APPENDIX No. 5.

Note to Letter from Mr. Gibson.

In the preceding letter, at top of page 600, Mr. Gibson cites within inverted commas these words :—

"~~That the amount for pass shall be fixed liberally, so as to give a fair encouragement to exertion, and in the smaller schools it must probably be higher than in schools attended by larger numbers.~~"

He adds: "(*See* General Report, 101)."

And he proceeds to make some observations founded upon the recommendation thus cited.

It is right to remark that the sentence quoted above does not occur in any part of the Report, as adopted by the Commission. It is taken from a *Draft* chapter on "Maintenance of Schools," which was considered during the May sittings; but the words printed above in erased type were not adopted by the Commission.

Mr. Gibson's attention was called to these facts, and he was informed that the passage he professes to quote does not exist in the Report. But he declined to make any alteration in his Letter, or even to omit the reference, now erroneous, to page 101.

APPENDIX No. 6.

Scheme of "School Districts," under an enlarged system, submitted to the consideration of the Commission, and referred to in the Report, *Part* III., *Chapter* VIII. (*Maintenance of Schools*), *p.* 347.

The following scheme is submitted as one possible mode of carrying out in detail some of the principles affirmed by the Royal Commission. By it the majority in any school district wishing to retain the present educational system in their schools could do so. In like manner, it would facilitate the establishment of denominational schools where the majorities preferred that system. It would also prevent an undue multiplication of schools of the same religious denomination in any district.

While thus adapted to all parties, it would secure to the smallest minorities the right to avail themselves of State-aided schools, under approved teachers, and free from all suspicion of proselytising influences.

It is hoped also that it will be found free from any restrictions which would prevent the Church Education Society on the one hand, or the Christian Brothers on the other, from availing themselves of State-aid for their schools under its provisions.

1. That the country shall be divided into "Educational Districts," whose areas shall vary according to the density of the population and physical character of the locality, and shall in no case exceed an area of ——

2. Wherever a "vested" school-house already exists, in a suitable situation, that school-house may be constituted the centre of an "Educational District"—("vested" schools chosen as being presumably in good condition.)

3. If in any district, of sufficient area and population, there be in existence a commodious school-house (well built, slated, floored and furnished), whether it be "non-vested" National or otherwise, and with an average attendance of not less than —— the owner or owners of such school-building may make a claim to have it constituted the centre of an "E.D."

4. If in any district, whose area and population would entitle it to be an "E.D.," there be in existence no commodious and fitting school-house, steps shall be taken to have one built. (*Infra, paragraph* 11.)

5 [**A**]. In any "E.D." where all the children of school age are of one religious denomination, there shall be but one State-aided school (or *two,* if one for boys and one for girls), and that school may, if the patron (*see paragraph* 16) and the majority of the population so wish it, be a "denominational school." (*See paragraph* 8 *a.*)

6 [**B**]. If in any "E.D." the population be "mixed," *i.e.*, "Catholic" and "Protestant" (*see paragraph* 17).

(*a.*) In such proportions that there are of the minority a sufficient number of children of school age to form a minimum school (minimum to be defined); or

(*b.*) If there be in such district, or within reasonable distance of all the school children of the minority in such district, an existing school with a teacher of the same "R.D." as the minority, then there may be in said district two (*or, if required, more*) State-aided schools, each of which may (as in paragraph 5) be a "Denominational" school.

[**C**]. If in any "E.D." the population be "mixed" (Catholic and Protestant), but in such proportions—

(*a.*) That of the minority there are *not* a sufficient number of children of school age to form a "minimum" school—or

(*b.*) If there be not within reasonable distance an existing school belonging to the R.D. of the minority in said "E.D.," then the district school shall receive the children of said minority for instruction in all such secular subjects taught in the school as their parents or guardians may desire, and with the protection against interference with their religious belief of a sufficient "Conscience Clause." (*See infra paragraph* 17.)

8. (*a.*) In all schools of Classes A and B (and which shall be classed as "denominational schools"), the nature and amount of religious instruction shall be unrestricted.

(*b.*) In all schools of Class C (and which shall be classed as "mixed" schools), there shall be fixed hours for religious instruction—such hours to be before the opening or after the closing of the school for secular instruction.

(*c.*) In all schools of Class C, there shall be provided a separate class-room for the use of the minority, in case any of them should be in school during the hours devoted to religious instruction of majority.

(*d.*) In all schools of Class C such pastors, or other persons as shall be approved of by the parents or guardians of the children respectively, shall have access to them in the school-room for the purpose of giving them religious instruction there, at convenient times to be appointed for that purpose. (*The adoption of "payment for results," will insure that in the schools of classes A and B, the religious instruction, although unrestricted, shall not lessen the efficiency of the school in those secular matters, for which alone the State will pay.*)

9. (*c.*) In all State-aided schools State Inspectors shall hold periodical examinations.

(*d.*) In all schools State Inspectors shall confine their inspection and examinations to secular subjects.

(*e.*) In schools of class C they shall inquire and report if the conscience clause is enforced.

10. To prevent undue multiplication of schools (*a*), State aid shall not be given in the same "E. D." to more than one school of classes A or C (or to *two*, if one for boys and one for girls).

(*b.*) Or to more than one school of each "R. D." in class B.

11. In any district circumstanced as described in paragraph 4, a State Grant in aid of proportionate local effort may be made to build a fitting school-house and a *free* residence for the teacher, due security being given for a proper expenditure of the grant, and that the school or residence shall not be alienated to other than educational uses.

12. In the case of any existing school (as in paragraphs 2 and 3), if there be not already in existence a fitting free residence for a teacher, the grant of State aid towards the payment of teacher's salary, &c., shall be conditional on the erection of such a "teacher's house," and a liberal grant in aid of local efforts may be made for this purpose. (*The principle on which loans are made under* "Land Improvement Act" *might be here adopted.*)

13. No teacher's house built in part with money granted by the State shall (unless the State grant be repaid) be used for any other purpose but as a teacher's residence. Should the teacher prefer to live elsewhere, and should the "patron" consent to his doing so, the "teacher's house" shall remain vacant, and be kept in proper repair, until again required for the use of a teacher of the school to which it is attached.

14. Whatever machinery may be devised for keeping State-aided schools in proper repair, the same shall be extended to the maintenance of "teachers' residences."

15. It is desirable that, where practicable, a small portion of land shall be devoted to the use of the teacher—which he shall be bound to cultivate, for his own benefit, under the directions of the State Inspector, in such a way as that it may be an example to his pupils.

16. (*a.*) The actual "patrons" of schools, such as those described in paragraphs 2 and 3, may claim to be "patrons" of same schools under new arrangement—subject to the conditions laid down in paragraph 12.

(*b.*) Schools such as those described in paragraph 4 shall be under the "patronage" of the persons receiving the grant for building, &c., under the scheme proposed in paragraph 11.

Conscience Clause.

17. Every pupil entering a State-aided school shall be enrolled by its guardian as being either a "Protestant" or a "Roman Catholic."

Should a Protestant parent or guardian so desire, the particular denomination of Protestantism to which the pupil belongs shall be specially registered.

18. In all cases of mixed schools, *i.e.*, where there may be in the same school pupils registered as "Protestants," and pupils registered as "Roman Catholics," the Protestant teacher shall be bound to exclude all such "Roman Catholic" pupils from the school-room during all times set apart for Protestant religious instruction; and in like manner, at like times, the "Roman Catholic" teacher shall be bound to exclude all such Protestant pupils (*in order to prevent any interference with parental authority, it will be*

made known that a Roman Catholic parent or guardian desiring his child or ward to receive Protestant religious instruction, can attain his object by registering said pupil as a Protestant, and vice versa.)

19. No Protestant teacher shall give religious instruction to any pupil registered as being of a different denomination of Protestantism from that of said teacher, unless the parent or guardian of such Protestant pupil shall have, in writing, and on a prescribed form, expressed a desire that said teacher should do so.

JAMES A. DEASE.

APPENDIX No. 7.

REPORT from SELECT COMMITTEE on EDUCATION in IRELAND REPORTS.

Referred to *supra*, Part I., page 21.

[Ordered, by the House of Commons, to be printed, 19th May, 1828; and to be re-printed, 16th March, 1829.]

THE SELECT COMMITTEE to whom the REPORTS on the subject of EDUCATION in IRELAND were referred, and who were empowered to report their observations and opinion thereon to the House, have agreed to the following REPORT:—

In the execution of the duties intrusted to them, your committee have proceeded to consider the Reports on the state of Education in Ireland, with a full sense of the importance of the subject, and of the peculiar difficulties with which it is at the present moment encompassed.

During several centuries the Legislature has recognised the necessity and expediency of providing means for the education of the Irish people. So far back as the 28 Henry VIII., an Act was passed for the general establishment of parochial schools. By the 12 Elizabeth the diocesan schools were founded, affording to the higher classes facilities for education analogous to those provided for the poorer orders under the Statute of Henry VIII. It is worthy of observation that even at this early period the progress of crime is traced by the Legislature to the ignorance of the people, and education is relied upon as producing moral improvement and of supporting the institutions of civil policy. Various Statutes have been passed on this important subject in the reigns of Charles II., William III., George I., George II., and George III., and charters have been granted and endowments made with the same intent. These laws and institutions have varied extremely in their spirit and character, according to the temper of the times and the disposition of the Government and of the Legislature, the latest in their foundation being generally the most comprehensive in their principles.

Inquiries have at different periods been instituted both by Committees of Parliament and by Parliamentary Commissioners, appointed for the purpose of considering the state of education in Ireland. Of these the most important are the two latest, to which the committee will feel it their duty to make frequent reference. The first of these commissions was issued under the authority of the Act 46 George III., c. 122, and produced, during the six years ending in 1812, fourteen reports upon the schools of royal and of private foundation, the charter schools, foundling hospital, and the parochial and diocesan schools. The second commission was issued in consequence of an address from the House of Commons to His Majesty, voted in 1824. This last inquiry was continued till the month of June, 1827, and has led to nine reports on the various establishments for education.

Nor has the interference of the State been solely confined to regulation and to inquiry. Parliamentary grants have been at various times most liberally made for the purposes of education. The amount of the expenditure will appear from the following account:—

	£	s.	d.		£	s.	d.
Charter schools,	1,105,869	0	0	Maynooth College,	271,869	18	6
Foundling hospital,	820,005	3	4	Belfast Institution,	4,155	0	0
Association for discountenancing Vice,	101,991	18	6	Cork Institution,	43,710	0	0
Kildare-place Society,	170,508	0	0	Hibernian school,	240,356	1	6
Lord Lieutenant's Fund,	40,998	0	0	Marine Society,	64,262	10	9
				Female orphan school,	50,414	10	9

Having thus adverted shortly to the legislative proceedings and the Parliamentary grants for promoting education in Ireland, it is important to consider the existing state of the schools now in operation. The number of scholars receiving instruction in 1826 was 560,549, leaving in all probability upwards of 150,000 without the means of education. Of the actual number of scholars returned, 394,732 are brought up in the common pay schools; 46,119 in schools supported exclusively by the Roman Catholic priesthood and laity; 84,295 under various establishments of private charity; and 55,246 (or less than one-tenth of the whole) are instructed in schools maintained in the whole or in part at the public expense. It is also worthy of consideration that whilst in

the least exclusive of the latter establishments (the Association for discountenancing Vice, and the Kildare-place Society) the number of Protestants as compared with Catholics is as 35,364 to 34,616; in the pay schools the proportion of scholars of the respective religious persuasions is as 87,338 to 307,405. It is, however, right to observe that at the time these returns were made many of the children are stated to have been withdrawn from the schools, and consequently the numbers are probably below the real strength of scholars in permanent attendance at other times.

In pursuing their inquiries your committee have avoided as much as possible the consideration of all questions that would add to existing irritation and party violence. Their sole object has been to consider the principle upon which it is expedient hereafter to grant public money in aid of Irish education. With this view your committee have preferred dealing with the proposition in the abstract, to entering upon any detailed examination of the comparative merits of existing establishments. After the most anxious deliberation your committee adopted the following resolutions, founded upon a consideration of the documents referred to by the House.

Resolved,—That it appears to this committee that Commissioners were appointed under legislative authority in the year 1806 for the purpose of inquiring into the state and condition of schools in Ireland.

Resolved,—That it appears to this committee that a report was agreed to by these Commissioners in the year 1812 communicating the result of their deliberations "on the subject of extending and improving the education of the poorer classes of His Majesty's Irish subjects."

Resolved,—That it appears to this committee that such general report, signed by three prelates, by the Provost of the University of Dublin, and by several other distinguished ecclesiastical as well as lay members of the Established Church, was presented to Parliament.

Resolved,—That it appears to this committee that in that report the Commissioners felt it their duty to express their unanimous opinion "That no plan of education, however wisely and unexceptionably contrived in other respects, can be carried into effectual operation in Ireland, unless it be explicitly avowed and clearly understood as its leading principle that no attempt shall be made to influence or disturb the peculiar religious tenets of any sect or denomination of Christians."

Resolved,—That it appears to this committee that a second commission issued in 1824, by command of His present Majesty, in consequence of an address from the House of Commons for the purpose of inquiring into the state of education in Ireland.

Resolved,—That it appears to this committee that the first report of the Commissioners so appointed has been presented to Parliament by His Majesty's command.

Resolved,—That it appears to this committee that in such report it is stated as the opinion of all the Commissioners "That in a country where mutual divisions exist between different classes of the people, schools should be established for the purpose of giving to children of all religious persuasions such useful instructions as they may severally be capable and desirous of receiving without having any ground to apprehend any interference with their respective religious principles." And the Commissioners further express "their entire concurrence in the principles laid down in the 14th Report," already adverted to.

Resolved,—That it appears to this committee that the schools recommended to be founded under the 14th Report of the Commissioners of Education were intended for the purpose of affording a *common* education for Protestant and Roman Catholic.

Resolved,—That it appears to this committee that the opinion of the second commission of inquiry has also been given "in favour of the expediency of devising a system of mutual education from which suspicion should if possible be banished, and the causes of distrust and jealousy should be effectually removed, and under which the children may imbibe similar ideas and form congenial habits tending to diminish not to increase that distinctness of feeling now but too prevalent."

Resolved,—That this committee, with reference to the opinions above recorded, consider that no system of education can be expedient which may be calculated "to influence or disturb the peculiar religious tenets of any sect or denomination of Christians."

Resolved,—That it is the opinion of this committee that it is of the utmost importance to bring together children of the different religious persuasions in Ireland for the purpose of instructing them in the general subjects of moral and literary knowledge, and providing facilities for their religious instruction *separately* when differences of creed render it impracticable for them to receive religious instruction together.

Resolved,—That it appears to this committee that it is recommended in the 14th Report that Commissioners should be appointed, empowered to receive and dispose of Parliamentary grants, and to have a general control over the whole of the proposed establishments for the instruction of the poorer classes in Ireland.

That it is also recommended in the first report of the second Board of Commissioners that there should be formed a distinct Board of persons responsible for the execution of the duties committed to their charge in the foundation and management of schools of general instruction.

Resolved,—That it is the opinion of this committee, that considering the very large sums of public money annually voted for the encouragement of education in Ireland, as well as the extreme discretion required in adopting a new system of united education without permitting any interference in the peculiar religious tenets of scholars, that it is indispensably necessary to establish a fixed authority, acting under the control of the Government and of the Legislature, bound by strict and impartial rules, and subject to full responsibility for the foundation, control, and management of such public schools of general instruction as are supported on the whole or in part at the public expense.

Resolved,—That it is the opinion of this committee, that the selection of teachers in the schools of general education should be made without religious distinction; but that the qualifications of such teachers should be proved by instruction or examination in a model school established under the direction of the fixed authority appointed by the Government; every such teacher being first required to produce a certificate of moral conduct and character from a clergyman of the communion to which he belongs.

Resolved,—That it is the opinion of this committee, that for the purpose of carrying into effect the combined literary and the separate religious education of the scholars, the course of study for four fixed days of the week should be exclusively moral and literary; and that of the two remaining days, the one be appropriated solely to the separate religious instruction of the Protestant children, the other for the separate religious instruction of the Roman Catholic children. In each case no literary instruction to be given, or interference allowed on the part of the teacher, but the whole of this separate religious instruction to be placed under the exclusive superintendence of the clergy of the respective communions.

Resolved,—That it is the opinion of this committee, that copies of the New Testament, and of such other religious books as may be printed in the manner hereinafter mentioned, should be provided for the use of the children, to be read in school at such times of separate instruction only, and under the direction of the attending clergyman; the established version for the use of the Protestant scholars, and the version published with the approval of the Roman Catholic bishops, for the children of that communion.

Resolved,—That it is the opinion of this committee, that it be the invariable rule in such schools of general instruction, that the scholars shall attend on Sunday at their respective places of worship, unless prevented by some sufficient excuse.

That certificates be required from every child, of attendance both at divine worship, and at the times appointed for separate religious instruction; and that the fact of such attendance be entered regularly in the school register.

Resolved,—That it is the opinion of this committee, that Parliamentary aid for the establishment and support of schools in Ireland should be for the future restricted to the following objects:

1. Granting aid to parishes, local subscribers or charitable societies for the erection of school-houses, such aid not to exceed two-thirds of the sum required, and the school-house and site to be conveyed to the Commissioners; the managers of such school entering into an engagement to conduct their establishment according to the rules prescribed.

2. Gratuities to teachers of schools conducted on the principles laid down by the Commissioners, not exceeding £5; £10 at the least being provided in addition, locally, as a permanent salary for such teacher.

3. The publication of books for the *literary* instruction of children, to be furnished to schools adopting the rules of the Commissioners, at *half price.*

4. School requisites and stationery, and books for the *separate religious* instruction of children, to be furnished at *prime cost.*

5. The establishment of a model school for the education of teachers.

6. A system of inspection, either by the Commissioners or by persons appointed by them.

7. All public aid to be dependent on private contributions, and an adherence to the rules of the Commissioners.

Resolved,—That it is the opinion of this committee, that the following objects should be provided for by local contribution, upon which all aid from Parliamentary funds is to be made strictly dependent:

1. A grant to the Commissioners of a site for school-house, either of one acre of land, or of land to the value of 40*s.* This to be required only when aid for building is applied for

2. Annual repairs of school-house and school furniture.

3. Local contributions, for building schools, of one-third of the expense.

4. Books for general instruction, stationery, school requisites, at half price.

5. Books for the separate religious education of the scholars, at prime cost.

6. Permanent salary for master, not less than £10.

Resolved,—That it is the opinion of this committee, that it be competent to the Commissioners to entertain any applications for the grant of aid to schools, coming either from individuals, charitable committees, or associations, or select vestries of parishes assembled under provisions analogous to those of the Tithe Composition Act.

That where a school has been built at their desire, vestries so assembled should have a power of assessing their respective parishes, for raising that portion of school expenditure which is required to be provided locally.

Resolved,—1. That it is the opinion of this committee, that a Board of Education should be appointed by the Government, receiving salaries and holding their offices, during pleasure; all persons being eligible, without reference to religious distinctions.

2. The Commissioners to receive all applications for public aid, in the establishment or maintenance of the schools of general instruction.

3. To decide on the appropriation of all grants made by Parliament for the purposes of education in Ireland, according to the principles laid down in these regulations; to keep record, and make an annual report of all their proceedings to the Government and Legislature.

4. To superintend the model schools for the instruction of teachers for the schools of general instruction; such teachers to be supported during their instruction at the public expense, when recommended by select vestries, or by persons or societies permanently endowing or having endowed schools.

5. To edit and print all books for the general literary instruction of scholars, and to supply such books to schools adopting the proposed regulations at half price.

6. To print all books for the separate religious instruction of scholars which are approved of by the Commissioners, and to supply such books, stationery, slates, and school requisites, at prime cost. The books for the separate religious instruction of the children, to be recommended by the Episcopal authorities of the Church, and by the Roman Catholic bishops in Ireland.

7. To grant certificates of qualification to teachers having been duly instructed, or having passed an examination in the model schools.

8. To hear and determine any complaint against teachers in the schools of general instruction, for violation of the rule laid down by Parliament; with power to fine, suspend, or remove teachers so transgressing.

9. To receive returns duly certified of the attendance of children at school, and of their attendance at divine worship, and at the times appropriated to separate religious instruction; and also of all sums received and disbursed on account of such schools.

10. To receive conveyances of the sites of all school-houses built at the public expense and receiving aid from the Commissioners.

11. To receive a return of all books used in schools supported in the whole or in part at the public expense, and to have a power of rejecting any disapproved of by such Commissioners.

Resolved,—That it is the opinion of this committee, that as a rule, the children received in the schools of general instruction be required to pay such small sums for their education as may be directed; but that free scholars, being either orphans or the children of parents unable to afford payment, be received on the recommendation of the parochial clergy and of the dissenting ministers, and of persons subscribing to the schools, or having granted land for a site; the power of recommendation being in proportion to the amount of money subscribed.

Such is the plan of education which your committee recommend to the most serious consideration of the House; it is founded on the principles laid down in 1812 and 1824 by the Commissioners of Inquiry, but it carries these principles into effect more strictly than has as yet been suggested or attempted. Your committee cannot avoid expressing the most earnest hope, that, if adopted by the House, their recommendation will satisfy moderate and rational men of all opinions. It has been the object of your committee to discover a mode in which the combined education of Protestant and Catholic may be carried on, resting upon religious instruction, but free from the suspicion of proselytism. Your committee have endeavoured to avoid any violation of the liberty of conscience, or any demands or sacrifices inconsistent with the religious faith of any denomination of Christians. They propose leaving to the clergy of each persuasion the duty and the privilege of giving religious instruction to those who are committed to their care. This plan cannot be objected to as disconnecting religion from morality and learning; on the contrary, it binds them together indissolubly, and appears to unite them in a manner suited to the principles of sound policy, good faith, and Christian charity.

May 19, 1828.

APPENDIX No. 8.

Collection of Rules and Regulations of the Commissioners of National Education in Ireland, showing the Successive Alterations made from time to time.

No. 1.

Rules and Regulations as First Issued.

Code I., 1831.

Board's Order, 13th December, 1831.

The Commissioners appointed for administering the Funds placed at the disposal of His Excellency The Lord Lieutenant, for the Education of the Poor of Ireland, are ready to receive Applications for Aid towards the building and fitting-up of Schools, the paying of Teachers, and the obtaining of Books and School-requisites, on the following Conditions:

I. They will require that local funds be raised: 1st. For the annual repair of the school-house and furniture. 2ndly. Towards a permanent salary for the teacher; the amount of such salary, in each case, to be settled with the approbation of the Commissioners. 3rdly. For the purchase of books and school-requisites, at half price.

II. Where aid is sought from the Commissioners for building a school-house, they will require, that, at least, one-third of the estimated expense be locally contributed; that a site for building, to be approved of by the Commissioners, be secured for the purpose: and that the school-house, when finished, be vested in Trustees, to be also approved of by them.

III. They will require that the schools be kept open for a certain number of hours, on four or on five days of the week, at the discretion of the Commissioners, for moral and literary education only; and that the remaining one or two days in the week be set apart, for giving, separately, such religious education to the children as may be approved of by the clergy of their respective persuasions. They will also permit and encourage the clergy to give religious instruction, either before or after the ordinary school hours, on the other days of the week.

IV. They will require to have the entire control over all books to be used in the schools, whether in the combined moral and literary, or separate religious instruction; none to be employed in the former, except under the sanction of the Board, nor in the latter, but with the approbation of those members of the Board who are of the same religious persuasion with the children for whose use they are intended.

Although it is not designed to exclude from the list of books, for the combined instruction, such portions of Sacred history, or of religious or moral teaching, as may be approved of by the entire Board; it is to be understood that the use of such books is by no means intended to constitute a perfect and sufficient religious education, or to supersede the necessity of separate religious instruction on the days set apart for that purpose.

V. "They will require that in all schools a register be kept, in which shall be entered the attendance, or non-attendance of each child on Divine Worship on Sundays." Omitted in all subsequent Codes.

VI. They will allow to the individuals or bodies, applying for aid, the appointment of their teachers, subject to the following restrictions and regulations: 1st. All teachers (except of schools now existing, and which shall be approved of by the Board) shall have received previous instruction in a model school in Dublin, to be sanctioned by the Board, and shall also have obtained from the Board testimonials of good conduct and general fitness. 2ndly. All teachers shall be liable to be fined, suspended, or removed, when the Commissioners deem it necessary.

VII. The Commissioners, by themselves or their Inspectors, to be allowed to visit and examine the schools whenever they think fit.

VIII. They will particularly require that the principles of the following lesson be strictly inculcated in all schools approved of by them, and that the lesson itself be printed, and copies of it on pasteboard be hung up in each school:—

Christians should endeavour, as the Apostle Paul commands them, to "live peaceably with all men;" (Romans, ch. 12, v. 18), even with those of a different religious persuasion.

Our Saviour Christ commanded his Disciples to "love one another." He taught them to love even their enemies, to bless those that cursed them, and to pray for those who persecuted them. He himself prayed for his murderers.

Many men hold erroneous doctrines; but we ought not to hate or persecute them. We ought to seek for the truth, and to hold fast what we are convinced is the truth; but not to treat harshly those who are in error. Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his Disciples to fight for him.

If any persons treat us unkindly we must not do the same to them; for Christ and his Apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others, not as they do to us, but as we should wish them to do to us.

Quarrelling with our neighbours and abusing them, is not the way to convince them that we are in the right, and they in the wrong. It is more likely to convince them that we have not a Christian spirit.

We ought to show ourselves followers of Christ, who, "when he was reviled, reviled not again." (1 Pet., ch. 2, ver. 23), by behaving gently and kindly to everyone.

As one of the main objects of His Majesty's Government is to unite in one system children of different creeds, and as much must depend upon the co-operation of the resident clergy, the Board will look with peculiar favour upon applications proceeding, either from—

1st. A Protestant clergyman and Roman Catholic clergyman conjointly—

2ndly. A clergyman of the one denomination and a certain number of laymen of the other.

3rdly. Laymen of both denominations.

Queries to be answered by Applicants for Aid towards the Fitting-up of Schools, the Paying of Teachers, and the obtaining of School-requisites. The Queries in this Form omitted in Code II.

1. What is the name of the school, and when was it established?
2. In what parish, county, and townland is it situated?
3. What is the name of the nearest Post-town

CODE I., 1831.

4. State particularly, whether the school is in connexion with, or derives aid from any other society—and if so, the name of the society, the amount of the aid received, and the nature of the connexion?

5. Upon what days of the week, and during how many and what hours of each day, is the school kept, or intended to be kept, open?

6. How many scholars are there usually in attendance?

In Summer males females | In Winter males females

7. What are the dimensions of the school-room and the number of its windows—from what funds was it erected, and what is the number of scholars it can accommodate?

8. What are the sources from whence the annual income of the school is derived, and what is the amount of such income—do the scholars pay anything and what?

9. State the names of the present master and mistress, with the amount of their respective salaries, and whether they have been educated in any and what model school or schools, and what testimonials they can produce of fitness for their office?

10. Is the school under the direction of an individual or individuals, or a committee? State the name and address of the individual or individuals; if a committee, state the names and address of the treasurer, secretary, or correspondent?

11. State the names of *all* books used in the school, specifying the editions; also by whom, or from whence, and at what time or times they have been supplied?

12. In what state of repair is the school-house?

13. What number of desks and seats are there in the school-room, and how many children do they accommodate?

14. What number of schools are there in the parish or neighbourhood, at what distance from the school-house for which aid is sought, and under whose patronage or direction?

Specify, particularly, the nature and extent of the aid required for the school, on behalf of which this application is made.

The Queries in this Form omitted from Code II.

QUERIES to be answered by Applicants for Aid towards the Building of School-houses.

1. In what county, parish, and townland is it proposed to build the School-house, and which is the nearest post town?

2. Has ground affording a commodious site for building been obtained? and if so, from whom, and by what tenure?

3. Is the ground liable to any, and what rent?

4. What is the estimated expense of the building, and what are its dimensions?

5. Has any and what progress been made in the building? and what is the estimated expense of finishing it?

N.B.—In addition to the answers to these Queries, the Commissioners will require to be furnished with a plan and estimate of the building.

6. Has any and what sum of money been actually contributed towards the building? and if so, state where the same is lodged and in whose name.

7. As the Commissioners require that the School-house, when finished, shall be vested in Trustees, to be approved of by them, state the names and address of the Trustees in whom the building may be already vested; or, if not already vested, of the persons in whom it is proposed to vest the same?

N.B.—The trusts must be distinctly declared. The property must continue in the original Trustees, or be vested, when necessary, in others, to be approved of by the Commissioners, upon the original trusts. Power of exchange and of appointment of new Trustees to be given, subject to the approval of the Commissioners.

8. What number of children may be expected to attend the school, distinguishing males and females, and what are the circumstances and the population of the neighbourhood?

9. What number of schools are there in the parish or neighbourhood, of what description, and under whose patronage or direction are they, and at what distance from the intended School-house?

State, particularly, the nature and extent of the aid required for the Building of the School-house, on behalf of which this application is made.

We, the undersigned, agree to the conditions embodied in the foregoing Regulations, and believe the above Queries are fully and truly answered.

PROTESTANTS. ROMAN CATHOLICS

CODE II., 1832. (First change.)

No. 2.

The COMMISSIONERS appointed for administering the Funds placed at the disposal of His Excellency The Lord Lieutenant, for the Education of the Poor of Ireland, are ready to receive Applications for Aid towards the building and fitting-up of Schools, the Paying of Teachers, and obtaining of Books and School Requisites, on the following conditions:

II. in Code III., but differently worded.

I. They will require that local funds be raised: 1st, For the annual repair of the school-house and furniture. 2ndly, Towards a permanent salary for the teacher; the amount of such salary, in each case, to be settled with the approbation of the Commissioners. 3rdly, For the purchase of books and school requisites, at half price.

[1] *When* in Code III. Part between [ ] omitted in Code III. Part between " " worded differently in Code III III. §. 1 in Code III, but differently worded.

II. *Where*[1] aid is sought from the Commissioners for building a school-house, they will require that, at least, one-third of the estimated expense be locally contributed; [that a site for building, to be approved of by the Commissioners, be secured for the purpose;] "and that the school-house, when finished, be vested in Trustees, to be also approved of by them."

III. They will require that the schools be kept open for a certain number of hours, on four or on five days of the week, at the discretion of the Commissioners, for moral and literary education only; and that the remaining one or two days in the week be set apart for giving, separately, such religious education to the children as may be approved of by the

clergy[2] of their respective persuasions. [They will also permit and encourage the clergy to give religious instruction, either before or after the ordinary school hours, on the other days of the week.]

Code II., 1832. (First change.)

[2] Or other persons, &c., added in III. §. 1, Code III.

IV. They will require to have the entire control over all books to be used in the schools, whether in the combined moral and literary, or separate religious instruction; none to be employed in the former, except under the sanction of the Board, [nor in the latter, but with the approbation of those members of the Board who are of the same religious persuasion with the children for whose use they are intended.]

[ ] omitted in subsequent Codes. IV. §. 1 in Code III., but differently worded. [ ] omitted in Code III.

[Although it is not designed to exclude from the list of books, for the combined instruction, such portions of Sacred history, or of religious or moral teaching, as may be approved of by the entire Board, it is to be understood that the use of such books is by no means intended to constitute a perfect and sufficient religious education, or to supersede the necessity of separate religious instruction on the days set apart for that purpose.]

[ ] omitted in this Form in Code III. See III. § 1 of this Code.

V. They will allow to individuals or bodies, applying for aid, the appointment of their teachers, subject to the following restrictions and regulations: 1st, All teachers, (except of schools now existing, and which shall be approved of by the Board,) shall have received previous instruction in a model school in Dublin, to be sanctioned by the Board, and shall also have obtained from the Board testimonials of good conduct and general fitness. 2ndly, All teachers shall be liable to be fined, suspended, or removed, when the Commissioners deem it necessary.

VI. in Code I.

VI. The Commissioners, by themselves, or their Inspectors, to be allowed to visit and examine the schools whenever they think fit.

VII. in Code I.

VII. They will particularly require that the principles of the following lesson be strictly inculcated in all schools approved of by them, and that the lesson itself be printed, and copies of it, on pasteboard, be hung up in each school:—

VIII. in Code I.

Christians should endeavour, as the Apostle Paul commands them, to "live peaceably with all men;" (Rom. ch. 12, v. 18,) even with those of a different religious persuasion.

Our Saviour, Christ, commanded his disciples to "love one another:" He taught them to love even their enemies, to bless those that cursed them, and to pray for those who persecuted them. He himself prayed for his murderers.

Many men hold erroneous doctrines; but we ought not to hate or persecute them. We ought to seek for the truth, and to hold fast what we are convinced is the truth; but not to treat harshly those who are in error.—Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his disciples to fight for him.

If any persons treat us unkindly, we must not do the same to them; for Christ and his apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others, not as they do to us, but as we should wish them to do to us.

Quarrelling with our neighbours, and abusing them, is not the way to convince them that we are in the right, and they in the wrong. It is more likely to convince them that we have not a Christian spirit.

We ought to show ourselves followers of Christ, who, "when he was reviled, reviled not again." (1 Pet. ch. 2, ver. 23,) by behaving gently and kindly to everyone.

[As one of the main objects of His Majesty's Government is to unite in one system children of different creeds; and as much must depend upon the co-operation of the resident clergy, the Board will look with peculiar favour upon applications proceeding, either from—

[ ] omitted in Code III., but see VI. § 1 of that Code.

"1st. A Protestant clergyman and Roman Catholic clergyman conjointly."

"2ndly. A clergyman of the one denomination and a certain number of laymen of the other."

"3rdly. Laymen of both denominations."]

The following Document explanatory of some of the foregoing Conditions which have been misunderstood, having been drawn up by the Commissioners as containing their views of them, has received the approbation and sanction of His Majesty's Government.

New matter.

As some parts of the plan of education committed to the Commissioners, to be by them carried into effect, have, as it appears, been misunderstood, the Commissioners beg to submit to Government the sense in which they have understood, and acted upon, the instructions given in the letter of the Chief Secretary for Ireland, that the Government may confirm them in their mode of procedure where they are right, and correct them where they are wrong.

I. In giving a control, to individual members of the Board, over books to be used in the particular religious instruction of different denominations of pupils, the Board do not understand that it was the intention of His Majesty's Government either to claim for themselves, or to vest in the Commissioners, any control over the use of the Sacred Scriptures, or over the standards of the Established Churches of Ireland—or of Scotland—or of the Roman Catholic Church, but only over books composed by private authors; and that the control over these is required merely for the purpose of checking the introduction of books of injurious tendency.

[II. The Board do not understand that it is imperative upon them to edit all books used in the schools receiving grants from them; but that they are at liberty to sanction such books as may previously be in use in schools, in behalf of which applications are made; or such as may be preferred by the local patrons and conductors of schools, provided that they find nothing objectionable in them. Under this view of the duty assigned to them, they require a list of the books used in the schools which they are requested to aid, and have already frequently sanctioned the school-books issued by the Kildare-place Society—and also, after certain alterations, the school-books issued by the Catholic Book Society, the Board wish to remark, that they have never conceived it would be expedient to render the use of any particular book or books imperative.]

[ ] omitted in Code III.

III. The Board understands that the control over teachers of schools is vested primarily in their local patrons and conductors; and that the power required by the Government to be conceded to the Board, of fining and dismissing teachers, is to be exercised only in case of such local patrons and conductors, after receiving grants, seeking to protect teachers in violating [the rules of the Board; or retaining teachers found, on trial, to be incompetent.]

Words in [ ] modified in Code III., V. § 2.

[IV. The Board understands that they are to require a permanent submission to its regulations, only in those cases in which grants have been made towards the erection of

Not in subsequent Codes.

Code II., 1832. (First change.)

school-houses, to be vested in Trustees, according to the directions of Government; and that in schools receiving occasional or annual grants, such as salaries for the teachers, &c., they are to require submission to their regulations only during the period for which grants are made.]

Not in subsequent Codes.

[V. By encouraging the pastors of different denominations to give religious instruction to the children of their respective flocks, out of school-hours, the Board understand, merely affording to such pastors facility of access to the pupils at the times specified, and not employing or remunerating them. And they understand that the parents and guardians of the children are to determine to what denomination they respectively belong—the Board taking no cognizance of the matter.]

[ ] omitted in subsequent Codes.

VI. The Board understand that the times for religious instruction are to be determined by the local patrons and conductors of schools; [the power vested in the Board on that subject being merely to see that at least one week-day in the week is set apart for that purpose; they also understand, that the religious instruction given may, or may not, be in the school-room; the choice of the place being left to the pastors of the children, but that liberty is to be secured to them to assemble the children of their respective flocks in the school-room, if they see fit.]

VII. The Board understand that they are not, in ordinary cases, to exercise control over the use of the school-rooms on Sundays, that control being left to the local conductors of the school; but[1] [that, if any use be made of them,] tending to contention "and well-founded complaints between adverse parties, it is competent for the Board to interfere for the purpose of remedying the evil."

[1] [ ] "they expect that no use shall be made of the school-room," in VI. § 3, Code III. The remainder of paragraph from "and," &c., omitted in that Code.

[ ] omitted in Code III.

[The Board beg leave to add, that they do not regard these observations as altering or modifying, in any degree, the original instructions communicated to them in the Chief Secretary's letter, of October, 1831; they offer them as containing views which they have always entertained of their instructions, and upon which they have uniformly acted since the commencement of their labours.]

By desire of the Commissioners,
THOMAS F. KELLY, Secretary.

No. 3.

Code III., 1833. (Second change.)

REGULATIONS and DIRECTIONS to be attended to in making application to the Board of Commissioners of National Education, for Aid towards the Building of School-houses, or for the Support of Schools.

I. On Building School-houses.

II. Code II. [1] "*Where*" in ditto.

1. When[1] aid is sought from the Commissioners for building a school-house, the site of the intended building is to be described, the tenure by which it is held stated, and a plan of the house, with estimates by one or more respectable tradesmen, furnished. One-third at least of the expense must be locally contributed.

2. The school-house, when finished, is to be vested in trustees, to be chosen by the applicants themselves, and their names reported to the Commissioners for their approbation. [These trustees to hold the school-house for the purpose of National education, according to the regulations "set forth in this paper."]

[ ] new matter not in Code II.
" " These regulations in I. § 2, Code IV.

3. No alteration is to be made in the trusteeship without the concurrence of the Commissioners. If any of the trustees die, or resign, new trustees shall be elected to supply their place, subject to the approval of the Board.

New matter not in Code II.

4. Although the Commissioners do not absolutely refuse aid in all cases towards the erection of school-houses on ground connected with a place of worship, yet they much prefer their being erected on ground which is not so connected, where it can be obtained: they therefore expect that before church, chapel, or meeting-house ground be adopted as the site of a school-house, inquiry be made whether another convenient site may be obtained, and the result of the inquiry stated to them.

New matter not in Code II.

5. The Board do not contribute to the ornamenting of school-houses, but merely to the accommodation of the children in plain substantial buildings. If buildings of a more ornamented and expensive kind be preferred, the whole of the extra expenses must be provided by the applicants.

New Rule omitted in Code IV.

6. The Board do not contribute towards the erecting of apartments for the teachers.

II. On Assistance given towards conducting Schools.

I. Code II., but differently worded.

1. "It is required that a portion of the different expenses requisite for conducting schools, such as providing" school furniture, repairing the school-houses, and paying teachers' salaries, be locally raised. [The Board will determine, in every case, the proportion to be contributed from the public funds towards these and similar expenses, according to the circumstances of each. All schools connected with the Board have permission to purchase the books issued by the Board, and other school requisites, such as paper, slates, quills, &c., at half cost price.]

[ ] new matter not in Code II.

III. On the Regulation of the Schools as to Tuition, Attendance, etc.

III. Code II.

1. The ordinary school business, during which all the children, of whatever denomination they be, are required to attend, "and which is expected" to embrace a competent number of hours [*in each day,*] is to consist exclusively of instruction in those branches which belong to a literary and moral education. [Such extracts from Scripture as are prepared under the sanction of the Board, may be used, and are earnestly recommended by the Board to be used during those hours allotted to this ordinary school business.]

[ ] on four or five days, in Code II.
[ ] new matter. See IV. Code II.

2. One day [at least] in each week (independently of the Sunday) is to be set apart for the religious instruction of the children [on which day such pastors or other persons as are approved of by the parents or guardians of the children, shall have access to them for that purpose, whether those pastors have signed the original application or not.]

[at least] omitted in Code IV. Words in ( ) not in Code II. [ ] new matter.

3. The managers of schools are also expected, [should the parents of any of the children

§ 3 differently worded in III. Code II. Words in [ ] left out in Code IV.

desire it,] to afford convenient opportunity and facility for the same purpose, [either before or after the ordinary school business (as the managers may determine),] on other days of the week.

CODE III., 1833. (Second change.)

4. Any arrangement of this description that may be made, is to be publicly notified in the schools, in order that those children, and those only, may be present at the religious instruction, whose parents and guardians approve of their being so.

New matter.

5. The reading of the Scriptures, either in the authorized or Douay version, is regarded as a religious exercise, [and, as such, is to be confined to those times which are set apart for religious instruction. The same regulation is also to be observed respecting prayer.]

New matter. Part in [ ] omitted in Code IV.

6. A register is to be kept in each school, recording the daily attendance of the scholars, and the average attendance in each week, and each quarter, according to a form to be furnished by the Board.

NEW RULE.

IV. ON THE BOOKS TO BE USED IN THE SCHOOLS.

IV. Code II., but differently worded.

1. The titles of all books which the conductors of schools intend to use in the ordinary school business, are to be reported to the Board, and no other books to be used than those which have been reported and sanctioned by the Board.

2. No books are to be understood as prohibited by the Board, except such as appear to them to contain matter objectionable in itself, or objectionable as peculiarly belonging to some peculiar religious denomination. [But the price of those books only shall be reduced which are issued from the Depository of the Board.]

[ ] omitted in Code IV.

3. The Board will furnish gratuitously to each school, a first stock of school-books, which are to be kept as a school stock, and used, when required, in teaching the pupils, but which are on no account to be taken out of the school-room. The Inspectors will require to see these books at every inspection. Children whose parents wish them to bring their books home with them will be supplied at the reduced price at which they are furnished by the Board. All supplies of books additional to those furnished by the Board, are to be purchased from the depository at half cost price.

NEW RULE.

4. If any other books than the Holy Scriptures, or the standard books of any Church to which any of the children belong, are to be employed in communicating religious instruction, [the pastor, or other religious teacher, who proposes to employ such book, is expected to communicate his intention to any individual member of the Board, and consult with him respecting its suitableness.]

NEW RULE. Part in [ ] omitted in Code IV.

V. ON THE CHOICE, ETC., OF TEACHERS.

V. Code II., but differently worded. Parts in [ ] omitted in Code IV.

1. [Local patrons, and committees of schools, are expected to select suitable teachers, and to superintend them]; but the Commissioners will require to be satisfied of the fitness of the teachers, both in regard to [moral] character and [to literary] qualification, [by testimonials, and also, if they see fit, by training in a model school and examination.]

2. Should the Commissioners judge any teachers employed in a school, [receiving occasional aid from them, not to possess suitable qualifications for his office, or to be otherwise objectionable, they will feel themselves at liberty to withhold the portion of the salary contributed by them until a fit person shall be appointed. If such a teacher be found employed in a school-house erected partly by the public funds intrusted to them, and vested in trustees, as above directed, they will require that the teacher be dismissed, and another provided.]

V. Code II., but differently worded. Part in [ ] changed in Code IV.

3. Salaries granted by the Board are granted to the teachers individually; [and, therefore, if any teacher be dismissed, or die, or any new teacher be introduced into the school, it is expected that such changes be communicated immediately to the Board, and their sanction obtained for the new teachers.]

NEW RULE. Part in [ ] modified in Code IV.

VI. MISCELLANEOUS.

1. It is the earnest wish of His Majesty's Government and of the Commissioners that the clergy and laity of the different religious denominations in the country co-operate with one another in conducting the schools [connected with the Board.] Nevertheless the Government and the Commissioners choose rather to leave this expression of their desire to the good feeling of applicants themselves, than to make it the subject of any express stipulation; persuaded that, when practicable, this recommendation will be attended to.

New matter. Words in [ ] changed to "National Schools" in Code IV.

2. [It is expected] that when any school is received by the Board in connexion with it, the inscription "NATIONAL SCHOOL," shall be put up conspicuously on the school-house; and that, in building school-houses, partly by funds intrusted to the Commissioners, a stone shall be built into the wall having that inscription cut in it.

NEW RULE. Words in [ ] omitted in Code IV.

3. [The Commissioners understand they are not, in ordinary cases, to exercise control over school-houses on Sundays,] "or beyond the hours of instruction on other days;" that control being left to the local conductors of the school. [But they expect that no use shall be made of the school-rooms tending to contention,] SUCH AS THE HOLDING OF POLITICAL MEETINGS IN THEM; and that they shall not be converted into places of public worship. Such use made of a school-house, built by aid from the Commissioners, will be held to be a violation of the principles of the National Education system; such a use made of a school-house received, after its establishment into connexion with the Board, they will regard as a sufficient reason for withholding further aid, and dissolving the connexion.

NEW RULE, except part in [ ]; the words in " " omitted in Code IV.

4. The Commissioners will require that the principles of the following lesson be strictly inculcated in all schools admitted into connexion with them, and that a printed copy of the lesson itself, to be furnished by them, shall be hung up in each school.

Christians should endeavour, as the Apostle Paul commands them, to "live peaceably with all men" (Rom. ch. xii. v. 18), even with those of a different religious persuasion.

Our Saviour, Christ, commanded his disciples to "love one another;" he taught them to love even their enemies, to bless those that curse them, and to pray for those that persecuted them. He himself prayed for his murderers.

Many men hold erroneous doctrines; but we ought not to hate or persecute them. We ought to seek for the truth, and to hold fast what we are convinced is the truth; but not to treat harshly those who are in error. Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his disciples to fight for him.

Code III., 1833. (Second change.)

If any persons treat us unkindly, we must not do the same to them; for Christ and his Apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others, not as they do to us, but as we should wish them to do to us.

Quarrelling with our neighbours, and abusing them, is not the way to convince them that we are in the right and they in the wrong. It is more likely to convince them that we have not a Christian spirit.

We ought to show ourselves followers of Christ, who, "when he was reviled, reviled not again" (1 Pet. ch. ii. v. 23), by behaving gently and kindly to every one.

New Rule.

5. It is expected that clergymen of all denominations, even although they may not have signed the application to the Board, shall have free admission to the school; not to take part in the ordinary business, or to interrupt it, but, as visitors, to observe how the school is conducted.

By desire of the Commissioners,
Thomas F. Kelly, Secretary.

Code IV., 1838. (Third change.)

No. 4.

Fifth Report of the Commissioners of National Education in Ireland, for the Year 1838.

TO HIS EXCELLENCY CONSTANTINE HENRY MARQUESS OF NORMANBY, LORD LIEUTENANT-GENERAL AND GENERAL GOVERNOR OF IRELAND.

I. As to the Building and Support of Schools.

I. § 1 in Code III. New matter in [ ].

1. The Commissioners will grant aid towards the building and support of schools of two classes—elementary schools, and schools of industry; but they can only grant aid to a limited number of the latter, and they must be at certain distances from each other. One-third, at least, [of the actual] expenditure [upon each building] must be locally provided for. Applicants for aid towards the building of a school-house are to describe the site of the intended building, to specify the tenure by which it is held, [and to state the number of children expected to attend, distinguishing males from females. If the Commissioners approve of the application, they will furnish a plan and specification of the necessary works, and the form of an estimate which is to be returned to them duly filled up; they will then notify the extent of aid which they are disposed to grant; but they are not empowered, in any case, to pay more than two-thirds of the sum which can be satisfactorily shown to them to have been actually and necessarily expended. They will require, by the plan which they furnish, that a portion of each school-building shall be divided from the rest by a partition, in order that it may be used as a separate class-room; and as an indispensable condition for aid towards a school of industry, that a work-room shall be annexed to it if it be situated in a city or town, and if it be a country or rural school, that a certain quantity of land shall be provided for garden culture. They will consider schools for females as of the class of elementary schools; but they will require that instruction be there given in sewing, knitting, and other works suited to females.]

New matter not in Code III.

2. The school, when finished, is to be vested in trustees, to be chosen by the applicants themselves, and their names reported to the Commissioners for their approbation. The trustees are to hold the school-house for the purpose of National education, according to these regulations.

3. No alteration is to be made in the trusteeship without the concurrence of the Commissioners. If any of the trustees die, or resign, new trustees shall be elected to supply their place, subject to the approval of the "Commissioners."

"Board" in Code III.

4. Although the Commissioners do not absolutely refuse aid towards the erection of school-houses on ground connected with a place of worship, yet they much prefer having them erected on ground which is not so connected, where it can be obtained; they therefore "expect" that, before church, chapel, or meeting-house ground be adopted as the site of a school-house, inquiry be made whether another convenient site can be obtained, and that the result shall be stated to them.

"Require" in Code V.

5. The "Commissioners" do not contribute to the ornamenting of school-houses, but merely to such expenditure as may be necessary for having the children accommodated in plain substantial buildings. If buildings of another description be preferred, the whole of the extra expense must be provided by the applicants.

"Board" in Code III.

New Rule.

6. The Commissioners will contribute a portion of the expense which may be originally required for fitting up or furnishing a school-house; but provision must thenceforth be locally made for keeping the house repaired and furnished.

Corresponds to IV. § 3, Code III., but much modified. Words in [ ] new.

7. The Commissioners will furnish gratuitously to each school a first stock of school-books, [which will be renewed at the end of every four years;] they are to be kept as a school-stock, for which the master or mistress will be held responsible, and they are on no account to be ever taken out of the school. The Commissioners will also supply books from time to time, for the general use of the children, and school requisites, such as paper, slates, quills, &c., at half cost price.

II. As to the Government of Schools with respect to Attendance and Religious Instruction.

III. § 1, Code III.

1. The ordinary school business, during which all children, of whatever denomination they may be, are required to attend, is to embrace a competent number of hours in each day.

Words in [ ] new; those " " omitted in II. § 4, Code V.

2. "One day in each week, [or part of a day] (independently of Sunday), is to be set apart for the religious instruction of the children, on which day" such pastors or other persons as are approved of by the parents or guardians of the children, shall have access to them for that purpose, whether those pastors have signed the original application or not.

Words from "But where any" to end new matter in II. § 2, Code V., in part.

3. The managers of schools are also expected to afford convenient opportunity and facility for the same purpose on other days of the week. But where any course of religious instruction is pursued in a school during school hours, to which the parents of any of the children attending it object, the managers are to make an arrangement for having it given to those who are to receive it at a stated time or times, and in a separate place; so that no children, whose parents or guardians object to their being so, shall be present at it.

II. § 9 of Code V., but wording changed.

4. Any arrangement "of this description" that may be made is to be publicly notified in

the "schools," in order that those children, and those only may be present whose parents or guardians approve of their being so.

Code IV., 1838. (Third change.)

5. The reading of the Scriptures, either in the Protestant Authorized or Douay versions, "comes within the rule" as to religious "instruction."

"Is regarded" in Code III. "Exercise" in Code III.

6. If any other books than the Holy Scriptures, or the standard books of the Church to which the Children using them belong, are employed in communicating religious instruction, the title of each is to be made known to the Commissioners.

II. § 5 in Code III., but slightly changed.

7. The titles of all books which the conductors of schools intend for the ordinary school business are also to be reported to the Commissioners, and none are to be used "to which they object;" but they will prohibit such only as may appear to them to contain matter objectionable in itself, or objectionable for common instruction as peculiarly belonging to some particular religious denomination.

IV. §§ 1 and 2 of Code III., but altered in wording.

8. A register is to be kept in each school, [recording] the daily attendance of the scholars, and the average attendance [in each week, and each quarter,] according to a form to be furnished by the Commissioners.

III. § 6, Code III. Words in [ ] omitted in Code V.

N.B.—The principle of the Commissioners as to religious instruction is the same as that laid down for education in workhouses, by the Act for the more effectual relief of the destitute poor in Ireland, 1st and 2nd Vic., ch. 56, sec. 49. The section is as follows:—

New explanation of rules as to religious instruction.

"And be it enacted, That no order of the Commissioners nor any by-law shall oblige any inmate of any workhouse to attend or be present at any religious service which may be celebrated in a mode contrary to the religious principles of such inmate, nor shall authorize the education of any child in such workhouse in any religious creed other than that professed by the parents or surviving parent of such child, and to which such parents or parent shall object, or, in the case of an orphan to which the guardian or guardians, godfather or godmother of such orphan, shall object: provided also that it shall be lawful for any regular minister of the religious persuasion of any inmate of such workhouse, at all times of the day, on the request of such inmate, to visit such workhouse, for the purpose of affording religious assistance to such inmate, *and also for the purpose of instructing his child or children in the principles of his religion.*"

III. As to Teachers.

1. The appointment of teachers rests with the local patrons and committees of schools; but the Commissioners are to be satisfied of the fitness of each, both as to character and general qualification. [He should be a person of Christian sentiment, of calm temper and discretion; he should be imbued with a spirit of peace, of obedience to the law, and loyalty to his Sovereign; he should not only possess the art of communicating knowledge, but be capable of moulding the mind of youth, and of giving the power which education confers a useful direction. These are the qualities for which patrons of schools, on making choice of teachers, should anxiously look. They are those which the Commissioners are anxious to find, to encourage, and to reward.]

Represents V. § 1 of Codes III. and V. [ ] new matter.

2. The Commissioners have provided a normal establishment adjoining their official house, in Marlborough-street, Dublin, for training teachers and educating persons destined to undertake the charge of schools; and they will not, in future, sanction the appointment of a teacher *permanently* to any school unless he shall have received a certificate from them, or from such one of their officers as they may authorize to examine him on the spot, that he is duly qualified for it.

New Rule, modified in Code V., V. § 2.

3. Persons presented for admission to the normal establishment must produce a certificate of good character from an officiating clergyman of the communion to which they belong; they must take the oath, or make a solemn declaration of allegiance before a magistrate, and in the presence of the Commissioners; they must pass through an examination in "grammar, in the third, fourth, and fifth lesson"-books, published by the Commissioners, and which contain a series of historical, scientific, and general information; also in arithmetic, in geometry, and in mensuration. Those allowed to enter will be boarded and lodged at a house which the Commissioners have taken at Glasnevin, in the immediate neighbourhood of Dublin, and to which an agricultural department is attached. They will receive religious instruction from their respective pastors. "They will attend upon five days in the week at the training and model schools of the Commissioners in Marlborough-street, where lectures are delivered on different branches of knowledge, and where they will be practised in the art of teaching. They will receive instruction at home, particularly in agriculture, upon each evening; and they will attend on Saturdays at a farm which is conducted under the directions of the Commissioners, and where they will see theory reduced to practice. They will undergo a final examination at the close of their course, and each will then receive a certificate according to his deserts."

New Rule. V. § 3 of Code V.

"" omitted in Code V.

Part between " " is made V. § 4 of Code V.

4. The Commissioners will grant a salary to each teacher of from £10 to £30 a year, "varying according to the nature and extent of the instruction which his school affords." "They will also grant annual gratuities to the most deserving teachers according to the reports made upon their conduct;" [and they will require that a further income be secured either by local subscription or school fees, to such amount in each case as they may direct.]

New Rule in part; scale changed in Code V.; part between " " omitted in that Code. Words in [ ] II. § 1 of Code III., and V. § 10 of Code V.

5. Should the Commissioners consider any teacher employed in a school, "towards the building of which they have contributed," unfit for his office, or otherwise objectionable, they will require that he be dismissed, and another provided. "Should such a teacher be found in any other school receiving aid, they will withhold the salary contributed by them until a fit person shall be appointed."

V. § 2, Code III. The words between " " omitted in III. § 6, Code V.

6. Salaries granted by the Commissioners are granted to the teachers individually, therefore no new teacher can receive a salary from them unless they have first approved of him.

V. § 3, Code III. V. § 14, Code V.

IV. Inspection of Schools.

1. "Clergymen of all denominations residing in the neighbourhood of a school, or having any ecclesiastical connexion with the district in which it is situated, although they may not have signed the original application to the Commissioners," are to have free admission to it, not to take part in the ordinary business, nor to interrupt it, but as visitors to observe how it is conducted.

VI. § 5, Code III. Words between " " made "The public generally must," &c., in Code V., IV. § 1.

2. Every teacher of a National school is required to receive courteously "known clergymen

New Rule. Words between " " made "visitors" in Code V.

Code IV., 1838. (Third change.)

or other gentlemen of the neighbourhood," of all denominations, who purpose to inspect it; to afford them free access to the school-room, and full liberty to observe what books are in the hands of the children, or upon the desks; what tablets are hung up on the walls, and what is their method of teaching; but they are by no means required to permit any person to interrupt the business of the school, by asking questions of children, examining classes, calling for papers of any kind, or in any other way diverting the attention of either teachers or scholars from their usual business.

New Rule. 3. Should any such visitors wish for information which they cannot obtain by such inspection, it will be the duty of the teacher to refer them to the patrons or managers of the school for it.

New Rule. 4. Every teacher is required to have his visitors' book lying upon his desk, that visitors may, if they choose, enter remarks in it. Such remarks as may be made, the teachers are by no means to alter or erase.

New Rule omitted in Code V. 5. With respect to persons not clergymen, or not of the neighbourhood, proposing to visit a school, the local managers are at liberty to make such regulations as they may deem expedient. The Commissioners, however, expect that, whether such visits be received or declined, the persons who offer them shall always be treated with respect, and their inspections subjected to the same regulations with those of clergymen residing in the neighbourhood.

New Rule. Words in [ ] made therewith in Code V. 6. As the religious instruction of the children is under the control of the clergyman or lay person communicating it with the approbation of their parents, the Commissioners can give no liberty to any other visitor, whether clergyman or layman, to interfere [at all upon the subject.]

New Rule. 7. The Commissioners, by themselves or their officers, are to be allowed to visit and examine the schools whenever they think fit. Those who visit on the part of the Commissioners will be furnished with credentials under their seal, which they will show to the teachers.

New Rule—superseded by Instructions, IV. 2, §§ 1 to 13, Code V. 8. The Commissioners have divided Ireland into twenty-five school districts, and have appointed a Superintendent for each. He is frequently to visit the several schools committed to his charge; to receive a monthly report upon each from the teacher; and to make one quarterly himself to the Commissioners. He is also to supply them with such local information as they may from time to time require from him, and to act as their agent in all matters in which they may employ him; but he is not invested with authority to decide upon any question affecting a National school, or the general business of the Commissioners, without their direction.

V. Miscellaneous.

Part between " " omitted in III. § 1, Code V. 1. It is the earnest wish of Her Majesty's Government, and of the Commissioners, that the clergy and laity of the different religious denominations in the country should co-operate with one another in conducting National schools. "Nevertheless, the Government and the Commissioners choose rather to leave this expression of their desire to the good feeling of applicants themselves, than to make it the subject of any express stipulation, persuaded that, when practicable, it will be attended to."

Words in [ ] not in Code III. 2. When any school is received by the Commissioners into connexion with them, the inscription "National School," [*and no other,*] shall be put up conspicuously on the school-house; and when a school-house is built partly by aid from them, a stone is to be introduced into the wall having that inscription cut upon it.

Words between " " omitted in Code V.; words in [ ] not in Code III. 3. "The Commissioners do not desire, in ordinary cases, to exercise control over school-houses on Sundays, or beyond the hours of instruction on other days; that control being left to the local managers." But they require that no use shall be made of them tending to contention, such as the holding of political meetings in them, [or bringing into them political petitions or documents of any kind for signature;] and that they shall not be converted into places of public worship. "Such use made of a school-house, built by aid from the Commissioners, will be held to be a violation of the principles of the National Education system. Such a use made of a school-house, after its establishment into connexion with the Board, they will regard as a sufficient reason for withholding further aid."

4. The Commissioners will require that the principles of the following lesson be strictly inculcated in all schools admitted into connexion with them; and that a printed copy of the lesson itself, to be furnished by them, shall be hung up in each school:—

Christians should endeavour, as the Apostle Paul commands them, "to live peaceably with all men" (Rom. ch. xii. v. 18), even with those of a different religious persuasion.

Our Saviour, Christ, commanded his disciples to "love one another." He taught them to love even their enemies, to bless those that cursed them, and to pray for those that persecuted them. He himself prayed for his murderers.

Many men hold erroneous doctrines, but we ought not to hate or persecute them. We ought to seek for the truth, and to hold fast what we are convinced is the truth; but not to treat harshly those who are in error. Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his disciples to fight for him.

If any persons treat us unkindly, we must not do the same to them; for Christ and his apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others, not as they do to us, but as we should wish them to do to us.

Quarrelling with our neighbours, and abusing them, is not the way to convince them that we are in the right and they in the wrong. It is more likely to convince them that we have not a Christian spirit.

We ought to show ourselves followers of Christ, who, "when he was reviled, reviled not again" (1 Pet. ch. ii. v. 23) by behaving gently and kindly to every one.

New Rule. 5. The Commissioners will regard any teacher attending meetings held for political purposes, or taking part in elections for Members of Parliament, as incompatible with the performance of his duties.

No. 5.

CODE V., 1843. (Fourth change.)

RULES and REGULATIONS of the COMMISSIONERS OF NATIONAL EDUCATION and DIRECTIONS for making APPLICATION for AID towards the BUILDING OF SCHOOL-HOUSES, or for the SUPPORT OF SCHOOLS.

I.

1. The Commissioners grant aid towards the building and support of schools of two classes, elementary schools and schools of industry; but they can grant aid only to a limited number of the latter, and these must be at certain distances from each other. [It is an indispensable condition for aid towards a school of Industry, that a work-room shall be annexed to it, if it be situated in a city or town; and if it be a country or rural school, that a certain quantity of land shall be provided for garden culture.] — Words in [ ] not in Code IV.

[It is, however, for the patrons of each National school to determine whether they will make agricultural or other industrial instruction part of the education which it affords. It is for the Commissioners to do what they can in aid of their efforts, by having the teachers taught the principles and practice of improved agriculture during their training course, and by receiving agricultural pupils at the Model Farm, Glasnevin. The Commissioners consider schools for females as of the class of elementary schools; but they require that instruction be there given in sewing, knitting, and other works suited to females.]

II. AS TO GOVERNMENT OF SCHOOLS WITH RESPECT TO ATTENDANCE AND RELIGIOUS INSTRUCTION.

1. The ordinary school business, during which all children, of whatever denomination they may be, are required to attend, is to embrace a "specified" number of hours each day. — "Competent" in Code IV.

2. Opportunities are to be afforded to the children of each school for receiving such religious instruction as their parents or guardians approve of. — See II. 3, Code IV.

3. The patrons of the several schools have the right of appointing such religious instruction as they may think proper to be given therein, provided that each school be open to children of all communions; [that due regard be had to parental right and authority; that accordingly, no child be *compelled* to receive, or be present at any religious instruction to which his parents or guardians object;] and that the time for giving it be so fixed that no child shall be thereby, in effect, excluded, directly or indirectly, from the other advantages which the school affords. Subject to this, religious instruction may be given either during the fixed school hours or otherwise. — NEW RULE. — *First use of the words in* [ ].

4. [In schools, towards the building of which the Commissioners have contributed, and which are, therefore, VESTED in trustees, for the purposes of National Education,] such pastors or other persons as shall be approved of by the parents or guardians of the children respectively, shall have access to them *in the school-room*, for the purpose of giving them religious instruction there, at convenient times to be appointed for that purpose, whether those pastors or persons shall have signed the original application or otherwise. — Represents II. § 2, Code IV.; *the part between* [ ] *is new matter.*

5. In schools NOT VESTED, but which receive aid only by way of salary and books, it is for the patrons to determine whether religious instruction shall be given *in the school-room* or not; but if they do not allow it in the school-room, the children whose parents or guardians so desire, must be allowed to absent themselves from the school, at reasonable times, for the purpose of receiving such instruction ELSEWHERE. — NEW RULE. See II. § 3, Code IV.

6. The reading of the Scriptures, either in the Protestant Authorised or Douay Version, [as well as the teaching of catechisms,] comes within the rule as to religious instruction. — II. § 5 in Code IV. Words in [ ] new.

7. The rule as to religious instruction applies to public prayer and to all other religious exercises. — NEW RULE.

8. The Commissioners do not insist on the Scripture lessons being read in any of the National schools, nor do they allow them to be read during the time of secular or literary instruction, in any school attended by children whose parents or guardians object to their being so read. In such cases, the Commissioners prohibit the use of them, except at the times of religious instruction, when the persons giving it may use these lessons or not, as they think proper. — NEW RULE.

9. "Whatever" arrangement is made in any school for giving religious instruction, must be *publicly notified* in the school-room, in order that those children, and those only, may be present, whose parents or guardians "allow" them. — II. § 4, Code IV., but wording changed. "Approve" in Code IV.

10. If any other books than the Holy Scriptures, or the *standard* books of the Church to which the children using them belong, are employed in communicating religious instruction, the title of each is to be made known to the Commissioners. — II. § 6 in Code IV.

11. [The use of the books published by the Commissioners is not compulsory; but] the titles of all other books which the conductors of schools intend for the ordinary school business, are to be reported to the Commissioners; and none are to be used to which they object; but they prohibit such only as may appear to them to contain matter objectionable in itself, or objectionable for *common* instruction, as peculiarly belonging to some particular religious denomination. — II. § 7 in Code IV., except the words in [ ].

12. A registry is to be kept in each school of the daily attendance of the scholars and the average attendance, according to the form furnished by the Commissioners. — Slightly changed from II. § 8, Code IV.

III. MISCELLANEOUS.

1. It is the earnest wish of Her Majesty's Government, and of the Commissioners, that the clergy and laity of the different religious denominations in the country should co-operate with one another in conducting National schools. — V. § 1, Code IV., part being omitted.

2. When any school is received by the Commissioners into connexion with them, the inscription "NATIONAL SCHOOL," *and no other* shall be put up conspicuously on the school-house; and when a school-house is built partly by aid from them, a stone is to be introduced into the wall having that inscription cut upon it. — V. § 2, Code IV

3. The Commissioners require that no use shall be made of the school-rooms for any purpose tending to contention, such as the HOLDING OF POLITICAL MEETINGS IN THEM, or — V. § 3, Code IV. in part. The part in [ ] new.

CODE V., 1843. (Fourth change.)

bringing into them political petitions or documents of any kind for signature; and that they shall not be converted into places of PUBLIC WORSHIP [The Commissioners require the school-rooms to be used *exclusively for the purposes of education;* and any breach of this rule will be held to be a violation of the principles of the National Education system.]

V. § 3, Code IV.

4. The Commissioners require that the principles of the following lesson, or of a lesson of a similar import, be strictly inculcated in all schools admitted into connexion with the Board, and that a copy of the lesson itself be hung up in each school.

Christians should endeavour, as the Apostle Paul commands them, to "live peaceably with all men" (Rom. ch. xii. v. 18), even with those of a different religious persuasion.

Our Saviour, Christ, commanded his disciples to "love one another;" he taught them to love even their enemies, to bless those that curse them, and to pray for those who persecuted them. He himself prayed for his murderers.

Many men hold erroneous doctrines; but we ought not to hate or persecute them. We ought to seek for the truth, and to hold fast what we are convinced is the truth; but not to treat harshly those who are in error. Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his disciples to fight for him.

If any persons treat us unkindly, we must not do the same to them; for Christ and his Apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others, not as they do to us, but as we should wish them to do to us.

Quarrelling with our neighbours, and abusing them, is not the way to convince them that we are in the right, and they in the wrong. It is more likely to convince them that we have not a Christian spirit.

We ought to show ourselves followers of Christ, who, "when he was reviled, reviled not again" (1 Pet. ch. ii. v. 23), by behaving gently and kindly to everyone.

V. § 5, Code IV., with the exception of words in [ ], which are new.

5. The Commissioners regard the attendance of any of their teachers at meetings held for *political purposes*, or their taking part in elections for members of Parliament, [except by voting,] as incompatible with the performance of their duties, and [as a violation of rule which will render them liable to dismissal.]

Represents III. § 5, Code IV., except the words in [ ], which are new.

6. Should the Commissioners consider any teacher employed in a school [under the Board] unfit for his office, or otherwise objectionable, they require that he be dismissed, and another provided. [Teachers are also liable to be fined or suspended at all times, when the Commissioners shall deem it necessary, on sufficient cause being shown.]

IV. § 7, Code IV.

7. The Commissioners by themselves or their officers are to be allowed to visit and examine the schools whenever they think fit. Those who visit on the part of the Commissioners are furnished with credentials under their Seal.

IV. INSPECTION OF SCHOOLS.

1. *Admission of Visitors.*

Part between " " substituted for "clergymen," &c., in Code IV.

1. "The public generally must have free access to every National school, during the hours devoted to secular instruction"—not to take part in the ordinary business, nor to interrupt it—but as visitors, to observe how it is conducted.

"Visitors" substituted for "known clergymen," &c., in Code IV.

2. Every teacher of a National school is to receive courteously "visitors" of all denominations, to afford them free access to the school-room, and full liberty to observe what books are in the hands of the children, or upon the desks; what tablets are hung up on the walls, and what is the method of teaching; but they are by no means required to permit any person to interrupt the business of the school, by asking questions of children, examining classes, calling for papers of any kind, or, in any other way, diverting the attention of either teachers or scholars from their usual business.

3. Should any visitors wish for information which they cannot obtain by such an inspection, it is the duty of the teachers to refer them to the patrons or managers of the school for it.

4. Every teacher is required to have his Visitors' or Daily Report Book lying upon his desk, that visitors may, if they choose, enter remarks in it. Such remarks as may be made, the teachers are by no means to alter or erase; [and the Superintendent of the district is required to transmit to the Commissioners copies of such remarks as he may deem of sufficient importance to be made known to them.]

Part between [ ] not in Code IV.

IV. § 6 in Code IV.; "therewith" substituted for "at all," &c.

5. As the religious instruction of the children is under the control of the clergyman or lay person communicating it with the approbation of their parents, the Commissioners can give no liberty to any other visitor, whether clergyman or layman, to interfere "therewith."

2. *Inspection by the Commissioners or their Officers.*

All these Instructions from Rules 1 to 13 are NEW.

1. The Commissioners do not take the control or regulation of any school, except their own model school, directly into their own hands, but leave all schools aided by them under the authority of the local conductors. The *Superintendents*, therefore, are not to give direct orders, as on the part of the Board, respecting any necessary regulations, but to point out such regulations to the conductors of the school, that *they* may give the requisite orders.

2. The Commissioners require that every National school be inspected by the *Superintendent of the district*, at least three times in each year.

3. The *Superintendent*, on each inspection, is to communicate with the patron or correspondent, for the purpose of affording information concerning the general state of the school, and pointing out such violations of rule, or defects, if any, as he may have observed; and he is to make such suggestions as he may deem necessary.

4. He is to examine the Visitors' Book, or Daily Report Book, and to transmit to the Commissioners copies of any observations made therein which he may consider to be of importance.

5. He is not to make any observation in the book except the date of his visit, the time occupied in the inspection of the school, showing the precise time at which it commenced, and the precise time at which it terminated; and also the number of scholars present.

6. Upon ordinary occasions, he is not to give any intimation of his intended visit; but during the middle term of the year, from 1st of May to the 31st August, when the inspection is to be public, he is to make such previous arrangements with the local managers, as will facilitate the attendance of the parents of the children, and other persons interested in the welfare of the schools.

7. He is to report to the Commissioners the result of each visit, and to use every means to obtain accurate information as to the discipline, management, and methods of instruction pursued in the school.

8. He is to examine all the classes in succession, in their different branches of study, so as to enable him to ascertain the degree and efficiency of the instruction imparted.

Code V., 1843. (Fourth change.)

9. He is to examine the Class Rolls, Register, and Daily Report Book; and to report with accuracy what is the actual number of children receiving instruction at the school, and what is the daily average attendance.

10. He is to receive a monthly report from the teacher of each school, and also to make one quarterly himself to the Commissioners, in addition to his ordinary report upon the school after each visit.

11. He is also to supply the Commissioners with such local information as they may from time to time require from him, and to act as their agent in all matters in which they may employ him; but he is not vested with authority to decide upon any question affecting a National school, or the general business of the Commissioners, without their direction.

12. When applications for aid are referred to the Superintendent, he is to communicate with the applicant so as to insure an interview, and also with the clergymen of the different denominations in the neighbourhood, with a view of ascertaining their sentiments on the case, and whether they have any, and what, objection thereto. He is also to communicate personally, if necessary, with any other individuals in the neighbourhood.

13. The Superintendent is to avoid all discussions of a religious or political nature; he is to exhibit a courteous and conciliatory demeanour towards all persons with whom he is to communicate, and to pursue such a line of conduct as will tend to uphold the just influence and authority both of managers and teachers.

V. As to Appointment, Conduct of Teachers, &c.

1. The appointment of teachers rests with the local patrons and committees of schools. But the Commissioners are to be satisfied of the fitness of each, both as to character and general qualification. He should be a person of Christian sentiment, of calm temper, and discretion; he should be imbued with a spirit of peace, of obedience to the law, and of loyalty to his Sovereign; he should not only possess the art of communicating knowledge, but be capable of moulding the mind of youth, and of giving to the power which education confers, a useful direction. These are the qualities for which patrons of schools, when making choice of teachers, should anxiously look. They are those which the Commissioners are anxious to find, to encourage, and to reward.

III. § 1, Code IV.

2. The Commissioners have provided a normal establishment in Marlborough-street, Dublin, for training teachers, and educating persons who are intended to undertake the charge of schools; and they do not sanction the appointment of a teacher to any school, unless he shall have [been previously trained at the normal establishment, or shall have been pronounced duly qualified by the superintendent of the district in which the school is situated].

Words in [ ] different, but meaning the same as III. § 2, Code IV.

3. "Teachers selected by the Commissioners" for admission to the normal establishment, must produce a certificate of good character from the officiating clergyman of the communion to which they belong; they must also take the oath, or make a solemn declaration of allegiance before a magistrate, and in the presence of the Commissioners; and they pass through an examination in the books published by the Commissioners. They are to be boarded and lodged at an establishment provided by the Board for the purpose, at Glasnevin, in the immediate neighbourhood of Dublin, to which an agricultural department is attached. They are to receive religious instruction from their respective pastors, who attend on Thursdays at the normal establishment; and on Sundays they are required to attend their respective places of worship; and a vigilant superintendence is at all times exercised over their moral conduct.

Words in " " substituted for "Persons presented" in III. § 3, Code IV.

4. They are to attend upon five days in the week at the training and model schools, where lectures are delivered on different branches of knowledge, and where they are practised in the art of teaching. They are to receive instruction at Glasnevin, particularly in agriculture, daily, and they attend on Saturdays at the farm, which is conducted under the direction of the Commissioners, and where they see theory reduced to practice. They undergo a final examination at the close of their course, and each will then receive a certificate according to his deserts. [The course of training at present occupies a period of four months and a half, and for a considerable time previous to their being summoned, they are required to prepare themselves for the course.]

Forms part of III. § 3, Code IV Words between [ ] not in Code IV.

5. Teachers of schools unconnected with the National Board, if properly recommended, are also admitted to attend the normal establishment as day pupils, without any charge for tuition; but such persons maintain themselves at their own expense.

New Rule.

6. The Commissioners grant salaries to the teachers, varying from £8 to £20 (and in the case of female teachers, from £8 to £15) per annum, "according to the class in which they may be placed; regard being had to their qualifications, the *average number* of children in attendance, the state of the school," and the extent of the instruction afforded in it.

Represents III. § 4 of Code IV.; but scale changed—part about gratuities omitted and conditions in " " added.

7. Teachers of National schools are divided into three classes, to which the following salaries are attached:—1st, or highest class, £20; 2nd, £15; 3rd, £12 per annum; and in the case of female teachers, 1st, or highest, £15; 2nd, £12; 3rd, £10 per annum.

New Rule.

8. Masters and mistresses, not sufficiently qualified for classification, constitute a *probationary* class, and receive at most £8 per annum each, in which they must remain for at least *one year*. They are afterwards to be examined by the Superintendent of the district, or, if in training, by the Professors, and such as are deemed sufficiently qualified to be placed in a higher class, receive the *increase of salary to which they may become entitled, from the commencement of the second year.*

New Rule.

9. National teachers are eligible to be re-classed at the termination of one year from the date of any previous classification. They are also liable to be *depressed* a class if they have conducted themselves improperly, or if their schools have declined, either as regards attendance, or in any other respect.

New Rule.

10. The Commissioners require that a further income be secured to the teacher, either by local subscription or school fees, to such amount in each case as they may direct; [and the Commissioners also require that the payments made by the children shall not be diminished in consequence of any increase of salary which may be awarded to the teacher.]

Represents the latter part of III. § 4, Code IV., with new matter in [ ]. Part in [ ] not in previous Codes.

CODE V., 1843. (Fourth change.)

NEW RULE.

11. In schools consisting of male and female children, occupying the same room, under the care of one male teacher, the Commissioners grant a salary not exceeding £6 per annum, to a teacher of needlework, provided the average daily attendance of children be sufficiently large to warrant the Commissioners in so doing.

NEW RULE.

12. In schools attended by female children only, under the care of a female teacher, such teacher must be competent to conduct the needlework as well as the literary department.

NEW RULE.

13. The Commissioners also grant salaries to assistant literary teachers, of not more than £8 per annum each, in all schools where, in their opinion, the daily average attendance is so large as to render additional teachers necessary.

III. § 6 of Code IV. Words in [ ] added here.

14. Salaries are granted by the Commissioners to the teachers *individually*. No new teacher, therefore, is to receive a salary from them unless they have first approved of him; [the amount is regulated by the class in which he may be placed.]

VI. BOOKS.

I. § 7, Code IV. Condition as to attendance added here.

1. The Commissioners furnish gratuitously to each school a first stock of school-books, in proportion to the attendance of children, which is renewed at the end of every four years. They are to be kept as a school stock, for which the master or mistress is held responsible, and they are on no account to be taken out of the school. The Commissioners also supply books from time to time for the general use of the children, and school requisites, such as paper, slates, quills, &c., at "reduced rates."

"Half cost price" in Code IV.
NEW RULE.
The words between " " left out in Code VIII.

2. The funds of the Commissioners do not enable them to give a free stock sufficiently large for the entire wants of the school. "It consists chiefly of books and lessons suited to the junior classes, viz.:—Spelling and Reading Tablets, First, Second, and Third Books, Grammars, Arithmetics, Copy Lines, and Arithmetical Tablets, also a Register and Report Book. The more advanced Lesson" Books, Maps, Slates, Pencils, and Stationery are to be purchased at the reduced rates.

NEW RULE.

3. When books, &c., purchased from the Commissioners at the reduced price, are sold to the children attending a National school, it is directed that in no case shall any advance be made on these prices; and the Superintendents have instructions to inquire into, and report upon, any infraction of this rule.

NEW RULE, omitted in Code VIII. for 1850.

4. Books are supplied to schools for the poor, not in connexion with the National Board, upon special application, at prices considerably lower than those at which they are sold to the public.

VII. BUILDING.

Substantially a NEW RULE. See I. § 1, Code IV.

1. Before any grant is made towards building a school-house, the Commissioners are to be satisfied that a necessity exists for such a school, that an eligible site has been procured, that a satisfactory lease of the site will be executed to "trustees"; and that the applicant parties are prepared to raise, by local contribution, at least one-third of the whole sum which the Commissioners deem necessary for the erection of the house, providing furniture, &c.

NEW RULE.

2. If the proposed site be for a school in a rural district, and be within three statute miles of a school-house, towards the erection of which the Commissioners have contributed aid, no grant can be made.

I. § 4, in Code IV.

3. Although the Commissioners do not absolutely refuse aid towards the erection of school-houses on ground connected with a place of worship, yet they much prefer having them erected on ground which is not so connected, where it can be obtained; they therefore "require" that, before church, chapel, or meeting-house ground be selected as the site of a school-house, "*strict*" inquiry be made whether another convenient site can be obtained, and that the result shall be stated to them.

"Expect" in Code IV.
Code IV.

Represents part of I. § 2, Code IV., but modified.

4. The school premises must be vested in trustees, at a nominal rent, and for such term, under the circumstances, as the Commissioners may deem necessary.

Represents part of I. §. 2, Code IV.

5. The trustees are to be chosen by the applicants themselves, and their names reported to the Commissioners for their approbation. The trustees are bound to hold the school premises for the purposes of National education, according to the regulations of the Commissioners.

§ 2, Code IV., words in [ ] added here.

6. No alteration is to be made in the trusteeship without the concurrence of the Commissioners. If any of the trustees die, or resign, [or become otherwise incapable of acting,] new trustees shall be elected to supply their place, subject to the approval of the Commissioners.

NEW RULE.

7. The trustees are bound by the terms of the lease to keep the house and furniture in sufficient repair.

NEW RULE.

8. When grants are voted towards the building, &c., of a school-house, the conveyance to trustees must be duly executed *before the works are commenced.*

NEW RULE.

9. No grant can be made until the Superintendent shall have reported upon all the circumstances of the case.

NEW RULE.

10. The Commissioners determine from the information afforded them, the dimensions of the proposed building.

Represents part of I. § 1, Code IV.

11. The Commissioners cannot, in any case, pay more than two-thirds of the sum which they may deem necessary for the erection of the school-house (including furniture, &c.); and they invariably require that the remaining one-third, at least, shall be locally provided for.

NEW RULE; but condition as to number of children is implied in I. § 1, Code IV.

12. The cost of the house, &c., is determined by the number of children which it is intended to accommodate, allowing an area of six square feet for each child.

Example.—A school-house capable of accommodating one hundred children should contain not less than an area of six hundred square feet, and should be ten feet high to the wall-plate.

13. The Commissioners furnish instructions as to the plan and specification, to which the parties receiving aid are bound strictly to adhere.

I. § 5, Code IV.

14. The Commissioners do not contribute to the ornamenting of school-houses, but merely to such expenditure as may be necessary for having the children accommodated in plain substantial buildings. If buildings of another description be preferred, the whole of the extra expense must be provided by the applicants.

15. The Commissioners do not contribute towards the expense of erecting residences for the teachers, except in the case of a district model school. — Code V., 1843. (Fourth change).

16. The house, furniture, &c., must be completed, the teacher or teachers appointed, and the school in operation, before the grants can be paid. — §§ 15 to 20 are New Rules.

17. The whole of the works must be completed within twelve months from the date of the execution of the lease (unless by special permission) or the grants will be forfeited.

18. The Commissioners do not make advances or instalments of their grants.

19. Previous to the payment of the grants, a certificate, according, to a form furnished, must be forwarded to the Commissioners, stating that the school-house, furniture, &c., have been completed in a satisfactory and workmanlike manner, and built according to the dimensions and directions set forth in the plan and specification. This certificate to be signed by the manager, "by the trustees named in the trust deed," and by the contractor. The work to be approved of by the Superintendent of the district, or by any other person authorized by the Commissioners or the Government to examine it; and if a question arise as to the expenditure incurred, the accounts must be submitted to any audit which may be deemed necessary. — Words between " " omitted in Code VI.

20. The Commissioners do not make grants to purchase school-houses, nor to purchase, alter, or furnish other houses, for the purpose of being converted into school-houses.

[Abstract of Trusts in Leases first published with Rules and Regulations.]

VIII. Aid to Schools Previously Established.

1.

1. The aid granted to schools previously established is limited to salary and books. — §§ 1 to 4 are New Rules.

2. Before such aid can be granted, the Commissioners must be satisfied that the case is deserving of assistance; that there is reason to expect that the school will be efficiently and permanently supported; that some local provision will be made in aid of the teachers' salary, either by school-fees or otherwise; that the school-house is in good repair, and provided with a sufficient quantity of suitable furniture; that a competent teacher has been appointed; that the school is in operation; and that there is a *sufficient* daily average attendance of children.

3. Before the Commissioners consider any application for aid, they require, from the Superintendent of the district, a report upon all the circumstances of the case.

4. To entitle a school to a continuance of aid, the house and furniture must be kept in sufficient repair by means of local contributions; the school conducted, in all respects, in a satisfactory manner, and in accordance with the regulations of the Commissioners; and it must appear, from the register of the school, that there is a sufficient daily average attendance of pupils.

2. *Workhouse Schools.*

Extract from the Act for the more effectual Relief of the Destitute Poor of Ireland, 1st and 2nd Vic. ch. 56, sec. 49 :— — Given as an explanation of rules as to religious instruction in a note to II. Code IV.

"And be it enacted, That no order of the Commissioners nor any by-law, shall oblige any inmate of any workhouse to attend or be present at any religious service which may be celebrated in a mode contrary to the religious principles of such inmate, nor shall authorize the education of any child in such workhouse in any religious creed other than that professed by the parents or surviving parent of such child, and to which such parents or parent shall object, or, in the case of an orphan, to which the guardian or guardians, godfather or godmother of such orphan, shall object: Provided also, that it shall be lawful for any regular minister of the religious persuasion of any inmate of such workhouse, at all times in the day, on the request of such inmate, to visit such workhouse, for the purpose of affording religious assistance to such inmate, *and also for the purpose of instructing his child or children in the principles of his religion.*"

Such schools are received into connexion, and grants of books made thereto, on condition that they shall be subject to inspection by the Commissioners, or their officers, and that the provisions of the above enactment, in reference to religious instruction, shall be faithfully observed. — *New Regulation.*

3. *Schools attached to Prisons.*

Such schools are received into connexion, upon the same general principles as the workhouse schools, and grants of books are made thereto. — *New Regulation.*

IX. 1. As applications for aid have frequently been made in respect of expenses incurred previously to any communication with the Commissioners, they desire it to be distinctly understood, that they will not hold themselves bound to grant assistance in any case unless application shall have been made to them in the first instance, unless such applications shall have been approved of, and unless they shall have funds at their disposal when they come to decide upon the case, to enable them to grant the required aid. Applicants are therefore recommended not to incur any expense towards the payment of which they expect the Commissioners to contribute, until the decision of the Board shall have been communicated to them. — §§ 1 to 5 are *new regulations.*

2. Applicants for assistance are not to understand that the Commissioners are bound to grant the full amount of aid as set forth in the foregoing regulations, in every case; nor can they grant any unless they have sufficient funds for the purpose, which depends upon the amount placed at their disposal by Parliament.

3. Persons desirous of obtaining assistance from the Commissioners of Education, under any of the foregoing heads, will, upon intimating to the secretaries the nature of the aid required, be furnished with the forms, upon which their application must be laid before the Commissioners.

4. All communications in reference to National schools should be made by the manager or correspondent. The Commissioners do not correspond with teachers.

5. All letters should be directed as under. No communications are received which are not prepaid, except those containing documents sent from this office, and which are required to be returned.

The Secretaries,
Education Office,
Marlboro' Street, Dublin.

ode VI., 1846. th change.)

No. 6.

RULES and REGULATIONS of the COMMISSIONERS OF NATIONAL EDUCATION, and DIRECTIONS for making APPLICATION for AID towards the BUILDING of SCHOOL-HOUSES, or for the SUPPORT of SCHOOLS.

These Rules and Regulations are the same as Code V., with the exception of the following changes :—

III. § 3 of Code V. is divided into three sections, §§ 3, 4, and 5 in Code VI.
The word "Trustees" in VII. § 1 of Code V. is made "Commissioners in their corporate capacity" in the same place in Code VI.
In VII. § 4 the word "Trustees" in Code V. is made "the Commissioners" in Code VI.
VII. § 5, Code V., beginning with the words "The Trustees," &c., is omitted in Code VI.
VII. § 6, Code V., beginning with the words "No alteration is to be made," &c., is omitted from Code VI.
For § 7, VII. of Code V., the following clause (which is numbered 5) is substituted in Code VI. :—

5. The Commissioners will keep in repair the school-house and furniture, where the premises are vested in them in their corporate capacity.

In VII. § 8, Code V., the words "to trustees" are omitted in the same clause in Code VI., where it is numbered VII. § 6.
In VII. § 19 the words "by the trustees named in the trust deed," is omitted from the clause in Code VI., where it is numbered VII. § 17.

[N.B.—The new Form of Lease, &c., framed to suit those changes, will be found in Section VII., paragraph 6.]

ODE VII., 1848. xth change.)

No. 7.

RULES and REGULATIONS of the COMMISSIONERS OF NATIONAL EDUCATION, and DIRECTIONS for making APPLICATION for AID towards the BUILDING OF SCHOOL-HOUSES, or for the SUPPORT OF SCHOOLS.

These Rules and Regulations are the same as Code V., modified as indicated in Code VI., with the exception of the following changes :—

The word "*Superintendents*," IV. 2, § 1 of Codes V. and VI., is made "*Inspectors*" in Code VII.
The words "*Superintendent of the District*," in IV. 2, § 2 in Codes V. and VI., is made "*Inspector of the District*" in Code VII.
The word the "Superintendent" in IV. 2, § 3 in Codes V. and VI., is made the "*District Inspector*" in Code VII.
The word "*Superintendent*" in IV. 2, § 12 of Codes V. and VI., is made "District Inspector" in Code VII. The same word in V. § 2 of Codes V. and VI. is made "Inspector of the District" in Code VII.
After clause 5 of V., Codes V. and VI., the following new or modified regulations are added, instead of § 7, changing the scale of fees of the same codes in Code VII. :—

6. The Commissioners grant salaries to teachers of National schools at the following rates, subject to the annexed regulations :—

		Males. Per annum.	Females. Per annum.
First class,	1st Division,	£30	£24
	2nd do.	25	20
	3rd do.	22	18
Second class,	1st do.	20	15
	2nd do.	18	14
Third class,	1st Division,	£16	£13
	2nd do.	14	12
Probationary teachers,		10	9
Assistant teachers,		10	9
Mistresses to teach needlework,		,,	6

7. Masters of agricultural model schools, with farms of eight or ten acres annexed, who are competent to conduct both the literary and agricultural departments, are to receive £10 per annum, in addition to the salary of the class in which they may be placed.
8. Masters of National schools, with a small portion of land annexed, consisting of from two to three acres, for the purpose of affording agricultural instruction, will receive £5 per annum in addition to the salary of their class, provided they are competent to conduct both the literary and agricultural departments, and that the Commissioners shall have previously approved of agriculture being taught in the school.

Regulations 8 and 9 of V., Codes V. and VI., represent the modified Regulations 9 and 10 of Code VII., which are as follows—the most essential changes being italicized :—

9. All newly-appointed teachers, who have not previously conducted National schools, are considered as probationers, and must remain as such for at least one year, *at the expiration of which time they will be eligible for classification, and may be promoted, even before being trained, to any class, except the first;* if placed in a higher class, they will receive the *full amount* of salary to which they may become entitled, from the commencement of the second year *of their service under the Board.*
10. All teachers must remain at least one year in a lower division of any class before they are eligible for promotion to a higher division ; *and they must remain two years in a lower class before they are eligible for promotion to a higher class.*

After the latter clauses the following new clauses, numbered 11, 12, 13, 14, and 15, are added in Code VII. :—

11. This regulation does not apply to probationary teachers, nor to teachers who may be promoted on the recommendation of the Professors at the termination of the course of training.
12. None but teachers trained at the normal school of the Commissioners are eligible for promotion to any division of the *first class*, and only upon the recommendation of the Professors, at the termination of the course of training, or of a Board of Inspectors.
13. Examinations are to be held, at specified times, by the Inspectors, with the view of promoting meritorious teachers, while those who may have conducted themselves improperly, or in whose schools the attendance has considerably decreased, will be liable to be depressed.

Code VII., 1848. (Sixth change.)

14. The Commissioners will not grant salary to an assistant teacher, or to a teacher of needlework, unless they are satisfied that the appointment is necessary; and such teachers, *even though they may be classed*, will not be paid any higher rate of salary than the amount awarded to them as assistant teachers, or teachers of needlework, until promoted to the rank of principal teacher, with the sanction of the Commissioners.

15. The Commissioners have determined upon a course of study for each class, in which the teachers are to be examined as a test of their fitness for promotion; but their general conduct, the condition of their respective schools, their method of conducting them, and the daily average attendance of pupils will also be taken into consideration.

The words "£8 per annum each," in V. § 13, Codes V. and VI., are made "£10 per annum to master, and £9 per annum to mistress," in Code VII., where the Regulation is numbered 19 of V., after V. § 14, Codes V. and VI. (numbered in Code VII. as 20. The following Regulations are added in Code VII., where they are numbered 21 and 22:—

21. The Commissioners also award salaries at the following rates, to six male and three female monitors in each district. These are selected by the Inspector from among the best pupils in the National schools:—

For the 1st Year, ...	£4	For the 3rd year, ...	£6
„ 2nd do., ...	5	„ 4th do., ...	7

22. The Commissioners also award premiums to the masters and mistresses of National schools who are most distinguished by the order, neatness, and cleanliness observable in themselves, their pupils, and in the school-houses, at the following rates:—

The sum of £14 10*s.* to be allocated to each of the school districts, to be divided into nine premiums. One of £3; two of £2 each, £4; three of £1 10*s.* each, £4 10*s.*; three of £1 each, £3.

The word "fourth" referring to renewal of stock of school books in VI, § 1 of Codes V. and VI., is made "third" in Code VII.

The word "Superintendent" in VII., § 19 of Codes V. and VII., § 17 of Code VI., is made "Inspectors" in VII., § 17 of Code VII.

[N.B.—The Leases, Declarations of Trusts, &c., based on these Rules and Regulations, and used at this period, will be found immediately after the present Collection.]

No. 8.

Code VIII., 1850. (Seventh change.)

IX. Rules and Regulations of the Commissioners of National Education, and Directions for making Application for Aid towards the Building of School-houses, or for the Support of Schools.

The following are the changes made in the last Code (VII. of the Rules and Regulations):—

II. As to Government of Schools with respect to Attendance and Religious Instruction, to § 3 was added.

"The following explanation of the preceding rule, and observations of the Commissioners, accompanied by the *new Order* issued by them in 1850, in reference to the 9th paragraph of section 2, are taken from their Sixteenth Report."

"We have recently issued an important Order, on the subject of religious instruction, to which we beg to draw your Excellency's attention. In our Report for the year 1847, we stated that our Secretaries having informed us that they had been frequently consulted, both personally and by letter, as to the true meaning of the following portion of section 2, paragraph 3, of the rules of the Board with reference to religious instruction—'That due regard be had to parental right and authority; that, accordingly, no child be compelled to receive, or be present at, any religious instruction to which his parents or guardians object;' and that they deemed it desirable that we should supply them with an authoritative answer to such questions, we directed them, by a minute bearing date 18th November, 1847, to give the following explanation in reply to all such inquiries in future:—

'First—That the true interpretation of the words in question clearly is, that no child be compelled to receive, or to be present at, any religious instruction to which his parents or guardians object; and that this rule (in conjunction with the notification in the school-room of the arrangement for giving religious instruction as required by rule 9, section 2) has hitherto been found amply sufficient for the full enforcement of parental authority.

'Secondly—That though all that is required by this rule (section 2, paragraph 3) is, that the patron should engage not to compel any child to be present at such religious instruction; yet, should the patron use any means, either directly or indirectly, to induce any child to attend such religious instruction, contrary to the desire of his parents or guardians, the Commissioners would consider such conduct inconsistent with the whole spirit of their system.'"

It was with a view to guard against the possibility of such a case arising, that the Commissioners gave the following important explanation of their sentiments in their Eleventh Report, for the year 1844, dated the 24th day of April, 1845:—

"It would be found impossible to lay down in detail any set of rules so accommodated to all the varying circumstances of every locality, and so guarded against all possible mistakes and misrepresentations, as to be secure from being violated in spirit, without any tangible infringement of the letter of them. For example, under our present rules, the patron of a National school may give religious instruction during even the fixed school hours. A patron, Protestant or Roman Catholic, might possibly, availing himself of the letter of this rule, make so unjust a use of this privilege as to drive from the school all children of a persuasion different from his own, or induce them, if they remained, to share in the religious instruction to which they and their parents were conscientiously opposed. In such a case we should immediately interpose, and cause the patron to abandon a course so inconsistent with the whole spirit of our system; or, in case of his refusal, we should strike the school off our roll.

"The Order which we have deemed it right to make is as follows:—'That the following arrangement be adopted for carrying out more effectually the rule as to the notification of the time for giving religious instructions, as set forth in the 9th paragraph of section 2 of the rules and regulations of the Commissioners:—

'First—That the public notification of the time for religious instruction shall be inserted in large letters in the "Time Table" supplied by the Commissioners to all National schools; and the Commissioners strongly recommend that, as far as may be practicable, the general nature of such religious instruction shall be also stated on the "Time Table."

'Secondly – That the "Time Table" shall be kept constantly hung up in a conspicuous place in the school-room.

'Thirdly—That, in order "that no child be compelled to receive, or to be present at, any religious instruction to which his parents or guardians object," the teacher shall immediately before the commencement of religious instruction, announce distinctly to the pupils that the hour for religious instruction has arrived, and shall at the same time, put and keep up, during the period allotted to such religious instruction, and within the view of all the pupils, a notification thereof, containing the words "Religious Instruction," printed in large characters, on a form to be also supplied by the Commissioners.

'Fourthly—That, when the secular instruction shall precede the religious instruction in any National school, there shall be a sufficient interval between the announcement and the commencement of the religious instruction; and whether the religious or the secular instruction shall have priority in any National school, the books used for the instruction first in order, shall be carefully laid aside at its termination, in the press or other place appropriated for keeping the school-books.'

"Although, so far as we are aware, no case has ever yet occurred in which proselytism has taken place, either on the Roman Catholic or Protestant side in any National school, yet fears have been entertained that such attempts might be made during the time set apart for religious instruction. The arrangement we have now adopted will, we trust, go far to remove such fears, and cannot be objected

CODE VIII., 1850. (Seventh change.)

to by anyone who places his school under us with the honest purpose of acting upon our leading principle. In founding our system, Lord Stanley announced, 'that even the suspicion of proselytism should be banished from it'—'that security would be afforded by it'—'that the most scrupulous care should be taken not to interfere with the peculiar tenets of any description of Christian pupils.' His language in this respect is in exact accordance with that employed in the fourteenth report of the 'Commissioners for inquiry into the state of all schools on public or charitable foundations in Ireland.' In that report, published in 1812, and signed by the Archbishops of Armagh and Cashel, by the Bishop of Killala, and by Provost Elrington, the Commissioners declare their hope that the scheme of National Education proposed by them will be cordially accepted by the people of Ireland. And they add these memorable words: 'That such will be its acceptance we shall indulge the more confident expectation, if all interference with the particular religious tenets of those who are to receive that instruction shall, in the first instance, be unequivocally disclaimed, and effectually guarded against. We conceive this to be of essential importance in any new establishments for the education of the lower classes in Ireland: and we venture to express our unanimous opinion that no such plan, however wisely and unexceptionably contrived in other respects, can be carried into effectual execution in this country, unless it be explicitly avowed, and clearly understood as its leading principle, that no attempt shall be made to influence or disturb the peculiar religious tenets of any sect or description of Christians.' No person who does not from his heart adopt the sentiments here expressed by the Commissioners, and which are embodied in Lord Stanley's letter, can conscientiously avail himself of our grants; and no one who does adopt those sentiments can object to the order which we have issued on this occasion."

§ 8 was modified as follows :—

8. The Commissioners do not insist on the "Scripture Lessons," [*"Lessons on the Truth of Christianity," or book of "Sacred Poetry,"*] being read in any of the National schools; nor do they allow them to be read "during the time of secular or literary instruction," in any school attended by children whose parents or guardians object to their being so read. In such case the Commissioners prohibit the use of them, "except at the times of religious instruction, when the persons giving it may use these [books] or not, as they think proper."

The words in [ ] were added in this Code, those between " " were omitted in the next one (Code IX., 1853).

V. As to Appointment, Salaries, Conduct of Teachers, &c.

1. *General Rules as to Appointment and Classification of Teachers.*

§ 1 was modified as follows :—

The words in italics added in this Code.

1. The appointment of teachers rests with the Local Patrons and Committees of Schools, but the Commissioners are to be satisfied with the fitness of each, both as to character and general qualification; *and the local patrons have the power of removing the teachers of their own authority.* The teacher should be a person of Christian sentiment, of calm temper, and discretion; he should be imbued with a spirit of peace, of obedience to the law, and of loyalty to his Sovereign; he should not only possess the art of communicating knowledge, but be capable of moulding the mind of youth, and of giving to the power which education confers, a useful direction. These are the qualities for which patrons of schools, when making choice of teachers, should anxiously look. They are those which the Commissioners are anxious to find, to encourage, and to reward.

§ 6 was modified as follows :—

V. § 9, Code VII. Words in [ ] not in corresponding rule of Code VII.

6. All teachers, appointed [after the 1st of April, 1851, who have not been previously classed by the professors or by a Board of Inspectors,] shall be paid as probationers, [until they be examined at the first general or special examination held in the district subsequently to their appointment.] Those who then obtain classification, will be paid from the commencement of [their service under the Board] according to the rate of salary attached to their class.

And the following new rules were added :—

NEW RULE.

7. This rule will not extend to any teachers who, when summoned, shall fail, from any cause whatever, to present themselves for examination.

NEW RULE.

8. All teachers who have been unsuccessful at their first examination, and who may be retained on trial, shall receive the salary of the class to which they may be promoted, at any subsequent examination, from the commencement of the quarter in which their classification shall be determined.

§ 12 (§ 10 of Code 7) was enlarged as follows :—

V. § 10 of Code VII.

Part in [ ] added in Code IX.

12. All teachers must remain at least one year in a lower division of any class before they are eligible for examination with a view to promotion to a higher division; and they must remain two years in a class before they can become candidates for a higher class. [These conditions, however, being fulfilled, teachers of superior attainments may be advanced from any division of one class to any division of another after their first classification (except untrained teachers who cannot be placed in the first class) without requiring them to pass through the intermediate divisions.]

§ 14 was added § 11 of Code 7 or § 14 of present one :—

NEW RULE.

14. All teachers, except probationers, recommended for promotion after a course of training, will receive the increase of salary from the commencement of the quarter in which they are classed by the professors.

The following new rules were added after § 15 of Code 7, or § 16 of the present one :—

NEW RULE.

17. No teacher will be admitted to examinations with a view to promotion, on whose school a decidedly unfavourable report has been made by the District Inspector within the previous year.

NEW RULE.

18. Teachers will not be eligible for promotion, unless, in addition to satisfactory answering in the course prescribed for the class to which they aspire, it appears from the reports of their respective District Inspectors, that their schools are properly organized and well conducted; that adequate exertions have been made by them to keep up a sufficient average attendance; that their junior classes are carefully taught, and that a fair proportion of the pupils of the higher classes, besides being proficients in the ordinary branches of reading, spelling, and writing, are possessed of a respectable amount of knowledge in, at least, grammar, geography, and arithmetic. In female schools it will be further requisite that instruction in plain needle-work, including sewing, knitting, and cutting out, be given to all girls capable of receiving it, and that they exhibit a due proficiency in this department.

19. It must also appear from the reports of their Inspectors, that their school accounts have been regularly and correctly kept, that their schools and school premises have been preserved with neatness and order, and that cleanliness in person and habits has been enforced on the children attending them. — Code VIII., 1850. (Seventh change.)
20. Satisfactory certificates of conduct and character will be required of all candidates. — New Rule.
21. Every National teacher will be furnished, on application to the District Inspector, with a copy of the programme of the course of study above referred to, in which is stated the minimum of proficiency required for each class. — New Rule. New Rule.
22. The Head and District Inspectors are authorized to recommend that such teachers be removed, fined, or lowered in their classification as may have conducted themselves improperly, or in whose schools the attendance has considerably decreased, or who, from any other cause, may seem to these officers to merit such punishment. — New Rule.

2. *Salaries and Gratuities to Teachers and Paid Monitors.*

§ 1. The scale of salaries was modified as follows :—

1. The Commissioners grant salaries and gratuities to teachers and to paid monitors of National schools at the following rates, subject to the foregoing and annexed regulations :— — New scale of salaries.

Ordinary National Schools.

		Males. Per annum.	Females. Per annum.
First Class Teachers,	1st Division,	£35	£24
	2nd do.,	28	20
	3rd do.,	24	18
Second Class do.,	1st Division,	21	16
	2nd do.,	19	15
Third Class do.,	1st Division,	17	14
	2nd do.,	15	13

	Males. Per annum.	Females. Per annum.
Probationary Teachers,	£11	£10
Assistant Teachers, if qualified as Probationers only,	11	10
Do. if qualified for any Division of a higher Class,	15	13
Mistresses to teach Needlework,	„	8

V. § 7, Code VII., was modified into the following rule, under a special heading :—

Agricultural Schools.

1. Masters of Agricultural Model Schools who are competent to conduct both the literary and agricultural departments are, whatever may be their classification, to receive £10 per annum, in addition to the salary of the class in which they may be placed; [and provided their income from the Board, with this addition, should fall short of £30 per annum, the difference will be granted to them, so that, in all cases, such teachers shall have secured to them for their *combined* services a salary of £30 a year at least.] — V. § 7 of Code VII. Part in [ ] new matter.

The following new rules were added after V. § 8 of Code VII., which is § 2 under the sub-head of Agricultural Schools in this Code :—

3. In cases where a sufficient number of acres of land are attached to workhouse schools in connexion with the National Board of Education, the Commissioners award annual gratuities, not exceeding £15 to each, to such of the agricultural teachers who shall be recommended as deserving of them by the agricultural Inspectors. — New Rule.

Assistant Teachers.

Salary not to exceed £15 for males, and £13 for females. — £10 and £9 in Code VII.

1. The Commissioners will not grant a higher rate of salary than the above to an assistant teacher, even if classed; nor will they consider any application for a grant of salary to an assistant in any school in which there is not a daily average attendance of at least seventy-five pupils; and in schools whose average attendance does not rise considerably above this, and which are already provided with paid monitors, assistants cannot be recognised by the Board. — New Rule.
2. When applications for an assistant are laid before the Commissioners, they will determine whether it will not be more advisable to appoint a paid monitor. — New Rule.
3. Assistant teachers will not be sanctioned whose qualifications are not at least equal to those required of probationers. — New Rule.

The modifications in the remainder of V., Code VII., commencing at § 17, and § 1 under a new sub-head, "Workmistresses," in the present Code, are indicated by marginal references, as follows :—

Workmistresses.

Salary, £8 per annum. — £6 in Code VII.

1. The Commissioners will not grant salary to workmistresses unless there be a sufficient daily average attendance of pupils, and the Commissioners require that at least two hours each day be devoted by them to instruction in this branch. — V. § 17, Code VII.
2. In schools attended by female children only, under the care of a female teacher, such teacher must be competent not only to conduct the literary department, but also to give instruction in needlework. — V. § 18, Code VII.

Schools in Connexion with Religious Bodies. — New Rule.

1. In schools of this description, salary is paid according to a per-centage on the daily average attendance :—

£20 per annum for 100 daily average.
£40 „ 200 „
£60 „ 300 „
£77 „ 400 „

£94 per annum for 500 daily average.
£111 „ 600 „
And for every 50 over 600 at the rate of £15 per cent.

Code VIII., 1850. (Seventh change.)

New Rule.

Industrial Schools.

1. In National schools where embroidery and other high branches of needlework are taught, the amount of salary granted for giving such instruction is regulated by the nature of the work, and the number of pupils engaged in it.

Paid Monitors.

Salaries in italics differ from Code VII. Words in italics show change made from Code VII.

SALARIES.

For the First Year,	£4	*For the Third Year,*	*£7*
For the Second Year,	£5	*For the Fourth Year,*	*£8*

Rules and *Regulations* 2 to 10 inclusive are New.

1. The number of paid monitors is limited to *eight* males and *four* females in each district, selected from among the best pupils in the National schools, and appointed upon the recommendation of the District Inspectors, *subject to the approval of the Commissioners.*
2. This appointment cannot be held for a longer period than FOUR YEARS, at the expiration of which the salary will be discontinued.
3. The salary may, however, be withdrawn at any time, should want of diligence, efficiency, or good conduct, on the part of the monitor, or any other circumstance, render such a course desirable.
4. The District Inspector selects the schools to which paid monitors should be appointed; and when vacancies occur, whether before or after the expiration of four years, it does not necessarily follow that a successor shall be appointed in the same schools.
5. When all the district model schools are established, candidates for the office of paid monitor must undergo a public examination by the Inspectors, in a prescribed course, to be held in those schools.
6. The selection will be made, as far as possible, from those who have shown aptitude for teaching.
7. The candidates should not be under fourteen nor over sixteen years of age. They must be of a sound and healthy constitution, and free from any physical defect likely to impair their efficiency as teachers.
8. The school to which the candidate belongs should exhibit a tolerable degree of efficiency, should have a sufficient average attendance to require a paid monitor, and the teacher should be qualified to give instruction in the prescribed course.
9. The paid monitors' programme can be obtained on application to the District Inspector.
10. Paid monitors who have completed the four years of their course in a satisfactory manner, are eligible, on examination by the Inspectors, for the situation of assistant teacher, or of pupil-teachers in district model schools.

Scale of Gratuities to Masters and Mistresses of Workhouse Schools.

Last paragraph of VIII., Code VII.

1. The Commissioners of National Education have resolved, with the concurrence of the Poor Law Commissioners, to award annual gratuities to a certain number (forty males and forty females) of the teachers of the workhouse schools, in connexion with the National Board, who shall be recommended by the District Inspectors.
2. The gratuities are divided into two classes :—

For Male Teachers,	First Class, Twenty at £6 a-year each.	For Female Teachers,	First Class, Twenty at £5 a-year each.
	Second Class, Twenty at £4 a-year each.		Second Class, Twenty at £3 a-year each.

Rules 3 to 5 inclusive under this head are New.

3. The payment will be made half-yearly, with the usual issue of salary to teachers of National schools, after the 31st March, and 30th September, in each year.
4. It is to be understood that such gratuities are given in *addition* to the salaries paid to the teachers of workhouse schools, under the provisions of the Poor Law Act.
5. No teacher is precluded from receiving the gratuity two or more years in succession, if recommended by the District Inspector as deserving of it; but a teacher having received one year's gratuity, is not thereby *entitled* to a continuance of it.

V. § 22, Code VII.

Scale of Premiums to Masters and Mistresses of National Schools who are most distinguished by the Order, Neatness, and Cleanliness observable in themselves, their Pupils, and in the School-houses.

1. The sum of £22 10*s.* will be allocated to each of the school districts, and divided into thirteen premiums:

Scale differs from Code VII.

One of £4	£4	Five of £1 10*s.*	£7 10*s.*
Two of £3	£6	Five of £1	£5

Rules 2 to 4 inclusive under this head are New.

2. These premiums will be awarded ANNUALLY on the recommendation of the District Inspector, and paid at the end of the year.
3. No distinction is made between vested and non-vested schools.
4. No teacher is eligible for those premiums for more than two years in succession.
5. These premiums will be awarded without reference to the class in which the teacher may be placed; but none will be deemed eligible to receive such premiums against whom there is any well-founded charge of neglect in the performance of their duties, of impropriety in their conduct, or whose schools are not conducted in a satisfactory manner.

VI.—Books.

The same as VI. § 1 of Code VII.

1. The Commissioners furnish gratuitously to each school a first stock of school-books, in proportion to the attendance of children, which is renewed at the end of every three years. They are to be kept as a school stock, for which the master or mistress is held responsible, and they are on no account to be taken out of the school. The Commissioners also supply books from time to time for the general use of the children, and school requisites, such as paper, slates, quills, &c., at reduced rates.
2. The funds of the Commissioners do not enable them to give a free stock sufficiently large for the entire wants of the school. Any additional books and maps, stationery, slates, clocks, and other requisites, must be purchased at reduced rates.

New Rule. VI. § 2 of Code VII.; the words beginning "It con-

3. The value of the grant is regulated by the daily average attendance, as ascertained from the reports of the Inspectors. The managers of schools have the privilege of selecting their grants of free stock from the *whole* list of books supplied by the Commissioners, and are at liberty to choose such of them as they most approve of, and to omit any to which they object.

4. When books, &c., purchased from the Commissioners at the reduced price, are sold to the children attending a National school, it is directed that in no case shall any advance be made on these prices; and the District Inspectors have instructions to inquire into and report upon any infraction of this rule.

CODE VIII., 1850. (Seventh change.)

VII. BUILDING.

The only change in this division of the Rules and Regulations is the substitution of "Clerk of Works" for "District Inspectors" in § 17.

The remaining Rules are the same as Code VII., with, however, the addition of the following list of Books published or sanctioned by the Commissioners:—

sists," &c., and ending with "advanced Lesson" in preceding Codes, omitted here.

APPENDIX XI.—1. LIST of the WORKS published by the COMMISSIONERS of EDUCATION, with the Reduced Prices at which they are sold to National Schools.

	s.	d.
First Book of Lessons,	0	0½
Second do.	0	2
Sequel to the Second Book, No. I. (new work),	0	3
Do. No. II.	0	3
Third Book of Lessons,	0	4
Fourth do.	0	5
Supplement to the Fourth Book,	0	6
Fifth Book (Boy's),	0	6
Reading Book for Girls' School,	0	6
Biographical Sketches of eminent British Poets, chronologically arranged from Chaucer to Burns, with criticisms on their works, selected from the most distinguished writers, intended for the use of Teachers and the higher classes in Schools, 1 vol.	0	6
Selections from the British Poets, in two volumes, chronologically arranged from Chaucer to the present time, and under separate divisions, with Introductions to each, explaining the different species of Poetry. Each volume is complete in itself, and sold separately.		
The First Volume contains Sacred, Moral, and Didactic; Descriptive and Pastoral Poetry,	0	6
The Second Volume contains Selections under the following heads:—The Seasons and Months; Morning, Noon, and Night; Portraits of Characters; Natural Phenomena; Natural History, comprising Flowers, Trees, Shrubs, Birds, Insects, and Animals; also, Specimens of Narrative, Pathetic, Elegiac, and Lyric Poetry, &c.	0	6

Exercises Book, 1, 2, 3, each,	0	3
Slates ruled for Music,	0	1
Tuning Forks,	1	3

PARTICULAR ATTENTION IS REQUESTED TO THE FOLLOWING INSTRUCTIONS.

1. All applications for books and requisites at reduced prices must be addressed to the Secretaries, and be accompanied by a money order for the amount, in favour of MAURICE CROSS, or JAMES KELLY, esq., and PAYABLE IN DUBLIN ON DEMAND.

2. When a Post Office order is transmitted, and the amount is under TEN SHILLINGS, the Postmaster's charge must be paid by the person applying for the order; if the sum exceeds Ten Shillings, it is to be handed to the Postmaster, who will deduct his charge, and requisites will be given for the *full amount* PAID.

3. The Correspondent is not to sign any application for books and requisites without first ascertaining that they are actually wanted for the school on behalf of which the application is made. The Inspectors are required to report to the Secretaries whenever it appears that an undue quantity of books or stationery has been ordered for a National school.

4. Books and requisites ordered for delivery *at this Office* are to be called for between the hours of 10 and 4 o'clock, and not sooner than two days, after the receipt of the money. The carriers must produce the order of the Manager.

5. All applications for books and requisites, at reduced prices, are to be PREPAID by the Managers, or the amount of postage will be deducted from the grant.

6. When there are separate ROLL NUMBERS for male and female National Schools, the application should state for which of them the books, &c., are required; and if for both, *two* forms should be used.

2.—LIST of the WORKS published by the COMMISSIONERS of EDUCATION, with the reduced Prices at which they are sold to poor Schools not in connexion with the Board.*

No. 9.

Code IX., 1853. (Eighth change.)

I.—Rules and Regulations of the Commissioners of National Education, and Directions for making Application for Aid towards the Building of School-houses, or for the Support of Schools.

I.—The Commissioners grant aid towards the building and support of schools of two classes, "elementary schools and schools of industry; but they can grant aid only to a limited number of the latter, and these must be at certain distances from each other. It is an indispensable condition for aid towards a school of industry, that a work-room shall be annexed to it, if it be situated in a city or town; and if it be a country or rural school, that a certain quantity of land shall be provided for garden culture."

Part I., Sect. III., § 1 of Code X. Part between " " omitted in that Code.

"It is, however, for the patrons of each National school to determine whether they will make agricultural or other industrial instruction part of the education which it affords. It is for the Commissioners to do what they can in aid of their efforts, by having the teachers taught the principles and practice of improved agriculture during their training course, and by receiving agricultural pupils at the Model Farm, Glasnevin." The Commissioners consider schools for females as of the class of elementary schools; but they require that instruction be there given in sewing, knitting, and other works suited to females.

Part I., Sect. III., § 4 of Code X. Part between " " omitted in that Code.

II. As to Government of Schools with respect to Attendance and Religious Instruction.

1. The ordinary school business, during which all children, of whatever denomination they may be, are required to attend, is to embrace a specified number of hours each day.

Differently worded in Part I., Sect. IV., § 19 of Code X.

2. Opportunities are to be afforded to the children of each school for receiving such religious instruction as their parents or guardians approve of.

Part I., Sect. IV., § 1 of Code X. Parts between " " omitted in that Code.

3. "The patrons of the several schools have the right of appointing such religious instruction as they may think proper to be given therein," provided that each school be open to children of all communions; that due regard be had to parental right and authority; that, accordingly, no child be *compelled* to receive, or to be present at, any religious instruction [to] which his parents or guardians [object]; and that the time for giving it be so fixed, that no child shall be thereby, in effect, excluded, directly or indirectly, from the other advantages which the school affords. "Subject to this, religious instruction may be given either during the fixed school-hours or otherwise."

Part I., Sect. IV., § 2 of Code X.

[Of] in Code X.

[Disapprove] in Code X.

Words between " " omitted in Code X.

"The following explanation of the preceding rule, and observations of the Commissioners, accompanied by the *new order* issued by them in 1850, in reference to the 9th paragraph of section 2, are taken from their Sixteenth Report."

This explanation omitted in Code X.

"'We have recently issued an important order, on the subject of religious instruction, to which we beg to draw your Excellency's attention. In our report for the year 1847, we stated that our Secretaries having informed us that they had been frequently consulted, both personally and by letter, as to the true meaning of the following portion of section 2, paragraph 3, of the rules of the Board with reference to religious instruction—'That due regard be had to parental right and authority; that, accordingly, no child be compelled to receive, or be present at, any religious instruction to which his parents or guardians object;' and that they deemed it desirable that we should supply them with an authoritative answer to such questions, we directed them, by a minute bearing date 18th November, 1847, to give the following explanation in reply to all such inquiries in future:—"

"'First—That the true interpretation of the words in question clearly is, that no child be compelled to receive, or to be present at, any religious instruction to which his parents or guardians object; and that this rule (in conjunction with the notification in the school-room of the arrangement for giving religious instruction as required by Rule 9, section 2) has hitherto been found amply sufficient for the full enforcement of parental authority."

(*a.) "'Secondly—That though all that is required by this rule (section 2, paragraph 3) is, that the patron should engage not to compel any child to be present at such religious instruction, yet, should the patron use any means, either directly or indirectly, to induce any child to attend such religious instruction, contrary to the desire of his parents or guardians, the Commissioners would consider such conduct inconsistent with the whole spirit of their system.'"

(*a.) Part I., Sect. IV., § 15 of Code X.

"It was with a view to guard against the possibility of such a case arising, that the Commissioners gave the following important explanation of their sentiments in their Eleventh Report, for the year 1844, dated the 24th day of April, 1845:—"

Omitted in Code X.

"'It would be found impossible to lay down in detail any set of rules so accommodated to all the varying circumstances of every locality, and so guarded against all possible mistakes and misrepresentations, as to be secure from being violated in spirit, without any tangible infringement of the letter of them. For example, under our present rules, the patron of a National school may give religious instruction during even the fixed school-hours. A patron, Protestant or Roman Catholic, might possibly, availing himself of the letter of this rule, make so unjust a use of this privilege as to drive from the school all children of a persuasion different from his own, or induce them, if they remained, to share in the religious instruction to which they and their parents were conscientiously opposed. In such a case we should immediately interpose, and cause the patron to abandon a course so inconsistent with the whole spirit of our system; or, in case of his refusal, we should strike the school off our roll."

Omitted in Code X.

"'The order which we have deemed it right to make is as follows:—'That the following arrangement be adopted for carrying out more effectually the rule as to the notification of the time for giving religious instructions, as set forth in the 9th paragraph of section 2 of the Rules and Regulations of the Commissioners:—"

(*1.) "'First—That the public notification of the time for religious instruction shall be inserted in large letters in the "time-table" supplied by the Commissioners to all National schools; and the Commissioners strongly recommend that, as far as may be practicable, the general nature of such religious instruction shall be also stated on the "time-table."

(*1.) Forms Part I., Sect. IV., § 3 of Code X.

Code IX., 1853. (Eighth change.)

(*2.) "'Secondly—That the "time-table" shall be kept constantly hung up in a conspicuous place in the school-room.

*2 Forms Part I., Sect. IV., § 4 of Code X.

(*3.) "'"Thirdly—That, in order "that no child be compelled to receive, or to be present at, any religious instruction to which his parents or guardians object," " the teacher shall immediately before the commencement of religious instruction, announce distinctly to the pupils, that the hour for religious instruction has arrived, and shall, at the same time, put and keep up, during the period allotted to such religious instruction, and within the view of all the pupils, a notification thereof, containing the words "religious instruction," printed in large characters, on a form to be also supplied by the Commissioners.

*3 Forms Part I., Sect. IV., § 5 of Code X.

(*4.) "'Fourthly—That, when the secular instruction shall precede the religious instruction in any National school, there shall be a sufficient interval between the announcement and the commencement of the religious instruction, and, whether the religious or the secular instruction shall have priority in any National school, the books used for the instruction first in order, shall be carefully laid aside at its termination in the press or other place appropriated for keeping the school-books.'

*4 Forms Part I., Sect. IV., § 6 of Code X.

Passage between " " omitted from Code X.

"'Although, so far as we are aware, no case has ever yet occurred in which proselytism has taken place, either on the Roman Catholic or Protestant side, in any National school, yet fears have been entertained that such attempts might be made during the time set apart for religious instruction. The arrangement we have now adopted will, we trust, go far to remove such fears, and cannot be objected to by anyone who places his school under us, with the honest purpose of acting upon our leading principle. In founding our system, Lord Stanley announced, 'that even the suspicion of proselytism should be banished from it'—'that security would be afforded by it'—'that the most scrupulous care should be taken not to interfere with the peculiar tenets of any description of Christian pupils.' His language in this respect is in exact accordance with that employed in the Fourteenth Report of the 'Commissioners for inquiry into the state of all schools on public or charitable foundations in Ireland.' In that Report, published in 1812, and signed by the Archbishops of Armagh and Cashel, by the Bishop of Killala, and by Provost Elrington, the Commissioners declare their hope that the scheme of National Education proposed by them will be cordially accepted by the people of Ireland. And they add these memorable words: 'That such will be its acceptance we shall indulge the more confident expectation, if all interference with the particular religious tenets of those who are to receive that instruction shall, in the first instance, be unequivocally disclaimed, and effectually guarded against. We conceive this to be of essential importance in any new establishments for the education of the lower classes in Ireland: and we venture to express our unanimous opinion that no such plan, however wisely and unexceptionally contrived in other respects, can be carried into effectual execution in this country, unless it be explicitly avowed, and clearly understood, as its leading principle, that no attempt shall be made to influence or disturb the peculiar religious tenets of any sect or description of Christians.' No person who does not from his heart adopt the sentiments here expressed by the Commissioners, and which are embodied in Lord Stanley's letter, can conscientiously avail himself of our grants; and no one who does adopt those sentiments can object to the order which we have issued on this occasion."

Part I., Sect. IV., § 8 of Code X.

4. In schools, towards the building of which the Commissioners have contributed, and which are, therefore, VESTED in trustees, for the purposes of National education, or which are vested in the Commissioners in their corporate capacity, such pastors or other persons as shall be approved of by the parents or guardians of the children respectively, shall have access to them *in the school-room*, for the purpose of giving them religious instruction there, at convenient times to be appointed for that purpose, whether those pastors or persons shall have signed the original application or otherwise.

Part I., Sect. IV., § 9 of Code X.

5. In schools NOT VESTED, but which receive aid only by way of salary and books, it is for the patrons to determine whether religious instruction shall be given *in the school-room* or not; but if they do not allow it in the school-room, the children whose parents or guardians so desire, must be allowed to absent themselves from the school, at reasonable times, for the purpose of receiving such instruction ELSEWHERE.

Rules 6 and 7 of this Code form Part I., Sect. IV., § 10 of Code X.

6. The reading of the Scriptures, either in the Protestant Authorized or Douay Version, as well as the teaching of catechisms, comes within the rule as to religious instruction.

7. The rule as to religious instruction applies to public prayer and to all other religious exercises.

Part I., Sect. VI., § 3 of Code X.

8. The Commissioners do not insist on the "Scripture Lessons" or book of "Sacred Poetry" being read in any of the National schools, nor do they allow them to be read [as part of the ordinary school business (during which all children, of whatever denomination they may be, are required to attend)] in any school attended by children whose parents or guardians object to their being read by their children.

Part between [ ] new matter.

Part between [ ] new matter.

In such cases the Commissioners prohibit the use of [these books,] except at times [set apart for the purpose, either before or after the ordinary school business, and under the following conditions:—]

New clauses: the three are omitted in Code X.

"First—That no child whose parent or guardian objects, shall be required, directly or indirectly, to be present at such reading."

"Second—That in order that no child, whose parent or guardian objects, may be present at the reading of the books above specified, public notification of the time set apart for such reading shall be inserted in large letters in the time-table of the school—that there shall be a sufficient interval between the conclusion of the ordinary school business and the commencement of such reading; and that the teacher shall immediately, before its commencement, announce distinctly to the pupils that any child whose parent or guardian so desires may then retire."

"Third—That in every such case there shall be, exclusive of the time set apart for such reading, sufficient time devoted each day to the ordinary school business, in order that those children who do not join in the reading of the books may enjoy ample means of literary instruction in the school-room." — Code IX., 1853. (Eighth change.)

9. Whatever arrangement is made in any school for giving religious instruction, must be *publicly notified* in the school-room, in order that those children, and those only, may be present whose parents or guardians allow them.* — May be considered as represented by Part I., Sect. IV., §§ 3 and 5 of Code X.

10. If any other books than the Holy Scriptures, or the *standard* books of the Church to which the children using them belong, are employed in communicating religious instruction, the title of each is to be made known to the Commissioners. — Part I., Sect. VI., § 2, Code X., but see proviso in the Rule in that Code.

11. The use of the books published by the Commissioners is not compulsory; but the titles of all other books which the conductors of schools intend for the ordinary school business, are to be reported to the Commissioners; and none are to be used to which they object; "but they prohibit such only as may appear to them to contain matter objectionable in itself, or objectionable for *common* instruction, as peculiarly belonging to some particular religious denomination." — Part I., Sect. VI., § 1 of Code X.; the passage in " " omitted in that Code, and a limitation added, which see.

12. A registry is to be kept in each school of the daily attendance of the scholars, and the average attendance, according to the form furnished by the Commissioners. — Omitted in Code X.

III. Miscellaneous.

1. It is the earnest wish of Her Majesty's Government, and of the Commissioners, that the clergy and laity of the different religious denominations in the country should co-operate with one another in conducting National schools. — Part I., Sect. I., § 2 of Code X.

2. When any school is received by the Commissioners into connexion with them, the inscription "National School," "*and no other*, shall be put up conspicuously on the school house; and when a school-house is built partly by aid from them, a stone is to be introduced into the wall having that inscription cut upon it. — Part I., Sect. X., § 1. Words between " " omitted in that Code.

This rule is not to be understood as precluding the addition to the terms "National School" of the description of children for whom the school is designed, as male, female, or infant, or of the proper local designation of the city, town, parish, street, village, or townland, in which the school may be situated; but the Commissioners will not sanction the inscription of any title of a denominational character, or which may appear to them to indicate that the school is one peculiarly belonging to any particular religious body. — Explanation of Rule new, embodied in Rule in Code X.

3. The Commissioners require that no use shall be made of the school-rooms for any purpose tending to contention, such as the HOLDING OF POLITICAL MEETINGS IN THEM, or bringing into them political petitions or documents of any kind for signature. — The latter part of this Rule represents Part I., Sect. V., § 6 of Code X.

4. The Commissioners require that the National school-rooms shall not be converted into places of PUBLIC WORSHIP. — Part I., Sect. V., §§ 2 and 3 of Code X. represents this rule, but in a materially altered form in the latter.

5. The Commissioners require the school-rooms to be used *exclusively for the purposes of education;* "and any breach of this rule will be held to be a violation of the principles of the National Education system." — Represents Part I., Sect. V., § 5 of Code X., but materially altered in the latter.

6. The Commissioners require that the principles of the following lesson, or of a lesson of a similar import, be strictly inculcated in all schools admitted into connexion with the Board, and that a copy of the lesson itself be hung up in each school. — Part I., Sect. VI., § 6 of Code X.

Christians should endeavour, as the Apostle Paul commands them, to "live peaceably with all men" (Rom. ch. xii., v. 17), even with those of a different religious persuasion. — Should be v. 18.

Our Saviour, Christ, commanded his disciples to "love one another." He taught them to love even their enemies, to bless those that cursed them, and to pray for those who persecuted them. He himself prayed for his murderers.

Many men hold erroneous doctrines, but we ought not to hate or persecute them. We ought to seek for the truth, and to hold fast what we are convinced is the truth, but not to treat harshly those who are in error. Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his disciples to fight for him.

If any persons treat us unkindly, we must not do the same to them; for Christ and his Apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others, not as they do to us, but as we would wish them to do to us.

Quarrelling with our neighbours, and abusing them, is not the way to convince them that we are in the right, and they in the wrong. It is more likely to convince them that we have not a Christian spirit. We ought to show ourselves followers of Christ, who, "when he was reviled, reviled not again" (1 Pet. ch. ii., v. 23) by behaving gently and kindly to everyone.

7. The Commissioners regard the attendance of any of their teachers at meetings held for *political purposes*, or their taking part in elections for Members of Parliament, except by voting, as incompatible with the performance of their duties, and as a violation of rule which will render them liable to dismissal. — Part I., Sect. X., § 5 of Code X.

8. "Should the Commissioners consider any teacher employed in a school under the Board unfit for his office, or otherwise objectionable, they require that he be dismissed and another provided. Teachers are also liable to be fined or suspended, at all times, when the Commissioners shall deem it necessary, on sufficient cause being shown." — Part I., Sect. VII., § 4 of Code X, but materially altered in that Code.

9. The Commissioners, by themselves or their officers, are to be allowed to visit and examine the schools whenever they think fit. Those who visit on the part of the Commissioners are furnished with credentials under their seal. — Part I., Sect. I., § 3, Code X.

IV. Inspection of Schools.

1. *Admission of Visitors.*

1. The public generally must have free access to every National school during the hours devoted to secular instruction—not to take part in the ordinary business, nor to interrupt it, but, as visitors, to observe how it is conducted. — Part I., Sect. IX., § 1, Code X.

2. Every teacher of a National school is to receive courteously visitors of all denominations, to afford them free access to the school-room, and full liberty to observe what books are in the hands of the children, or upon the desks; what tablets are hung up on the walls, and what is the method of teaching; but they are by no means required to permit any — Part I., Sect. IX., § 2, Code X.

* See the order made by the Commissioners for carrying out more effectually the above rule, as printed after rule 3, section 2.

Code IX., 1853. (Eighth change.)

person to interrupt the business of the school, by asking questions of children, examining classes, calling for papers of any kind, or in any other way diverting the attention of either teachers or scholars from their usual business.

Part I., Sect. IX., § 3 of Code X.

3. Should any visitors wish for information which they cannot obtain by such an inspection, it is the duty of the teachers to refer them to the patrons or managers of the school for it.

Part I., Sect. IX., § 4 of Code X.

4. Every teacher is required to have his Visitors' or Daily Report Book lying upon his desk, that visitors may, if they choose, enter remarks in it. Such remarks as may be made the teachers are by no means to alter or erase; and the Inspector of the district is required to transmit to the Commissioners copies of such remarks as he may deem of sufficient importance to be made known to them.

Part I., Sect. IX., § 5 of Code X., but somewhat changed in the latter.

5. As the religious instruction of the children is under the control of the clergyman or lay person communicating it with the approbation of their parents, the Commissioners can give no liberty to any other visitor, whether clergyman or layman, to interfere therewith.

2. *Inspection by the Commissioners or their Officers.*

Part I., Sect. VIII., § 1 of Code X.

1. The Commissioners do not take the control or regulation of any school, except their own model schools, directly into their own hands, but leave all schools aided by them under the authority of the local "conductors." The *Inspectors*, "therefore," are not to give direct orders, as on the part of the Board, respecting any necessary regulations, but to point out such regulations to the conductors of the school, that *they* may give the requisite orders.

"Conductors" made "Patrons or Managers" in Code X.; "therefore" omitted in Code X.

Part I., Sect. VIII., § 2 in Code X.

2. The Commissioners require that every National school be inspected by the *Inspector of the district* at least three times in each year.

Part I., Sect. VIII., § 3 in Code X.

3. The *District Inspector*, on each inspection, is to communicate with the patron or correspondent, for the purpose of affording information concerning the general state of the school, and pointing out such violations of rule or defects, if any, as he may have observed; and he is to make such suggestions as he may deem necessary.

Regulations 4 and 5 omitted from Code X.

4. "He is to examine the Visitors' Book, or Daily Report Book, and to transmit to the Commissioners copies of any observations made therein which he may consider to be of importance."

5. "He is not to make any observation in the book except the date of his visit, the time occupied in the inspection of the school, showing the precise time at which it commenced, and the precise time at which it terminated, and also the number of scholars present."

Words in " " omitted in Part I., Sect. VIII., § 4, Code X.

6. Upon ordinary occasions, he is not to give any intimation of his intended visit; but "during the middle term of the year, from 1st May to the 31st August," when the inspection is to be public, he is to make such previous arrangements with the local managers as will facilitate the attendance of the parents of the children, and other persons interested in the welfare of the schools.

Part I., Sect. VIII., § 5 of Code X.

7. He is to report to the Commissioners the result of each visit, and to use every means to obtain accurate information as to the discipline, management, and methods of instruction pursued in the school.

Regulations 8, 9, and 10, omitted from Code X.

8. "He is to examine all the classes in succession, in their different branches of study, so as to enable him to ascertain the degree and efficiency of the instruction imparted."

9. "He is to examine the class rolls, register, and Daily Report Book; and to report with accuracy what is the actual number of children receiving instruction at the school, and what is the daily average attendance."

10. "He is to receive a monthly report from the teacher of each school, and also to make one quarterly himself to the Commissioners, in addition to his ordinary report upon the school after each visit."

Part I., Sect. VIII., § 7 of Code X.

11. He is also to supply the Commissioners with such local information as they may from time to time require from him, and to act as their agent in all matters in which they may employ him; but he is not invested with authority to decide upon any question affecting a National school, or the general business of the Commissioners, without their direction.

Forms VIII., § 6, Code X., but changed in the wording.

12. When applications for aid are referred to the District Inspector, he is to communicate with the applicant, so as to insure an interview, and also with the clergymen of the different denominations in the neighbourhood, with the view of ascertaining their sentiments on the case, and whether they have any, and what, objections thereto. He is also to communicate personally, if necessary, with any other individuals in the neighbourhood.

Regulation omitted from Code X.

13. The District Inspector is to avoid all discussions of a religious or political nature; he is to exhibit a courteous and conciliatory demeanour towards all persons with whom he is to communicate, and to pursue such a line of conduct as will tend to uphold the just influence and authority both of managers and teachers.

V. As to Appointment, Salaries, Conduct of Teachers, &c.

1. *General Rules as to Appointment and Classification of Teachers.*

VII. § 1, Part I. of Code X. "Committees" omitted in that Code

1. The appointment of teachers rests with the local patrons and "committees" of schools, but the Commissioners are to be satisfied with the fitness of each, both as to character and general qualification; and the local patrons have the power of removing the teachers of their own authority. The teacher should be a person of Christian sentiment, of calm temper, and discretion; he should be imbued with a spirit of peace, of obedience to the law, and of loyalty to his Sovereign; he should not only possess the art of communicating knowledge but be capable of moulding the mind of youth, and of giving to the power which education confers a useful direction. These are the qualities for which patrons of schools when making choice of teachers, should anxiously look. They are those which the Commissioners are anxious to find, to encourage, and to reward.

VII. § 1, Part III., in Code X. Part in " " omitted in that Code.

2. The Commissioners have provided a Normal Establishment in Marlborough-street, Dublin, for training teachers, and educating persons who are intended to undertake the charge of schools; "and they do not sanction the appointment of a teacher to any school unless

he shall have been previously trained at the Normal Establishment, or shall have been pronounced duly qualified by the Inspector of the district in which the school is situated."

CODE IX., 1853. (Eighth change.)

3. Teachers selected by the Commissioners for admission to the Normal Establishment must produce a certificate of good character from the officiating clergyman of the communion to which they belong; and must pass through an examination in the books published by the Commissioners. They are to be boarded and lodged at the establishments provided by the Board for the purpose, "in Dublin, and at Glasnevin, in the immediate neighbourhood of Dublin, to which latter an agricultural department is attached." They are to receive religious instruction from their respective pastors, who attend "on Tuesdays" at the Normal Establishment; and on Sundays they are required to attend their respective places of worship; and a vigilant superintendence is at all times exercised over their moral conduct.

VII. § 2, Part III., in Code X. Part in " " omitted in that Code.

4. "They are to attend upon five days in the week at the training and model schools, where lectures are delivered on different branches of knowledge, and where they are practised in the art of teaching. They are to receive instruction in agriculture daily, and they attend on Saturdays at the farm, at Glasnevin, which is conducted under the direction of the Commissioners, and where they see theory reduced to practice." They undergo a final examination at the close of their course, and each will then receive a certificate according to his deserts. The course of training at present occupies a period of four months and a half, and for a considerable time previous to their being summoned, they are required to prepare themselves for the course.

Part in " " omitted in Code X.; the remainder is incorporated in VII., § 2, Part III., of that Code.

5. Teachers of schools unconnected with the National Board, if properly recommended, are also admitted to attend the Normal Establishment as day pupils, without any charge for tuition; but such persons maintain themselves at their own expense.

Sect. VII., § 5, Class Third, Part III., of Code X.

6. All teachers, appointed after the 1st of April, 1851, who have not been previously classed by the Professors or by a Board of Inspectors, shall be paid as probationers, until they be examined at the first general or special examination held in the district subsequently to their appointment. Those who then obtain classification, will be paid from the commencement of their service under the Board according to the rate of salary attached to their class.

This and the following Rule are made into one in Code X. See V. § 9, Part III.

7. This rule will not extend to any teachers who, when summoned, shall fail, from any cause whatever, to present themselves for examination.

8. All teachers who have been unsuccessful at their first examination, and who may be retained on trial, shall receive the salary of the class to which they may be promoted at any subsequent examination, from the commencement of the quarter in which their classification shall be determined.

V. § 10, Part III. of Code X.

9. Teachers who after their first examination have been retained on trial as probationers, if not recommended for promotion by the Head or District Inspectors at the next ensuing examination, or by the Professors after training, cannot be continued in the service of the Board; but their salaries will be paid for one month subsequent to the date of dismissal.

V. § 11, Part III. of Code X.

10. All newly appointed teachers who, after examination by the Inspectors, may be found wholly unqualified, shall be paid salary "up to the close of the month in which the Commissioners refuse to sanction their appointment."

V. § 12, Part III. of Code X., but changed in the part between " ".

11. The pupil teachers of district model schools, on taking charge of National schools after the completion of their course of training, shall rank as third class teachers (provided they be deemed qualified for that class by the Head Inspector) until they shall have been classed at the first general or special examination held after their appointment in the district in which their schools are situated, from which date they will be paid according to their classification.

V. § 15, Part III., Code X.

12. All teachers must remain at least one year in a lower division of any class, before they are eligible for examination with a view to promotion to a higher division; and they must remain two years in a class before they can become candidates for a higher class. These conditions, however, being fulfilled, teachers of superior attainments may be advanced from any division of one class to any division of another after their first classification (except untrained teachers, who cannot be placed in the first class) without requiring them to pass through the intermediate divisions.

V. § 16, Part III., Code X.

13. This regulation does not apply to teachers who may be promoted on the recommendation of the Professors at the termination of their course of training.

V. § 17, Part III., Code X.

14. "All teachers, except probationers, recommended for promotion after a course of training, will receive the increase of salary from the commencement of the quarter in which they are classed by the Professors."

Omitted in Code X.

15. No teachers can be raised to any division of the first class, unless they shall have been trained at the Normal School of the Commissioners, and recommended for promotion by the Professors "at the end of the course of training, or by a Board of Inspectors."

V. § 18, Part III., Code X. Part in " " omitted from that Code.

16. The Commissioners have determined upon a course of study for each class, in which the teachers are to be examined as a test of their fitness for promotion; "but their general conduct, the condition of their respective schools, their method of conducting them, and the daily average attendance of pupils will also be taken into consideration."

V. § 2, Part III. of Code X. The part in " " omitted in that Code.

17. No teacher will be admitted to examination, with a view to promotion, on whose school a decidedly unfavourable report has been made by the District Inspector within the previous year.

V. § 4, Part III. of Code X.

18. Teachers will not be eligible for promotion, unless, in addition to satisfactory answering in the course prescribed for the class to which they aspire, it appears from the reports of their respective District Inspectors, that their schools are properly organized and well conducted; that adequate exertions have been made to keep up a sufficient average attendance; that their junior classes are carefully taught, and that a fair proportion of the pupils of the higher classes, besides being proficients in the ordinary branches of reading, spelling, and writing, are possessed of a respectable amount of knowledge in, at least, grammar, geography, and arithmetic. In female schools it will be further requisite that instruction in plain needlework, including sewing, knitting, and cutting-out, be given to all girls capable of receiving it, and that they exhibit a due proficiency in this department.

V. § 5, Part III. of Code X.

Code IX., 1853. (Eighth change).

19. It must also appear from the reports of their Inspectors, that their school accounts have been regularly and correctly kept, that their schools and school premises have been

Part III., Sect. V., § 6 of Code X.

preserved with neatness and order, and that cleanliness in person and habits has been enforced on the children attending them.

Omitted in Code X.

20. "Satisfactory certificates of conduct and character will be required of all candidates."

Part III., Sect. V., § 3 of Code X.

21. Every National teacher will be furnished, on application to the District Inspector, with a copy of the programme of the course of study above referred to, in which is stated the minimum of proficiency required for each class.

Part III., Sect. V., § 7 of Code X.

22. The Head and District Inspectors are authorized to recommend that such teachers be removed, fined, or lowered in their classification as may have conducted themselves improperly, or in whose schools the attendance has considerably decreased, or who, from any other cause, may seem to these officers to merit such punishment.

Not in Code X.

23. Salaries are granted by the Commissioners to the teachers *individually*. No new teacher, therefore, is to receive a salary from them unless they have first approved of him; the amount is regulated by the class in which he may be placed.

2. *Salaries and Gratuities to Teachers and Paid Monitors.*

Part III., Sect. VI., § 1 in Code X.

1. The Commissioners grant salaries "and gratuities" to teachers "and to paid monitors" of National schools at the following rates, subject to the foregoing and annexed regulations:—

Ordinary National Schools.

	Males.	Females.
First Class Teachers,	1st Division, £36	£25 per annum.
	2nd do. 30	22 ,,
	3rd do. 25	19 ,,
Second Class do.	1st Division, 22	17 ,,
	2nd do. 20	16 ,,
Third Class do.	1st Division, 18	15 ,,
	2nd do. 15	13 ,,
Probationary Teachers,	11	10 ,,
Assistant Teachers, if qualified as probationers only,	11	10 ,,
Do. if qualified for any division of a higher class,	15	13 ,,
Mistresses to teach needlework,	—	8 ,,

Scale higher in Code X.

Part III., Sect. VI., 1, § 2 in Code X.

2. The Commissioners require that a further income be secured to the teacher, either by local subscription or school-fees, to such amount in each case as they may direct; and the Commissioners also require that the payments made by the children shall not be diminished in consequence of any increase of salary which may be awarded to the teacher.

Agricultural Schools.

Part III., Sect. VI., 3, § 1, Code X. Words in " " omitted in that Code.

1. Masters of agricultural model schools who are competent to conduct both the literary and agricultural departments are, "whatever may be their classification," to receive £10 per annum, in addition to the salary of the class in which they may be placed; and provided their income from the Board, with this addition, should fall short of £30 per annum, the difference will be granted to them, so that, in all cases, such teachers shall have secured to them for their *combined* services a salary of £30 a year at least.

See Part III., Sect. VI., 4, § 1, Code X.

2. Masters of "National schools, having a small portion of land annexed to their schools, consisting of from two to three acres, for the purpose of affording agricultural instruction," will receive £5 per annum, in addition to the salary of their class, provided they are competent to conduct both the literary and agricultural departments, "and the Commissioners shall have previously approved of agriculture being taught in the school."

See Part II., Sect. VI., § 1, and Part III., Sect. VI., 4, § 1.

3. "In cases where a sufficient number of acres of land are attached to workhouse schools in connexion with the National Board of Education, the Commissioners award annual gratuities, not exceeding £15 to each, to such of the agricultural teachers who shall be recommended as deserving of them by the Agricultural Inspectors."

Assistant Teachers.

Omitted in Code X., already in scale of salaries.

"Salary not to exceed £15 for males, and £13 for females."

Part V., Sect. VI., 5, § 1. Words between " " made "a salary to an assistant teacher" in Code X.

1. The Commissioners will not grant "a higher rate of salary than the above to an assistant teacher, even if classed;" nor will they consider any application for a grant of salary to an assistant in any school in which there is not a daily average attendance of at least seventy-five pupils; and in schools whose average attendance does not rise considerably above this, and which are already provided with paid monitors, assistants cannot be recognised by the Board.

Rule omitted in Code X.

2. "When applications for an assistant are laid before the Commissioners, they will determine whether it will not be more advisable to appoint a paid monitor."

Part V., Sect. VI., 5, § 2, but a limitation as to age.

3. Assistant teachers will not be sanctioned whose qualifications are not at least equal to those required of probationers.

Workmistresses.

Omitted in Code X. Is to be found in scale of salaries, Part V., Sect. VI., 6, § 1.

"Salary, £8 per annum."

1. The Commissioners will not grant salary to workmistresses, unless there be a sufficient daily average attendance of pupils, and the Commissioners require that at least two hours each day be devoted by them to instruction in this branch.

Part V., Sect. VI., 6, § 3 of Code X., in part.

2. In schools attended by female children only, under the care of a female teacher, such teacher must be competent not only to conduct the literary department, but also to give instruction in needlework.

Called "Convent Schools" in Code X.

Schools in connexion with Religious Bodies.

Part V., Sect. VI., 8, § 1, Code X.

1. In schools of this description, salary is paid according to a per-centage on the daily average attendance:—

£20 per annum for 100 daily average.		£77 per annum for 400 daily average.	
£40 ,, 200 ,,		£94 ,, 500 ,,	
£60 ,, 300 ,,		£111 ,, 600 ,,	

"And for every 50" over 600 at the rate of £15 per cent.

Industrial Schools.

Code IX., 1853. (Eighth change.)

1. In National schools where embroidery and other high branches of needlework are taught, the amount of salary granted for giving such instruction is regulated by the nature of the work, and the number of pupils engaged in it. — Part V., Sect. VI., 7, § 1, Code X.

Paid Monitors.

SALARIES.

For the First Year,	£4	For the Third Year,	£7
For the Second Year,	£5	For the Fourth Year,	£8

1. The "number of" paid monitors "is limited to eight males and four females in each district," selected from among the best pupils in the National schools, and appointed upon the recommendation of the District Inspectors, "subject to the approval of the Commissioners." — Part V., Sect. VI., 9, § 1 of Code X. The words in " " show the alterations made in Code X.

2. This appointment cannot be held for a longer period than four years, at the expiration of which the salary will be discontinued. — Part V., Sect. VI., 9, § 3 of Code X.

3. The salary may, however, be withdrawn at any time, should want of diligence, efficiency, or good conduct on the part of the monitor, or any other circumstance, render such a course desirable. — Ditto, § 4.

4. The District Inspector selects the schools to which paid monitors should be appointed; and when vacancies occur, whether before or after the expiration of four years, it does not necessarily follow that a successor shall be appointed in the same schools. — Divided into §§ 5, 6. Part V., Sect. VI., 9 of Code X.

5. When all the district model schools are established, candidates for the office of paid monitor must undergo a public examination by the Inspectors, in a prescribed course, to be held in those schools. — §§ 5 and 6 omitted from Code X.

6. The selection will be made, as far as possible, from those who have shown aptitude for teaching.

7. "The candidates should not be under fourteen nor over sixteen years of age. They must be of a sound and healthy constitution, and free from any physical defect likely to impair their efficiency as teachers." — Omitted in Code X.

8. The school to which the candidate belongs should exhibit a tolerable degree of efficiency, should have a sufficient average attendance to require a paid monitor, and the teacher should be qualified to give instruction in the prescribed course. — Part V., Sect. VI., 9, § 7, Code X.

9. The paid monitors' programme can be obtained on application to the District Inspector. — Part V., Sect. VI., 9, § 8 of Code X.

10. Paid monitors who have completed the four years of their course in a satisfactory manner, are eligible, on examination by the Inspectors, for the situation of assistant teacher, or of pupil-teachers in district model schools. — Part V., Sect. VI., 9, § 9, Code X.

Scale of Gratuities to "Masters and Mistresses" of Workhouse Schools. — "Literary teachers" in Code X.

1. The Commissioners for National education have resolved, with the concurrence of the Poor Law Commissioners, to award annual gratuities to a certain number (forty males and forty females) of the teachers of the workhouse schools, in connexion with the National Board, who shall be recommended by the District Inspectors. — Part V., Sect. VI., 10, § 1 of Code X.

2. The gratuities are divided into two classes :—

For Male Teachers,	First Class,	Twenty at £6 a year each.	Ditto, § 2.
	Second Class,	Twenty at £4 a year each.	
For Female Teachers,	First Class,	Twenty at £5 a year each.	Ditto, § 3.
	Second Class,	Twenty at £3 a year each.	

3. The payment will be made half-yearly, with the usual issue of salary to teachers of National schools, after the 31st March, and 30th September, in each year.

4. It is to be understood that such gratuities are given in *addition* to the salaries paid to the teachers of workhouse schools, under the provisions of the Poor Law Act. — Ditto, § 4.

5. No teacher is precluded from receiving the gratuity two or more years in succession, if recommended by the District Inspector as deserving of it; but a teacher having received one year's gratuity is not thereby *entitled* "to a continuance of it." — Ditto, § 5. Words in " " different in Code X.

Scale of Premiums to Masters and Mistresses of National Schools who are most distinguished by the Order, Neatness, and Cleanliness observable in themselves, their Pupils, and in the School-houses.

1. The sum of £22 10*s.* will be allocated to each of the school districts, and divided into thirteen premiums. — Part V., Sect. VI., 12, § 1 of Code IX.

One of £4,	£4
Two of £3,	£6
Five of £1 10*s.*	£7 10*s.*
Five of £1,	£5

2. These premiums will be awarded annually on the recommendation of the District Inspector, "and paid at the end of the year." — Ditto, § 2. Words in " " show part changed in Code X.

3. "No distinction is made between vested and non-vested schools." — Omitted in Code X., but see heading of class.

4. No teacher is eligible for these premiums for more than two years in succession. — Part V., Sect. VI., 12, § 3.

5. These premiums will be awarded without reference to the class in which the teachers may be placed; but none will be deemed eligible to receive such premiums against whom there is any well-founded charge of neglect in the performance of their duties, of impropriety in their conduct, or whose schools are not conducted in a satisfactory manner. — Ditto, § 4.

VI. Books.

1. The Commissioners furnish gratuitously to each school a first stock of school-books, in proportion to the attendance of children, which is renewed at the end of every three years. They are to be kept as a school stock, for which the master or mistress is held responsible, and they are on no account to be taken out of the school. The Commissioners also supply books from time to time for the general use of the children, and school requisites, such as paper, slates, quills, &c., at reduced rates. — Part III., Sect. VIII., § 1 in Code X.

Code IX., 1853. (Eighth change.)

Part III., Sect. VIII., § 2 in Code X.

2. The funds of the Commissioners do not enable them to give a free stock sufficiently large for the entire wants of the school. Any additional books, and maps, stationery, slates, clocks, and other requisites, must be purchased at reduced rates.

Ditto, § 3.

3. The value of the grant is regulated by the daily average attendance, as ascertained from the reports of the Inspectors. The managers of schools have the privilege of selecting their grants of free stock from the *whole* list of books supplied by the Commissioners, and are at liberty to chose such of them as they most approve of, and to omit any to which they object.

Ditto, § 4.

4. When books, &c., purchased from the Commissioners at the reduced price, are sold to the children attending a National school, it is directed that in no case shall any advance be made on these prices; and the District Inspectors have instructions to inquire into and report upon any infraction of this rule.

VII. Building.

Part III., Sect. II., § 1.

1. Before any grant is made towards building a school-house, the Commissioners are to be satisfied that a necessity exists for such a school, that an eligible site has been procured, that a satisfactory lease of the site will be executed to the Commissioners in their corporate capacity; and that the applicant parties are prepared to raise, by local contribution, at least one-third of the whole sum which the Commissioners deem necessary for the erection of the house, providing furniture, &c.

Ditto, § 2.

2. If the proposed site be for a school in a rural district, and be within three statute miles of a school-house, towards the erection of which the Commissioners have contributed aid, no grant can be made.

Ditto, § 3.

3. Although the Commissioners do not absolutely refuse aid towards the erection of school-houses on ground connected with a place of worship, yet they much prefer having them erected on ground which is not so connected, where it can be obtained; they therefore require that, before church, chapel, or meeting-house ground be selected as the site of a school-house, *strict* inquiry be made whether another convenient site can be obtained, and that the result shall be stated to them.

Ditto, § 4.

4. The school premises must be vested in the Commissioners, at a nominal rent, and for such term, under the circumstances, as they may deem necessary.

Ditto, § 5.

5. The Commissioners will keep in repair the school-house and furniture, where the premises are vested in them in their corporate capacity.

Ditto, § 7.

6. When grants are voted towards the building, &c., of a school-house, the conveyance must be duly executed *before the works are commenced.*

Ditto, § 8, but enlarged.

7. No grant can be made until the District Inspector shall have reported upon all the circumstances of the case.

Ditto § 9, but modified.

8. The Commissioners determine from the information afforded them the dimensions of the proposed building.

Ditto § 10.

9. The Commissioners cannot, in any case, pay more than two-thirds of the sum which they may deem necessary for the erection of the school-house (including furniture, &c.); and they invariably require that the remaining one-third, at least, shall be locally provided for.

Ditto, § 11, but part omitted in that Code.
Parts in " " omitted in Code X.

10. The cost of the house, &c., is determined by the number of children which it is intended to accommodate, "allowing an area of six square feet for each child."

"*Example.*—A school-house capable of accommodating one hundred children should contain not less than an area of six hundred square feet, and should be ten feet high to the wall-plate."

Ditto, § 12.

11. The Commissioners furnish instructions as to the plan and specification, to which the parties receiving aid are bound strictly to adhere.

Ditto, § 13.

12. The Commissioners do not contribute to the ornamenting of school-houses, but merely to such expenditure as may be necessary for having the children accommodated in plain, substantial buildings. If buildings of another description be preferred, the whole of the extra expense must be provided by the applicants.

Ditto, § 14.

13. The Commissioners do not contribute towards the expense of erecting residences for the teachers, except in the case of a district model school.

Ditto, § 17.

14. The house, furniture, &c., must be completed, the teacher or teachers appointed, and the school in operation before the grants can be paid.

Ditto, § 15.

15. The whole of the works must be completed within twelve months from the date of the execution of the lease (unless by special permission), or the grants will be forfeited.

Ditto, § 16.

16. The Commissioners do not make advances or instalments of their grants.

Ditto, § 18.

17. Previous to the payment of the grants, a certificate, according to a form furnished, must be forwarded to the Commissioners, stating that the school-house, furniture, &c., have been completed in a satisfactory and workmanlike manner, and built according to the dimensions and directions set forth in the plan and specification. This certificate to be signed by the manager and by the contractor. The work to be approved of by the Clerk of Works, or by any other person authorized by the Commissioners or the Government to examine it; and if a question arise as to the expenditure incurred, the accounts must be submitted to any audit which may be deemed necessary.

Ditto, § 19.

18. The Commissioners do not make grants to purchase school-houses, nor to purchase, alter, or furnish other houses, for the purpose of being converted into school-houses.

[The Leases, Declarations of Trusts, &c., based on these Rules and Regulations, and used at this period, will be found immediately after the present Collection.

VIII. Aids to Schools previously established.

1.

Part III., Sect. III., § 1, Code X.

1. The aid granted to schools previously established is limited to salary and books.

Ditto, § 3.
Words in " " omitted in Code X.

2. Before "such" aid can be granted, the Commissioners must be satisfied that the case is deserving of assistance; that there is reason to expect that the school will be efficiently and permanently supported; that some local provision will be made in aid of the teachers' salary, either by school-fees "or otherwise;" that the school-house is in good repair and

provided with a sufficient quantity of suitable furniture; that a competent teacher has been appointed; that the school is in operation; and that there is a [*sufficient*] daily average attendance of children.

Code IX., 1853. (Eighth change.)

[Sufficient] is made [at least thirty] in Code X.

3. Before the Commissioners consider any application for aid, they require from the Inspector of the district, a report upon all the circumstances of the case.

Part III., Sect. III., § 5 in Code IX.

4. To entitle a school to a continuance of aid, the house and furniture must be kept in sufficient repair, by means of local contributions; the school conducted, in all respects, in a satisfactory manner, and in accordance with the regulations of the Commissioners; and it must appear from the "register" of the school, that there is a sufficient daily average attendance of pupils.

Ditto, § 6.

"Record" in Code X.

2. *Workhouse Schools.*

Extract from the Act for the more effectual relief of the Destitute Poor of Ireland, 1st and 2nd Vict., ch. 56, sec. 49:—

Extract omitted in Code X.

"And be it enacted that no order of the Commissioners, nor any by-law, shall oblige any inmate of any workhouse to attend or be present at any religious service which may be celebrated in a mode contrary to the religious principles of such inmate, nor shall authorize the education of any child in such workhouse in any religious creed other than that professed by the parents or surviving parent of such child, and to which such parents or parent shall object, or, in the case of an orphan, to which the guardian or guardians, godfather or godmother of such orphan shall object: Provided also, that it shall be lawful for any regular minister of the religious persuasion of any inmate of such workhouse at all times in the day, on the request of such inmate, to visit such workhouse, for the purpose of affording religious assistance to such inmate, *and also for the purpose of instructing his child or children in the principles of his religion.*"

Such schools are received into connexion, and grants of books made thereto, on condition that they shall be subject to inspection by the Commissioners, or their officers, and that the provisions of the above enactment in reference to religious instruction, shall be faithfully observed.

Part II., Sect. X., § 1, Code X.

The Commissioners [have resolved, with the concurrence of the Poor Law Commissioners, to] award annual gratuities to a certain number of the teachers of the workhouse schools, [in connexion with the National Board], who shall be recommended by the District Inspectors.

Ditto, § 2.
Words in [ ] left out in Code X.

For Scale of Gratuities and the conditions under which they are awarded, see section V.

3. *Schools attached to Prisons.*

Such schools are received into connexion, upon the same general principles as the workhouse schools, and grants of books are made thereto.

Part II., Sect. XI.

IX.—1. "As applications for aid have frequently been made in respect of expenses incurred previously to any communication with the Commissioners, they" desire to be distinctly understood, that they will not hold themselves bound to grant "assistance in any case," unless application shall have been made to them in the first instance, unless such application shall have been approved of, "and unless they shall have funds at their disposal when they come to decide upon the case, to enable them to grant the required aid." Applicants are therefore recommended not to incur any expense towards the payment of which they expect the Commissioners to contribute, until the decision of the Board shall have been communicated to them.

Part III., Sect. IX., § 3.
Parts in " " left out or modified in Code IX.

2. Applicants for assistance are not to understand that the Commissioners are bound to grant the full amount of aid, as set forth in the foregoing regulations, in every case; nor can they grant any unless they have sufficient funds for the purpose, which depends upon the amount placed at their disposal by Parliament.

Part III., Sect. IX., § 2.

3. Persons desirous of obtaining assistance from the Commissioners of National Education, under any of the foregoing heads, will, upon intimating to the Secretaries the nature of the aid required, be furnished with the forms, upon which their application must be laid before the Commissioners.

Ditto, § 1.

4. All communications in reference to National Schools should be made by the manager or correspondent. The Commissioners do not correspond with teachers.

Ditto, § 4.

5. All letters should be directed as under. No communications are received which are not prepaid, except those containing documents sent from this office, and which are required to be returned.

Ditto, §§ 6 and 7.

The Secretaries,
Education Office,
Marlborough-street, Dublin.

By order of the Commissioners,

MAURICE CROSS,
JAMES KELLY, } Secretaries.

No. 10.

Code X., 1855. (Ninth change.)

RULES AND REGULATIONS OF THE COMMISSIONERS OF NATIONAL EDUCATION, IRELAND.

PART I.

I. OBJECT AND FUNDAMENTAL PRINCIPLE OF THE SYSTEM OF NATIONAL EDUCATION.

1. The object of the system of National Education is to afford *combined* literary and moral, and *separate* religious instruction, to children of all persuasions, as far as possible, in the same school, upon the fundamental principle, that no attempt shall be made to interfere with the peculiar religious tenets of any description of Christian pupils.

New form of declaration of principle.

2. It is the earnest wish of her Majesty's Government, and of the Commissioners, that the clergy and laity of the different religious denominations should co-operate in conducting National schools.

III., § 1, Code IX.

CODE X., 1855. (Ninth change.)

III., § 9, Code IX. NEW RULE.

3. The Commissioners, by themselves or their officers, are to be allowed to visit and examine the schools whenever they think fit. Those who visit on the part of the Commissioners are furnished with credentials under their seal.

4. The Commissioners will not change any fundamental rule without the express permission of His Excellency the Lord Lieutenant.

II. MANAGEMENT OF NATIONAL SCHOOLS.

§§ 1 to 11 NEW RULES.

1. The local government of the National schools is vested in the local patrons thereof.

2. The Commissioners recognise as the local patron the person who applies in the first instance to place the school in connexion with the Board, unless it be otherwise specified in the application.

3. If a school be under the local management of a school committee, such committee has all the rights of an individual patron.

4. The patron has the right of nominating any fit person to act as his representative in the local management of the school; such representative to be designated the "Local Manager." The patron may, at any time, resume the direct management of the school, or appoint another local manager.

This rule applies equally whether the patronship be vested in one or more individuals.

5. When a school is vested in trustees, they have the right to nominate the local manager.

6. When a school is vested in the Commissioners, the name of the patron or patrons is inserted in the lease.

7. In the case of a vacancy in the patronship by death, the representative of a lay patron, or the successor of a clerical patron, is recognised by the Board (where no valid objection exists) as the person to succeed to the patronship of the school.

8. If a patron wishes to resign the office, he has the power of nominating his successor, subject to the approval of the Board.

9. In all cases, the Commissioners reserve to themselves the power of determining whether the patron, or the person nominated by him, either as his successor, or as local manager, can be recognised by them as a fit person to exercise the trust.

10. In all cases, whether the school be vested or non-vested, the patron, when nominating a local manager, ought to notify to the Commissioners, whether or not the person so nominated is to exercise all the rights of patron during the period he acts as manager.

11. When a school is under the control of a committee of joint patrons, a "Local Manager" should be appointed, to correspond with the office, sign documents, &c., &c.

III. DESCRIPTION OF SCHOOLS TO WHICH COMMISSIONERS GRANT AID.

New classification of schools.

Words in " " omitted in Code XI.

1. The schools to which the Commissioners grant aid are divided into two classes, viz. :— 1st, vested schools, which are vested in the Commissioners, "or were vested previously to the incorporation of the Board, in trustees," for the purpose of being "permanently" maintained as National schools; 2ndly, non-vested schools, "which are" the property of private individuals. Both these classes of schools are under the control of local patrons or managers.

2. There are also model schools, "literary and agricultural," of which the Commissioners are themselves the patrons, but which are conducted on the same fundamental principles as the ordinary National schools.

§§ 3 and 4 represent III., § 1, Code IX.

3. The Commissioners encourage industrial instruction in National schools in all suitable cases.

Words in " " left out in Code XI.

4. The Commissioners require that, in schools attended by females, instruction shall be given "(if practicable)" in plain needlework.

IV. RELIGIOUS AND SECULAR INSTRUCTION.

II., § 2, Code IX. Words in ( ) new.

1. Opportunities are to be afforded (*as hereinafter provided for*) to the children of all National schools for receiving such religious instruction as their parents or guardians approve of.

II., § 2 of Code IX.

2. Religious instruction must be so arranged that each school shall be open to children of all communions; that due regard be had to parental right and authority; that, accordingly, no child be *compelled* to receive, or to be present at, any religious instruction [of] which his parents or guardians [*disapprove*]; and that the time for giving it be so fixed that no child shall be thereby, in effect, excluded, directly or indirectly, from the other advantages which the school affords.

[To] in Code IX.
[Object] in Code IX.

II., § 3 (*1), Code IX.

3. A public notification of the times for religious instruction must be inserted in large letters in the "time table" supplied by the Commissioners, who recommend that, as far as may be practicable, the general nature of such religious instruction be also stated therein.

II., § 3 (*2), Code IX.

4. The "Time Table" must be kept constantly hung up in a conspicuous place in the school-room.

II., § 3 (*3), Code IX.

5. The teacher must, immediately before the commencement of religious instruction, announce distinctly to the pupils, that the hour for religious instruction has arrived, and must, at the same time, put and keep up, during the period allotted to such religious instruction, and within the view of all the pupils, a notification thereof, containing the words "religious instruction," printed in large characters, on a form to be supplied by the Commissioners.

II., § 3 (*4), Code IX.

6. When the secular instruction precedes the religious instruction in any National school, there shall be a sufficient interval between the announcement and the commencement of the religious instruction; and whether the religious or the secular instruction shall have priority in any National school, the books used for the instruction first in order, shall be "carefully" laid aside, at its termination, in the press or other place appropriated for keeping the school-books.

NEW RULE.

7. No secular instruction, whether literary or industrial, shall be carried on in the same apartment, during school hours,* simultaneously with religious instruction.

* The term "SCHOOL HOURS," is always to be understood to mean the entire time, in each day, from the opening of the school to the closing of the same for the dismissal of the pupils.

8. In schools, towards the building of which the Commissioners have contributed, and which are VESTED in trustees, for the purposes of National education, or which are vested in the Commissioners in their corporate capacity, such pastors or other persons as shall be approved of by the parents or guardians of the children respectively, shall have access to them *in the school-room*, for the purpose of giving them religious instruction there, at convenient times to be appointed for that purpose. — CODE X., 1855. (Ninth change.) — II., § 4, Code IX.

9. In schools NOT VESTED, and which receive no other aid than salary and books, it is for the patrons or managers to determine whether any, and if any, what religious instruction shall be given *in the school-room;* but if they do not permit it to be given in the school-room, the children whose parents or guardians so desire, must be allowed to absent themselves from the school, at reasonable times, for the purpose of receiving such instruction ELSEWHERE. — II., § 5, Code IX.

"In such schools, the Commissioners do not insist that opportunities shall be afforded (as in the case of vested schools) for religious instruction being given *in the school-room*, by such pastors, or other persons, as shall be approved by the parents or guardians of the children." — New Matter, omitted in Code XI.

10. The reading of the Scriptures, either in the Protestant Authorised or Douay Version,—the teaching of catechisms,—public prayer,—and all other religious exercises, come within the rules as to religious instruction. — Represents II., §§ 6 and 7, Code IX.

11. The patrons and managers of *all* National schools have the right to permit the Holy Scriptures (either in the Authorised or Douay Version) to be read, at the time or times set apart for religious instruction; and in *all vested schools* the parents or guardians of the children have the right to require the patrons and managers to afford opportunities for the reading of the Holy Scriptures, in the school-room, under proper persons approved of by the parents or guardians for that purpose. — NEW RULE.

12. Religious instruction, prayer, or other religious exercises, may take place, at any time, before and after the ordinary school business (during which all children, of whatever denomination they may be, are required to attend); but must not take place *more than once*, at *an intermediate* time, between the commencement and the close of the ordinary school business. The Commissioners, however, will not sanction any arrangement for religious instruction, prayer or other religious exercises *at an intermediate time*, in cases where it shall appear to them that such arrangement will interfere with the usefulness of the school, by preventing children of any religious denomination from availing themselves of its advantages, or by subjecting those in attendance to any practical inconvenience. — NEW RULE.

13. The secular school business must not be interrupted, or suspended, by any spiritual exercise whatsoever. — NEW RULE.

NOTE.—The Commissioners earnestly recommend that religious instruction shall take place either immediately before the commencement, or immediately after the close, of the ordinary school business; and they further recommend that, whenever the patron or manager thinks fit to have religious instruction at an intermediate time, a separate apartment shall (when practicable) be provided for the reception of those children whose parents or guardians may disapprove of their being present thereat.

14. Patrons, managers, and teachers, are not required to *exclude* any children from any religious instruction given in the school; but all children are to have full power to absent themselves, or to withdraw from it. If any parents or guardians object to the religious instruction given in a National school, it devolves upon them to adopt measures to prevent their children from being present thereat. — NEW RULE.

15. Patrons, managers, and teachers are not to use any means, directly or indirectly, to induce children to attend any religious instruction, contrary to the wishes of their parents or guardians. The Commissioners will regard such interference as opposed to the whole spirit of the system of National education. — Sect. II., 3 (*a), Code IX.

16. If any child of a religious persuasion different from that of the teacher of any National school, attend during the time or times set apart for religious instruction given by such teacher, it shall be his or her duty, on the *first attendance* of every such child, during the time for such religious instruction given by such teacher in such school, *forthwith* to notify the same to the parent or guardian of such child on, and by, a form to be furnished by the Commissioners. — NEW RULE.

17. The teachers are required to keep a record of the names of the children to whose parents they have sent the printed form of notification. — NEW RULE.

18. The registry kept in each school, according to the form furnished by the Commissioners, must show the religious denomination of each child on the school roll. — NEW RULE.

19. A sufficient number of hours, to be approved of in each case by the Commissioners, is to be appropriated to the ordinary school business, during which all children, of whatever denomination they may be, are required to attend. — Represents II., § 1, Code IX.

20. In all National schools (except those in which industrial instruction is the *chief* object) there must be literary instruction for at least *four* hours, upon five days in the week. — *New Regulation.*

21. In schools in which industrial instruction is the *chief* object, the Commissioners require that not less than *two* hours daily, shall be devoted to literary instruction. — *New Regulation.*

V. USE OF SCHOOL-HOUSES.

1. In non-vested schools, the Commissioners do not, in ordinary cases, exercise control over the use of the school-houses on Sundays, or before or after the school hours on the other days of the week; such use being left altogether to the local patrons or managers, of all religious persuasions, subject to the interference of the Board in cases leading to contention or abuse. — NEW RULE.

2. No National school-house shall be employed at any time, even temporarily, as the *stated* place of DIVINE WORSHIP of any religious community; [or for the celebration or administration of the sacraments or rites of any Church].

3. No aid will be granted to a school *held in a place of worship;* [nor will the Commissioners sanction the *transfer* of an existing school, to a place of worship, even for a temporary period].

§§ 2 and 3 Represent in *a materially altered form*, III., § 4 of Code IX. The word "*stated*" first introduced here. Words in [ ] added in this Code.

Code X., 1855. (Ninth change.)

* New Rule.

The *limitation* of "vested" first introduced here—see Sect. III., § 5, Code IX. The permission given in the passage between [ ] new.

III., § 3, Code IX.

* 4. When a school-room is in any way connected with a place of worship, there must not be any *direct internal* communication between the school-room and such place of worship.

5. Vested school-houses must be used, *exclusively, for the education* of the children attending them: [except on Sundays, when they may be employed for Sunday schools, with the sanction of the patrons or managers, subject, in cases leading to contention or abuse, to the interference of the Commissioners].

6. No political meetings shall be held in National school-houses, whether vested or non-vested; nor shall any political business *whatsoever* be transacted therein.

VI. Use of Books or Tablets.

II., § 11, Code IX.

1. The use of the books published by the Commissioners is not compulsory; but the titles of all other books which the patrons or managers of schools intend for the ordinary school business, are to be notified to the Commissioners; and none are to be used to which they object. ["The approval of any such books is to extend only to the particular edition which has been submitted to the Commissioners."]

Part in [ ] added here; left out in Code XI.

II., § 10, Code IX., with the exception of the proviso in [ ]

2. If any other books than the Holy Scriptures, or the *standard* books of the Church to which the children using them belong, be employed in communicating religious instruction, the title of each is to be made known to the Commissioners [whenever they deem it necessary.]

II., § 8, Code IX.

3. The Commissioners do not insist on the "Scripture Lessons" or book of "Sacred Poetry" being read in any of the National schools, nor do they allow them to be read as part of the ordinary school business (during which all children, of whatever denomination they may be, are required to attend) in any school attended by children whose parents or guardians object to their being read by their children.

In such cases the Commissioners prohibit the use of these books, except at times set apart for the purpose, either before or after such ordinary school business, and under the following conditions:—

First—That no child, whose parent or guardian objects, shall be required, directly or indirectly, to be present at such reading.

Second—That in order that any children, whose parents or guardians object, may be at liberty to absent themselves, or to withdraw, at the time set apart for the reading of the books above specified, public notification of the time set apart for such reading shall be inserted in large letters in the time-table of the school; that there shall be a sufficient interval between the conclusion of such ordinary school business and the commencement of such reading; and that the teacher shall, immediately before its commencement, announce distinctly to the pupils that any child whose parent or guardian so desires may then retire.

Third—That in every such case there shall be, exclusive of the time set apart for such reading, sufficient time devoted each day to the ordinary school business, in order that those children who do not join in the reading of the books may enjoy ample means of literary instruction in the school-room.

New Rule.

4. When using the Scripture Lessons, the teachers are prohibited, except at the times set apart for religious instruction, from putting to the children any other questions than those appended to the end of each lesson.

III., § 6, Code IX.

5. The Commissioners require that the principles of the following lesson, or of a lesson of a similar import (to be approved of by the Commissioners), shall be strictly inculcated, during the hours of united instruction, in all schools received into connexion with the Board, and that a copy of the lesson itself be hung up in each school.

Should be v. 18.

Christians should endeavour, as the Apostle Paul commands them, to "live peaceably with all men" (Rom. ch. xii. v. 17), even with those of a different religious persuasion.

Our Saviour, Christ, commanded his disciples "to love one another." He taught them to love even their enemies, to bless those that cursed them, and to pray for those who persecuted them. He himself prayed for his murderers.

Many men hold erroneous doctrines, but we ought not to hate or persecute them. We ought to seek for the truth, and to hold fast what we are convinced is the truth; but not to treat harshly those who are in error. Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his disciples to fight for him.

If any persons treat us unkindly, we must not do the same to them; for Christ and his apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others, not as they do to us, but as we would wish them to do to us.

Last sentence differently arranged in preceding Codes.

Quarrelling with our neighbours and abusing them is not the way to convince them that we are in the right, and they in the wrong. It is more likely to convince them that we have not a Christian spirit. We ought, by behaving gently and kindly to everyone, to show ourselves followers of Christ, who, "when he was reviled, reviled not again" (1 Pet. ch. ii. v. 23).

6. The use of the tablet, furnished by the Commissioners, containing the Ten Commandments, is not compulsory.

7. The rules as to religious instruction do not apply to the matter contained in the common school-books, in the Scripture Lessons, in the book of Sacred Poetry, or in any other book, the use of which the Commissioners may at any time sanction for the purpose of united instruction.

VII. Appointment and Dismissal of Teachers.

See V., § 1. Words in ( ) and [ ] indicate changes in previous rule. First part in " " omitted in Code XI.

1. "The local patrons (or managers) of schools have the right of appointing the teachers, [subject to the approval of the Board], as to character and general qualifications; the local patrons (or managers) have also the power of removing the teachers of their own authority." National teachers should be persons of Christian sentiment, of calm temper, and discretion; they should be imbued with a spirit of peace, of obedience to the law, and of loyalty to their Sovereign; they should not only possess the art of communicating knowledge, but be capable of moulding the mind of youth, and of giving to the power which education confers a useful direction. These are the qualities for which patrons of schools, when making choice of teachers, should anxiously look. They are those which the Commissioners are anxious to find, to encourage, and to reward.

New Rule. Words in " " omitted in Code XI. See Part IV., Sect. I., § 2 of that Code.

2. No clergyman of any denomination, or "(except in the case of convent schools)" member of any religious order, can be recognised as the teacher of a National school.

CODE X., 1855. (Ninth change.)

3. Teachers of National schools are not permitted to carry on, or engage in any business or occupation that will impede or interfere with their usefulness as teachers. Teachers of National schools are especially forbidden to keep public-houses, or houses for the sale of spirituous liquors. — NEW RULE.

4. Should the Commissioners consider any teacher in a "vested" school unfit for his office, or otherwise objectionable, they will require that he be dismissed, and another provided. [In non-vested schools the grant of salary will be withheld until a suitable teacher be procured.] Teachers are also liable to be fined or suspended, at all times, when the Commissioners shall deem it necessary, on sufficient cause being shown. — III., § 8, Code IX. The *limitation to vested schools* first made here. See Code IX. The words in [ ] new matter not in Code IX.

VIII. INSPECTION BY THE COMMISSIONERS OR THEIR OFFICERS.

1. As the Commissioners do not take the control or regulation of any school except their own model schools directly into their own hands, but leave all schools aided by them under the authority of the local "patrons or managers" as stated in § II.); the Inspectors are not to give direct orders, as on the part of the Board, respecting any necessary regulations, but to point out such regulations to the [local patrons or managers] of the schools, that they may give the requisite orders. — IV., 2, § 1 in Code IX. "Patrons or managers" "conductors" in Code IX. Words in [ ] not in IX.

2. The Commissioners require that every National school be inspected by the Inspector of the district at least three times in each year. — IV., 2, § 2 in Code IX.

3. The District Inspector, after each inspection, is to communicate with the local patron or manager, for the purpose of affording information concerning the general state of the school, and pointing out such violations of rule or defects, if any, as he may have observed; and he is to make such suggestions as he may deem necessary. — IV., 2, § 3 in Code IX.

4. Upon ordinary occasions, the Inspector is not to give any intimation of his intended visit; but when the inspection is to be public, he is to make such previous arrangements with the local [patrons or] managers, as will facilitate the attendance of the parents of the children, and other persons interested in the welfare of the schools. — IV., 2, § 6 of Code IX. Words in [ ] not in Code IX.

5. The Inspector is to report to the Commissioners the result of each visit, and to use every means to obtain accurate information as to the discipline, management, and methods of instruction pursued in the school. — IV., 2, § 7, Code IX.

6. When applications for aid are referred to the District Inspector, he is to have an interview with the applicant; and also to communicate personally, or by writing, with the clergymen of the different denominations, and with other parties in the neighbourhood, with the view of ascertaining their opinions on the application, and whether they have any, and what, objections thereto. — IV., § 12, but changed in the wording.

7. The Inspector is also to supply the Commissioners with such local information as they may from time to time require from him, and to act as their agent in all matters in which they may employ him; but he is not invested with authority to decide upon any question affecting a National school, or the general business of the Commissioners, without their direction. — IV., 2, § 11, Code IX.

IX. ADMISSION OF VISITORS.

1. The public generally must have free access to every National school (whether vested or non-vested) during the hours devoted to secular instruction—not to take part in the ordinary business, or to interrupt it, but, as visitors, to observe how it is conducted. — IV., 1, § 1 of Code IX. Words in ( ) not in that Code.

2. Every teacher of a National school is to receive courteously visitors of all denominations, to afford them free access to the school-room, and full liberty to [examine the Register, Daily Report Book, and Class Rolls;] to observe what books are in the hands of the children, or upon the desks, what tablets are hung up on the walls, and what is the method of teaching; "but the teachers are not required to permit any person" to interrupt the business of the school, by asking questions of children, examining classes, calling for papers [or documents] of any kind [except those specified], or in any other way diverting the attention of either teachers or scholars from their usual business. — IV., 1, § 2 of Code IX. Passages in [ ] new.

3. Should any visitors wish for information which they cannot obtain by such an inspection, it is the duty of the teachers to refer them to the patron or manager of the school for such information. — IV., 1, § 3 of Code IX.

4. Every teacher is required to have his "Visitors' or" Daily Report Book lying upon his desk, that visitors may, if they choose, enter remarks in it. Such remarks as may be made, the teachers are by no means to alter or erase; and the Inspector of the district is required to transmit to the Commissioners copies of such remarks as he may deem of sufficient importance to be made known to them. — IV., 1, § 4 of Code IX., made § 4 of Part IV., Sect. I., Code XI. Words in " " omitted in that Code.

5. As to the religious instruction of the children [given in the school-room,] is under the control of the clergyman or lay person, communicating it with the approbation of their parents, the *Commissioners* can give no liberty to any visitor whether clergyman or other person, to interfere therewith, [or to be present thereat]. — IV., 1, § 5 of Code IX. Words in [ ] new matter not in Code IX.

X. MISCELLANEOUS.

1. When any school is received by the Commissioners into connexion with them, the inscription, "NATIONAL SCHOOL," shall be put up [in plain and legible characters] on the school-house, [or on such other place as may render it conspicuous to the public]. When a school-house is built partly by aid from the Commissioners, a stone is to be introduced into the wall having that inscription cut upon it. The Commissioners will not, when granting aid *in future*, sanction the inscription of any title of a *denominational character*, or which may appear to them to indicate that the school is one belonging to any particular religious body. The Commissioners, however, do not object to the terms, male, female, or infant; or to the proper local designation of the city, town, parish, street, village, or townland in which the school may be situated; or to the name of the founder being stated on the inscription. — III., § 2, Code IX. Words in [ ] new.

2. "Patrons and managers are permitted to close their respective schools for a reasonable time or times during the year, subject to the interference of the Commissioners in case of abuse." — NEW RULE. Omitted in Code XII.

Code X., 1855. (Ninth change.)

New Rule.

New Rule.

3. No emblems or symbols of a *denominational* nature shall be exhibited in the school-room, during the hours of united instruction; nor will the Commissioners, in future, grant aid to any school which exhibits on the exterior of the buildings any such emblems.

4. No emblems or symbols of a *political* nature shall at *any time* be exhibited in the school-room, or affixed to the *exterior* of the buildings: nor shall any placards whatsoever be affixed thereto.

III., § 7 of Code IX., except the words in [ ].

5. The Commissioners regard the attendance of any of their teachers at meetings held for *political purposes*, or their taking part in elections for Members of Parliament, [or for Poor Law Guardians,] &c., except by voting, as incompatible with the performance of their duties, and as a violation of rule which will render them liable to dismissal.

New Rule.

6. The Commissioners require that a copy of Part I. of their Rules, on a form to be furnished by them, shall be suspended in every National school-room.

Part II.—Different Classes of National Schools.

I. District Model Schools.

Classification of schools enlarged and modified here; re-arranged again in Code XI.

1. District model schools are built and supported entirely out of the funds placed by Parliament at the disposal of the Commissioners, and are therefore under their exclusive control.

2. The chief objects of district model schools are to promote united education; to exhibit the most improved methods of literary and scientific instruction, and to train young persons for the office of teacher.

3. In district model schools, the Commissioners appoint and dismiss, of their own authority, the teachers and other officers; regulate the course of instruction, and exercise all the rights of patrons. The Commissioners afford the necessary opportunities for giving religious instruction to the pupils, by such pastors or other persons as are approved of by their parents or guardians, and in separate apartments allotted to the purpose.

4. Some of the district model schools have farms attached to them, for the purpose of affording instruction in agriculture.

II. Agricultural Schools.

1. Agricultural schools of every class must have a literary department annexed to them, conducted on the principles of ordinary National schools.

" " modified again in next Code.

2. Agricultural schools consist of two classes, "model and ordinary."

3. Model agricultural schools are divided into two classes, viz., those under the exclusive control of the Commissioners, and those under local patrons.

Words in " " made "In all schools connected with school farms of the first class," in Code XI.

4. "In all model agricultural schools" the Commissioners will grant salary to a teacher for the literary department *exclusively*, when the extent of the farm and other circumstance render such an appointment necessary.

"III. Model Agricultural Schools" under the Exclusive Control of the Commissioners.

Words in " " made A. School farms of the first class" in Code XI.

1. The Commissioners defray the greater portion of the cost of erecting the necessary buildings; but they require the local parties to contribute in such proportion as may be deemed necessary, according to the circumstances of each case.

2. The Commissioners undertake the *entire* cost of the furniture, fittings, rent, taxes, maintenance, implements, stock, &c., &c.

3. A farm of sufficient extent must be conveyed to the Commissioners, at a moderate rent, and on a satisfactory lease.

4. The Commissioners exercise all the rights of patrons, as in the case of district model schools.

5. The Commissioners admit into these schools a limited number of free, and also of paying resident agricultural pupils.

6. The Commissioners contribute a small weekly payment to the class of day pupils who work on the farm.

"IV. Model Agricultural Schools (Vested and Non-vested)" under Local Patrons.

Words in " " made "School farms of the first class." " " made "where the premises are vested."

1. "Vested Model Agricultural Schools."

1. The Commissioners contribute a certain amount of assistance towards the erection of the buildings, in proportion to the amount of local contribution, and the extent of the farm. The remaining portion of the cost of the buildings and furniture, and the whole cost of implements, stock, seed, &c., must be contributed by local parties.

2. The site of the buildings must be legally vested in the Commissioners "free of" rent.

3. The only aid granted by the Commissioners towards the *maintenance* of such schools, consists of salary to the master (who must be competent to conduct both the literary and agricultural departments); a sum towards the support of a limited number of resident agricultural pupils, and a weekly payment to the class of day pupils who work on the farm.

2. Non-vested "Model Agricultural Schools."

The first part represents V. 2, § 1 of agricultural schools, Code IX.; the latter part in [ ] new matter; the part in " " indicate where the wording was again changed in Code XI.

1. The entire cost of the necessary buildings, furniture, implements, stock, seed, &c., must be defrayed by local parties, and a farm of sufficient extent must be provided.

2. The Commissioners "grant the usual" salary to the master, "according to his class, as a literary teacher, and an additional sum £10 a year for his services as agriculturist." [They contribute also towards the support of a limited number of resident agricultural pupils, and a weekly payment to the class of day pupils who work on the farm.]

V. Ordinary Agricultural Schools.

V. 2, § 2, agricultural schools, Code IX. New or modified matter in [ ].

1. *This class of schools consists of ordinary National schools (either vested or non-vested)*, to which a small farm (from *one* to three acres) is annexed. The teacher must be competent

to give instruction *both in the theory and practice* of agriculture, [and must cultivate the land, with the assistance of his pupils]. Code X., 1855. (No such change.)

2. The only aid granted by the Commissioners, is an addition of "£5 a year" to the class salary of the teacher, [and in some special cases a small weekly payment to an industrial class of pupils].

3. To entitle a school to such aid, the Commissioners require to be satisfied from the reports of the Agricultural Inspectors, that the agricultural department is efficiently conducted.

VI. Agricultural Schools connected with Workhouses.

1. In Workhouse schools to which farms are attached, the Commissioners award to the agricultural teacher a gratuity, not exceeding £15 in one year, and make a free grant of books on agriculture. These gratuities and grants are awarded on the recommendation of the Agricultural Inspectors. See V., 2, Agricultural Schools, § 3, Code IX.

VII. School Gardens.

1. The Commissioners award gratuities, on the recommendation of the Agricultural Inspectors, to the teachers of National schools, who exhibit the best specimens of garden culture, on ground attached to their respective schools, the ground to be cultivated by the pupils. *New regulation.*

VIII. Industrial Schools.

1. In these schools embroidery and other advanced kinds of needlework are taught. The Commissioners grant salaries to the teachers on the following conditions :— Rules, §§ 1 to 3, new

First. That *all* the pupils of the industrial department shall receive literary instruction, for at least *two hours* daily.

Second. That no religious instruction or religious exercise shall take place during the time the pupils are engaged in industrial occupation.

Third. That a separate room be provided for industrial instruction.

Fourth. That in addition to the literary teacher, there shall be a suitable person appointed to conduct the industrial department.

2. None but lay teachers are entitled to a salary from the Commissioners, for conducting an industrial department in connexion with a *convent school.*

3. The amount of salary will depend upon the circumstances of each case.

IX. Convent Schools.

1. Convent schools receive aid under the conditions applicable to non-vested schools, and they are subject to the same rules and regulations. Rules and *regulations*, §§ 1 to 4, new.

2. The members of the community may themselves discharge the office of teachers, with or without, the aid of such other persons as they may see fit to employ ; the salaries of the assistants to be defrayed by the community.

3. The amount of salary awarded to convent schools is regulated by the average number of children in daily attendance, according to a scale laid down by the Commissioners.

4. The Commissioners will grant aid to *one school only* in *connexion with the same* convent.

X. Workhouse Schools.

1. Such schools are received into connexion, and grants of books made thereto, on condition that they shall be subject to inspection by the Commissioners, or their officers, and that all the rules of the Board applicable to non-vested schools be faithfully observed. VIII., 2, Code IX.

2. The Commissioners award annual gratuities to a certain number of the teachers of Workhouse schools in each district, on the recommendation of the Inspector.

XI. Schools attached to Prisons.

Such schools are received into connexion, upon the same general principles as the Workhouse schools, and grants of books are made thereto. [In special cases gratuities are awarded to the teachers.] VIII., 3, Code IX. Words in [ ] not in previous Codes.

XII. Evening Schools.

The Commissioners grant aid towards the support of evening schools, where the wants of the locality render such institutions desirable. The aid is limited to salary and books. *New regulation.*

Part III.

I. Conditions upon which Aid is granted towards Building School-houses ; towards Payment of Teachers' Salaries.—Classification of Teachers.—Scale of Salaries to Teachers, Monitors, &c.—General Regulations respecting the Training of Teachers, &c., &c.

New regulations, see III., § 1, Code IX.

1. The Commissioners of National Education grant aid under two general heads, viz. :—

First.—Towards building school-houses and providing suitable fittings and furniture. In such cases the Commissioners also grant aid towards the payment of teachers, supply of books, &c., as hereafter explained.

Secondly.—Towards the support and maintenance of schools established by local parties, without any assistance from the Commissioners towards the erection of the buildings, or providing furniture.

2. The Commissioners desire it to be distinctly understood that they reserve to themselves the right to withdraw any grant of salary or books, whenever they see fit.

II. Building (Vested Schools).

Words in ( ) not in previous Code.

1. Before any grant is made towards building a school-house, the Commissioners are to be satisfied that a necessity exists for such a school, that an eligible site has been procured, that VII., § 1 in Code IX.

CODE X., 1855. (Ninth change.)

a satisfactory lease of the site will be executed to the Commissioners in their corporate capacity; and that the applicant parties are prepared to raise, by local contribution, at least one-third of the whole sum which the Commissioners deem necessary for the erection of the house, providing furniture, &c.

VII., § 2, Code IX. 2. If the proposed site be for a school in a rural district, and be within three statute miles of a school-house, towards the erection of which the Commissioners have contributed aid, no grant can be made.

Ditto, § 3. 3. Although the Commissioners do not absolutely refuse aid towards the erection of school-houses on ground connected with a place of worship, yet they much prefer having them erected on ground which is not so connected, where it can be obtained; they therefore require that, before church, chapel, or meeting-house ground be selected as the site of a school-house, *strict* inquiry be made whether another convenient site can be obtained, and that the result shall be stated to them.

Ditto, § 4. 4. The school premises must be vested in the Commissioners, at a nominal rent, and for such term, under the circumstances, as they may deem necessary.

Ditto, § 5. 5. The Commissioners will keep in repair the school-house and furniture, where the premises are vested in them in their corporate capacity.

NEW RULE. 6. When the school premises have been vested in trustees, for the purposes of National Education, it devolves on the trustees to keep the house, furniture, &c., in repair.

VII., § 6, Code IX. 7. When grants are voted towards the building, &c., of a school-house, the conveyance must be duly executed *before the works are commenced.*

Ditto, § 7. 8. No grant can be made until the District Inspector shall have reported upon all the circumstances of the case; [until the Clerk of Works shall have reported on the eligibility of the proposed site; and the Law Adviser of the Board shall have given his opinion, from the information laid before him, that a satisfactory lease can be executed].

Words in [ ] new matter.

VII., § 8. 9. The Commissioners determine, from the information afforded them, [what amount of school accommodation should be provided in the] proposed building.

Words in [ ] show part changed from Code IX.

VII., § 9, Code IX., omitted in Code XI. 10. "The Commissioners cannot, in any case, pay more than two-thirds of the sum which they may deem necessary for the erection of the school-house (including furniture, &c.); and they invariably require that the remaining one-third, at least, shall be locally provided for."

VII., § 10, Code IX. 11. The cost of the house, &c., is determined by the number of children which it is intended to accommodate.

Ditto, § 11. 12. The Commissioners furnish instructions as to the plan and specification, to which the parties receiving aid are bound strictly to adhere.

Ditto, § 12. 13. The Commissioners do not "contribute" to the ornamenting of school-houses, but merely to such expenditure as may be necessary for having the children accommodated in plain, substantial buildings. If buildings of another description be preferred, the whole of the extra expense must be provided by the applicants.

Ditto, § 13. 14. The Commissioners do not contribute towards the expense of erecting residences for the teachers.

Ditto, § 15, omitted in Code XI. 15. "The whole of the works must be completed within twelve months from the date of the execution of the lease (unless by special permission), or the grants will be forfeited."

Ditto, § 16, ditto. 16. "The Commissioners do not make advances or instalments of their grants."

Ditto, § 14. 17. The house, furniture, &c., must be completed, and the school ready for the reception of the scholars before the grant can be paid.

Ditto, § 17, omitted in Code XI. 18. "Previous to the payment of the grants, a certificate, according to a form furnished, must be forwarded to the Commissioners, stating that the school-house, furniture, &c., have been completed in a satisfactory and workmanlike manner, and built according to the dimensions and directions set forth in the plan and specification. This certificate to be signed by the manager and by the contractor. The work to be approved of by the clerk of works or by any other person authorized by the Commissioners or the Government to examine it; and if a question arise as to the expenditure incurred, the accounts must be submitted to any audit which may be deemed necessary."

Ditto, § 18. 19. The Commissioners do not make grants to purchase school-houses, nor to purchase, alter, or furnish other houses, for the purpose of being converted into school-houses.

III. AIDS TO SCHOOLS PREVIOUSLY ESTABLISHED.

VIII., 1, § 1, Code IX. *Such Schools come under the class of "Non-vested Schools."* (*See* PART I., *Sec.* 3, *p.* 4.)

1. The aid granted to schools previously established is limited to salary and books.

NEW RULE 2. The Commissioners do not contribute towards repairs, fittings, furniture; or to the rent of the school-house.

VIII., 1, § 2, Code IX. 3. Before aid can be granted, the Commissioners must be satisfied that the case is deserving of assistance; that there is reason to expect that the school will be efficiently and permanently supported; that some local provision will be made in aid of the teacher's salary, in addition to the school fees; that the school-house is in good repair, and provided with a sufficient quantity of suitable furniture; that a competent teacher has been appointed; that the school is in operation; and that there is an average daily attendance of, [at least, thirty] children.

[At least thirty] was "sufficient" in Code IX.

NEW RULE, omitted in Code XI. 4. "The Commissioners reserve to themselves the right of making grants of "Salary and Books," in special cases, to schools in which the average daily attendance of pupils is below thirty, upon the following condition:—"

> "That so long as the average daily attendance continues under thirty, the salary awarded shall not exceed that of a probationary teacher; but that whenever an average daily attendance of thirty pupils, for a period of three months, can be shown from the records of the school, the teacher will then be paid the amount of salary to which he or she may be entitled, according to the scale of classification."

VIII., 1, § 3, Code IX. 5. Before the Commissioners consider any application for aid, they require from the Inspector of the district, a report upon all the circumstances of the case.

Ditto, § 4 6. To entitle a school to a continuance of aid, the house and furniture must be kept in sufficient repair by means of local contributions; the school conducted in all respects in a

satisfactory manner, and in accordance with the regulations of the Commissioners; and it must appear from the "records" of the school, that there is a sufficient average daily attendance of pupils.

Code X., 1855. (Ninth change.)

"Register" in Code IX. §§ 7 and 8 New Rules.

7. In mixed schools, *i.e.*, schools in which male and female children are taught in the same room, the teacher may be either male or female, as the circumstances of the school may require; but when a mixed school has been received into connexion, by the Commissioners, under a male or female teacher, the Commissioners will not sanction the appointment of a teacher of a different sex, unless previous application be made to them to sanction such change.

8. When a school has been taken into connexion, as a school for males, or for females solely, the Commissioners will not sanction the change from a male to a female school, or *vice versa*, without their permission having been previously obtained.

IV. Workhouse Schools and Schools attached to Prisons.

(*See* Part II., *Sections* 10 & 11.)

V. Classification and Salaries of Teachers, Monitors, &c.

1. All National teachers are either "classed teachers" or "probationers." The former are divided into three classes:—

New description of classes, &c., of teachers.

The class in which each teacher is ranked depends upon his or her qualifications, as determined after examination by the professors, or by the Inspectors.

All teachers on first entering the service of the Board, or who have not been classed, are termed probationers.

There are, also, assistant teachers, teachers of needlework, paid monitors.

2. The Commissioners have determined upon a course of study for each class, in which the teachers are to be examined, as a test of their fitness for promotion.

V., 1, § 16, Code IX.

3. Every National teacher will be furnished, on application to the District Inspector, with a copy of the programme of the course of study above referred to, in which is stated the minimum of proficiency required for each class.

V., 1, § 21, Code IX.

4. "No teacher will be admitted" to examination with a view to promotion, on whose school a decidedly unfavourable report has been made by the District Inspector within the previous year.

V., 1, § 17, Code IX., and modified in Part IV., Sect. III., § 5 of Code XI.

5. Teachers will not be eligible for promotion, unless in addition to satisfactory answering in the course prescribed for the class to which they aspire, it appears from the reports of the respective District Inspectors, that the schools are properly organized and well conducted; that adequate exertions have been made to keep up a sufficient average attendance; that the junior classes are carefully taught, and that a fair proportion of the pupils of the higher classes, besides being proficients in the ordinary branches of reading, spelling, and writing, are possessed of a respectable amount of knowledge in, at least, grammar, geography, and arithmetic. In female schools it will be further requisite that instruction in plain needlework, including sewing, knitting, and cutting-out, be given to all girls capable of receiving it, and that they exhibit a due proficiency in this department.

V., 1, § 18, Code IX., and modified Part IV., Sect. III., § 6*a*, Code XI.

6. It must also appear from the reports of the Inspectors, that the school accounts have been regularly and correctly kept; that the school premises have been preserved with neatness and order, and that cleanliness in person and habits has been enforced on the children attending them.

V., 1, § 19, Code IX., and modified Part IV., Sect. III., § 6*b*, Code XI.

7. "The Head and District Inspectors are authorized to recommend that such teachers be removed, fined, or lowered in their classification, as may have conducted themselves improperly, or in whose schools the attendance has considerably decreased, or who, from any other cause, may seem to these officers to merit such punishment."

V., 1, § 22, Code IX., omitted in Code XI.

8. All teachers who have not been classed, will be paid as probationers, until they be classed at the first general or special examination, to which they shall have been summoned. Those who then obtain classification, will be paid from the commencement of their service under the Board, according to the rate of salary attached to their class. This rule will not extend to any teachers who, when summoned, shall fail, from any cause whatever, to present themselves for examination.

V., 1, §§ 6 & 7, Code IX., Part IV., Sect. III., § 7 of Code XI.

9. "All teachers, not previously classed, who shall be summoned to a course of training, are to undergo a preliminary examination on their arrival in Dublin; and if then classed, shall receive the benefit of *such classification*, from the date of appointment to the date of the termination of the course of training; and they will receive the benefit of any promotion obtained at their second classification at the termination of the course, from the latter date."

New regulation, omitted in Code XI.

10. All teachers who have been unsuccessful at their first examination, and who may be retained on trial will receive the salary of the class to which they may be promoted at any subsequent examination, "from the commencement of the quarter in which their classification shall be determined."

V., 1, § 8, Code IX. Part between " " modified in Code XI., see Part IV., Sect. III., § 8.

11. Teachers who, after their first examination, have been retained on trial as probationers, if not recommended for promotion by the Head or District Inspectors, at the next ensuing examination, "or by the professors, after training," cannot be continued in the service of the Board; "but their salaries will be paid for one month subsequent to the date of dismissal."

V., 1, § 9, Code IX. Part in " " omitted in Code XI., see Part IV., Sect. III., § 9.

12. All teachers newly appointed to National schools, who, after examination by the Inspectors, may be found wholly unqualified, [must be removed from the school; but salary will be paid, at the rate of a probationer, up to the date of the order for removal].

V., 1, § 10, Code IX. New matter in [ ] again modified in Code XI., see Part IV., Sect. I., § 7.

13. If a teacher who has been dismissed from a National school for any cause, be appointed to another National school, the Commissioners reserve to themselves the right to determine whether the appointment can be sanctioned, or any salary paid to such teacher.

New regulation.

14. If a teacher who has been a considerable period out of the service of the Board, shall again enter it, the Commissioners reserve to themselves the right to determine, in each case, whether such teacher shall retain the class he was in, previous to quitting the service of the Board.

New regulation.

Code X., 1855. (Ninth change.)

15. The pupil teachers of district model schools, on taking charge of National schools after the completion of their course of training, shall rank as third class teachers (provided they be deemed qualified for that class by the Head Inspector) until they shall have been classed at the first "general or special" examination held after their appointment, in the district in which their schools are situated, when they will be paid according to their classification, from the date of such "examination."

V., 1, § 11, Code IX., Part IV., Sect. III., § 11, Code XI. Words in " " omitted in the latter. "Examination" made appointment in Code XI.

16. All teachers must remain at least one year in a lower division of any class, before they are eligible for promotion to a higher division; and they must remain two years in the same class before they can be promoted to a higher class. These conditions, however, being fulfilled, teachers of superior attainments may be advanced from any division of one class to any division of another after their first classification "(except untrained teachers who cannot be placed in the first class)" without being required to pass through the intermediate divisions: [such promotion to date from the 1st of April in the year in which the examinations are held].

V., 1, § 12, Code IX., and Part IV., Sect. III., § 12, Code XI. Words in [ ] new; words in " " and the passage in [ ] omitted in the latter.

17. This regulation does not apply to teachers who may be promoted on the recommendation of the professors at the termination of their course of training.

V., 1, § 13, Code IX.

18. No teachers can be raised to any division of the first class, unless they shall have been trained at the Normal school of the Commissioners, "and recommended for promotion by the professors."

V., 1, § 15, Code IX. Words in " " omitted from Code XI., see Part IV., Sect. III., § 14.

19. "Trained teachers, except at their own request, and with the sanction of the District Inspector, will not be required to attend any examination that may be held during the three years subsequent to the date of their classification by the professors at the expiration of the course of training."

New regulation, omitted in Code XI.

20. "National teachers, forty-five years of age and upwards, who have served under the Board for a period of not less than fifteen years, or teachers who have attained fifty years of age, and served not less than ten years, will not be required to attend any examination, provided they have been already examined and classed by the professors, or by the Inspectors."

New regulation.

21. Teachers who may have absented themselves, without satisfactory reason assigned, from the examinations of previous years, will be liable to be dismissed should they not present themselves when again summoned.

New regulation.

22. All teachers also who may be *specially* summoned, and who shall be absent without a sufficient reason, will be liable to be fined or depressed.

VI. Scale of Salaries to Teachers, Monitors, &c.

1. *Ordinary National Schools.*

V., 2, § 1, but part put under a different head.

1. The Commissioners grant salaries to teachers of National schools at the following rates, subject to the foregoing and annexed regulations:—

Scale higher than in Code IX., altered again in Code XI.

		Males.	Females.
First class teachers,	1st division,	£46	£36
	2nd do.,	38	30
	3rd do.,	32	24
Second class do.,	1st division,	26	22
	2nd do.,	24	20
Third class do.,	1st division,	20	17
	2nd do.,	17	15
Probationary teachers,		14	12
Assistant teachers, if qualified as probationers only,		14	12
Do. if qualified for any division of a class,		17	15
Mistresses to teach needlework,			8

V., 2, § 2 in Code IX.

2. The Commissioners require that a further income be secured to the teacher, either by local subscription or school-fees, to such amount in each case as they may direct; and the Commissioners also require that the payments made by the children shall not be diminished in consequence of any increase of salary which may be awarded to the teacher.

2. *Model Agricultural schools under exclusive control of the Board.*

New classification of agricultural schools. New Rule.

Teachers of model agricultural schools under the exclusive control of the Board, receive such amount of salary as the Commissioners deem sufficient, according to the circumstances of each case.

3. *Model Agricultural Schools under Local Patrons.*

V., 2, § 1, Agricultural Schools Code IX. Words in " " first used here.

1. Masters of model agricultural schools "under local patrons," who are competent to conduct both the literary and agricultural departments, receive £10 per annum, in addition to the salary of the class in which they may be placed; but if their income from the Board, with this addition, should fall short of £30 per annum, the difference will be granted to them, so that, in all cases, such teachers shall have secured to them for their *combined* services a salary of £30 a year at least.

4. *Ordinary Agricultural Schools.*

Represents V., 2, § 2, Agricultural Schools, Code IX.

2. Masters of "ordinary agricultural" schools receive £5 per annum in addition to the salary of their class, provided they are competent to conduct both the literary and agricultural departments, and that the Commissioners shall have previously approved of agriculture being taught in the school.

5. *Assistant Teachers.*

V., 2, Assistant Teachers, § 1, Code IX. Words in [ ] added in this Code.

1. The Commissioners will not grant a salary to an assistant teacher in any school in which there is not an average daily attendance of at least seventy-five pupils [for three months previous to the date of application]; and in schools whose average attendance does not rise considerably above this, and which are already provided with paid monitors, assistants cannot be recognised by the Board.

Ditto, § 3. Limitation as to age in [ ] added in this Code.

2. Assistant teachers will not be sanctioned whose qualifications are not at least equal to those required of probationers, [or who are under eighteen years of age].

6. *Workmistresses.*

CODE X., 1855. (Ninth Change.)

1. The Commissioners will not grant salary to workmistresses, unless there be a sufficient average daily attendance of pupils ; and the Commissioners require that at least two hours each day be devoted to instruction in this branch. — V., 2, workmistresses, § 1 in Code IX.

2. If any workmistress whose appointment has been sanctioned by the Commissioners, be employed during the remainder of the ordinary school-hours in giving literary instruction to the junior classes, it is competent for the District Inspector, if he considers her qualified, to recommend that she be paid at the rate of salary awarded to "probationers :" any increase of salary granted under this regulation is not to have a retrospective effect. — NEW RULE.

3. In schools attended by female children only, under the care of a female teacher, such teacher must be competent not only to conduct the literary department, but also to give instruction in needlework ; [but if the average daily attendance of girls exceed fifty, for a period of three months, application may be made for a grant of salary to a workmistress to take charge of the industrial department, which, however, must be superintended by the principal teacher, who will be held responsible for its efficient management]. — V., 2, workmistresses, § 2, Code IX., part in [ ] new matter.

7. *Industrial Schools.*

In National schools where embroidery and other advanced kinds of needlework are taught, the amount of salary granted for giving such instruction is regulated by the nature of the work, and the number of pupils engaged in it, [subject to the conditions set forth in Part II., sec. 8]. — V., 2, Industrial schools, § 1, Code IX., words in [ ] not in that Code.

8. "*Convent Schools.*"

Called "Schools in connexion with Religious Bodies" in Code X.

1. In schools of this description, salary is paid according to a per-centage on the average daily attendance :— — V., 2, § 1.

[For 50 average daily attendance,	£10]	Parts in [ ] added in this Code.
„ 100 „	20	
„ 200 „	40	[Increase per cent. £20 per annum.]
„ 300 „	60	
„ 400 „	77	
„ 500 „	94	[Increase per cent. £17 per annum.]
„ 600 „	111	
Above 600 „		Increase per cent. £15 per annum.

2. "Where the average daily attendance amounts to thirty above the 100, salary for fifty will be allowed ; and when it exceeds fifty and does not amount to seventy-five, above the 100, salary for three-fourths of 100 will be allowed ; and when it exceeds seventy-five, salary for 100 will be allowed." — NEW RULE, omitted in Code XI.

3. "In cases where the average attendance does *not* amount to 100, salary to be paid thus :"— — NEW RULE, omitted in Code XI

"For thirty children, and not exceeding fifty, £10 per annum."

"When the attendance exceeds fifty and does not amount to seventy-five, £15 per annum will be paid."

"When it exceeds seventy-five, to be paid at £20."

4. "The Commissioners pay salary according to the average number of children in daily attendance at each convent school, without reference to the number of rooms into which they may be distributed." — NEW RULE, omitted in Code XI.

5. As the amount of salary will in all cases depend upon the average daily attendance of pupils, "as shown by the quarterly returns," managers are to be prepared for augmentation or diminution accordingly. — NEW RULE, words in " " omitted in Code XI.

9. *Paid Monitors.*

SALARIES.

For the First Year, . .	£4
For the Second Year, . .	£5
For the Third Year, . .	£7
For the Fourth Year, . .	£8

Scale the same as in Code IX.

1. The paid monitors are selected from among the best pupils in the National schools of each district, and are appointed by the Commissioners upon the recommendation of the District Inspectors. — V., 2, Paid Monitors, § 1 of Code IX., except omitted passage.

2. No manager of a National school is obliged to employ the services of a paid monitor, "unless he wishes to do so." — NEW RULE, words in " " omitted in Code XI.

3. The appointment of a paid monitor cannot be held for a longer period than "FOUR YEARS," at the expiration of which the salary will be discontinued. — V., 2, "Paid Monitors," § 2 of Code IX., words in " " modified in Code XI.

4. The salary may, however, be withdrawn at any time, should want of diligence, of efficiency, or of good conduct on the part of the monitor, or should any other circumstance render such a course desirable. — Ditto, § 3.

5. The Commissioners select the schools (on the recommendation of the Inspectors) in which the services of paid monitors may be employed. — §§ 5, 6, represent § 4, V., 2, "Paid Monitors," Code IX.

6. When a vacancy occurs, whether before or after the expiration of four years, it does not necessarily follow that a successor shall be appointed in the same school.

7. "The school [for which a paid monitor is recommended by the Inspector] should exhibit a tolerable degree of efficiency, should have a sufficient average attendance to require a paid monitor, and the teacher should be qualified to give instruction in a prescribed course." — V., 2, "Paid Monitors," § 8 of Code IX. The words in [ ] show the changes.

8. The programme of the course of study for paid monitors can be obtained on application to the District Inspector. — Ditto, § 9.

9. Paid monitors who have completed the four years of their course in a satisfactory manner, are eligible, on examination by the Inspectors, as candidates for the situation of assistant teachers, or of pupil-teachers in district model schools. — Ditto, § 10.

Code X., 1855. (Ninth Change.)

10. *Scale of Gratuities to "Literary Teachers" of Workhouse Schools.*

"Masters and Mistresses" in Code IX., V., 2, scale of gratuities, &c., § 1, Code IX.

1. The Commissioners of National Education (with the concurrence of the Poor Law Commissioners) award gratuities to a certain number (forty males and forty females) of the teachers of the Workhouse schools, in connexion with the National Board, who shall be recommended by the District Inspectors.

Ditto, § 2.

2. The gratuities are divided into two classes :—

For Male Teachers,	First Class,	Twenty at the rate of	£6	a year each.
	Second Class,	Twenty „	£4	„
For Female Teachers,	First Class,	Twenty „	£5	„
	Second Class,	Twenty „	£3	„

Ditto, § 3.

3. The payment will be made half-yearly, with the usual issue of salary to teachers of National schools, after the 31st March and 30th September, in each year.

Ditto, § 4.

4. It is to be understood that such gratuities are given in *addition* to the salaries paid to the teachers of Workhouse schools, under the provisions of the Poor Law Act.

Ditto, § 5.

5. No teacher is precluded from receiving the gratuity two or more years in succession, if recommended by the District Inspector as deserving of it; but a teacher having received a gratuity for one half year, is not thereby *entitled* [to the payment of it for the succeeding half year].

Words in [ ] different from Code IX.

New regulation.

6. If the local guardians know any just cause for withholding the gratuity from the teacher, they should return the receipt unsigned, and communicate to the Commissioners of National Education the grounds for so doing.

11. *Gratuities to Agricultural Teachers of Workhouse Schools.*

See V., 2, agricultural schools, § 3, Code IX.

The Commissioners award annual gratuities to agricultural teachers of Workhouse schools, not exceeding £15 to each, on conditions stated in Part II., sec. 6.

Words in brackets not in Code IX., but in a separate regulation.

12. *Scale of Premiums to Masters and Mistresses of National Schools, [vested and non-vested,] who are most distinguished by the Order, Neatness, and Cleanliness observable in themselves, their Pupils, and in the School-houses.*

V., 2, similar heading, § 1, Code IX.

1. The sum of £22 10*s.* will be allocated to each of the school districts, and divided into thirteen premiums.

One of £4	£4
Two of £3	£6
Five of £1 10*s.*	£7 10*s.*
Five of £1	£5.

Ditto, § 2. Words in [ ] show change from previous Code.

2. These premiums are awarded ANNUALLY on the recommendation of the District Inspector, [at the expiration of the year.]

V., 2, similar heading, § 4, Code IX.

3. No teacher is eligible for this premium for more than two years in succession.

Ditto, § 5.

4. These premiums will be awarded without reference to the class in which the teachers may be placed; but none will be deemed eligible to receive such premiums against whom there is any well-founded charge of neglect in the performance of their duties, of impropriety in their conduct, or whose schools are not conducted in a satisfactory manner.

New regulation.

5. If the patron or manager of a National school knows any just cause for withholding the premium from the teacher, he should return the receipt unsigned, and state his reasons for so doing.

VII. Training of Teachers.

V., 1, § 2, Code IX.

1. The Commissioners have provided a Normal establishment in Dublin, for training teachers, and educating persons who are intended to undertake the charge of schools.

V., 1, § 3, Code IX. Words in " " omitted in Code XI. Words in [ ] added in this Code.

2. Teachers selected by the Commissioners for admission to the Normal establishment, must produce a certificate of good character "from an officiating clergyman of the communion to which they belong;" [also, a certificate from a member of the medical profession that they are in good health, and free from any cutaneous disease;] and must pass through an examination in the books published by the Commissioners. They are boarded and lodged at the establishments provided by the Commissioners for the purpose. They receive religious instruction from their respective pastors, who attend at the normal establishment at convenient times appointed "for the purpose." On Sundays they are required to attend their respective places of worship; and a vigilant superintendence is at all times exercised over their moral conduct. [The teachers undergo a final examination at the close of the course, and they then receive a certificate according to their deserts. The teachers for a considerable time previous to their being summoned, are required to prepare themselves for the course.]

Part in brackets forms part of V., § 4, Code X.

New regulation.

3. During the absence of the recognised teacher, a temporary teacher must be provided to take charge of the school, who is to be paid a portion of the salary falling due to the recognised teacher during his or her attendance at the Normal establishment.

New regulation. Words in " " altered in Code XI.

4. Should any teachers present themselves in a delicate state of health, or affected with any cutaneous disease, "they will be required to return home at their own expense." No teacher can be admitted who has not had the small pock, or been vaccinated.

New regulation.

5. The teachers trained in the Normal institution are divided into three classes, namely :—

First—The general or ordinary class, composed of teachers (males or females) of National schools who have been recommended by the District or Head Inspectors as eligible candidates for training.

Second—The special or extra training class, composed chiefly of teachers (males or females) who have been selected from the ordinary or general class, for additional training.

See V., 1, § 5 of Code IX.; this regulation is much altered here.

Third—The candidate or *extern* class is composed of a limited number of respectable and well-informed young persons, who wish to qualify themselves to act as teachers. The candidates admitted to this class are permitted to attend, without any charge, the model schools and the lectures of the professors, and at the end of the course they are examined and classed as teachers according to their merits and qualifications. Permission is also given to teachers of schools not connected with the Board to attend the model schools as *auditors* or *visitors*, for any period that may suit their own convenience.

VIII. Books.

Code X., 1855. (Ninth Change.)

1. The Commissioners furnish gratuitously to each school a first stock of school-books, in proportion to the attendance of children, "which is renewed at the end of every three years." These "books" are to be kept as a school stock, for which the master or mistress is held responsible, and they are on no account to be [sold or] taken out of the school. "The Commissioners also supply books from time to time for the general use of the children, and also school requisites, such as paper, slates, quills, &c., at reduced rates." — VI., § 1, Code IX. Words in " " omitted in Code XI. Words in [ ] new. Words in " " omitted in Code XI.

2. The funds of the Commissioners do not enable them to give a free stock sufficiently large for the entire wants of the school. Any additional books, and maps, stationery, slates, clocks, and other requisites, must be purchased at reduced rates. — VI., § 2, Code IX.

3. The value of the grant of free stock is regulated by the average daily attendance of pupils as ascertained from the reports of the Inspectors. The managers of schools have the privilege of selecting their grants of free stock from the "*whole*" list "of books supplied by the Commissioners," and are at liberty to choose such of them as they most approve of, and to omit any to which they object, ["except in the case of a *first free stock*, when the Commissioners require that a map of the world, and a set each of spelling and arithmetical tablets shall be procured."] — VI., § 3, Code IX. Words in " " omitted in Code XI. New condition, not in Code IX.

4. "When books, &c., purchased from the Commissioners at the reduced price, are sold to the children attending a National school, it is directed that in no case shall any advance be made on these prices; and the District Inspectors have instructions to inquire into and report upon any infraction of this rule." — VI., § 4, Code IX., omitted in Code XI.

5. Books published by the Commissioners of National Education :—

First Book of Lessons.
Second do.
Sequel to Second Book, No. 1.
Sequel to the Second Book, No. 2.
Third Book of Lessons.
Fourth do.
Supplement to the Fourth Book.
Fifth Book (Boys').
Reading Book for Girls' School.
Biographical Sketches of British Poets.
Selections from the British Poets, Vol. 1.
Do. do., Vol. 2.
Introduction to the Art of Reading.
English Grammar.
Key to do.
First Book of Arithmetic.
Key to do.
Arithmetic in Theory and Practice.
(For Key to "Arithmetic in Theory and Practice," see "Books sanctioned.")
Book-keeping.
Key to do.
Epitome of Geographical Knowledge.

Do. do. Part II.
Do. Introduction to Algebra.
Arithmetical Table Book.
Hullah's Manual.

7. THE COMMISSIONERS WILL NOT WITHDRAW, OR ESSENTIALLY ALTER ANY BOOK THAT HAS BEEN, OR SHALL BE HEREAFTER, UNANIMOUSLY PUBLISHED OR SANCTIONED BY THEM, WITHOUT A PREVIOUS COMMUNICATION WITH THE LORD LIEUTENANT. — NEW RULE.

8. All applications for books and requisites at reduced prices must be addressed to the Secretaries, and be accompanied by a money order for the amount, in favour of MAURICE CROSS, or JAMES KELLY, Esq., and PAYABLE IN DUBLIN ON DEMAND. — §§ 8 to 19, *new regulations*.

9. Checks or money orders drawn on country banks cannot be received in payment for books.

10. When a post office order or letter of credit is transmitted, and the amount is under TEN SHILLINGS, the cost of the remittance must be paid by the person applying for the same; but if the sum exceeds Ten Shillings, the cost of the remittance will be allowed, and requisites given for the *full amount* PAID.

11. The patron or manager should not sign any application for books and requisites without first ascertaining that they are actually wanted for the school, on behalf of which the application is made. The Inspectors are required to report to the Commissioners whenever it appears that an undue quantity of books or stationery has been ordered for a National school.

12. All applications for books and requisites at reduced prices, are to be PREPAID by the managers, or the amount of postage will be deducted from the grant. — § 12, omitted in Code XI.

13. When there are separate ROLL NUMBERS for male and female National schools, the application should state for which of them the books, &c., are required; and if for both, *two* forms should be used.

14. Parcels of books, &c., when so desired, will be forwarded, carriage free, to the depot of the district in which the school for which the books are required is situated, and the Inspectors will inform the managers on what day they will be ready for delivery; or to the depot of any other district if more convenient; but in the latter case, the Inspector, not knowing the managers of any schools out of his district, cannot give notice.

15. Or the parcel will be forwarded to any place nearest to the manager's residence to which there is a mode of conveyance. In this case the manager must point out the precise

Code X., 1855. (Ninth change.)

mode of conveyance by which the parcel is to be transmitted, and he must also defray the cost of carriage.

16. When parcels are forwarded to the depot of a district it is *not* the duty of the Inspector to transmit the parcel to the manager's residence or to the school.

17. The manager is required to send to the depot on the day appointed by the Inspector for delivery of parcels, a messenger who must present the order on the Inspector, with which the manager will be furnished; and which order the Inspectors are required to transmit to this office as a proof of the delivery of the parcels.

18. If a parcel is to be sent by a carrier, he must call at the office in Dublin not sooner than two days after the manager's directions shall have been received, and must produce the manager's order to the storekeeper here, for its delivery, on the form supplied for the purpose.

19. The Commissioners do not supply books or requisites to the public, or to schools not connected with the Board of National Education.

IX. Miscellaneous.

IX., § 3, Code IX.

1. Persons desirous of obtaining assistance from the Commissioners of National Education, under any of the foregoing heads, will, upon intimating to the secretaries the nature of the aid required, be furnished with the forms, upon which their application must be laid before the Commissioners.

IX., § 2, Code IX.

2. Applicants for assistance are not to understand that the Commissioners are bound to grant the full amount of aid, as set forth in the foregoing regulations, in every case; nor can they grant any, unless they have sufficient funds for the purpose, which depends upon the amount placed at their disposal by Parliament.

IX., § 1 of Code IX., but greatly modified. "Assistance in any case in Code IX. Words in [ ] indicate the addition to rule made in this Code.

3. The Commissioners desire it to be distinctly understood that they do not hold themselves bound to grant "aid," unless application shall have been made to them in the first instance, [on the proper form, unless such application shall have been approved of, and unless the application shall have been favourably and finally decided upon by the Board.] Applicants, therefore, should not incur any expense towards the payment of which they expect the Commissioners to contribute, until the decision of the Board shall have been communicated to them.

IX., § 4 in Code IX., words in [ ] added here.

4. All communications in reference to National schools should be [signed and] made by the patron or manager. The Commissioners do not correspond with teachers of National schools.

Omitted in Code XI.

5. No attention can be paid to "anonymous" communications.

IX., § 5, Code IX. in part, words in [ ] added here.

6. All letters, or other communications, in any manner relating to the business of the Board, or to the National schools, are to be addressed to the secretaries, [and not to any other officer or person connected with the Board.]

IX., § 5, Code IX.; the regulation in the latter part of clause changed in Code XI.

7. All letters, &c., to be directed as under.* No communications can be received which are not prepaid, except documents sent from this office, and which are required to be returned.

* *The Secretaries,*
Education Office,
Marlborough-street, Dublin.

New regulation.

Correspondents are requested to attend to the following directions, viz.:—

1. To write at the head of any letter addressed to this office the name of the school referred to, and the county in which it is situated.

2. To make communications on different subjects in separate letters.

3. To state in every case the writer's post town; and in the case of persons whose names are not recorded as patrons or managers of schools, to give the name and style of address in full.

4. In replying to an official letter to quote its number and date.

5. It is particularly requested that all letters may be written clearly, and on paper of foolscap size, or, at least, large-sized letter-paper.

By order of the Commissioners of National Education,

Maurice Cross, James Kelly, } *Secretaries.*

Education Office, Dublin,
May, 1855.

Code XI., 1863. (Tenth Change.)

No. 11.

Rules and Regulations of the Commissioners of National Education in Ireland.

Part I.

General Nature of the System of National Education.

I. Its Object and Fundamental Principle.

§§ 1 to 4 as in Code X.

1. The object of the system of National Education is to afford *combined* literary and moral, and *separate* religious instruction, to children of all persuasions, as far as possible, in the same school, upon the fundamental principle, that no attempt shall be made to interfere with the peculiar religious tenets of any description of Christian pupils.

2. It is the earnest wish of Her Majesty's Government, and of the Commissioners, that the Clergy and Laity of the different religious denominations should co-operate in conducting National Schools.

3. The Commissioners by themselves, or their Officers, are to be allowed to visit and examine the Schools whenever they think fit. Those who visit on the part of the Commissioners are furnished with credentials under their seal.

4. The Commissioners will not change any fundamental rule without the express permission of His Excellency the Lord Lieutenant.

CODE XI., 1863. (Tenth Change.)

5. The Commissioners will not withdraw, or essentially alter, any book that has been, or shall be hereafter, unanimously published or sanctioned by them, without a previous communication with the Lord Lieutenant.

Transferred from Part III., Sect. VIII., BOOKS in Code X.

II. DESCRIPTION OF SCHOOLS TO WHICH THE COMMISSIONERS GRANT AID.

1. The Schools to which the Commissioners grant aid are divided into two classes, viz. :— 1st, Vested Schools, [of which there are two sorts, namely, first, those vested in the Commissioners; and, second, those vested in Trustees], for the purpose of being maintained as National Schools; 2ndly, Non-Vested Schools, the property of private individuals. Both these classes of Schools are under the control of local Patrons or Managers.

Sect. III. of same part in Code X., otherwise materially unaltered, words in [ ] indicate verbal changes.

2. There are also Model Schools, of which the Commissioners are themselves the Patrons, but which are conducted on the same fundamental principles, as the ordinary National Schools.

3. The Commissioners encourage Industrial Instruction in National Schools in all suitable cases.

4. The Commissioners require that instruction shall be given in plain needle-work in all Female Schools.

III. USE OF SCHOOL-HOUSES.

1. In Non-Vested Schools, the Commissioners do not, in ordinary cases, exercise control over the use of the School-houses on Sundays, or before or after the School hours on the other days of the week; such use being left altogether to the local Patrons or Managers, of all religious persuasions, subject to the interference of the Board in cases leading to contention or abuse.

Sect. V. of same part. §§ 1 to 6 inclusive as in Code X.

2. No National School-house shall be employed, at any time, even temporarily, as the *stated* place of DIVINE WORSHIP of any religious community; or for the celebration or administration of the Sacraments or Rites of any Church.

3. No aid will be granted to a School *held in a place of worship;* nor will the Commissioners sanction the *transfer* of an existing School to a place of worship, even for a temporary period.

4. When a School-room is in any way connected with a place of worship, there must not be any *direct internal* communication between the School-room and such place of worship.

5. Vested School-houses must be used, *exclusively for the education* of the pupils attending them: except on Sundays, when they may be employed for Sunday Schools, with the sanction of the Patrons or Managers, subject, in cases leading to contention or abuse, to the interference of the Commissioners.

6. No political meetings shall be held in National School-houses, whether Vested or Non-vested; nor shall any political business *whatsoever* be transacted therein.

7. When any School is received by the Commissioners into connexion with them, the inscription, "NATIONAL SCHOOL," shall be put up in plain and legible characters on the School-house, or on such other place as may render it conspicuous to the public. When a School-house is built partly by aid from the State, a stone is to be introduced into the wall having that inscription cut upon it. The Commissioners will not, when granting aid *in future*, sanction any inscription containing a title of a *denominational character*, or which may appear to them to indicate that the school is one belonging to any particular religious body. The Commissioners do not object to the terms, Male, Female, or Infant; or the proper local designation taken from the city, town, parish, street, village, or townland, in which the School may be situated; or the name of the founder being included in the inscription.

Transferred from Sect. X. of Part I., § 7, Code X.

8. No emblems or symbols of a *denominational* nature shall be exhibited in the School-room, during the hours of united instruction; nor will the Commissioners, in future, grant aid to any School which exhibits on the exterior of the buildings any such emblems.

Transferred from Sect. X. of Part I., § 3 of Code X.

9. No emblems or symbols of a *political* nature shall at *any time* be exhibited in the School-room, or affixed to the *exterior* of the buildings: nor shall any placards whatsoever, except such as refer to the legitimate business of school management, be affixed thereto.

Transferred from Sect. X. of Part I., § 3 of Code X.

IV. RELIGIOUS AND SECULAR INSTRUCTION.

1. Opportunities are to be afforded (as hereinafter provided for) to the children of all National Schools for receiving such religious instruction as their parents or guardians approve of.

As in Code X.

2. Religious instruction must be so arranged, that each School shall be open to children of all communions; that due regard be had to parental right and authority; that, accordingly, no child "be *compelled* to" receive, or to be present at, any religious instruction of which his parents or guardians disapprove; and that the time for giving it be so fixed, that no child shall be thereby, in effect, excluded, directly or indirectly, from the other advantages which the School affords.

Words in " " changed to "shall" in Code XII.

3. A public notification of the times for religious instruction must be inserted in large letters in the "Time Table" supplied by the Commissioners, who recommend that, as far as may be practicable, the general nature of such religious instruction be also stated therein.

4. The "Time Table" must be kept constantly hung up in a conspicuous place in the School-room.

5. [When the religious instruction comes after the secular], the Teacher must, immediately before the commencement of the former, announce distinctly to the pupils that the hour for religious instruction has arrived, and must, at the same time, put up and keep up, during the period allotted to such religious instruction, and within the view of all the pupils, a notification thereof, containing the words "Religious Instruction," printed in large characters, on a form to be supplied by the Commissioners. [Similarly when the School commences with religious instruction, the Teacher is to put up and keep up the same notification.]

Rule modified here by words in [ ].

CODE XI., 1863. (Tenth Change).

6. When the secular instruction precedes the religious instruction, in any National School, there shall be a sufficient interval between the announcement and the commencement of the religious instruction; and whether the religious or the secular instruction shall have priority in any National School, the books used for the instruction first in order shall be laid aside at its termination, in the press or other place appropriated for keeping the School-books.

7. No secular instruction, whether literary or industrial, shall be carried on in the same apartment during school hours,* simultaneously with religious instruction.

"State" in place of "Commissioners" in Code X.

8. In Schools towards the building of which the "State" has contributed, and which are VESTED in Trustees, for the purposes of National Education, or which are vested in the Commissioners in their corporate capacity, such pastors or other persons as shall be approved of by the parents or guardians of the children respectively, shall have access to them *in the School-room*, for the purpose of giving them religious instruction there, at times convenient for that purpose [that is, at times so appointed as not to interfere unduly with the other arrangements of the School].

Words in [ ] added here.

A paragraph added to this Rule in 1855 (Code X.) omitted here.

9. In Schools, NOT VESTED, and which receive no other aid than Salary and Books, it is for the Patrons or Managers to determine whether any, and if any, what religious instruction shall be given *in the School-room;* but if they do not permit it to be given in the School-room, the children whose parents or guardians so desire, must be allowed to absent themselves from the School, at reasonable times, for the purpose of receiving such instruction ELSEWHERE.

10. The reading of the Scriptures, either in the Protestant Authorized or Douay Version,—the teaching of Catechisms,—public prayer,—and all other religious exercises, come within the rules as to religious instruction.

11. The Patrons and Managers of *all* National Schools have the right to permit the Holy Scriptures (either in the Authorized or Douay Version) to be read, at the time or times set apart for religious instruction; and in *all Vested Schools* the parents or guardians of the children have the right to require the Patrons and Managers to afford opportunities for the reading of the Holy Scriptures, in the School-room, under proper persons approved of by the parents or guardians for that purpose.

12. Religious instruction, prayer, or other religious exercises, may take place, at any time, before and after the ordinary School business (during which all children, of whatever denomination they may be, are required to attend); but must not take place *at more than one intermediate* time, between the commencement and the close of the ordinary School business. The Commissioners, however, will not sanction any arrangement for religious instruction, prayer, or other religious exercises *at an intermediate time*, in cases where it shall appear to them, that such arrangement will interfere with the usefulness of the School, by preventing children of any religious denomination from availing themselves of its advantages, or by subjecting those in attendance to any practical inconvenience.

Words in [ ] added here.

13. [With the above exception,] the secular School business must not be interrupted, or suspended, by any spiritual exercise whatsoever.

Note.—The Commissioners earnestly recommend that Religious Instruction shall take place either immediately before the commencement, or immediately after the close, of the ordinary School business; and they further recommend that, whenever the Patron or Manager thinks fit to have religious instruction at an intermediate time, a separate apartment shall (when practicable) be provided for the reception of those children "whose parents or guardians may disapprove of their being" present thereat.

Words between " " made "who according to these rules should not be" in Code XII.

Rules 14, 15, 16, & 17, *replaced in Code XII. by Rule* 15 *of that Code.*

14. Patrons, Managers, and Teachers are not required to *exclude* any children from any religious instruction given in the School; but all children are to have full power to absent themselves, or to withdraw, from it. If any parents or guardians object to the religious instruction given in a National School, it devolves upon them to adopt measures to prevent their children from being present thereat.

15. Patrons, Managers, and Teachers are not to use any means, directly or indirectly, to induce children to attend any religious instruction, contrary to the wishes of their parents or guardians. The Commissioners will regard such interference as opposed to the whole spirit of the system of National Education.

16. "If any child of a religious persuasion different from that of the Teacher of any National School, attend during the time or times set apart for religious instruction given by such Teacher, it shall be the duty of the Teacher, on the *first attendance* of every such child, during the time for such religious instruction given by such Teacher in such school, *forthwith* to notify the same to the parent or guardian of such child, on, and by, a Form to be furnished by the Commissioners."

17. "The Teachers are required to keep a record of the names of the children to whose parents they have sent the printed Form of notification."

18. The Registry kept in each School, according to the Form furnished by the Commissioners, must show the religious denomination of each child on the School Roll.

19. A sufficient number of hours, to be approved of in each case by the Commissioners, is to be appropriated to the ordinary School business, during which all children, of whatever denomination they may be, are required to attend.

20. In all National Schools (except those in which Industrial instruction is the *chief* object) there must be Literary instruction for at least *four* hours, upon five days in the week.

Words in [ ] added here.

21. [In Industrial Schools—that is,] in Schools where Industrial instruction is the *chief* object the Commissioners require that not less than *two* hours, daily, shall be devoted to Literary instruction.

V. USE OF BOOKS AND TABLETS.

VI., of same part in Code X.

1. The use of the books published by the Commissioners is not compulsory; but the titles of all other books which the Patrons or Managers of Schools intend for the ordinary School business, are to be notified to the Commissioners; and none are to be used to which

* The term "SCHOOL HOURS," is always to be understood to mean the entire time in each day, from the opening of the School to the closing of the same for the dismissal of the pupils.

they object. The approval of any such books is to extend only to the particular edition which has been submitted to the Commissioners. CODE XI., 1863. (Tenth change.)

2. If any books other than the Holy Scriptures, or the *standard* books of the Church to which the children using them belong, be employed in communicating religious instruction, the title of each is to be made known to the Commissioners whenever they deem it necessary.

3. The Commissioners do not insist on the "Scripture Lessons" or book of "Sacred Poetry" being read in any of the National Schools, nor do they allow them to be read as part of the ordinary School business (during which all children, of whatever denomination they may be, are required to attend) in any School attended by children whose parents or guardians object to their being read by their children. In such cases the Commissioners prohibit the use of these books, except at times set apart for the purpose, either before or after such ordinary School business, and under the following conditions:—

First—That no child, whose parent or guardian objects, shall be required, directly or indirectly, to be present at such reading.

Second—That in order that any children, whose parents or guardians object, may be at liberty to absent themselves, or to withdraw, at the time set apart for the reading of the books above specified, public notification of the time set apart for such reading shall be inserted in large letters in the Time-table of the School—that there shall be a sufficient interval between the conclusion of such ordinary School business and the commencement of such reading; and that the Teacher shall, immediately before its commencement, announce distinctly to the pupils, that any child whose parent or guardian so desires may then retire.

Third—That in every such case there shall be, exclusive of the time set apart for such reading, sufficient time devoted each day to the ordinary School business, in order that those children who do not join in the reading of these books may enjoy ample means of literary instruction in the School-room.

4. When using the Scripture Lessons, the Teachers are prohibited, except at the time set apart for religious instruction, from putting to the children any other questions than those appended to the end of each lesson.

5. The Commissioners require that the principles of the following Lesson, or of a Lesson of a similar import (to be approved of by the Commissioners), shall be strictly inculcated, during the hours of united instruction, in all Schools received into connexion with the Board, and that a copy of the Lesson itself be hung up in each School.

Christians should endeavour, as the Apostle Paul commands them, to live peaceably with all men (Rom. ch. xii. v. 18), even with those of a different religious persuasion.

Our Saviour, Christ, commanded his disciples to love one another. He taught them to love even their enemies, to bless those that cursed them, and to pray for those who persecuted them. He himself prayed for his murderers.

Many men hold erroneous doctrines, but we ought not to hate or persecute them. We ought* to hold fast what we are convinced is the truth; but not to treat harshly those who are in error. Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his disciples to fight for him.

If any persons treat us unkindly, we must not do the same to them; for Christ and his apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others, not as they do to us, but as we would wish them to do to us.

Quarrelling with our neighbours and abusing them, is not the way to convince them that we are in the right, and they in the wrong. It is more likely to convince them that we have not a Christian spirit. We ought, by behaving gently and kindly to every one, to show ourselves followers of Christ, who, when he was reviled, reviled not again (1 Pet. ch. ii. v. 23).

*The words "*to seek for the truth, and*" in Code X. omitted here.

6. The use of the Tablet, furnished by the Commissioners, containing the Ten Commandments, is not compulsory.

7. The rules as to religious instruction do not apply, [except in the way hereinbefore stated,] to the Scripture Lessons and the Book of Sacred Poetry, or to the matter contained in the common School-books, or in any other book, the use of which the Commissioners may at any time sanction for the purpose of united instruction.

Words in [ ] added here.

VI. MANAGEMENT OF NATIONAL SCHOOLS.

1. The local government of the National Schools is vested in the local Patrons thereof. Part I., Sect. II. of Code X.

2. The Commissioners recognise as the local patron the person who applies in the first instance to place the School in connexion with the Board, unless it be otherwise specified in the application. §§ 1 to 11 inclusive, as in Code X.

3. If a School be under the local management of a School-Committee, such Committee has all the rights of an individual Patron.

4. The Patron has the right of nominating any fit person to act as his representative in the local management of the School; such representative to be designated the "Local Manager." The Patron may, at any time, resume the direct management of the School, or appoint another Local Manager. This rule applies equally whether the Patronship be vested in one or more individuals.

5. When a school is vested in Trustees, they have the right to nominate the Local Manager.

6. When a School is vested in the Commissioners, the name of the Patron or Patrons is inserted in the lease.

7. In the case of a vacancy in the Patronship by death, the representative of a lay Patron, or the successor of a clerical Patron, is recognised by the Board (where no valid objection exists) as the person to succeed to the Patronship of the School.

8. If a Patron wishes to resign the office, he has the power of nominating his successor, subject to the approval of the Board.

9. In all cases, the Commissioners reserve to themselves the power of determining whether the Patron, or the person nominated by him, either as his successor, or as local Manager, can be recognised by them as a fit person to exercise the trust.

10. In all cases, whether the School be vested or non-vested, the Patron, when nominating a local Manager, ought to notify to the Commissioners, whether or not the person so nominated is to exercise all the rights of Patron during the period he acts as Manager.

11. When a School is under the control of a Committee, or of joint Patrons, a "Local Manager" should be appointed, to correspond with the office, sign documents, &c., &c.

CODE XI., 1863. (Tenth change.)

Part I., Sect. VII., § 1 of Code X.; but declaration of character of teachers omitted here, and made § 1, Part IV., § 1.

12. The local Patrons (or Managers) of Schools have the right of appointing the Teachers, subject to the approval of the Board as to character and general qualifications; the local Patrons (or Managers) have also the power of removing the Teachers of their own authority.

Part I., Sect. X., § 2 of Code X., but words in [ ] added here.

13. Patrons and Managers are permitted to close their respective Schools for a reasonable time during the year, subject to the interference of the Commissioners in cases of abuse; [such periods of closing should be limited to six weeks in the year, including the recognised vacations.]

New regulation.

14. Managers of National Schools are requested to notify all changes of Teachers to the Office, and to the Inspectors of the respective districts.

VII. INSPECTION BY THE COMMISSIONERS OR THEIR OFFICERS.

VIII., of same part in Code X.

1. As the Commissioners do not take the control or regulation of any School, except their own Model Schools, directly into their own hands, but leave all Schools aided by them under the authority of the local Patrons or Managers; the *Inspectors* are not to give *direct orders*, as on the part of the Board, respecting any necessary regulations, but to point out such regulations to the local Patrons or Managers of the Schools, that *they* may give the requisite orders.

2. The Commissioners require that every National School be inspected by the *Inspector of the District* at least three times in each year.

3. The *District Inspector*, after each inspection, is to communicate with the local Patron or Manager, for the purpose of affording information concerning the general state of the School, and pointing out such violations of rule, or defects, if any, as he may have observed; and he is to make such suggestions as he may deem necessary.

4. Upon ordinary occasions, the Inspector is not to give any intimation of his intended visit; but when the inspection is to be public, he is to make such previous arrangements with the local Patrons or Managers, as will facilitate the attendance of the parents of the children, and other persons interested in the welfare of the Schools.

Words in [ ] added here.

5. The Inspector is to report to the Commissioners the result of each visit, and to use every means to obtain accurate information as to the [proficiency of the pupils, and the] discipline, management, and methods of instruction pursued in the School.

6. When applications for aid are referred to the District Inspector, he is to have an interview with the applicant: and also to communicate personally, or by writing, with the clergymen of the different denominations, and with other parties in the neighbourhood, with the view of ascertaining their opinions on the application, and whether they have any, and what, objections thereto.

7. The Inspector is also to supply the Commissioners with such local information as they may from time to time require from him, and to act as their agent in all matters in which they may employ him; but he is not invested with authority to decide upon any question affecting a National School, or the general business of the Commissioners, without their direction.

VIII. ADMISSION OF VISITORS.

IX., of same part in Code X.

1. The public, generally, must have free access to every National School (whether Vested or Non-Vested) during the hours devoted to secular instruction,—not to take part in the ordinary business, or to interrupt it, but, as Visitors, to observe how it is conducted.

Words in [ ] differently arranged here from what they are in Code X.

2. [Visitors of all denominations are to be received courteously by all Teachers of National Schools, and are to have] free access to the School-rooms, and full liberty to examine the Registers, Daily Report Books, and Class Rolls; to observe what books are in the hands of the children, or upon the desks, what tablets are hung up on the walls, and what is the method of teaching; [but they are not authorized] to interrupt the business of the school, by asking questions of the children, examining classes, calling for papers or documents of any kind, except those specified, or in any other way diverting the attention of either Teachers or Scholars from their usual business.

Words in [ ] substituted for "but the Teachers are not required to permit any person," in Code X.

3. Should any Visitors wish for information which they cannot obtain by such an Inspection, it is the duty of the Teachers to refer them to the Patron or Manager of the School for such information.

§ 5 in Code X.

4. As the religious instruction of the children given in the School-room is under the control of the Clergyman or Lay person communicating it with the approbation of their parents, the *Commissioners* can give no liberty to any Visitor, whether Clergyman or other person, to interfere therewith, or to be present thereat.

§ 6 of X., Part I., Code X.; words in [ ] added here.

5. The Commissioners require that a copy of PART I., [with selections from other Parts, of these their Rules,] on a form furnished by them, shall be suspended in every National School-room.

Part III. in Code X.

PART II.

EXTENT OF AID, AND CONDITIONS UPON WHICH GRANTED.

I. KINDS OF AID.

1. The Commissioners of National Education award aid under two general heads, viz.:—

First—Towards building School-houses and providing suitable fittings and furniture. In such cases, the Commissioners also grant aid towards the payment of Teachers, supply of Books, &c., as hereafter explained.

"Commissioners" in Code X.

Secondly—Towards the support and maintenance of Schools established without any assistance from the "public funds" for the erection of the buildings, or providing furniture.

Words in [ ] added here.

2. The Commissioners desire it to be distinctly understood that they reserve to themselves [in all cases, in vested as well as in non-vested schools,] the right to withdraw any grant of salary or books, whenever they see fit.

II. TOWARDS BUILDING SCHOOL-HOUSES (VESTED).

1. Before any grant is made towards building a School-house, the Commissioners are to be satisfied that a necessity exists for such a School, that an eligible site has been procured,

that a satisfactory lease of the site will be executed [either to Trustees for the purposes of National Education,] or to the Commissioners in their corporate capacity; and that the applicants are prepared to raise, by local contribution, at least one-third of the whole sum which the Commissioners deem necessary for the erection of the house, providing furniture, &c. — Code XI., 1863. (Tenth change.) Words in [ ] again introduced in this Code.

2. If the proposed site for a School be in a rural district, and be within three statute miles of a School-house erected with aid from the State, no grant will be made, [except under special circumstances.] — Words in [ ] added here.

3. In a rural district, the site should contain one rood. In a town district, the site for a single School should be 100 feet in front, and 80 feet from front to rear; and for a double School, 100 feet square. It should be in a healthy situation, on a public road or street, and have a dry level surface, with a good foundation at a moderate depth, and be convenient to pure water. — New Rule.

4. Although the Commissioners do not refuse aid towards the erection of School-houses on ground connected with places of worship, yet they much prefer having them erected on ground which is not so connected, where it can be obtained; they therefore require that, before Church, Chapel, or Meeting-house ground be selected as the site of a School-house, *strict* inquiry be made whether another convenient site can be obtained, and that the result shall be stated to them. — § 3 in same section of Code X.

5. The School premises must be vested in the Commissioners, or in Trustees, at a nominal rent, and for such term as, under the circumstances, the Commissioners may deem necessary. — § 4 in Code 10.

6. The lease must be prepared in the Office; the expense to be borne by the Commissioners of National Education. — New Rule.

7. The Commissioners will cause to be kept in repair the School-house and furniture, where the premises are vested in them in their corporate capacity. — § 5 in Code X.

8. When the School premises have been vested in Trustees, for the purposes of National Education, it devolves on the Trustees to keep the house, furniture, &c., in repair. — § 6 in Code X.

9. When grants are voted towards the building, &c., of a School-house, the conveyance must be duly executed *before the works are commenced.* — § 7 in Code X.

10. No grant can be approved until the District Inspector shall have reported upon all the circumstances of the case; until the "Board" of Works shall have reported on the eligibility of the proposed site; and the Law Adviser of the "Commissioners" shall have given his opinion, from the information laid before him, that a satisfactory lease can be executed. — § 8 in Code X. "Clerk" in Code X. "Board" in Code X.

11. The Commissioners determine, from the information afforded them, what amount of School accommodation should be provided in the proposed building. — § 9 in Code X.

The following is the scale of Grants for the erection of School-houses, whether vested in Trustees or in the Commissioners. — New Scale of Building Grants.

Class of School.	No. of Children to be accommodated.	Total Estimated Cost, including School Furniture and Out-offices.	Board's Grant.	Description of School.
		£ s. d.	£ s. d.	
1	60	207 0 0	138 0 0	Single School-room.
2	75	225 0 0	150 0 0	Ditto.
3	100	255 0 0	170 0 0	Ditto.
4	120	306 0 0	204 0 0	Ditto.
5	150	416 5 0	277 10 0	Two rooms on ground.
5 A	150	360 0 0	240 0 0	Ditto—one over the other.
6	200	487 10 0	325 0 0	Two rooms on ground.
6 A	200	435 0 0	290 0 0	Ditto—one over the other.

Note.—In many poor localities, where buildings of a less expensive nature than those erected according to the above scale of grants may answer the necessary purposes, the Commissioners will be prepared to grant two-thirds of the expense of erection, provided— — *New regulations.*

(*a*). That the general conditions already specified with regard to building grants be complied with.

(*b*). That the erection of such *exceptional* class of building shall not cost more than £100.

(*c*). That as regards the character and size of the building, the instructions issued by the Board of Works, from time to time, shall be complied with.

12. The cost of the house, &c., is determined by the number of children which it is intended to accommodate. — § 11, Code X.

13. The "Board of Works" will furnish instructions as to the plan and specification, to which the parties receiving aid are bound strictly to adhere. — § 12, Code X. "Commissioners" in Code XII.

14. The Commissioners do not "sanction grants for" the ornamenting of School-houses, but merely for such expenditure as may be necessary for having the children accommodated in plain, substantial buildings. If buildings of another description be preferred, the whole of the extra expense must be provided by the applicants. — § 13 in Code X. "Contribute to" in Code XII.

15. The Commissioners do not sanction grants towards the expense of erecting residences for the Teachers. — § 14 in Code X.

16. The Commissioners do not sanction grants to purchase, alter, or furnish houses, for the purpose of being converted into School-houses. — § 19 in Code X.

§§ 10, 15, 16, 17, 18 of the corresponding Section, code X, omitted from this code.

III. Towards Support of Schools previously established (Non-Vested).

1. The aid granted to Schools previously established is limited to Salary and Books, [and the benefits of Inspection and Training.] — Words in [ ] added here.

CODE XI., 1863. (Tenth Change.)

2. The Commissioners do not contribute towards repairs, fittings, or furniture; or to the rent of the School-house.

3. Before aid can be granted, the Commissioners must be satisfied that the case is deserving of assistance; that there is reason to expect that the School will be efficiently and permanently supported; that some local provision will be made in aid of the Teacher's salary, in addition to the School-fees; that the School-house is in good repair, and provided with a sufficient quantity of suitable furniture; that a competent Teacher has been appointed; and that the School is in operation.

The NEW RULE, § 4 in Code X. omitted here.
§ 5 in Code X.
§ 6 in do.

4. Before the Commissioners consider any application for aid, they require, from the Inspector of the District, a report upon all the circumstances of the case.

5. To entitle a School to a continuance of aid, the house and furniture must be kept in sufficient repair by means of local contributions; the School conducted in all respects in a satisfactory manner, and in accordance with the regulations of the Commissioners; and it must appear from the records of the School that there is a sufficient average daily attendance of pupils.

§ 7 in do.

6. In mixed schools, *i.e.*, schools in which male and female children are taught in the same room, the teacher may be either male or female, as the circumstances of the school may require; but when a mixed school has been received into connexion, by the Commissioners, under a male or a female teacher, the Commissioners will not sanction the appointment of a teacher of a different sex, unless previous application be made to them to sanction such change.

§ 8 in do.

7. When a school has been taken into connexion, as a school for males or for females solely, the Commissioners will not sanction the change from a male to a female school, or *vice versâ*, without their permission having been previously obtained.

Part II. in Code X.

PART III.

DIFFERENT CLASSES OF NATIONAL SCHOOLS.

I. DISTRICT AND MINOR MODEL SCHOOLS.

Words in [ ] new.

1. District [and minor] model schools are built and supported entirely out of the funds placed by Parliament at the disposal of the Commissioners, and are therefore under their exclusive control.

* District in Code X. left out here.

2. The chief objects of * model schools are to promote united education; to exhibit the most improved methods of literary and scientific instruction [to the surrounding schools,] and to train young persons for the office of teacher.

Words in [ ] added here.
Words in [ ] new.

3. In district [and minor] model schools, the Commissioners appoint and dismiss, of their own authority, the teachers and other officers; regulate the course of instruction, and exercise all the rights of patrons. The Commissioners afford the necessary opportunities for giving religious instruction to the pupils, by such pastors or other persons as are approved of by their parents or guardians, and in separate apartments allotted to the purpose.

4. Some of the model schools have farms attached to them, for the purpose of affording instruction in agriculture.

Section II. is new.

II. ORDINARY LITERARY SCHOOLS.

1. Such schools may be established either with aid from the State, or by local provision solely.

2. In vested schools, the local expenditure need only be one-third of the expense, and the teachers' salaries are supplemented by the Commissioners.

3. In non-vested schools, the State assistance is limited to salary and books, and the benefits of inspection and training.

II., in Code X.
New descriptive clause.

III. AGRICULTURAL SCHOOLS.

§ 1 in Code X.

1. To schools of this description farms are attached, for the purpose of illustrating and introducing the most approved systems of tillage and cropping, and general husbandry.

§ 2 in do.

2. Agricultural schools of every class must have a literary department annexed to them, conducted on the principles of ordinary National schools.

Words in [ ] indicate change.

3. Agricultural schools consist of two classes, [those connected with school farms of the first class, and those connected with ordinary school farms].

§ 3 in Code X.
Words in [ ] "Model Agricultural," in Code X.

4. [School farms are further sub]divided into two classes, viz., those under the exclusive control of the Commissioners, and those under local patrons.

§ 4 in Code X.
Words in [ ] "Model Agricultural Schools," in Code X.

5. In all [schools connected with school farms of the first class] the Commissioners will grant salary to a teacher for the literary department *exclusively*, when the extent of the farm and other circumstances render such an appointment necessary.

III., in Code X.; words in [ ] "Model Agricultural Schools" in that Code.

A. [*School Farms of the First Class*] *under the exclusive control of the Commissioners.*†

1. The Commissioners defray the greater portion of the cost of erecting the necessary buildings; but they require the local parties to contribute in such proportion as may be deemed necessary, according to the circumstances of each case.

2. The Commissioners undertake the *entire* cost of the furniture, fittings, rent, taxes, maintenance, implements, stock, &c., &c.

3. A farm of sufficient extent must be conveyed to the Commissioners, at a moderate rent, and on a satisfactory lease.

4. The Commissioners exercise all the rights of patrons, as in the case of district and minor model schools.

5. The Commissioners admit into these schools a limited number of free, and also of paying resident agricultural pupils.

6. The Commissioners contribute a small weekly payment to the class of day pupils who work on the farm.

† The Commissioners have, for the present, ceased to take into connexion school farms of the first class.

CODE XI., 1863. (Tenth Change.)

B. [*School Farms of the First Class*] *under Local Patrons.*

IV., in Code X.; words in [ ] Model Agricultural Schools (Vested and Non-Vested) in that Code.

1. [*Where the Premises are Vested.*]

Vested Model Agricultural Schools in Code X.

1. The Commissioners contribute a certain amount of assistance towards the erection of the buildings, in proportion to the amount of local contribution, and the extent of the farm. The remaining portion of the cost of the buildings and furniture, and the whole cost of implements, stock, seed, &c., must be contributed by local parties.

2. The site of the buildings must be legally vested in the Commissioners [or in trustees, at a moderate rent, and on a satisfactory lease].

Words in [ ] substituted for "free of rent," of Code X.

3. The only aid granted by the Commissioners towards the *maintenance* of such schools consists of salary to the master (who must be competent to conduct both the literary and agricultural departments); a sum towards the support of a limited number of resident agricultural pupils, and a weekly payment to the class of day pupils who work on the farm.

2. *Where the Premises are Non-vested.*

2. Non-Vested Model Agricultural Schools in Code X.

1. The entire cost of the necessary buildings, furniture, implements, stock, seed, &c., must be defrayed by local parties, and a farm of sufficient extent must be provided.

2. The Commissioners [besides salary to the master] contribute also towards the support of a limited number of resident agricultural pupils, and a weekly payment to the class of day pupils who work on the farm.

Words in [ ] show alteration made from Code X., which see.

C. *Ordinary Agricultural Schools.*

V., in Code X.

1. This class of schools consists of ordinary national schools, (either vested or non-vested), to which a small farm (from one to three acres), is annexed. The teacher must be competent to give instruction both in the theory and practice of agriculture, and must cultivate the land with the assistance of his pupils.

2. The only aid granted by the Commissioners, is an addition to the class salary of the teacher, and in some special cases, a small weekly payment to an industrial class of pupils.

3. To entitle a school to such aid, the Commissioners require to be satisfied, from the reports of the Agricultural Inspectors, that the agricultural department is efficiently conducted.

D. *School Gardens.*

VII., in Code X.

1. The Commissioners award gratuities, on the recommendation of the Agricultural Inspectors, to the teachers of National schools, who exhibit the best specimens of garden culture, on ground attached to their respective schools, the ground to be cultivated by the pupils.

IV. INDUSTRIAL SCHOOLS.

VIII., in Code X.

1. In these schools, embroidery and other advanced kinds of needlework are taught. The Commissioners grant salaries to the teachers, on the following conditions:—

First. That *all* the pupils of the industrial department shall receive literary instruction, for at least *two hours* daily.

Second. That no religious instruction or religious exercise shall take place during the time the pupils are engaged in industrial occupation.

Third. That a separate room be provided for industrial instruction.

Fourth. That in addition to the literary Teacher, there shall be a suitable person appointed to conduct the industrial department.

2. None but lay Teachers are entitled to a salary from the Commissioners, for conducting an Industrial Department in connexion with a *Convent School.*

3. The amount of salary will depend upon the circumstances of each case.

V. CONVENT SCHOOLS.

IX., in Code X.

1. Convent Schools receive aid under the conditions applicable to Non-vested Schools, and they are subject to the same Rules and Regulations.

2. The members of the community may discharge the office of [Literary] Teachers, either by themselves or with the aid of such other persons as they may see fit to employ; the salaries of such assistants to be defrayed by the community [except in the case of monitors].

Restriction of [Literary] new.

Words in [ ] new.

3. The amount of salary awarded to Convent Schools is regulated by the average number of children in daily attendance, according to a scale laid down by the Commissioners.

4. The Commissioners will grant aid to *one School only*, in *connexion with the same* Convent.

VI. WORKHOUSE SCHOOLS.

X., in Code X.

1. Such Schools are received into connexion, and grants of Books made to them, on condition that they shall be subject to inspection by the Commissioners, or their Officers, and that all the Rules of the Board applicable to Non-vested Schools be faithfully observed.

2. The Commissioners award gratuities to a certain number of the Teachers of Workhouse Schools in each District, on the recommendation of the Inspector.

VII. SCHOOLS ATTACHED TO PRISONS, [ASYLUMS, &C.]

Words in [ ] new.

Such Schools are received into connexion, upon the same general principles as the workhouse Schools, and grants of Books are made to them. In special cases gratuities are awarded to the Teachers.

VIII. EVENING SCHOOLS.

XII., in Code X.

The Commissioners grant aid towards the support of Evening Schools, where the wants of the locality render such institutions desirable. The aid is limited to salary, books, [and inspection].

Words in [ ] new.

CODE XI., 1863.
(Tenth Change.)

PART IV.

TEACHERS.

I. THEIR QUALIFICATIONS AND DUTIES.

Part of § 1 of Sect. VII., Part I., Code X.

1. National Teachers should be persons of Christian sentiment, of calm temper, and discretion; they should be imbued with a spirit of peace, of obedience to the law, and of loyalty to their sovereign; they should not only possess the art of communicating knowledge, but be capable of moulding the mind of youth, and of giving to the power which education confers a useful direction. These are the qualities for which Patrons of Schools, when making choice of Teachers, should anxiously look. They are those which the Commissioners are anxious to find, to encourage, and to reward.

Represents § 2 of Sect. VII., Part I.
Words in [ ] new.

2. No clergyman of any denomination, or member of any religious order, can be recognised as the Teacher of a National School. This does not apply to the Teachers of Convent Schools, [nor to those of any Monastery Schools which have been at any time previously in connexion with the Board.]

§ 3, Sect. VII., Part I., Code X.

3. Teachers of National Schools are not permitted to carry on, or engage in, any business or occupation that will impede, or interfere with, their usefulness as Teachers. They are especially forbidden to keep public-houses, or houses for the sale of spirituous liquors.

§ 4, Sect. IX., Part I., Code X.

4. Every teacher is required to have his Daily Report Book lying upon his desk, that Visitors may, if they choose, enter remarks in it. Such remarks as may be made, the Teachers are by no means to alter or erase; and the Inspector of the District is required to transmit to the Commissioners copies of such remarks as he may deem of sufficient importance to be made known to them.

§ 4, Sect. VII., Part I., Code X.

5. Should the Commissioners consider any Teacher in a vested school unfit for his office, or otherwise objectionable, they will require that he be dismissed and another provided: in non-vested schools the grant of salary will be withheld until a suitable Teacher be procured. Teachers are also liable to be fined, depressed, or suspended, at all times, when the Commissioners shall deem it necessary, on sufficient cause being shown.

NEW RULE.

6. Teachers, whose Schools may have declined in usefulness and efficiency, or who may have conducted themselves improperly, or who, from any other cause, may seem to merit punishment, may be fined, depressed, or deprived of salary.

§ 12, Sect. V., Part III., Code X.
Words in [ ] show an important change from previous Code.

7. All Teachers *newly appointed* to National Schools, who, after examination by the Inspectors, may be found wholly unqualified, must be removed; [such Teachers not being *entitled* to any salary from the Commissioners, until examined and pronounced competent.]

§ 13, Sect. V., Part III., Code X.

8. If a Teacher who has been dismissed from a National School for any cause be appointed to another National School, the Commissioners reserve to themselves the right to determine whether the appointment can be sanctioned, or any salary paid to such Teacher.

NEW RULE.

9. No teacher dismissed for incompetency is eligible for re-entry into the Board's service till after the expiration of at least six months from the date of such dismissal.

§ 14, do.

10. If a Teacher who has been a considerable period out of the service of the Board shall again enter it, the Commissioners reserve to themselves the right to determine in each case, whether such Teacher shall retain the class he was in previous to quitting the service of the Board.

§ 5, Sect. X., Part I., Code X.

11. The Commissioners regard the attendance of any of the Teachers at meetings held for *political purposes*, or their taking part in elections for Members of Parliament, or for Poor Law Guardians, &c., except by voting, as incompatible with the performance of their duties, and as a violation of rule which will render them liable to dismissal.

New regulation.

12. Teachers, to be eligible for entering the service of the Board must, if males, have completed their seventeenth year; and, if females, their sixteenth.

§ 2, Assistant Teachers, Sect. VI., Code X.

13. No Assistant Teachers will be recognised whose qualifications are not at least equal to those required of Probationers.

Do., do.

14. The same rule as to age applies to Assistant as to Principal Teachers.

§ 1, Do., do.
[Any school] in Code X.
[Seventy-five] in Code X.; "for three months previous to date of application," omitted.
Part in [ ] substituted for others, see Code X.
New regulation.

15. The Commissioners will not grant a salary to an Assistant Teacher in [a Boys' School] in which there is not an average daily attendance of at least [sixty pupils]; [but in the case of Girls' Schools, or Mixed Schools—that is, Schools attended by both sexes—salary may be obtained for an Assistant, when the attendance shall have maintained itself at an average of at least fifty.]

16. In Mixed Schools presided over by a Master, it is desirable, where the attendance warrants it, that a Female Assistant should be selected.

§ 1, W. Mistresses, Sect. VI., Code X.
Words in [ ] "sufficient" in Code X.

17. The Commissioners will not grant salary to Workmistresses in Mixed Schools, unless there be an average daily attendance [of at least forty-five pupils]; and the Commissioners require that at least two hours each day be devoted to instruction in this branch.

§ 2, W. Mistresses, Sect VI., Code X.

18. If any Workmistress whose appointment has been sanctioned by the Commissioners, be employed during the remainder of the ordinary school-hours in giving literary instruction to the junior classes, it is competent for the District Inspector, if he considers her qualified, to recommend that she be paid at the rate of salary awarded to "Probationers."

§ 3, Do., do.

Words in [ ] "exceed fifty for a period of three months," in Code X.

19. In Schools attended by Female Children only, under the care of a Female Teacher, such Teacher must be competent not only to conduct the Literary Department, but also to give instruction in Needlework; but if the average daily attendance [amount to forty-five,] application may be made for a grant of salary to a Workmistress to take charge of the Industrial Department, which, however, must be superintended by the principal Teacher, who will be held responsible for its efficient management.

New School-Rules, I. to XIV.

20. The following Practical Rules are to be strictly observed by the teachers of National schools:—

I. To keep at least one copy of the *General Lesson* suspended conspicuously in the school-room, and to inculcate the principles contained in it on the minds of their pupils. This should be done at the time of combined ordinary instruction.

II. To exclude from the school, except at the hours set apart for religious instruction, all catechisms and books inculcating peculiar religious opinions.

III. To avoid fairs, markets, and meetings—but above all *Political* meetings of every kind; to abstain from controversy; and to do nothing either in or out of school which might have a tendency to confine it to any one denomination of children. Code XI., 1863. (Tenth change.)

IV. To keep the Register, Report Book, and Class Rolls, accurately, neatly, and according to the precise forms prescribed by the Board; and to enter or mark in the two latter, before *noon* each day, the number of children in actual attendance.

V. To classify the children according to the National school books: to study these books themselves; to teach according to the improved method, as pointed out in their several prefaces; and to labour diligently to train up their pupils in each branch of knowledge to that degree of attainment, or amount of proficiency, pointed out for each class respectively in the *Programme of Instruction for National Schools.*

VI. To observe themselves, and to impress upon the minds of their pupils, the great rule of regularity and order—A TIME AND A PLACE FOR EVERY THING, AND EVERY THING IN ITS PROPER TIME AND PLACE.

VII. To promote, both by precept and example, *cleanliness*, *neatness*, and *decency*. To effect this, the teachers should set an example of cleanliness and neatness in their own persons, and in the state and general appearance of their schools. They should also satisfy themselves, by personal inspection every morning, that the children have had their hands and faces washed, their hair combed, and clothes cleaned; and, when necessary, mended. The school apartments, too, should be swept and dusted every *evening;* and white-washed at least once a year.

VIII. To pay the strictest attention to the morals and general conduct of their pupils, and to omit no opportunity of inculcating the principles of *truth* and *honesty;* the duties of respect to superiors, and obedience to all persons placed in authority over them.

IX. To evince a regard for the improvement and general welfare of their pupils; to treat them with kindness, combined with firmness; and to aim at governing them by their affections and reason, rather than by harshness and severity.

X. To cultivate kindly and affectionate feelings among their pupils; to discountenance quarrelling, cruelty to animals, and every approach to vice.

XI. To record in the Report Book of the school, the weekly receipts of school fees, and the amount of all grants made by the Board, as well as the purposes for which they were made, whether in the way of premiums, salaries to teachers, or payments to monitors or workmistresses; also school requisites, whether free stock or purchased at the reduced prices.

XII. To take strict care of the *free stock* of "books" granted by the Board; and to endeavour to keep the school constantly supplied with the National school books and requisites, for sale to the children, at the reduced prices charged by the Commissioners; also to preserve, for the information of the Inspectors the invoices of free stock or purchased requisites, which will be enclosed with the grant.

XIII. Should it be intended to close a school for a time not included in the recognised vacations, notice should be given some days previously to the Inspector; and when a teacher is summoned for training, and means to obey the summons, or intends resigning or removing to another school, he should intimate his intention to the Inspector a month at least before his removal or resignation, in order that the latter may have an opportunity of visiting his school, and reporting upon the state of the premises, free stock, school accounts, &c., &c.

XIV. To attend to the ventilation of the school:—I. Immediately after entering the room in the morning; II. At the time of roll-call; III. About an hour before the school breaks up. The ventilation can best be effected by lowering, where practicable, the upper part of the windows, so as to admit a thorough air through the room.

21. In cases of illness, and upon medical certificates being submitted, the Commissioners allow to principal teachers, or assistants, *one* month's leave of absence from school duty in the year, for which time their salaries will be paid without deduction. If any more lengthened leave of absence be required, there must be competent substitutes appointed, such substitutes to be paid by the recognised teachers, at the rate of, at least, the salary allowed to probationers. In no case can leave be granted for more than six months. *New regulation.*

II. Training of Teachers.

Part III., Sect. VII. of Code X.

1. The Commissioners have provided a Normal Establishment in Dublin, for training teachers, and educating persons who are intended to undertake the charge of schools.

2. Teachers selected by the Commissioners for admission to the Normal Establishment, must produce a certificate of good character; also a certificate from a member of the medical profession that they are in good health, and free from any cutaneous disease; and must be prepared to pass through an examination in the books published by the Commissioners. They are boarded and lodged at the establishments provided by the Commissioners; [and arrangements are made for their receiving] religious instruction from their respective pastors, who [may] attend at the Normal Establishment at convenient times appointed for the purpose. On Sundays they are required to attend their respective places of worship; and a vigilant superintendence is at all times exercised over their moral conduct. The teachers undergo examination at the close of the course, and they then receive a certificate according to their deserts. The teachers are, for a considerable time previous to their being summoned, required to prepare themselves for the course.

The words "*from an officiating Clergyman of the communion to which they belong,*" in Code X., omitted here.
Words in [ ] substituted for "they receive."
[*may*] inserted in this Code.

3. During the absence of the recognised teacher, a temporary teacher must be provided to take charge of the school, who is to be paid a portion of the salary falling due to the recognised teacher during such teacher's attendance at the Normal Establishment.

4. Should any teachers present themselves in a delicate state of health, or affected with any cutaneous disease, they will [not be received or allowed any travelling expenses.] No teacher can be admitted who has not had the small-pock, or been vaccinated.

Words in [ ] substituted for "be required to return home at their own expense."

5. The teachers trained in the Normal Institution are divided into three classes, namely:—

First—The general or ordinary class, composed of teachers (males or females) of National schools, who have been recommended by the District or Head Inspectors as eligible candidates for training.

Second—The special or extra training class, composed chiefly of teachers (males or females) who have been selected from the ordinary or general class, for additional training.

Third—The candidate or *extern* class, composed of a limited number of respectable and well-informed young persons, who wish to qualify themselves to act as teachers. The candidates admitted to this class are permitted to attend, without any charge, the Model schools and the lectures of the professors, and at the end of the course they are examined and

Code XI., 1863. (Tenth change.)

classed as teachers, according to their merits and qualifications. Permission is also given to teachers of schools not connected with the Board to attend the Model schools as *auditors* or *visitors*, for any period that may suit their own convenience.

New Rule.

6. No teachers can be admitted to the general or ordinary class, but those who have succeeded in obtaining classification after examination by a Board of Inspectors, or who may be *specially* recommended by the Inspectors or Professors.

Part III., Sect. V. of Code X.

III. Classification of Teachers, &c.

1. All National teachers are either "Classed Teachers" or "Probationers." The former are divided into three classes.

Conditions in [ ] added here.

The class in which teachers are ranked depends (I.) upon their qualifications, as determined after examination by the professors, or by the inspectors; [and (II.) on their proved capacity and efficiency as conductors of schools.]

All teachers, on first entering the service of the Board, or who have not been classed, are termed probationers.

Part of § 1, Sect. V., Part III., Code X., the words in [ ] showing additions.

2. [Besides the principal and assistant teachers included under the foregoing heads,] there are [junior literary and industrial] assistant-teachers, teachers of needlework, pupil-teachers, and paid monitors.

Sect. V., Part III. § 2, Code X.

3. The Commissioners have determined upon a course of study for each class, in which the teachers are to be examined, as one of the tests of their fitness for promotion.

§ 3, ditto.

4. Every National teacher will be furnished, on application to the District Inspector, with a copy of the programme of the course of study above referred to, in which is stated the minimum of proficiency required for each class.

§ 4, ditto.

Words in [ ] added here.

5. Teachers [already classed are to be admitted] to examination, with a view to promotion, [only on the recommendation of the District Inspector,] and no one on whose school a decidedly unfavourable report has been made within the previous year [is to be admitted.]

§ 5, Code X.

6. (*a*). Teachers will not be eligible for promotion, unless, in addition to satisfactory answering in the course prescribed for the class to which they aspire, it appears from the reports of the respective District Inspectors, that the schools are properly organized and well conducted; that adequate exertions have been made to keep up a sufficient average attendance; [that their classes are taught according to the *programme of instruction for schools*;] that while the junior pupils are carefully taught, a fair proportion of the pupils of the higher classes, besides being proficients in the ordinary branches of reading, spelling, writing, and [arithmetic,] are possessed of a respectable amount of knowledge in grammar and geography,* [and able to write from dictation ordinary sentences with readiness and correctness.] In female schools it will be further requisite that instruction in plain needlework, including sewing, knitting, and cutting out, be given to all girls capable of receiving it, and that they exhibit a due proficiency in this department.

Words in [ ] show changes in, or additions to clause, as in Code X.

[Arithmetic] added here.

*"Arithmetic" omitted here.

§ 6 in Code X.

(*b*). It must also appear from the reports of the Inspectors, that the school accounts have been regularly and correctly kept; that the school premises have been preserved with neatness and order; that cleanliness in person and habits has been enforced on the children attending them, [and that an adequate supply of *sale stock* of lesson books and other necessary school requisites has been regularly kept up.]

Words in [ ] added here.

New Clause.

(*c*). It must also clearly appear that, JUDGED BY THE TOTAL RESULTS PRACTICALLY REALIZED IN THEIR SCHOOLS in the instruction and discipline of their pupils, they are worthy of the higher class to which they aspire.

§ 7, Code X., omitted here.

§ 8, Sect. V., Part III., Code X.

7. All teachers, who have not been classed, will be paid as probationers, until they be classed at the first examination, to which they shall have been summoned. Those who then obtain classification, will be paid from the commencement of their service under the Board, according to the rate of salary attached to their class. This rule will not extend to those teachers who when summoned, shall fail, from any cause whatever, to present themselves for examination.

§ 9, Code X., omitted here.

§ 10, Code X.

Words [ ] different from Code X.

8. All teachers who have been unsuccessful at their first examination, and who may be retained on trial, will receive the salary of the class to which they may be promoted at any subsequent examination, from the [1st of April of the year in which they offer themselves for such subsequent examination.]

§ 11, Code X.

9. Teachers who, after their first examination, have been retained on trial as probationers, if not recommended for promotion by the Head or District Inspectors at the next ensuing examination, cannot be continued in the service of the Board.

New regulation, but see § 16, Sect. V., Part III., Code X.

10. Classed teachers who may offer for re-classification will, if promoted, be paid according to their new grade from the 1st of April of the year in which they offer themselves for examination.

§ 15, Code X.

Words in [ ] new.

11. The pupil-teachers of district model schools, on taking charge of National schools after the completion of their course of training, [shall, if not already classed], rank as third class teachers provided they be deemed qualified for that class by the Head Inspector) until they shall have been classed at the first examination held after their appointment, in the district in which their schools are situated—when they will be paid according to their classification, from the date of their [appointment].

[Examination] in Code X.

§ 16, Code X

12. All teachers must remain *at least* one year in a lower *division* of any class, before they are eligible for promotion to a higher division; and they must remain *at least* two years in a lower *class* before they can be promoted to a higher class. These conditions, however, being fulfilled, teachers of superior attainments, [and of eminent usefulness], may be advanced from any division of one class to any division of another, after their first classification, without being required to pass through the intermediate divisions.

Words in [ ] added here.

§ 17, Code X.

13. This regulation does not apply to teachers who may be promoted on the recommendation of the professors at the termination of their course of training.

§ 18, Code X., omitted in Code XII.

14. "No teachers can be raised to any division of the first class, unless they shall have been trained at the Normal school of the Commissioners."

§ 21, ditto.

15. Teachers who may have absented themselves from the examinations of previous years,

without satisfactory reason assigned, will be liable to be dismissed should they not present themselves when again summoned. CODE XI., 1863. (Tenth change.)

16. All teachers also who may be *specially* summoned, and who shall be absent without a sufficient reason, will be liable to be fined or depressed. New rules, §§ 19, 20, 21, 22, of Code X. omitted here. § 22, Code X.

IV. SALARIES (*Ordinary National Schools.*) Sect. VI., Part III., Code X.

1. The Commissioners grant salaries to teachers of National schools at the following rates, subject to the foregoing and annexed regulations :—

Principal Teachers :—		Males.	Females.
First Class,	1st Division,	£52	£42
	2nd „	44	36
	3rd „	38	30
Second Class,	1st Division,	32	26
	2nd „	28	24
Third Class,	1st Division,	24	20
	2nd „	18	16
Probationers,		15	14

Scale of Salaries altered from Code X.

(*a*). As a general rule, a school to be entitled to be taken into connexion, or to remain in connexion, must exhibit an average daily attendance of at least thirty pupils. NEW RULE.

(*b*). Teachers cannot be admitted to the enjoyment of first class salary, nor allowed to continue in its enjoyment, unless their schools command an average daily attendance of thirty-five pupils.

(*c*). Should schools of the ordinary class be retained in connexion after the attendance shall have fallen below *thirty pupils*, as in certain circumstances they may be retained, their teachers will be paid according to the provisions of the modified scale given below.

(*d*). But as regards the schools placed in connexion with the Board *before* the close of October, 1860, in every case where the attendance shall appear to be diminished by the admission of new schools, the Commissioners will not make any reduction of salary on the *first* occasion of such diminution taking place, but will defer making such reduction until a period of six months shall have elapsed from the termination of the quarter in which the attendance shall, on such *first* occasion, fall below the required *minimum*.

(*e*). And in the case of schools taken into connexion *since* October, 1860, reduction of salary, proportioned to the decrease in attendance, will be made in the *next* quarter subsequent to that in which it first occurs, should the decrease re-appear.

Assistant Teachers :—	Males.	Females.
Unclassed,	£15	£14
If classed 3^2,	18	16
If classed 3^1, or higher,	24	20
Junior Literary and Industrial Assistants,	—	14
Workmistresses,	—	8

2. To entitle a school to the services of an assistant, the school, if for boys only, must have an average daily attendance of at least 60 ; but if for girls only, or if a mixed school, an average of 50 will suffice. While, however, the average daily attendance in such schools respectively, remains under 65 and 55, no higher salary than that of III^2 can be awarded. NEW RULE.

3. In mixed schools presided over by a master, the assistant should be a female. NEW RULE.

4. To entitle an assistant to the salary of III^1, the school, if for boys only, must have an average daily attendance of at least 65, or if mixed, or for girls only, an average daily attendance of 55. NEW RULE.

5. In schools where the average attendance amounts to 110, salary of classification, up to 2^1, will be allowed to the first or senior assistant. NEW RULE.

6. To entitle a girls' school, or a mixed school, presided over by a master, to the services of a workmistress, an average daily attendance of 45 pupils is required, of whom, in the case of mixed schools, 20 at least must be girls. The same rule applies to junior literary and industrial assistants in such schools. NEW RULE.

7. The Commissioners in certain cases are prepared to act on the following modification of the above scale of salaries provided for principal teachers. NEW RULE.

I. *Attendance under 15 Pupils.*—Schools with an average daily attendance under 15 pupils, conducted on the principles and the system of the Board, will not be admitted to the enjoyment of salary, but may be allowed inspection, books, and apparatus, under existing regulations. The teachers will be eligible for training, and their service, from their connexion with the Board, will count to their credit in respect to supplemental salaries, retiring allowances, &c., should their schools afterwards become entitled to regular grants of salary, or should they be removed to others so entitled.

II. *Attendance 15 but under 20 Pupils.*—When the average daily attendance is 15, but under 20, in addition to inspection, books, &c., and training, the Commissioners will make an award of salary to the teacher, to the amount of two-thirds of a probationer's salary.

III. *Attendance 20 but under 25.*—When the average daily attendance is 20 but under 25, the full salary of a probationer, but no more, will be awarded to the teacher.

IV. *Attendance 25 but under 30.*—When the average daily attendance is 25, but under 30, salary as high as that of first division of third class, but no higher, will be awarded to the teacher, should his qualifications in other respects entitle him to such classification.

NOTE.—These modified grants the Commissioners are prepared to make where the means of religious instruction are not attainable by children of a particular denomination within a reasonable distance of their homes, in any existing National school ; but they reserve to themselves the power, in all cases, of preventing the unnecessary multiplication of schools in any district, and will require as a condition of this modified aid that the managers of such schools shall be either clergymen or other persons of good position in society.

8. The Commissioners "are anxious" that a further income be secured to the teacher, either by local subscription or school-fees, and they require that the payments made by the children shall not be diminished in consequence of any increase of salary which may be awarded to the teacher. § 2, Sect. V., Part III., "require" in Code X.

CODE XI., 1863. (Tenth change.)

V. PAID MONITORS—THEIR SALARIES, &c.

Sect. VI., 9, Part III. in Code X. Classification and Scale changed.

Junior monitors.		*Senior monitors.*	
For the First Year, . .	£2	For the First Year, . .	£5
For the Second Year, . .	£3	For the Second Year, . .	£6
For the Third Year, . .	£4	For the Third Year, . .	£8
		For the Fourth Year, . .	£10

NEW RULE. 1. No school whose teacher does not rank at least in 3[1] class, can get the benefit of the services of a junior monitor; nor can any school whose teacher ranks not at least in 2[2] class, be allowed the services of a senior monitor.

§ 1, Code X. 2. The paid monitors are selected from among the best pupils in the National schools of each district, and are appointed by the Commissioners upon the recommendation of the District Inspectors.

§ 2, ditto. Words in [ ] added here. 3. No manager of a National school is obliged to employ a paid monitor, [nor will such be appointed without his approval].

§ 3, Code X. Words in [ ] indicate changes. 4. The appointment of a [junior] paid monitor cannot be held for a longer period than [THREE] YEARS, [nor that of a senior paid monitor for more than FOUR YEARS], at the expiration of which periods respectively the salary will be discontinued.

§ 4, Code X. 5. The salary, may, however, be withdrawn at any time, should want of diligence, of efficiency, or of good conduct on the part of the monitor, or any other circumstance, render such a course desirable.

§ 5, ditto. 6. The Commissioners select (on the recommendation of the Inspectors), the schools in which the services of paid monitors may be employed.

§ 6, ditto. 7. When a vacancy in a monitorship occurs, whether before or after the expiration of a monitor's term of service, it does not necessarily follow that a successor shall be appointed in the same school.

§ 7 of Code X. omitted here. 8. The programme of the course of study for paid monitors can be obtained on application to the District Inspector.

9. Paid monitors who have completed their course in a satisfactory manner, are eligible, on examination by the Inspectors, to offer as candidates for assistant teacherships, or for pupil-teacherships in district model schools.

NEW RULE. Words in " " omitted in Code XII. 10. In the case of a few very large and highly efficient schools, the Commissioners are prepared to appoint young persons of great merit to act as first class monitors, "with a rate of salary somewhat higher than that of paid monitors of the above grades."

Arrangement changed from Code X.

VI. SALARIES, &c., TO OTHER THAN ORDINARY NATIONAL SCHOOLS.

A. *Evening Schools.*

Sect. XII., Part II., Code X. Words in [ ] show changes. The Commissioners grant [salaries, generally amounting to £5 a-year, to teachers] of evening schools, [for every 25 pupils in average attendance].

Sect. VI., § 2, part III., Code X.

B. *Schools connected with School Farms of the First Class under the exclusive control of the Board.*

Teachers of this class of schools receive such amount of salary as the Commissioners deem sufficient, according to the circumstances of each case.

Sect. VI., § 3, Code X.

C. *Schools connected with School Farms of the First Class, under Local Patrons.*

Masters of this class of schools, competent to conduct both the literary and agricultural departments receive £10 per annum, in addition to the salary of the class in which they may be placed; but if their income from the Board, with this addition, should fall short of £30 per annum, the difference will be granted to them, so that in all cases such teachers shall have secured to them for their *combined* services a salary of £30 a-year at least.

Sect. VI., § 4, Code X.

D. *Schools connected with Ordinary School Farms.*

Masters of such schools receive £5 per annum in addition to the salary of their class, provided they are competent to conduct both the literary and agricultural departments, and that the Commissioners shall have previously approved of agriculture being taught in the school.

Sect. VI., 7, Code X.

E. *Industrial Schools.*

In National schools where embroidery and other advanced kinds of needle-work are taught, the amount of salary granted for giving such instruction is regulated by the nature of the work, and the number of pupils engaged in it.

"Monasterics" added here.

F. *Schools connected with Convents and "Monasteries."*

1. In schools of this description, salary is paid according to a per-centage on the average daily attendance:—

Scale modified and more extended than in Code X.

Average Attendance.		Salary. £	Average Attendance.		Salary. £ s.
30 to 50	Increase at £20 per cent.	10	301 to 325	Increase at £17 per cent.	64 5
51 „ 75		15	326 „ 350		68 10
76 „ 100		20	351 „ 375		72 15
101 „ 125		25	376 „ 400		77 0
126 „ 150		30	401 „ 425		81 5
151 „ 175		35	426 „ 450		85 10
176 „ 200		40	451 „ 475		89 15
201 „ 225		45	476 „ 500		94 0
226 „ 250		50	501 „ 525		98 5
251 „ 275		55	526 „ 550		102 10
276 „ 300		60	551 „ 575		106 15
			576 „ 600		111 0

601 upwards, increase at £15 per cent.

2. As the amount of salary to schools of this class will in all cases depend upon the average daily attendance of pupils, managers are to be prepared for augmentation or diminution accordingly, at the expiration of each quarter.

3. Schools of this class are entitled to the services of paid monitors.

Code XI., 1863. (Tenth Change.)

New Rule, § 4. Sect. VI., 8, Part III., Code X., omitted here. § 5, Code X., arrangement of sentence different.

New regulations, to end of Section G.

G. *Model Schools.*

(*a*) *Scale of Salaries to Head Masters and Mistresses of Model Schools.*

1. The head master to receive £60 per annum, and after the completion of three years' service to rise by £5 per annum, until the salary amount to £100, should he be reported faithful and efficient in the discharge of his duties.*

2. The head mistress to receive £55† per annum, and after three years' service to rise by £2 10*s.* per annum, on the same condition as in the case of males, until the salary amount to £75 a-year.

3. Principals, both males and females, enjoy also one-half the school-fees received in their respective departments.

(*b.*) *Scale of Salaries and Allowances to Assistant Masters and Mistresses in Model Schools.*

1. An assistant master to receive his class salary, a supplemental salary of £16 per annum, and generally a certain proportion of the school fees.

2. An assistant mistress to receive her class salary, a supplemental salary of £12 per annum, and generally a certain proportion of the school fees.

3. The grant of such supplemental salaries to be contingent upon the report of the head and district Inspectors.

(*c.*) *Allowances to Teachers of Model Schools who, possessing Certificates of Competency, shall give Instruction in Singing, Drawing, or Physical Science.*

1. The head master or mistress to be allowed £10 annually, but to be paid for teaching only *one* of these subjects.

2. The assistant master or mistress to be allowed for

Singing,	£8
Drawing,	8
When both are taught,	12
And an Assistant Master for teaching Physical Science,	8

3. When the assistant teacher is engaged in teaching both physical science and *either* drawing or singing (for not more than *two* of these extra branches are to be taken by the same assistant), a sum of £12 annually to be granted to him.

4. If in the case of singing or drawing the instructions of the teacher, principal or assistant, are confined to but one department of the school, as the boys' or girls', but half the assigned rate of payment is allowed.

5. These allowances to be contingent upon the report of the head and district Inspectors.

(*d.*) *Paid Monitors and Pupil-Teachers in Model Schools.*

1. Monitors are allowed for the

First Year,	£6	Third Year,	£10
Second Year,	8	Fourth Year,	12

2. In the case of pupil-teachers resident in the house, an allowance at the rate of £20 a-year is granted to the master for the board, &c., of each.

3. Extern pupil-teachers are allowed at the rate of £20 a-year each, in lieu of board, &c.

(*e.*) *Gratuities to Pupil-Teachers and Paid Monitors in Model Schools.*

1. An annual gratuity not exceeding 30*s.* may be awarded to pupil-teachers (of *first* year) and paid monitors for good conduct, distinguished merit in their studies, and success in the instruction of the classes intrusted to their charge.

2. Pupil-teachers who may be retained for training beyond their first year, will be allowed a gratuity of 30*s.* a quarter, as reward for good conduct, &c.

3. These gratuities are granted on the recommendation of the head and district Inspectors.

H. *Gratuities to Literary Teachers of Workhouse Schools.*

1. The Commissioners of National Education (with the concurrence of the Poor Law Commissioners) award gratuities to a certain number (forty males and forty females) of the teachers of the workhouse schools, in connexion with the National Board, who shall be recommended by the district Inspectors.

The gratuities are divided into two classes :—

For Male Teachers,	First Class,	Twenty	at the rate of £6	a year each.
	Second Class,	Twenty	„ £4	„
For Female Teachers,	First Class,	Twenty	„ £5	„
	Second Class,	Twenty	„ £3	„

2. The "awards" are made half-yearly, for the periods ending 31st March, and 30th September. Payment in Code X.

3. It is to be understood that such gratuities are given in *addition* to the salaries paid to the teachers of workhouse schools under the provisions of the Poor Law Act.

4. No teacher is precluded from receiving the gratuity two or more half years in succession, if recommended by the district Inspector as deserving of it; but a teacher having received a gratuity for one half year, is not thereby *entitled* to the payment of another for the succeeding half year.

* In case of head masters of model schools residence is provided, or in lieu thereof, in some cases, allowance for house rent.

† This includes £20 a-year for lodging allowance.

CODE XI., 1863. (Tenth Change.)

5. If the local guardians know any just cause for withholding the gratuity from the teacher, they are to return the receipt unsigned, and communicate to the Commissioners of National Education the grounds for so doing.

New regulation.

6. The teachers of workhouse National schools are also eligible to receive the gratuity for instructing pupils in vocal music.

Sect. VI., 12, Part III., Code X.

VII. GRATUITIES, &c., TO TEACHERS OF ORDINARY NATIONAL SCHOOLS.

A.—*Premiums for Order, Neatness, and Cleanliness.*

1. The sum of £22 10*s.* will be allocated to each of the school districts, and divided into thirteen premiums.

One of £4, . . £4	Five of £1 10*s.*, . . £7 10*s.*
Two of £3, . . £6	Five of £1 . . . £5

2. These premiums are awarded ANNUALLY on the recommendation of the district Inspector at the expiration of the year.

Restriction in [ ] added here.

3. No teacher is eligible for this premium for more than two years in succession, [or who shall be in receipt of good service salary.]

Proviso in [ ] added here.

4. These premiums will be awarded to teachers of all classes, [provided the average attendance in each case shall not fall below that required for salary of teacher's class;] but none will be deemed eligible to receive such premiums against whom there is any well-founded charge of neglect in the performance of their duties, of impropriety in their conduct, or whose schools are not conducted in all respects in a satisfactory manner.

5. If the patron or manager of a National school knows any just cause for withholding the premium from the teacher, he is to return the receipt unsigned, and state his reasons for so doing.

New Regulations, to end of Sect. B.

B. *Supplemental or Good Service Salaries.*

1. Supplemental or good service salaries are awarded to a certain number of teachers of National schools on the recommendation of the head and district Inspectors, subject to the following conditions:—

(*a.*) That the teacher ranks not lower than the First Division of Third Class.

(*b.*) That the average attendance at his school amounts to thirty-five at least.

(*c.*) That the teacher has given not less than eight years' service under the Board; period of service to be reckoned from the date from which salary as a classed teacher was first paid.

2. No teacher to be eligible for such supplemental salary who shall have been depressed or fined for misconduct or neglect of duty, or on whose school a decidedly unfavourable report shall have been made within the preceding three years, or who shall not have shown himself, throughout his whole career, to have been attentive and painstaking, and mindful of all the details of school-keeping.

3. Any teacher to whom such good service salary shall have been awarded, but who shall subsequently cease to exhibit those qualities which first obtained for him this distinction, or whose school shall fall below an average daily attendance of thirty-five pupils, shall thereby forfeit such supplemental salary.

4. Teachers in receipt of good service salary who may become entitled to an increase, on the ground of a more lengthened term of service, or on account of promotion to a higher class, must be specially recommended by Inspector for such increase.

5. In case of promotion from a lower to a higher class, teacher will not be entitled to the consequent increase of good service salary until he shall have been a year in his new class.

6. Payments to be made annually; and in no case without the united recommendation of the Head and District Inspectors.

New Regulations, to end of Sect. C.

C. *Allowance for teaching Vocal Music, Drawing, and Navigation.*

1. To every teacher, possessing a certificate of competency, who shall give instruction in vocal music in his school, a gratuity ranging from £2 to £5 a year, according to the number under instruction and the success of the teacher's efforts.

2. To every teacher possessing a certificate of competency from the drawing master in the central model school, or from the master of a school of art, who shall give instruction in drawing to a class with sufficient average attendance, an annual gratuity, varying from £3 to £10, according to the number under instruction and the success of the teacher's efforts.

3. Gratuities for teaching singing and drawing are awarded to the conductors of convent schools on the same conditions as in case of ordinary schools, provided satisfactory proof is afforded of the competency of the teachers, and that the instruction is given during the hours of secular education.

4. To every teacher of a National school, possessing a certificate of competency from the masters of the Dublin, Belfast, Limerick, or Waterford model maritime schools, who shall give evidence of having an average attendance of at least six pupils under instruction in navigation, an annual gratuity of £5 for an attendance of six pupils, and £10 for an attendance of twelve or more.

D. *Gratuities for instructing Paid Monitors.**

CODE XI., 1863. (Tenth Change.)

SENIOR MONITORS.

		£	s.	d.
For each monitor of 1st year	a gratuity of	1	0	0
Do. of 2nd year	do.	1	10	0
Do. of 3rd or 4th year	do.	3	0	0

JUNIOR MONITORS.

For each junior monitor a gratuity of		1	0	0

New Regulations, to end of Sect. D.

E. *Gratuities for Extra Instruction to Unpaid Monitors.**

New Regulations, to end of Sect. E.

1. A gratuity not exceeding *four pounds* may be awarded to teachers of organized schools, who shall give *extra* instruction to a staff of *unpaid monitors* appointed by the Inspector or Organizer.

a. Teachers must, to entitle them to such gratuities, keep a record of the time devoted by them to the monitors' instruction.

b. No gratuity can be awarded under this or the preceding head unless the answering of the monitors be satisfactory, and that such answering can be fairly referred, in great part at least, to the care bestowed by the teacher during the time of such special instruction.

F. *Gratuities for preparing Young Persons for the Office of Teacher.**

New Regulations, to end of Sect. F.

1. For every pupil who, after having been appointed to a school, shall pass respectably the *first* annual examination, held subsequently to such appointment, the master or mistress by whom such pupil shall have been trained will be entitled to a sum of not less than £2, and not more than £3; but in no year is the amount to exceed £15 to any one school or teacher as the reward of such services.

2. The conditions to be observed in regard to these gratuities are—

(*a*). That such pupil shall have attended in the school not less than two consecutive years immediately preceding his or her appointment as a teacher.

(*b*). That the District Inspector shall certify that the school in which such pupil shall have been trained is efficiently conducted in all other respects.

(*c*). That the Head Inspector before whom such pupil shall have been examined shall certify that the teacher is entitled to the gratuity.

(*d*). That not more than twelve months shall have elapsed between such pupil's first examination and the date of his leaving the school of his former instructor.

G. *Gratuities for preparing Young Persons for the Office of Pupil-teacher in Model Schools.**

New Regulations, to end of Sect. G.

1. A gratuity not exceeding £2 may be awarded to teachers from whose schools shall proceed eligible candidates for the office of pupil-teacher in the model schools.

2. The conditions to be observed in regard to these gratuities are—

(*a*). That such pupil shall have attended in the school not less than two consecutive years immediately preceding his appointment as pupil-teacher.

(*b*). That the District Inspector shall certify that the school in which such pupil shall have been trained is efficiently conducted in all respects.

(*c*). That the Head Inspector before whom such pupil shall have been examined shall certify that the teacher is entitled to the gratuity.

H. *Retiring Gratuities.*

New Regulation.

In particular cases the Commissioners have the privilege of granting gratuities of reasonable amount to deserving teachers of long standing in their service, when, from old age and infirmity, they are obliged to retire.

PART V.

Part III., Sect. VIII., Code X.

SUPPLIES OF BOOKS, SCHOOL REQUISITES, AND APPARATUS.

I. NATURE AND EXTENT OF GRANTS, AND CONDITIONS ON WHICH MADE.

"Books" in Code X.

1. The Commissioners furnish gratuitously to each school a first stock of school "requisites," in proportion to the attendance of children. These requisites are to be kept as a school stock, for which the master or mistress is held responsible, and are on no account to be sold or taken out of the school.

2. The funds of the Commissioners do not enable them to give a free stock sufficiently large for the entire wants of the school. Any additional maps, stationery, slates, clocks, and other requisites, must, as required from time to time, be purchased at reduced rates.

A. *Free Stock.*

§ 3, Sect. VIII., Part III., Code X.

The value of the grant of free stock is regulated by the average daily attendance of pupils, as ascertained from the reports of the Inspectors. The managers of schools have the privilege of selecting their grants of free stock from the "following" list—being at liberty to choose such of them as they most approve of, and to omit any to which they object.

"Whole" in Code X.; part of Rule in that Code omitted here.

FREE STOCK LIST, REQUISITES, &c.

Slates, Large.

Do. do. Part 2.
Do. Introduction to Algebra.
Arithmetical Table Books.

Works for the use of Agricultural Pupils.

Dr. Hodges' First Steps in Agricultural Chemistry.
Do. First Lessons in do.
Johnston's Catechism of do.
Murphy's Agricultural Instructor.
Campbell's Farmer's and Cottager's Guide.
Pringle on Green Cropping.
Stephen's Catechism of Practical Agriculture.

Wilhelm's Vocal Music, supplied only to Schools where the Teachers hold Certificates of competency to instruct in Singing.

Hullah's Manual.
Do. Songs for Schools, No. 1.
Do. do. No. 2.
Do. Set of 8 Large Sheets.
Do. Exercises, Book 1.
Do. do., Book 2.
Slate, ruled for Music.
Tuning fork.

GLOBES:—
12-inch, in Mahogany, low stand, Brass Meridian.
12-inch in Stained Wood, low stand, Iron Meridian.
6-inch Semi-Globe, on Mahogany board.
3-inch do., do.
3-inch do., hinged.

MAPS:—
Johnston's School and Family Maps—size, 23 by 27 inches, on rollers, varnished:—

Eastern Hemisphere.	America.
Western do.	Canaan and Palestine.
England.	Chart of the World.
Scotland.	Geographical Terms.
Ireland.	United States and Canada.
Europe.	Chronological Chart of Ancient History.
Asia.	
Africa.	

*** These Maps are of the same character as the large Maps usually supplied by the Commissioners, but being smaller, may be more convenient to many Schools.

MAPS—*continued.*
Johnston's Physical Map of the World.
Do. Physical Map of Europe, with book.
Betts' Educational Maps—size 23 by 26 inches, on roller, varnished:—

England.	America.
Scotland.	Australia.
Ireland.	Palestine.
Europe.	Eastern Hemisphere.
Asia.	Western do.
Africa.	

Interrogatory Maps, with Book of Exercises to each map, to correspond with the Educational Series, on roller, varnished:—

Europe.	England.
Asia.	Scotland.
Africa.	Ireland.
America.	

Geographical Slates: each Slate has Two Outline Maps permanently engraved on it, and accompanied with Key Maps:—

England and the World.	Ireland and Scotland.
Europe and Asia.	United States and England.
Africa and America.	United States and the World.

Outline Maps—size, 17 by 13½ inches, printed on good paper, for Geographical Exercises:—

England.	Africa.
Scotland.	North America.
Ireland.	South America.
France.	Eastern Hemisphere.
Europe.	Western do.
Asia.	Palestine.

Key Maps—same size and sorts as preceding—coloured.
Physical Geography (Reynolds's), mounted:—

1. Physical Features of the Land.	4. Movements of the Waters.
2. Volcanic System.	5. Distribution of Rain.
3. Climates.	6. Distribution of the Winds.

Griffith's Geological Map of Ireland, on roller.
School Atlas of Physical Geography, with Introduction, and 39 Maps, coloured, bound.
Atlas illustrative of the Physical, Political, and Historical Geography of the British Empire, 10 Maps, coloured, bound.

DIAGRAMS:—Illustrations of Natural Philosophy (Johnston's), on roller, varnished, each accompanied by a book—
No. 1. Properties of Bodies.
No. 2. Mechanical Powers.
No. 3. Hydrostatics.
No. 4. Hydraulics.
No. 5. Physiology, No. 1.
No. 6. Physiology, No. 2.
No. 7. Steam Engines.
Astronomy, 6 sheets (Reynolds's), mounted.
View of Nature in all climates, in wrapper.
Do., Do., mounted on a roller.
Do., in ascending regions, mounted on roller.
The Human Species, 4 sheets, mounted on roller.
Machinery and Manufactures, viz.:—
1. Condensing Steam Engine.
2. High Pressure Engine.
3. Locomotive Engine.
4. Marine Engine—side Lever.
5. Marine Engine—Oscillating.
6. Marine Engine—Screw.
7. Paper-making Machine.
8. Printing Machine.
9. Manufacture of Gas.
10. Electric Telegraph.
11. Fire Engine and Pumps.
12. Malting and Brewing.
13. Distilling.
14. Principle of the Watch.
15. Hydraulic Press.
16. Manufacture of Cast Iron.
17. Flour Mill.
18. Suction and Force Pumps.
19. The Barometer and its uses.
20. Threshing Machine.
21. Gas Meter.
22. Mechanism of a Clock.
23. The Cotton Plant and its Cultivation.

Lardner's Illustrations of Mechanics, Natural Philosophy, &c., mounted on roller—

1. Mechanical Powers.	6. The Steam Engine.
2. Machinery.	7. Hydrostatics.
3. Watch and Clockwork.	8. Hydraulics.
4. Elements of Machinery.	9. Pneumatics.
5. Motion and Force.	

Section of Screw Line-of-Battle-Ship, mounted.
Table of British Strata, mounted.
Natural Phenomena, 30 prints.
Do. mounted.
Useful Plants, a set of 12 plates, coloured, in wrapper, with book.
Do., Do., mounted.
Natural History, 150 prints.
Do., mounted.
Animals, illustrated in the comparative sizes, on roller.
Graphic Illustrations of Animals, showing their uses in life and after death, 21 prints, mounted.
The Animal Kingdom, 4 sheets, coloured, mounted.
Patterson's Zoological Diagrams (10), mounted on rollers, varnished.
Set of Chemical Apparatus for performing experiments to illustrate Johnston's Agricultural Chemistry.
Tool Box, containing an assortment of most useful Tools.
Compound Portable Microscope.
Magnetic Ship's Compass, 10-inch.
Magnetic Compass, in brass case, 1½-inch.
Do., in mahogany case.
Thermometers:—Boxwood Thermometers.
Models, &c.:—Working Models of Mechanical Powers (Edwards).
Centrifugal Machine.
Archimedean Screw; Working Model.
Cards of Model Tools—Carpenter, Cabinetmaker, Bricklayer, Plumber, Painter and Glazier, Printer, Bookbinder, Goldbeater, Cooper, Farrier, Miner, Roadmaker, and Pavior, Gardener, 12 sorts.
Geometrical Solids, set of, in box.
Conic Sections, do.
Dissected Cone, in boxwood.
Dissected Cube, Octahedron.
Do. Tetrahedron.
Do. Dodecahedron.
Do. Pentagonal Dodecahedron.
Steel Goniograph, for illustrating Geometrical figures.
Tangible Arithmetic, consisting of 12 doz. cubes in box.

Illustrations of the Useful Arts:—
The Manufacture of a Needle described, with specimens of wire in its various stages up to the finished needle.
The manufacture of a Pin described, with specimens, showing the progress from the rough metal to the finished article.
The Manufacture of Paper described, accompanied by sixteen illustrative specimens.

Educational Cabinets:—
Edwards' Educational Cabinet, consisting of Natural Objects to illustrate Lessons on Common Things.
M'Nab's Object-Lesson Cards, illustrative of the Vegetable Kingdom, with specimens.
The Silkworm, exhibiting its various changes from the egg; in glazed case.

Mathematical Drawing Instruments:—
Leather pull-off Case of Patent Instruments, No. 0211, containing 5-inch steel-joint compass, pen point, pencil point, hand pen, and 6-inch boxwood scale.
Mahogany Case of ditto, No. 0212, containing 6-inch steel-joint compass, pen and pencil points, divider, bow pen, hand pen, pencil, box scale, ebony parallel, and brass protractor.
Land Surveying Chains, English Measure.
Do., Irish Measure.
Flat Rulers, Pear Tree Wood, No. 2, 12-inch.
Do., Do., No. 3, 15 ,,
Do., Do., No. 4, 18 ,,
Round Ebony Rulers, 12-inch.
Do., 18 ,,
Gunter's Scale, boxwood, 12-inch.
Do., 24 ,,
Chain Scale, boxwood, 12-inch.
Plotting Scale, 12-inch.
Off-set Scales.
Ebony Parallel Rulers, 15 inches.
T Squares, No. 1, 16-inch.
Do., No. 3, 26 ,,
Do., No. 4, 30 ,,
Black Boards:—42 by 30-inch.
Do., 36 by 30 ,,
Do., 30 by 24 ,,
Do., 42 by 30, on Stand.
Do., 36 by 30, Ruled for Music.
Framed Black Boards:—42 by 30-inch.
Do., 36 by 30 ,,
Do., 24 by 16 ,,
Easels:—Shut up Easel, 7 feet.
Do., 6 feet.

Mathematical Drawing Instruments—*continued*.
Framed Easel, 6 feet, double leg.
Lesson Post, suitable for Tablet Lessons.
Black Canvas, stretched on Frames, 22 by 17 inches.
Drawing Boards—Clamped:—13 by 9¾.
Do., Do., 18 by 13½.
Do., Do., 20 by 15¼.

Arithmetic Frames:—
Frame and Stand.
Hand Frames, 15 by 13 inches.
Pointers, common, long.
Do., Do., short.
Sewing Needles:—Assorted sizes.
Packets of Needles.
Darning Needles:—Assorted sizes.
Crochet Needles:—Steel.
Knitting Pins.
Sewing Cotton:—Clarke's.
Do., Brook's.

Thimbles:—
Brass, common.
Do., steel top.

Scissors:—
Cutting-out Scissors.
Class Scissors, No. 99.
Do., No. 264.
Penknives, No. 4000.

Working Materials:—
Knitting Cotton, blay.
Do., white.
Knitting Worsted, white.
Do., gray.
Do., black drab.
Do., black.
Yellow Sampler Canvas.
White, do.
Yellow Stripe, do.
White Muslin.

Black Lead Pencils, Chalk, &c.:—
Black Lead Drawing Pencils, HB, B, BB, F
Common Drawing Pencils.
India Rubber.
White Chalk—French.
Charcoal.
Black Conte Crayons, Nos. 1, 2, 3.
Drawing Pins.
Porte Crayons, brass.

Drawing Paper:—
Cartridge Paper.
Do., tinted.
Medium Drawing Paper.
Do., do., hand made.
Royal do.
Imperial do.

Drawing Materials:—
Water Colours in boxes.
School of Art Colour Box.
Water Colours in boxes, best quarter cakes, slide lid.
Do., half cakes, slide lid.
Indian Ink.
Camel Hair Pencils, crow-quill.
Do., duck-quill.
Do., goose-quill.
Cabinet Nests, 6 saucers.

Drawing Copies, &c.:—
Lineal Drawing Copies, mounted in portfolio.
Easy Drawing Copies, do.
Hermes' Drawing Instructor, 64 Nos.:—
Part 1 to 24—Landscapes.
25 to 36—Flowers and Fruit.
37 to 48—Heads.
49 to 60—Arabesques.
61 to 64—Horses.
School of Art Drawing Book.
Familiar Freehand Drawing Copies.
Green's First Studies in Landscape, 6 Nos.
Elementary Studies, by Julien and others.
Heads from the Antique, drawn by Smeeth, plain.
Do., do., tinted.
Harmoniums, with each Instrument an Instruction Book is supplied:—
Harmonium (of 5 octaves), with expression stop.
Do., do., without stop.
Do., (of 4 octaves).

C. *Additional Requisites and Apparatus.*

In addition to the Requisites and Apparatus in the foregoing List supplied to National Schools, the following is a List of Apparatus supplied at reduced prices to schools under special circumstances:

GLOBES:—Celestial and Terrestrial:—

18-inch, in Mahogany, high stand, with Compass.
18-inch, in ditto, with Iron Meridian.
18-inch, in Mahogany, low stand, with Brass Meridian.
18-inch, in Stained Wood, low stand, with Brass Meridian.
18-inch, in Stained Wood, low stand, Iron Meridian.
12-inch, in Mahogany, high stand, Brass Meridian.
12-inch, in Stained Wood, low stand, Brass Meridian.
9-inch, in Mahogany, low stand, Brass Meridian.
9-inch, in Stained Wood, low stand, Brass Meridian.
9-inch, in Stained Wood, low stand, Iron Meridian.
6-inch, on Mahogany Pedestal.
3-inch, ditto.
3-inch, in Mahogany boxes.
Patent Portable Globe, with stand.

SLATE OUTLINE GLOBES:—

18-inch.
12-inch.

GLOBE COVERS:—

Brown Holland, for 18-inch high.
Ditto, 18-inch low.
Ditto, 12-inch high.
Ditto, 12-inch low.

PLANISPHERES, to exhibit the state of the Heavens at any time:—

18-inch.
9-inch.

MAPS:—

Johnston's Chart of the World, with enlarged Map of Europe, &c.—72 by 56 inches, mounted.
Arrowsmith's Map of the Ancient World.

Outline Maps, corresponding in size with Betts' Educational and Interrogatory Maps, the Physical Features very distinctly marked, and the situations of the principal Towns shown by signs; on roller, varnished—

Eastern Hemisphere.	America.
Western Hemisphere.	Ireland.
Europe.	England.
Asia.	Scotland.
Africa.	

NOTE.—The "Outline" Maps are without names or numbers, and are intended for exercising the pupils' memory.

Projectional Maps—size, 17 by 13½ inches, printed on good paper—have only the lines of longitude and latitude delineated, and furnish an excellent Geographical exercise.
Griffith's Geological Map of Ireland on roller.
Reynolds's Atlas of Physical Geography, 12 Maps, printed on cards, in portfolio.
Atlas of Astronomy, in portfolio.
Atlas of Natural Philosophy, in portfolio.
Atlas of Geology, ditto.
Atlas of Arts, Science, and Manufactures, in portfolio.
Pictorial Illustrations of Geometrical terms, 2 sheets, on rollers.
Scientific School Tablets—On 3 Sheets:—
No. 1, Specific Gravities.
No. 2, Temperatures.
No. 3, Thermometer—on roller, varnished.
Only issued in sets.
Astronomy, 4 sheets (Darton's), mounted.
Ethnographical Map of the World, mounted on roller.
Geognostic Profiles, 4 sheets, in wrapper.
Ditto, ditto, mounted on roller.
Geological Chart, mounted on roller.
Section of the Earth's Crust, with letter-press description, mounted.
Geological Diagrams, including Section of the Earth's Crust, with descriptions, in wrapper.
Ditto, ditto, mounted on roller.
Botanical Chart, ditto.
Botanical Diagrams, 6 sheets, with descriptions, wrapper.
Ditto, ditto, mounted on roller.
Range of Vegetation, in wrapper.
Twelve prints, illustrative of the sources of Manufacture, Animal and Vegetable, mounted.
The Mechanical Powers illustrated, 8 sheets, mounted on mill-boards.

DIAGRAMS, printed on cloth, coloured:—

Astronomy, 12 diagrams.
Nebulæ, 6 diagrams.
Comet of 1853, 1 diagram.
One Million Points, 1 large diagram.

DIAGRAMS—*continued.*

Physiology in relation to Health, 10 diagrams.
Eastern Habitations, 10 diagrams.
Domestic Arrangements of the Orientals, 10 diagrams.
The Telescope, 6 diagrams.
The Microscope, 6 diagrams.
Australia and Australian Life, 10 diagrams.
Progress in Locomotion, 12 diagrams.
Mechanical Powers, 3 diagrams.
Nineveh and Assyria, 20 diagrams.
Ancient Egypt, 14 diagrams.
Geology, 15 diagrams.
Volcanoes, 7 diagrams.
Natural History, 15 diagrams.
Lardner's Illustrations of Mechanics, Natural Philosophy, &c.—numbers 1 to 9 in sheets.
Botany, 2 plates, mounted.
The Zones of the Earth, 10 plates, mounted, in portfolio, with a book of description to each plate.
Diagram of Gas Works, mounted on cloth.
Ditto, Glass Works, ditto.
Ditto, Blast Furnace, ditto.
Table of Ingredients of Food, ditto.
Ditto, Examples of Dietaries, ditto.
Graphic Illustrations of Animals, showing their uses in life and after death, 21 prints, in sheets.
The Animal Kingdom, 4 sheets, coloured.
Natural History, 150 prints.
Natural Phenomena, 30 prints.
Wild Flowers, 96 prints.
Ditto, mounted.
Trees, 12 prints, mounted.

PHILOSOPHICAL APPARATUS, &c.:—

Case of Pneumatic Apparatus, suitable for performing Experiments.
Case of Electrical Apparatus, ditto.
Case of Electro-Magnetic Apparatus, suitable for performing Experiments.
The Magnet familiarly described.
Ditto, accompanied by a box of Magnetic toys.
Collodion Gas Balloon, with apparatus for inflation.
Simple Microscope, with rack-movement, mirror, and condenser, tweezers, glass slides; in mahogany case.
The Student's Microscope—compound body, rack adjustment, on tripod stand, plane and concave mirrors, condensing lens, two Huyghenian eye-pieces, and two achromatic eye-pieces, in upright mahogany case, lock and key.
Case of Microscopic objects, A.
Ditto, B.
Ditto, C.

THERMOMETERS:—Boxwood Thermometers.

BAROMETERS:—Marine Barometer.
Upright Barometer.

MODELS, &c.:—Working Models of Mechanical Powers (Protheroe).
Ditto, Griffin.
Atwood's Machine for Illustrating the Laws of Gravitation, &c.
Working Model of Lift Pump (brass, with glass cylinder).
Sectional Model of Lift Pump
Working Model of Force Pump (brass, with glass cylinders).
Sectional Model of Steam Engine.
,, Link motion of Steam Engine.
,, Parallel motions of Steam Engine (five kinds).
Gas Meter.
Threshing Machine.
,, Winnowing Machine.
,, Corn Mill.

The three last-mentioned Models show the progress of preparation of grain from the field to its manufacture into flour.

Sectional Model of Mortising Machine.
Water Wheels (undershot and overshot), Working Model.
Hero's Fountain, Model of.
Mechanical Apparatus, Models, &c.
Drawing Models.
Models of Crystals, in box.
Butter's Trinomial Cube.

EDUCATIONAL CABINETS:—

Edwards' Cabinet of Objects.
Griffin's Specimens of Rocks, 100 specimens.

MATHEMATICAL DRAWING INSTRUMENTS:

Brass Dividers, common, 5-inch.
Patent Brass Dividers, 4-inch.
Ditto, 5-inch.
Ditto, with pen and pencil-point.
Drawing Pens, fine hard steel, bone handle.
Ditto, small fine.
Ditto, for red ink, electro, gilt.

MATHEMATICAL DRAWING INSTRUMENTS:—*continued.*

Patent Brass Bow Pen, fine needle-point.
Ditto, Pencil, ditto.
Patent Steel-spring Dividers, ditto.
Ditto, Bow Pen, ditto.
Ditto, Bow Pencil, ditto.

RULERS:—

Flat Rulers, Pear Tree Wood, No. 1, 7¾ inch.
Ditto, No. 5, 21 inch.
Round Ebony Rulers, 15-inch.
Architect's Scale, 12-inch.
Boxwood Protractor, 6 inch, narrow.
Ditto, 6 ,, broad.
Brass Protractor, 3½ inch.
Ditto, superior.
T SQUARES, No. 2, 18-inch.
Ditto, No. 5, 37 ,,
Ditto, No. 6, 42 ,,

SET SQUARES:—

45°, 6 inch.
45°, 9 ,,
60°, 8 ,,
60°, 10 ,,
75°, 8 ,,
75°, 12 ,,

BLACK BOARDS:—48 by 36 inches.
36 by 24 ,,

FRAMED BLACK BOARDS:—48 by 36 inches.
36 by 24 ,,
30 by 24 ,,

EASELS:—Shut up Easel, 5 feet, 6 inches.
Framed Easel, 6 feet, single leg.

Sponge.

DRAWING BOARDS—CLAMPED:—

19 by 13 inches.
22 by 17 ,,
28 by 19 ,,

ARITHMETIC FRAMES:—Oak, with Black Board.
Ditto, superior, Oak; Sliding-Black Board and Frame.
Hand Frames, 17 by 19 inches.

POINTERS, lancewood, long.
Ditto, ditto, short.

STEEL PENS AND HOLDERS:—

School pens, No. 016.
Ditto, broad, medium, or fine points, No. 09 F, 010 M, 011 B.
Ditto, superior G.
Barrel Pen, O.
Ditto, K.

CROCHET NEEDLES:—Bone.

PINS:—In sheets.
Mixed.

THIMBLES:—

Steel.

SCISSORS:—

Class Scissors, fine, No. 357.
Buttonhole ditto, No. 115.

PENKNIVES, No. 8943.
Ditto, No. 5650.

WORKING MATERIALS:—

Knitting Angola, gray.
Yellow Stripe Canvas, ¾ yard wide.
Brussels Net.
Bobbinet.

BLACK LEAD PENCILS, CHALK, &c.:—

Black Lead Drawing Pencils:—EHB, DEHB, FF, BBB.
Black Lead Drawing Pencils:—BBBBBB.
White Chalk—French.
Ditto (American calcined).
White Conté Crayons.
Red ditto.
Brown ditto.
French Crayons (coloured), in boxes.
Paper Stumps.

BLACK LEAD PENCILS, CHALK, &c.—*continued.*

Leather Stumps.
Drawing Pins.
Porte Crayons, brass (French).

DRAWING PAPER:—

Cartridge Paper.
Medium Drawing Paper.
Ditto, ditto, hand-made.
Royal, ditto.
Imperial, ditto.
Ditto, ditto, rough.
Ditto, ditto, hot-pressed.
Oil Sketching Paper Royal.
Ditto, Imperial.
White Mounting Boards, Half Imperial.
Ditto, Royal.
Ditto, Imperial.

DRAWING MATERIALS:—

Water Colours in boxes, best quarter cakes, lock.
Ditto, half cakes, lock.
Ditto, ,, selected colours, &c., lock.
Best colours in cakes.
Indian Ink.
Chinese White in bottles.
Camel Hair Brushes, flat, in tin, ½-inch.
Ditto, ditto, ¾-inch.
Ditto, ditto, 1-inch.
Ditto, ditto, 1½-inch.
Ditto, ditto, 2-inch.
Camel Hair Brushes, round, No. 1.
Ditto, ditto, No. 2.
Ditto, ditto, No. 3.
Ditto, ditto, No. 4.
Ditto, ditto, No. 5.
Ditto, ditto, No. 6.
Red Sables, round, No. 1.
Ditto, No. 2.
Ditto, No. 3.
Ditto, No. 4.
Ditto, No. 5.
Ditto, No. 6.
Pencil Sticks, 6-inch.
Ditto, 12-inch.
Ditto, 15-inch.
Earthenware Palettes, 3-inch.
Ditto, 4 ,,
Ditto, 5 ,,
Ditto, 6 ,,
Ditto, 7 ,,
Ditto, 8 ,,
Ditto, 9 ,,
Division Slants, 3 divisions.
Ditto, 4 ditto.
Ditto, 5 ditto.
Ditto, 6 ditto.
Ditto, 8 ditto.
Ditto, 10 ditto.
Ditto, 12 ditto.
Indian Ink Stones, small.
Ditto, middle.
Ditto, large.
New Colour Slab.
5 Well and 5 Slant Slab.

DRAWING COPIES, &c.:—

Odds and Ends of Progressive Drawing Studies, 6 Nos.
Hermes' Progressive Drawing School.
Green's Second Drawing Book of Landscape, 6 parts.
Harpur's Easy Course of Landscape Drawings, 6 Nos.
Hulme's Graduated Series of Landscapes, 4 parts.
Walton's Advanced Landscape Drawing Book, 6 parts.
Bright's Advanced Drawing Book, 6 parts.
Syer's Advanced Drawing Book, 6 Nos.
Syer's Marine and River Views, 6 parts.
Barnard's Elementary Studies of Trees, 9 parts.
Willis's Cattle and Rustic Figures, 6 parts.
Architectural Ornaments, by Raentz.
Green's Illustrations of the Five Orders of Architecture, 6 plates.

II. Regulations, etc., to be observed by Managers in regard to Grants of Books, etc. — Code XI., 1863. (Tenth Change.)

1. All applications for books, school requisites, and apparatus, at reduced prices, must be addressed to the Secretaries, and be accompanied by a money order for the amount, in favour of James Kelly, or William M'Creedy, Esq., and payable in Dublin on demand. — Part III., Sect. VIII., § 8, Code X.

2. [Half notes, cash, postage stamps,] orders or cheques drawn on country banks, cannot be received in payment. [If remitted, they will be returned at the risk of the sender.] — § 9, Code X.; words in [ ] added here.

3. When a post office order or letter of credit is transmitted, and the amount is under Ten Shillings, the cost of the remittance must be paid by the person applying for the same; but if the sum exceeds Ten Shillings, the cost of the remittance will be allowed, and requisites given for the *full amount* paid. — § 10, Code X.

4. When a National school has had a grant, either as free stock or at reduced prices, of a clock, or of any of the large maps, another will not be supplied until *three* years shall have elapsed, unless in special cases, the circumstances of which are to be stated, when the grant will be sanctioned, if the reasons assigned be deemed satisfactory. — *New Regulation.*

5. Teachers are not permitted to include, in the applications for requisites, *clocks* or *maps* for their own private use. Managers should, therefore, caution teachers that such irregularity, if reported, will subject them to a fine, or other serious mark of the Board's displeasure. *Books* for their own use may be purchased by the teachers at the reduced prices, but then they should be careful to indicate the fact to the manager, by writing the words "for Teacher" after the name of the book in the list. — *New Regulation.*

6. The patron or manager should not sign any application for books, requisites, or apparatus, without first ascertaining that they are actually wanted for the school on behalf of which the application is made. The Inspectors are required to report to the Commissioners whenever it appears that an undue quantity of requisites, &c., has been ordered for a National school. — § 11, Sect. VIII., Part III., Code X.

7. When there are separate Roll Numbers for male and female National schools, the application should state for which of them the books, &c., are required; and if for both, *two* forms should be used. — § 12, Code X., omitted here. § 13 of Code X.

8. Parcels of books, &c., when so desired, will be forwarded, carriage free, to the depôt of the district in which the school for which they are required is situated, and the Inspectors will inform the managers on what day they will be ready for delivery; or to the depôt of any other district, if more convenient; but in the latter case, the Inspector, who may not know the managers of any schools not in his district, cannot be expected to give notice. — § 14 ditto.

9. Or the parcel will be forwarded to the railway station nearest to the manager's residence. In this case the manager must himself incur the risk of its safe delivery, and the expense of carriage. — § 15 ditto.

10. Parcels are sent free to any place within the civic boundaries of Dublin. — *New Regulation.*

11. When parcels are forwarded to the depôt of a district, it is *not* the duty of the Inspector to transmit the parcel to the manager's residence, or to the school. — § 16, Code X.

12. On the day appointed by the Inspector for the delivery of parcels, the manager is required to send a messenger to the depôt with the order on the Inspector (with which the manager will be furnished), and which order the Inspector is required to transmit to the office as a proof of the delivery of the parcel. — § 17, Code X.

13. If a parcel is to be sent by a carrier, he must call at the office in Dublin not sooner than two days after the manager's directions shall have been received, and must produce the manager's order to the storekeeper here, for its delivery, on the form supplied for the purpose. — § 18, ditto.

14. The school apparatus must, on no account, be taken out of the school for which it has been procured, and must be used solely for school purposes. If it, or any portion of it, should be removed from the school, or any improper use be made of it, the Commissioners will adopt such measures as the nature of the case may demand. — *New regulation.*

15. The Commissioners do not supply books, requisites, or apparatus to the public, or to schools not connected with the Board of National Education. — § 19, Code X.

16. The amount of each grant must be inserted in the Daily Report Book of the school, and the invoice of the articles preserved for the examination of the Inspector, who will be required to report whether the articles in the school correspond with the invoice, and are in a good state of preservation. — *New regulation.*

Part VI.

General Instructions to Managers and Correspondents. — Part III., Sect. IX., Code X.

1. Persons desirous of obtaining assistance from the Commissioners of National Education, will, upon intimating to the secretaries the nature of the aid required, be furnished with the forms, upon which their application must be laid before the Commissioners: [and all grants of salary will date from the *first of the month nearest to the return of* such application forms to the office]. — § 1, Code X. Part in [ ] added in this Code.

2. Applicants for assistance are to understand that the Commissioners are not bound to grant the full amount of aid, as set forth in the foregoing regulations, in every case; nor can they grant any, unless they have sufficient funds for the purpose, which depends upon the amount placed at their disposal by Parliament. — § 2, Code X.

3. The Commissioners desire it to be distinctly understood that they do not hold themselves bound to grant aid, unless application shall have been made to them in the first instance, on the proper form, and unless the application shall have been favourably and finally decided upon by the Board. Applicants, therefore, should not incur any expense towards the payment of which they expect the Commissioners to contribute, until the decision of the Board shall have been communicated to them. — § 3, ditto.

4. The managers of National schools are particularly requested to attend to the following regulations respecting the payment of salaries or gratuities to teachers, as the Lords of Her Majesty's Treasury and the Commissioners for auditing the public accounts will not, in future, sanction any payments which are not in compliance with these rules:— — *New regulations.*

Code XI., 1863. (Tenth Change.)

Every receipt should be signed by the manager and by the teacher entitled to receive the amount of salary or gratuity therein specified.

Whenever a manager or other person advances money to a teacher on account of the salary payable by the Commissioners of National Education, he should *take a receipt* for the same (stamped, if the amount be £2 or upwards), in order to have a proper voucher to produce to the office for repayment.

If a teacher die to whom any salary or gratuity is due by the Commissioners at the time of his or her death which, with any other property he or she may have been possessed of, would amount to £20 or above, it will be paid only to the representatives or next of kin, on the exhibition, at the office, of letters of administration.

If the amount be over £5, and under £20, payment will be made without the production of letters of administration, to the alleged next of kin, on satisfactory proof that the just debts of the deceased have been paid, and on the party claiming payment giving a bond, on the form issued from the office, to free the Commissioners from any claim on the part of other next of kin, or of creditors: if the amount be £5, or under, neither letters of administration nor bond will be required, provided the debts are certified to have been paid.

If a teacher leave a National school, and authorize the manager or some other person to receive the salary due from the Board, such authority must be given in writing, or the amount will not be paid.

§ 4, Code X.

5. All communications in reference to National schools should be signed and made by the patron or manager. The Commissioners do not correspond with teachers of National schools.

§ 5, ditto.

6. No attention can be paid to "anonymous" communications.

Postscript of Code X.

7. Correspondents are requested to attend to the following directions, viz.:—

To write at the head of any letter addressed to the office, the name and roll number of the school referred to, and the county in which it is situated.

To make communications on different subjects in separate letters.

To state in every case the writer's post town; and, in the case of persons whose names are not recorded as patrons or managers of schools, to give the name and style of address in full.

In replying to an official letter, to quote its number and date.

It is particularly requested that all letters may be written clearly, and on paper of foolscap size, or, at least, large sized letter paper.

See Sect. IX., Part III., § 7 of Code X.

Letters or other communications addressed to the Secretaries, on the business of the Board, need not be prepaid.

§ 6, Sect. IX., Part III., Code X.

8. All letters, or other communications, in any manner relating to the business of the Board, or to the National schools, are to be addressed to the Secretaries, and not to any other officer or person connected with the Board—such communications to be directed thus:—

The Secretaries,
Education Office,
Marlborough-street, Dublin.

By order of the Commissioners of National Education,

JAMES KELLY,
WILLIAM M'CREEDY, } Secretaries.

Education Office,
21st November, 1863.

Code XII., 1866. (Eleventh Change.)

No. 12.

RULES AND REGULATIONS OF THE COMMISSIONERS OF NATIONAL EDUCATION IN IRELAND.

PART I.

GENERAL NATURE OF THE SYSTEM OF NATIONAL EDUCATION.

I. ITS OBJECT AND FUNDAMENTAL PRINCIPLE.

[The same as in Code XI.]

II. DESCRIPTION OF SCHOOLS TO WHICH THE COMMISSIONERS GRANT AID.

[The same as in Code XI.]

II. USE OF SCHOOL-HOUSES.

[The same as in Code XI.]

IV. RELIGIOUS AND SECULAR INSTRUCTION.

Rules §§ 1 to 13, inclusive, the same as in Code XI., with the exception of changes indicated in §§ 2 and 13.

1. Opportunities are to be afforded (as hereinafter provided for) to the children of all National schools for receiving such religious instruction as their parents or guardians approve of.

"Be compelled to" in Code XI.

2. Religious instruction must be so arranged, that each school shall be open to children of all communions; that due regard be had to parental right and authority; that, accordingly, no child "shall" receive, or be present at, any religious instruction of which his parents or guardians disapprove; and that the time for giving it be so fixed, that no child shall be thereby, in effect, excluded directly or indirectly, from the other advantages which the school affords.

3. A public notification of the times for religious instruction must be inserted in large letters in the "Time Table" supplied by the Commissioners, who recommend that, as far as may be practicable, the general nature of such religious instruction be also stated therein.

Code XII., 1866. (Eleventh Change.)

4. The "Time Table" must be kept constantly hung up in a conspicuous place in the school-room.

5. When the religious instruction comes after the secular, the teacher must, immediately before the commencement of the former, announce distinctly to the pupils that the hour for religious instruction has arrived, and must, at the same time, put up and keep up, during the period allotted to such religious instruction, and within the view of all the pupils, a notification thereof, containing the words "Religious Instruction" printed in large characters, on a form to be supplied by the Commissioners. Similarly when the school commences with religious instruction, the teacher is to put up and keep up the same notification.

6. When the secular instruction precedes the religious instruction, in any National school, there shall be a sufficient interval between the announcement and the commencement of the religious instruction; and whether the religious or the secular instruction shall have priority in any National school, the books used for the instruction first in order shall be laid aside at its termination, in the press or other place appropriated for keeping the school-books.

7. No secular instruction, whether literary or industrial, shall be carried on in the same apartment, during school-hours,* simultaneously with religious instruction.

8. In schools towards the building of which the State has contributed, and which are VESTED in trustees, for the purposes of National education, or which are vested in the Commissioners in their corporate capacity, such pastors or other persons as shall be approved of by the parents or guardians of the children respectively, shall have access to them *in the school-room*, for the purpose of giving them religious instruction there, at times convenient for that purpose, that is, at times so appointed as not to interfere unduly with the other arrangements of the school.

9. In schools, NOT VESTED, and which receive no other aid than salary and books, it is for the patrons or managers to determine whether any, and if any, what religious instruction shall be given *in the school-room;* but if they do not permit it to be given in the school-room, the children whose parents or guardians so desire, must be allowed to absent themselves from the school, at reasonable times, for the purpose of receiving such instruction ELSEWHERE.

10. The reading of the Scriptures, either in the Protestant Authorized, or Douay Version, —the teaching of catechisms,—public prayer,—and all other religious exercises, come within the rules as to religious instruction.

11. The patrons and managers of *all* National schools have the right to permit the Holy Scriptures (either in the Authorized or Douay Version) to be read, at the time or times set apart for religious instruction; and in *all vested schools* the parents or guardians of the children have the right to require the patrons and managers to afford opportunities for the reading of the Holy Scriptures, in the school-room, under proper persons approved of by the parents or guardians for that purpose.

12. Religious instruction, prayer, or other religious exercises, may take place, at any time before and after the ordinary school business (during which all children, of whatever denomination they may be, are required to attend); but must not take place *at more than one intermediate* time, between the commencement and the close of the ordinary school business. The Commissioners, however, will not sanction any arrangement for religious instruction, prayer, or other religious exercises *at an intermediate* time, in cases where it shall appear to them, that such arrangement will interfere with the usefulness of the school, by preventing children of any religious denomination from availing themselves of its advantages, or by subjecting those in attendance to any practical inconvenience.

13. With the above exception, the secular school business must not be interrupted, or suspended, by any spiritual exercise whatsoever.

NOTE.—The Commissioners earnestly recommend that religious instruction shall take place either immediately before the commencement, or immediately after the close, of the ordinary school business; and they further recommend that, whenever the patron or manager thinks fit to have religious instruction at an intermediate time, a separate apartment shall (when practicable) be provided for the reception of those children [who, according to these rules, should not be] present thereat.

Words in [ ] "whose parents or guardians may disapprove of their being" in Code XI.

14. The registry kept in each school, according to the form furnished by the Commissioners, must show the religious denomination of each child on the school roll.

§ 18 in Code XI.

15. No pupil who is registered by its parents or guardians as a Protestant is to be permitted to remain in attendance during the time of religious instruction in case the teacher giving such instruction is a Roman Catholic; and no pupil who is registered by its parents or guardians as a Roman Catholic is to be permitted to remain in attendance during the time of religious instruction in case the teacher giving such instruction is not a Roman Catholic. And further, no pupil is to be permitted to remain in attendance during the time of any religious instruction to which its parents or guardians object.

NEW RULE. Replacing Rules 14 to 17 of Code XI.

Provided, however, that in case any parent or guardian shall express his desire that his child should receive any particular religious instruction, and shall record such desire in a book to be provided in the school, when necessary for that purpose, this prohibition shall not apply to the time during which such religious instruction only is given.† The entry in the book shall be signed with the name or mark of the parent or guardian, and the book shall be submitted to the Inspector so often as he visits the school.

The following is the form of book:—

Roll No., —— School, —— County, ——
Name of Teacher who gives religious instruction, ——
Religious denomination of do., ——

CERTIFICATE OF PARENT OR GUARDIAN.

[In case a parent or guardian should wish his child to receive religious instruction from a teacher who is of a different religious denomination from the child, or from a teacher who gives any religious instruction different from that which is in accordance with the creed of the child, the following certificate is to be made by such parent or guardian.]

Explanatory note added in Code XIII.

* The term "SCHOOL-HOURS," is always to be understood to mean the entire time, in each day, from the opening of the school to the closing of the same for the dismissal of the pupils.

† Such expression of desire may at any time be revoked by the parent or guardian, and shall thereupon become inoperative.

Code XII., 1866. (Eleventh Change.)

I (1) ——, being the (2) —— of (3) ——, who is registered by me as (4) —— in the School Register of the (5) —— National School, HEREBY CERTIFY that it is my desire that the said (6) —— shall receive instruction in (7) —— during the time set apart for religious instruction.

Signature of parent or guardian, (8) ——

Witness, if signed by "mark," ——

Dated —— day of ——, 18—.

CERTIFICATE OF TEACHER.

I HEREBY CERTIFY that before (9) —— signed the above certificate, I read aloud to (10) —— the following rule of the COMMISSIONERS OF NATIONAL EDUCATION:—

"No pupil who is registered by its parents or guardians as a Protestant is to be permitted to remain in attendance during the time of religious instruction in case the teacher giving such instruction is a Roman Catholic; and no pupil who is registered by its parents or guardians as a Roman Catholic is to be permitted to remain in attendance during the time of religious instruction in case the teacher giving such instruction is not a Roman Catholic. And further, no pupil is to be permitted to remain in attendance during the time of any religious instruction to which its parents or guardians object.

"Provided, however, that in case any parent or guardian shall express his desire that his child should receive any particular religious instruction, and shall record such desire in a book to be provided in the school, when necessary for that purpose, this prohibition shall not apply to the time during which such religious instruction only is given.* The entry in the book shall be signed with the name or mark of the parent or guardian, and the book shall be submitted to the Inspector so often as he visits the school.

* Such expression of desire may at any time be revoked by the parent or guardian, and shall thereupon become inoperative."—*Part* I., *sec.* iv., *par.* 15.

And I FURTHER CERTIFY that I believe when the said (11) —— signed the above certificate (12) —— had a full apprehension of the meaning and force of the rule, and also of the true intent and object of the certificate.

Signature of teacher, ——

Dated —— day of ——, 18—.

CERTIFICATE OF INSPECTOR.

I HEREBY CERTIFY that I have examined the certificate of (13) —— and also of the teacher (14) —— above set forth, and that I am satisfied as to the genuineness of each.

Signature of Inspector, ——

Dated —— day of ——, 18 —.

(1) Insert the name of the parent or guardian who makes the certificate.
(2) Insert the relationship of the parent or guardian; as—"father," "mother," "aunt," &c.
(3) Insert the name of the pupil.
(4) Insert the registered religion of the pupil.
(5) Insert the name of the National school.
(6) Insert the name of the pupil again.
(7) Insert in full the nature of the religious instruction; as—The Holy Scriptures in the Authorized Version.—The Roman Catholic Catechism.—The Protestant Catechism; &c., &c. *This is to be written by the parent or guardian;* but in case the parent or guardian cannot write, it may be written by the teacher.
(8) The parent or guardian is here to inscribe his name. If the parent or guardian be unable to write his name, he is to sign by mark; but this mark must be witnessed by some respectable third party.
(9) Insert the name of the parent or guardian.
(10) Insert "him" or "her."
(11) Insert the name of the parent or guardian.
(12) Insert "he" or "she."
(13) Insert the name of the parent or guardian.
(14) Insert the name of the teacher.

§ 19, Code XI. 16. A sufficient number of hours, to be approved of in each case by the Commissioners, is to be appropriated to the ordinary school business, during which all children, of whatever denomination they may be, are required to attend.

§ 20, ditto. 17. In all National schools (except those in which industrial instruction is the *chief* object) there must be literary instruction for at least *four* hours, upon five days in the week.

§ 21, ditto. 18. In industrial schools—that is, in schools where industrial instruction is the *chief* object—the Commissioners require that not less than *two* hours, daily, shall be devoted to literary instruction.

V. USE OF BOOKS AND TABLETS.

[The same as in Code XI.]

VI. MANAGEMENT OF NATIONAL SCHOOLS.

[The same as in Code XI.]

VII. INSPECTION BY THE COMMISSIONERS OR THEIR OFFICERS.

[The same as in Code XI.]

VIII. ADMISSION OF VISITORS.

[The same as in Code XI.]

PART II.

EXTENT OF AID AND CONDITIONS UPON WHICH GRANTED.

I. KINDS OF AID.

[The same as in Code XI.]

II. TOWARDS BUILDING SCHOOL-HOUSES (*Vested*)

[The same as in Code XI.]

III. TOWARDS SUPPORT OF SCHOOLS PREVIOUSLY ESTABLISHED (*Non-Vested*).

[The same as in Code XI.]

Code XII., 1866. (Eleventh change.)

Part III.

Different Classes of National Schools.

I. District and Minor Model Schools.

[The same as in Code XI.]

II. Ordinary Literary Schools.

[The same as in Code XI.]

III. Agricultural Schools.

[The same as in Code XI.]

A. *School Farms of the First Class under the exclusive control of the Commissioners.*

[The same as in Code XI.]

B. *School Farms of the First Class under Local Patrons.*

1. *Where the Premises are Vested.*

[The same as in Code XI.]

2. *Where the Premises are Non-Vested.*

[The same as in Code XI.]

C. *Ordinary Agricultural Schools.*

[The same as in Code XI.]

D. *School Gardens.*

[The same as in Code XI.]

IV. Industrial Schools.

[The same as in Code XI.]

V. Convent Schools.

[The same as in Code XI.]

VI. Workhouse Schools.

[The same as in Code XI.]

VII. Schools attached to Prisons, Asylums, &c.

[The same as in Code XI.]

VIII. Evening Schools.

[The same as in Code XI.]

Part IV.

Teachers.

I. Their Qualifications and Duties.

[The same as in Code XI., with the exception of Rule 7, which is as follows:—]

7. *Newly appointed* teachers are not *entitled* to any salary from the Commissioners until examined and pronounced competent; and any teachers *newly appointed* to National schools, who, after examination by the Inspectors, may be found wholly unqualified, must be removed.

II. Training of Teachers.

[The same as in Code XI., with the exception of a new clause, § 4, as follows:—]

4. Assistant teachers of model schools, while in training, receive but half their accustomed share of the fees, and a deduction is made from their salaries at the rate of £20 per annum in the case of males, and £18 in the case of females; these deductions to serve as payment for their substitutes. New Rule.

[Rules 4, 5, and 6 of Code XI., become 5, 6, and 7 of Code XII.]

III. Classification of Teachers, &c.

[The same as in Code XI., with the exception of Rule 14, which is omitted in this Code, by which Rules 15 and 16 of Code XI., become Rules 14 and 16 of this one.]

IV. Salaries (Ordinary National Schools).

[The same as in Code XI., with the addition of the following note after Rule 6:—]

Note.—In cases where schools enjoying the services of assistants (under which term are included monitors, workmistresses, and industrial instructors) fail to command the average attendance required for the amount of aid awarded for such services, managers must be prepared for the entire withdrawal or reduction of such aid in the second quarter in which the falling off appears. *New note.*

A like rule will be applied to evening schools.

V. Paid Monitors—their Salaries, &c.

[The same as in Code XI., with the exception of Rule 10, which is altered into the following:—]

10. In the case of a few very large and highly efficient schools, the Commissioners are prepared to appoint young persons of great merit to act as first-class monitors.

Salary for the first year, ... £15
Do. second year, ... £17

CODE XII., 1866. (Eleventh change.)

VI. SALARIES, &c., TO OTHER THAN ORDINARY NATIONAL SCHOOLS.

A. *Evening Schools.*

[As in Code XI.]

B. *Schools connected with School Farms of the First Class, under the exclusive control of the Board.*

[As in Code XI.]

C. *Schools connected with School Farms of the First Class under Local Patrons.*

[As in Code XI.]

D. *Schools connected with Ordinary School Farms.*

[As in Code XI.]

E. *Industrial Schools.*

[As in Code XI.]

F. *Schools connected with Convents and Monasteries.*

[As in Code XI., with the addition of Regulation 4, as follows:—]

New Regulation. 4. For evening schools, an allowance is made at the rate of £10 for every hundred pupils in average attendance.

G. *Model Schools.*

[As in Code XI.]

H. *Gratuities to Literary Teachers of Workhouse Schools.*

[As in Code XI.]

VII. GRATUITIES, &c., TO TEACHERS OF ORDINARY NATIONAL SCHOOLS.

[As in Code XI., with the following exceptions:—]

Sub-section D, *Gratuities for instructing Paid Monitors*, is modified as follows:—

D. *Gratuities for instructing paid Monitors.**

New scale.

		£	s.	d.
Junior Monitors.—For each junior monitor a gratuity of		1	0	0
	For each monitor of 1st year a gratuity of	1	0	0
Senior Monitors,	do. of 2nd year, do.	1	10	0
	do. of 3rd or 4th year, do.	3	0	0
1st Class Monitors,	do. of 1st or 2nd year, do.	3	0	0

Sub-section G, *Gratuities for preparing young persons for the office of Pupil Teacher in Model Schools*, has the following explanatory note:—

New note. NOTE.—In regard to the foregoing special gratuities, as in regard to the annual salaries of teachers of National schools, it is to be distinctly understood that the Commissioners reserve to themselves the right to determine, on cause shown, whether the payment is to be made in whole or in part, or is to be altogether withheld.

PART V.

SUPPLIES OF BOOKS, SCHOOL REQUISITES, AND APPARATUS.

[As in Code XI., with the exception of the addition in [ ] to Rule 2 of "I. Nature and Extent of Grants, and Conditions on which made:"—]

New matter in [ ].

2. The funds of the Commissioners do not enable them to give a free stock sufficiently large for the entire wants of the school; [and they therefore require that the local parties shall purchase a stock of books and other requisites, proportionate to the grant of free stock, for the use of the school and for sale to the pupils.] Any additional maps, stationery, slates, clocks, and other requisites, must also, as required from time to time, be purchased at reduced rates.

[The omission of the list "C. Additional Requisites and Apparatus."]

[The addition of a new rule after § 4 in "II. Regulations, &c., to be observed by Managers in regard to Grants of Books, &c.:"—]

NEW RULE. 4. When the teacher of an ordinary National school advances from his own resources the amount of an order for requisites, and that such amount is not less than the sum of ONE POUND FIVE SHILLINGS, an allowance of 20 per cent. will be made as commission on the order, if demanded.

[The insertion of this rule advances the numbers of the remaining sections by one, so that § 4 becomes § 5, and so on.]

PART VI.

GENERAL INSTRUCTIONS TO MANAGERS AND CORRESPONDENTS.

[As in Code XI.]

* Teachers of Model Schools are excluded from obtaining this class of gratuities.

No. 13.

Code XIII., 1869. (Twelfth change.)

Rules and Regulations* of the Commissioners of National Education in Ireland.

Part I.

Part I.

Same as in last Code (XII.)

General Nature of the System of National Education.

I.—*Its Object and Fundamental Principle.*

1. The object of the system of National Education is to afford *combined* literary and moral, and *separate* religious instruction, to children of all persuasions, as far as possible, in the same school, upon the fundamental principle, that no attempt shall be made to interfere with the peculiar religious tenets of any description of Christian pupils.

2. It is the earnest wish of Her Majesty's Government, and of the Commissioners, that the Clergy and Laity of the different denominations should co-operate in conducting National Schools.

3. The Commissioners by themselves, or their Officers, are to be allowed to visit and examine the schools whenever they think fit. Those who visit on the part of the Commissioners are furnished with credentials under their seal.

4. The Commissioners will not change any fundamental Rule without the express permission of His Excellency the Lord Lieutenant.

5. The Commissioners will not withdraw, or essentially alter, any book that has been, or shall be hereafter, unanimously published or sanctioned by them, without a previous communication with the Lord Lieutenant.

II.—*Description of Schools to which the Commissioners grant aid.*

1. The schools to which the Commissioners grant aid are divided into two classes, viz. :—1st, Vested Schools, of which there are two sorts, namely, first, those vested in the Commissioners; and, second, those vested in Trustees, for the purpose of being maintained as National Schools; 2ndly, Non-Vested Schools, the property of private individuals. Both these classes of Schools are under the control of local Patrons or Managers.

2. There are also Model Schools, of which the Commissioners are themselves the Patrons, but which are conducted on the same fundamental principles as the ordinary National Schools.

3. The Commissioners encourage Industrial Instruction in National Schools in all suitable cases.

4. The Commissioners require that instruction shall be given in plain needlework in all Female Schools.

III.—*Use of School-houses.*

1. In Non-Vested Schools, the Commissioners do not, in ordinary cases, exercise control over the use of the School-houses on Sundays, or before or after the school-hours on the other days of the week; such use being left altogether to the local Patrons or Managers, of all religious persuasions, subject to the interference of the Board in cases leading to contention or abuse.

2. No National School-house shall be employed, at any time, even temporarily, as the *stated* place of DIVINE WORSHIP of any religious community; or for the celebration or administration of the Sacraments or Rites of any Church.

3. No aid will be granted to a School *held in a place of worship;* nor will the Commissioners sanction the *transfer* of an existing School, to a place of worship, even for a temporary period.

4. When a School-room is in any way connected with a place of worship, there must not be any *direct internal* communication between the School-room and such place of worship.

5. Vested School-houses must be used, *exclusively, for the education* of the pupils attending them; except on Sunday, when they may be employed for Sunday Schools, with the sanction of the Patrons or Managers, subject, in cases leading to contention or abuse, to the interference of the Commissioners.

6. No political meetings shall be held in National School-houses, whether Vested or Non-Vested; nor shall any political business *whatsoever* be transacted therein.

7. When any School is received by the Commissioners into connexion with them, the inscription "NATIONAL SCHOOL," shall be put up in plain and legible characters on the School-house, or on such other place as may render it conspicuous to the public. When a School-house is built partly by aid from the State, a stone is to be introduced into the wall having that inscription cut upon it. The Commissioners will not, when granting aid *in future*, sanction any inscription containing a title of a *denominational character*, or which may appear to them to indicate that the School is one belonging to any particular religious body. The Commissioners do not object to the terms, Male, Female, or Infant; or the proper local designation taken from the city, town, parish, street, village, or townland, in which the School may be situated; or the name of the founder being included in the inscription.

8. No emblems or symbols of a *denominational* nature shall be exhibited in the School-room during the hours of united instruction; nor will the Commissioners in future, grant aid to any School which exhibits on the exterior of the buildings any such emblems.

9. No emblems or symbols of a *political* nature shall at *any time* be exhibited in the School-room, or affixed to the *exterior* of the buildings; nor shall any placards whatsoever, except such as refer to the legitimate business of school management, be affixed thereto.

IV.—*Religious and Secular Instruction.*

1. Opportunities are to be afforded (as hereinafter provided for) to the children of all National Schools for receiving such religious instruction as their parents or guardians approve of.

2. Religious instruction must be so arranged, that each school shall be open to children of all communions; that due regard be had to parental right and authority; that, accordingly, no child shall receive, or be present at, any religious instruction of which his parents or guardians disapprove; and that the time for giving it be

* The existing "Rules and Regulations" of the Commissioners of National Education are here given *in extenso*. Any change by which the present Code differs from its predecessors is indicated in the marginal notes.

Code XIII, 1869. (Twelfth change.)

Part I.

so fixed that no child shall be thereby, in effect, excluded, directly or indirectly, from the other advantages which the school affords.

3. A public notification of the times for religious instruction must be inserted in large letters in the "Time Table" supplied by the Commissioners, who recommend that, as far as may be practicable, the general nature of such religious instruction be also stated therein.

4. The "Time Table" must be kept constantly hung up in a conspicuous place in the School-room.

5. When the religious instruction comes after the secular, the Teacher must, immediately before the commencement of the former, announce distinctly to the pupils that the hour for religious instruction has arrived, and must, at the same time, put up and keep up, during the period allotted to such religious instruction, and within the view of all the pupils, a notification thereof, containing the words "Religious Instruction," printed in large characters, on a form to be supplied by the Commissioners. Similarly when the School commences with religious instruction, the Teacher is to put up and keep up the same notification.

6. When the secular instruction precedes the religious instruction, in any National School, there shall be a sufficient interval between the announcement and the commencement of the religious instruction; and whether the religious or the secular instruction shall have priority in any National School, the books used for the instruction first in order shall be laid aside at its termination, in the press or other place appropriated for keeping the School-books.

7. No secular instruction, whether literary or industrial, shall be carried on in the same apartment, during school-hours,* simultaneously with religious instruction.

8. In Schools towards the building of which the State has contributed, and which are VESTED in Trustees, for the purposes of National Education, or which are vested in the Commissioners in their corporate capacity, such pastors or other persons as shall be approved of by the parents or guardians of the children respectively, shall have access to them *in the School-room*, for the purpose of giving them religious instruction there, at times convenient for that purpose—that is, at times so appointed as not to interfere unduly with the other arrangements of the School.

9. In Schools, NOT VESTED, and which receive no other aid than Salary and Books, it is for the Patrons or Managers to determine whether any, and if any, what religious instruction shall be given *in the School-room;* but if they do not permit it to be given in the School-room, the children whose parents or guardians so desire, must be allowed to absent themselves from the School, at reasonable times, for the purpose of receiving such instruction ELSEWHERE.

10. The reading of the Scriptures, either in the Protestant Authorized, or Douay Version—the teaching of Catechisms—public prayer—and all other religious exercises, come within the rules as to religious instruction.

11. The Patrons and Managers of *all* National Schools have the right to permit the Holy Scriptures (either in the Authorized or Douay Version) to be read, at the time or times set apart for religious instruction; and in *all Vested Schools* the parents or guardians of the children have the right to require the Patrons and Managers to afford opportunities for the reading of the Holy Scriptures, in the School-room, under proper persons approved of by the parents or guardians for that purpose.

12. Religious instruction, prayer, or other religious exercises, may take place, at any time, before and after the ordinary School business (during which all children, of whatever denomination they may be, are required to attend); but must not take place *at more than one intermediate* time, between the commencement and the close of the ordinary School business. The Commissioners, however, will not sanction any arrangement for religious instruction, prayer, or other religious exercises *at an intermediate time*, in cases where it shall appear to them that such arrangement will interfere with the usefulness of the School, by preventing children of any religious denomination from availing themselves of its advantages, or by subjecting those in attendance to any practical inconvenience.

13. With the above exception, the secular School business must not be interrupted, or suspended, by any spiritual exercise whatsoever.

Note.—The Commissioners earnestly recommend that Religious Instruction shall take place either immediately before the commencement, or immediately after the close, of the ordinary School business; and they further recommend that whenever the Patron or Manager thinks fit to have religious instruction at an intermediate time, a separate apartment shall (when practicable) be provided for the reception of those children who, according to these Rules, should not be present thereat.

14. The Registry kept in each School, according to the Form furnished by the Commissioners, must show the religious denomination of each child on the School Roll.

15. No pupil who is registered by its parents or guardians as a Protestant is to be permitted to remain in attendance during the time of Religious instruction in case the Teacher giving such instruction is a Roman Catholic; and no pupil who is registered by its parents or guardians as a Roman Catholic is to be permitted to remain in attendance during the time of Religious instruction in case the Teacher giving such instruction is not a Roman Catholic. And further, no pupil is to be permitted to remain in attendance during the time of any Religious instruction to which its parents or guardians object.

Provided, however, that in case any parent or guardian shall express his desire that his child should receive any particular Religious instruction, and shall record such desire in a book to be provided in the School, when necessary for that purpose, this prohibition shall not apply to the time during which such Religious instruction only is given.* The entry in the book shall be signed with the name or mark of the parent or guardian, and the book shall be submitted to the Inspector so often as he visits the School.

* Such expression of desire may at any time be revoked by the parent or guardian, and shall thereupon become inoperative.

The following is the Form of Book.

Roll No., —— *School*, —— *County*, ——
Name of Teacher who gives Religious Instruction, ——
Religious Denomination of do., ——

CERTIFICATE OF PARENT OR GUARDIAN.

[In case a Parent or Guardian should wish his Child to receive religious instruction from a Teacher who is of a different religious denomination from the Child, or from a Teacher who gives any religious instruction different from that which is in accordance with the creed of the Child, the following Certificate is to be made by such Parent or Guardian.]

NOTE.†—As some doubts have arisen as to the interpretation of the Rule, attention is requested to the following minute of the Board, dated February 26, 1867 :—

"The object of the Rule is more fully to carry out the general principle of the Board, that no child is to receive any religious instruction contrary to the wishes of its parent. Accordingly, the Rule first provides for the case where the Teacher is a Protestant and the child a

* The term "SCHOOL-HOURS," is always to be understood to mean the entire time in each day, from the opening of the School to the closing of the same for the dismissal of the pupils.

† This explanatory note has been added since publication of Code XII.

Roman Catholic, or *vice versa*. In this case the dissent of the parent is implied, and no religious instruction can be given to a child by a Teacher of the different creed unless the parent expressly requests it. But where the Teacher and the child are both Protestants, whether of the same or of a different denomination, the dissent of the parent will not be implied. In this case religious instruction may be given to the child unless the parent expressly forbids it. In each case, however, the assent or dissent, whether implied or expressed, may be modified by an entry, duly signed by the parent, in the Certificate Book of Religious Instruction. Cases may occur in which the conduct of the Teacher, although not coming within the strict letter of the new Rule, is obviously contrary to the general spirit of the National System; as, for instance, if instruction should be given in the Catechism or Creed of a different persuasion from that of the child."

I (1) ———, being the (2) —— of (3) ———, who is registered by me as (4) ——— in the School Register of the (5) —— National School, HEREBY CERTIFY that it is my desire that the said (6) ——— shall receive instruction in (7) ——— during the time set apart for Religious Instruction.

All from this out same as in last Code (XII.)

Signature of Parent or Guardian, (8) ———
Witness, if signed by "Mark," ———
Dated —— day of ——, 18—.

CERTIFICATE OF TEACHER.

I HEREBY CERTIFY that before (9) ——— signed the above Certificate, I read aloud to (10) —— the following Rule of the COMMISSIONERS of NATIONAL EDUCATION:—

"No Pupil who is registered by its Parents or Guardians as a Protestant is to be permitted to remain in attendance during the time of religious instruction in case the Teacher giving such instruction is a Roman Catholic; and no Pupil who is registered by its Parents or Guardians as a Roman Catholic is to be permitted to remain in attendance during the time of religious instruction in case the Teacher giving such instruction is not a Roman Catholic. And further, no Pupil is to be permitted to remain in attendance during the time of any religious instruction to which its Parents or Guardians object.

"Provided, however, that in case any Parent or Guardian shall express his desire that his child should receive any particular religious instruction, and shall record such desire in a book to be provided in the School, when necessary for that purpose, this prohibition shall not apply to the time during which such religious instruction only is given.* The entry in the book shall be signed with the name or mark of the Parent or Guardian, and the book shall be submitted to the Inspector so often as he visits the School.

"* Such expression of desire may at any time be revoked by the Parent or Guardian, and shall thereupon become inoperative."—*Part I., Sec. IV., Par.* 15.

And I FURTHER CERTIFY that I believe when the said (11) ——— signed the above Certificate (12) —— had a full apprehension of the meaning and force of the Rule, and also of the true intent and object of the Certificate.

Signature of Teacher, ———
Dated — day of ——, 18—.

CERTIFICATE OF INSPECTOR.

I HEREBY CERTIFY that I have examined the Certificate of (13) ——— and also of the Teacher (14) ——— above set forth, and that I am satisfied as to the genuineness of each.

Signature of Inspector, ———
Dated — day of ——, 18—.

16. A sufficient number of hours, to be approved of in each case by the Commissioners, is to be appropriated to the ordinary School business, during which all children, of whatever denomination they may be, are required to attend.

17. In all National Schools (except those in which Industrial instruction is the *chief* object) there must be Literary instruction for at least *four* hours, upon five days in the week.

18. In Industrial Schools—that is, in Schools where Industrial instruction is the *chief* object—the Commissioners require that not less than *two* hours, daily, shall be devoted to Literary instruction.

V.—*Use of Books and Tablets.*

1. The use of the books published by the Commissioners is not compulsory; but the titles of all other books which the Patrons or Managers of Schools intend for the ordinary School business, are to be notified to the Commissioners; and none are to be used to which they object. The approval of any such books is to extend only to the particular edition which has been submitted to the Commissioners.

2. If any books other than the Holy Scriptures, or the *standard* books of the Church to which the children using them belong, be employed in communicating religious instruction, the title of each is to be made known to the Commissioners whenever they deem it necessary.

3. The Commissioners do not insist on the "Scripture Lessons" or book of "Sacred Poetry" being read in any of the National Schools, nor do they allow them to be read as part of the ordinary School business (during which all children, of whatever denomination they may be, are required to attend) in any school attended by children whose parents or guardians object to their being read by their children. In such cases the Commissioners prohibit the use of these books, except at times set apart for the purpose, either before or after such ordinary School business, and under the following conditions:—

First—That no child, whose parent or guardian objects, shall be required, directly or indirectly, to be present at such reading.

Second—That in order that any children, whose parents or guardians object, may be at liberty to absent themselves, or to withdraw, at the time set apart for the reading of the books above specified, public notification of the time set apart for such reading shall be inserted in large letters in the Time-table of the School—that there shall be a sufficient interval between the conclusion of such ordinary School business and the commencement of such reading; and that the Teacher shall, immediately before its commencement, announce distinctly to the pupils, that any child whose parent or guardian so desires may then retire.

Third—That in every such case there shall be, exclusive of the time set apart for such reading, sufficient time devoted each day to the ordinary School business, in order that those children who do not join in the reading of these books may enjoy ample means of literary instruction in the School-room.

4. When using the Scripture Lessons, the Teachers are prohibited, except at the time set apart for religious instruction, from putting to the children any other questions than those appended to the end of each lesson.

(1) Insert the name of the Parent or Guardian who makes the Certificate.
(2) Insert the relationship of the Parent or Guardian; as—"Father," "Mother," "Aunt," &c.
(3) Insert the name of the Pupil. (4) Insert the registered religion of the Pupil.
(5) Insert the name of the National School. (6) Insert the name of the Pupil again.
(7) Insert in full the nature of the Religious Instruction; as—The Holy Scriptures in the Authorized Version—The Roman Catholic Catechism—The Protestant Catechism, &c., &c. *This is to be written by the Parent or Guardian*; but in case the Parent or Guardian cannot write, it may be written by the Teacher.
(8) The Parent or Guardian is here to inscribe his name. If the Parent or Guardian be unable to write his name, he is to sign by mark; but this mark must be witnessed by some respectable third party.
(9) Insert the name of the Parent or Guardian. (10) Insert "him" "or "her."
(11) Insert the name of the Parent or Guardian. (12) Insert "he" or "she."
(13) Insert the name of the Parent or Guardian. (14) Insert the name of the Teacher.

CODE XIII., 1869. (Twelfth change.)

PART I.

5. The Commissioners require that the principles of the following Lesson, or of a Lesson of a similar import (to be approved of by the Commissioners), shall be strictly inculcated, during the hours of united instruction, in all Schools received into connexion with the Board, and that a copy of the Lesson itself be hung up in each School.

Christians should endeavour, as the Apostle Paul commands them, to live peaceably with all men (Rom. ch. xii., v. 18), even with those of a different religious persuasion.

Our Saviour Christ, commanded his disciples to love one another. He taught them to love even their enemies, to bless those that cursed them, and to pray for those who persecuted them. He himself prayed for his murderers.

Many men hold erroneous doctrines, but we ought not to hate or persecute them. We ought to hold fast what we are convinced is the truth; but not to treat harshly those who are in error. Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his disciples to fight for him.

If any persons treat us unkindly, we must not do the same to them; for Christ and his apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others, not as they do to us, but as we would wish them to do to us.

Quarrelling with our neighbours and abusing them, is not the way to convince them that we are in the right, and they in the wrong. It is more likely to convince them that we have not a Christian spirit. We ought, by behaving gently and kindly to every one, to show ourselves followers of Christ, who, when he was reviled, reviled not again (1 Pet. ch. ii., v. 23).

6. The use of the Tablet, furnished by the Commissioners, containing the Ten Commandments, is not compulsory.

7. The rules as to religious instruction do not apply, except in the way hereinbefore stated, to the Scripture Lessons and the Books of Sacred Poetry, or to the matter contained in the common School-books, or in any other book, the use of which the Commissioners may at any time sanction for the purpose of united instruction.

VI.—*Management of National Schools.*

1. The local government of the National Schools is vested in the local Patrons thereof.

2. The Commissioners recognise as the local Patron the person who applies in the first instance to place the School in connexion with the Board, unless it be otherwise specified in the application.

3. If a School be under the local management of a School-Committee, such Committee has all the rights of an individual Patron.

4. The Patron has the right of nominating any fit person to act as his representative in the local management of the School; such representative to be designated the "Local Manager." The Patron may, at any time, resume the direct management of the School, or appoint another Local Manager. This rule applies equally whether the Patronship be vested in one or more individuals.

5. When a School is vested in Trustees, they have the right to nominate the Local Manager.

6. When a School is vested in the Commissioners, the name of the Patron or Patrons is inserted in the lease.

7. In the case of a vacancy in the Patronship by death, the representative of a lay Patron, or the successor of a clerical Patron, is recognised by the Board (where no valid objection exists) as the person to succeed to the Patronship of the School.

8. If a Patron wishes to resign the office, he has the power of nominating his successor, subject to the approval of the Board.

9. In all cases, the Commissioners reserve to themselves the power of determining whether the Patron, or the person nominated by him, either as his successor, or as local Manager, can be recognised by them as a fit person to exercise the trust.

10. In all cases, whether the School be vested or non-vested, the Patron, when nominating a local Manager, ought to notify to the Commissioners whether or not the person so nominated is to exercise all the rights of Patron during the period he acts as Manager.

11. When a School is under the control of a Committee, or of joint Patrons, a "Local Manager" should be appointed, to correspond with the office, sign documents, &c., &c.

12. The local Patrons (or Managers) of Schools have the right of appointing the Teachers, subject to the approval of the Board, as to character and general qualifications; the local Patrons (or Managers) have also the power of removing the Teachers of their own authority.

13. Patrons and Managers are permitted to close their respective Schools for a reasonable time during the year, subject to the interference of the Commissioners in cases of abuse; such periods of closing should be limited to six weeks in the year, including the recognised vacations.

14. Managers of National Schools are requested to notify all changes of Teachers to the Office, and to the Inspectors of the respective districts.

VII.—*Inspection by the Commissioners or their Officers.*

1. As the Commissioners do not take the control or regulation of any School, except their own Model Schools, directly into their own hands, but leave all Schools aided by them under the authority of the local Patrons or Managers; the *Inspectors* are not to give *direct orders*, as on the part of the Board, respecting any necessary regulations, but to point out such regulations to the local Patrons or Managers of the Schools, that *they* may give the requisite orders.

2. The Commissioners require that every National School be inspected by the *Inspector of the District*, at least three times in each year.

3. The *District Inspector*, after each inspection, is to communicate with the local Patron or Manager, for the purpose of affording information concerning the general state of the School, and pointing out such violations of rule, or defects, if any, as he may have observed; and he is to make such suggestions as he may deem necessary.

4. Upon ordinary occasions, the Inspector is not to give any intimation of his intended visit; but when the inspection is to be public, he is to make such previous arrangements with the local Patrons or Managers, as will facilitate the attendance of the parents of the children, and other persons interested in the welfare of the Schools.

5. The Inspector is to report to the Commissioners the result of each visit, and to use every means to obtain accurate information as to the proficiency of the pupils, and the discipline, management, and methods of instruction pursued in the School.

6. When applications for aid are referred to the District Inspector, he is to have an interview with the applicant, and also to communicate personally, or by writing, with the clergymen of the different denominations, and with other parties in the neighbourhood, with the view of ascertaining their opinions on the application, and whether they have any, and what, objections thereto.

7. The Inspector is also to supply the Commissioners with such local information as they may from time to time require from him, and to act as their agent in all matters in which they may employ him; but he is not invested with authority to decide upon any question affecting a National School, or the general business of the Commissioners, without their direction.

Code XIII., 1869. (Twelfth change.)

Part I.

VIII.—*Admission of Visitors.*

1. The public, generally, must have free access to every National School (whether Vested or Non-Vested) during the hours devoted to secular instruction,—not to take part in the ordinary business, or to interrupt it, but, as Visitors, to observe how it is conducted.

2. Visitors of all denominations are to be received courteously by all Teachers of National Schools, and are to have free access to the School-rooms, and full liberty to examine the Registers, Daily Report Books, and Class Rolls; to observe what books are in the hands of the children, or upon the desks, what tablets are hung up on the walls, and what is the method of teaching; but they are not authorized to interrupt the business of the School by asking questions of the children, examining classes, calling for papers or documents of any kind, except those specified, or in any other way diverting the attention of either Teachers or Scholars from their usual business.

3. Should any Visitors wish for information which they cannot obtain by such an Inspection, it is the duty of the Teachers to refer them to the Patron or Manager of the School for such information.

4. As the religious instruction of the children given in the School-room is under the control of the Clergyman or Lay person communicating it with the approbation of their parents, the *Commissioners* can give no liberty to any Visitor, whether Clergymen or other person, to interfere therewith, or to be present thereat.

5. The Commissioners require that a copy of Part I., with selections from other parts, of these, their Rules, on a form furnished by them, shall be suspended in every National School-room.

Part II.

Part II.

Extent of Aid, and Conditions upon which Granted.

I.—*Kinds of Aid.*

1. The Commissioners of National Education award aid under two general heads, viz. :—

First—Towards building School-houses and providing suitable fittings and furniture. In such cases, the Commissioners also grant aid towards the payment of Teachers, supply of Books, &c., as hereafter explained.

Secondly—Towards the support and maintenance of Schools established without any assistance from the public funds for the erection of the buildings, or providing furniture.

2. The Commissioners desire it to be distinctly understood that they reserve to themselves in all cases, in vested as well as in non-vested schools, the right to withdraw any grant of salary or books, whenever they see fit.

II.—*Towards Building School-houses (Vested).*

1. Before any grant is made towards building a School-house, the Commissioners are to be satisfied that a necessity exists for such a School, that an eligible site has been procured, that a satisfactory lease of the site will be executed either to Trustees for the purposes of National Education, or to the Commissioners in their Corporate capacity; and that the applicants are prepared to raise, by local contribution, at least one-third of the whole sum which the Commissioners deem necessary for the erection of the house, providing furniture, &c.

2. If the proposed site for a School be in a rural district, and be within three statute miles of a School-house erected with aid from the State, no grant will be made, except under special circumstances.

3. In a rural district, the site should contain one rood. In a town district, the site for a single School should be 100 feet in front, and 80 feet from front to rear; and for a double School, 100 feet square. It should be in a healthy situation, on a public road or street, and have a dry level surface, with a good foundation at a moderate depth, and be convenient to pure water.

4. Although the Commissioners do not refuse aid towards the erection of School-houses on ground connected with places of worship, yet they much prefer having them erected on ground which is not so connected, where it can be obtained; they therefore require that, before Church, Chapel, or Meeting-house ground be selected as the site of a School-house, *strict* inquiry be made whether another convenient site can be obtained, and that the result shall be stated to them.

5. The School premises must be vested in the Commissioners, or in Trustees, at a nominal rent, and for such term as, under the circumstances, the Commissioners may deem necessary.

6. The lease must be prepared in the Office; the expense to be borne by the Commissioners of National Education.

7. The Commissioners will cause to be kept in repair the School-house and furniture, where the premises are vested in them in their Corporate capacity.

8. When the School premises have been vested in Trustees, for the purposes of National Education, it devolves on the Trustees to keep the house, furniture, &c., in repair.

9. When grants are voted towards the building, &c., of a School-house, the conveyance must be duly executed *before the works are commenced.*

10. No grant can be approved until the District Inspector shall have reported upon all the circumstances of the case; until the Board of Works shall have reported on the eligibility of the proposed site; and the Law Adviser of the Commissioners shall have given his opinion, from the information laid before him, that a satisfactory lease can be executed.

11. The Commissioners determine, from the information afforded them, what amount of School accommodation should be provided in the proposed building.

CODE XIII., 1869. (Twelfth change.)

PART II.

The following is the scale of Grants for the erection of School-houses, whether vested in Trustees or in the Commissioners :—

Class of School.	No. of Children to be accommodated.	Total Estimated Cost, including School Furniture and Out-offices.	Board's Grant.	Description of School.
		£ s. d.	£ s. d.	
1	60	207 0 0	138 0 0	Single School-room.
2	75	225 0 0	150 0 0	Ditto.
3	100	255 0 0	170 0 0	Ditto.
4	120	306 0 0	204 0 0	Ditto.
5	150	416 5 0	277 10 0	Two rooms on ground.
5 A	150	360 0 0	240 0 0	Ditto—one over the other.
6	200	487 10 0	325 0 0	Two rooms on ground.
6 A	200	435 0 0	290 0 0	Ditto—one over the other.

NOTE.—In many poor localities, where buildings of a less expensive nature than those erected according to the above scale of grants may answer the necessary purposes, the Commissioners will be prepared to grant two-thirds of the expense of erection, provided—

(*a*). That the general conditions already specified with regard to building grants be complied with.

(*b*). That the erection of such *exceptional* class of building shall not cost more than £100.

(*c*). That as regards the character and size of the building, the instructions issued by the Board of Works, from time to time, shall be complied with.

12. The cost of the house, &c., is determined by the number of children which it is intended to accommodate.

13. The Board of Works will furnish instructions as to the plan and specification, to which the parties receiving aid are bound strictly to adhere.

14. The Commissioners do not sanction grants for the ornamenting of School-houses, but merely for such expenditure as may be necessary for having the children accommodated in plain, substantial buildings. If buildings of another description be preferred, the whole of the extra expense must be provided by the applicants.

15. The Commissioners do not sanction grants towards the expense of erecting residences for the Teachers.

16. The Commissioners do not sanction grants to purchase, alter, or furnish houses, for the purpose of being converted into School-houses.

III.—*Towards Support of Schools previously established (Non-Vested).*

1. The aid granted to Schools previously established is limited to Salary and Books, and the benefits of Inspection and Training.

2. The Commissioners do not contribute towards Repairs, Fittings, or Furniture; or to the Rent of the School-house.

3. Before aid can be granted, the Commissioners must be satisfied that the case is deserving of assistance; that there is reason to expect that the School will be efficiently and permanently supported; that some local provision will be made in aid of the Teacher's Salary, in addition to the School-fees; that the School-house is in good repair, and provided with a sufficient quantity of suitable Furniture; that a competent Teacher has been appointed; and that the School is in operation.

4. Before the Commissioners consider any application for aid, they require, from the Inspector of the District, a Report upon all the circumstances of the case.

5. To entitle a School to a continuance of aid, the House and Furniture must be kept in sufficient repair by means of local contributions; the School conducted in all respects in a satisfactory manner, and in accordance with the regulations of the Commissioners; and it must appear from the Records of the School that there is a sufficient average daily attendance of pupils.

6. In Mixed Schools, *i.e.*, Schools in which male and female children are taught in the same room, the Teacher may be either male or female, as the circumstances of the School may require; but when a Mixed School has been received into connexion, by the Commissioners, under a male or a female Teacher, the Commissioners will not sanction the appointment of a Teacher of a different sex, unless previous application be made to them to sanction such change.

7. When a school has been taken into connexion, as a School for Males or for Females solely, the Commissioners will not sanction the change from a male to a female school, or *vice versâ*, without their permission having been previously obtained.

PART III.

PART III.

DIFFERENT CLASSES OF NATIONAL SCHOOLS.

I.—*District and Minor Model Schools.*

1. District and Minor Model Schools are built and supported entirely out of the funds placed by Parliament at the disposal of the Commissioners, and are therefore under their exclusive control.

2. The chief objects of Model Schools are to promote united education; to exhibit the most improved methods of literary and scientific instruction to the surrounding schools, and to train young persons for the office of Teacher.

3. In District and Minor Model Schools, the Commissioners appoint and dismiss, of their own authority, the Teachers and other officers; regulate the course of instruction, and exercise all the rights of Patrons. The Commissioners afford the necessary opportunities for giving religious instruction to the pupils, by such Pastors or other persons as are approved of by their parents or guardians, and in separate apartments allotted to the purpose.

4. Some of the Model Schools have farms attached to them, for the purpose of affording instruction in agriculture.

II.—*Ordinary Literary Schools.*

1. Such Schools may be established either with aid from the State, or by local provision solely.
2. In Vested Schools, the local expenditure need only be one-third of the expense, and the Teachers' salaries are supplemented by the Commissioners.
3. In Non-vested Schools, the State assistance is limited to salary and books and the benefits of inspection and training.

III.—*Agricultural Schools.*

1. To Schools of this description Farms are attached, for the purpose of illustrating and introducing the most approved systems of tillage and cropping, and general husbandry.
2. Agricultural Schools of every class must have a literary department annexed to them, conducted on the principles of ordinary National Schools.
3. Agricultural Schools consist of two classes, those connected with School Farms of the First Class, and those connected with Ordinary School Farms.
4. School Farms are further subdivided into two classes, viz., those under the exclusive control of the Commissioners, and those under local Patrons.
5. In all Schools connected with School Farms of the First Class the Commissioners will grant salary to a Teacher for the literary department *exclusively*, when the extent of the farm and other circumstances render such an appointment necessary.

A.—*School Farms of the First Class under the exclusive control of the Commissioners.**

1. The Commissioners defray the greater portion of the cost of erecting the necessary buildings; but they require the local parties to contribute in such proportion as may be deemed necessary, according to the circumstances of each case.
2. The Commissioners undertake the *entire* cost of the furniture, fittings, rent, taxes, maintenance, implements, stock, &c., &c.
3. A Farm of sufficient extent must be conveyed to the Commissioners, at a moderate rent, and on a satisfactory lease.
4. The Commissioners exercise all the rights of Patrons, as in the case of District and Minor Model Schools.
5. The Commissioners admit into these Schools a limited number of free, and also of paying resident Agricultural Pupils.
6. The Commissioners contribute a small weekly payment to the class of day pupils who work on the farm.

B.—*School Farms of the First Class under Local Patrons.*

1. *Where the Premises are Vested.*

1. The Commissioners contribute a certain amount of assistance towards the erection of the buildings, in proportion to the amount of local contribution, and the extent of the farm. The remaining portion of the cost of the buildings and furniture, and the whole cost of implements, stock, seed, &c., must be contributed by local parties.
2. The site of the buildings must be legally vested in the Commissioners, or in Trustees, at a moderate rent, and on a satisfactory lease.
3. The only aid granted by the Commissioners towards the *maintenance* of such Schools, consists of salary to the Master (who must be competent to conduct both the literary and agricultural departments); a sum towards the support of a limited number of resident Agricultural pupils, and a weekly payment to the class of day pupils who work on the farm.

2. *Where the Premises are Non-vested.*

1. The entire cost of the necessary buildings, furniture, implements, stock, seed, &c., must be defrayed by local parties, and a farm of sufficient extent must be provided.
2. The Commissioners, besides salary to the Master, contribute also towards the support of a limited number of resident Agricultural pupils, and a weekly payment to the class of day pupils who work on the farm.

C.—*Ordinary Agricultural Schools.*

1. This class of Schools consists of Ordinary National Schools (either Vested or Non-vested), to which a small farm (from one to three acres) is annexed. The Teacher must be competent to give instruction both in the theory and practice of Agriculture, and must cultivate the land, with the assistance of his pupils.
2. The only aid granted by the Commissioners is an addition to the class salary of the Teacher, and in some special cases, a small weekly payment to an Industrial class of pupils.
3. To entitle a School to such aid the Commissioners require to be satisfied, from the Reports of the Agricultural Inspectors, that the Agricultural department is efficiently conducted.

D.—*School Gardens.*

The Commissioners award gratuities, on the recommendation of the Agricultural Inspectors, to the Teachers of National Schools who exhibit the best specimens of garden culture on ground attached to their respective Schools, the ground to be cultivated by the pupils.

IV.—*Industrial Schools.*

1. In these Schools embroidery and other advanced kinds of needlework are taught. The Commissioners grant salaries to the Teachers on the following conditions:—

First—That *all* the pupils of the industrial department shall receive literary instruction for at least *two hours* daily.

Second—That no religious instruction or religious exercise shall take place during the time the pupils are engaged in industrial occupation.

Third—That a separate room be provided for industrial instruction.

* The Commissioners have, for the present, ceased to take into connexion School Farms of the First Class.

CODE XIII., 1869 (Twelfth change).

PART III.

Fourth—That in addition to the literary Teacher there shall be a suitable person appointed to conduct the industrial department.

2. None but lay Teachers are entitled to a salary from the Commissioners for conducting an Industrial Department in connexion with a *Convent School.*

3. The amount of salary will depend upon the circumstances of each case.

V.—*Convent Schools.*

1. Convent Schools receive aid under the conditions applicable to Non-vested Schools, and they are subject to the same Rules and Regulations.

2. The members of the community may discharge the office of Literary Teachers, either by themselves or with the aid of such other persons as they may see fit to employ ; the salaries of such assistants to be defrayed by the community, except in the case of monitors.

3. The amount of salary awarded to Convent Schools is regulated by the average number of children in daily attendance, according to a scale laid down by the Commissioners.

4. The Commissioners will grant aid to *one School only* in *connexion with the same* Convent.

VI.—*Workhouse Schools.*

1. Such Schools are received into connexion, and grants of Books made to them, on condition that they shall be subject to inspection by the Commissioners, or their Officers, and that all the Rules of the Board applicable to Non-vested Schools be faithfully observed.

2. The Commissioners award gratuities to a certain number of the Teachers of Workhouse Schools in each District on the recommendation of the Inspector.

VII.—*Schools attached to Prisons, Asylums, &c.*

Such Schools are received into connexion upon the same general principles as the Workhouse Schools, and grants of Books are made to them. In special cases gratuities are awarded to the Teachers.

VIII.—*Evening Schools.*

The Commissioners grant aid towards the support of Evening Schools where the wants of the locality render such institutions desirable. The aid is limited to salary, books and inspection.

PART IV.

PART IV.

TEACHERS.

I.—*Their Qualifications and Duties.*

1. National Teachers should be persons of Christian sentiment, of calm temper, and discretion ; they should be imbued with a spirit of peace, of obedience to the law, and of loyalty to their Sovereign ; they should not only possess the art of communicating knowledge, but be capable of moulding the mind of youth, and of giving to the power which education confers a useful direction. These are the qualities for which Patrons of Schools, when making choice of Teachers, should anxiously look. They are those which the Commissioners are anxious to find, to encourage, and to reward.

2. No clergyman of any denomination, or member of any religious order can be recognised as the Teacher of a National School. This does not apply to the Teachers of Convent Schools, nor to those of any Monastery Schools which have been at any time previously in connexion with the Board.

3. Teachers of National Schools are not permitted to carry on, or engage in, any business or occupation that will impede or interfere with their usefulness as Teachers. They are especially forbidden to keep public-houses or houses for the sale of spirituous liquors.

4. Every Teacher is required to have his Daily Report Book lying upon his desk that Visitors may, if they choose, enter remarks in it. Such remarks as may be made the Teachers are by no means to alter or erase ; and the Inspector of the district is required to transmit to the Commissioners copies of such remarks as he may deem of sufficient importance to be made known to them.

5. Should the Commissioners consider any Teacher in a Vested School unfit for his office, or otherwise objectionable, they will require that he be dismissed and another provided : in Non-vested Schools the grant of salary will be withheld until a suitable Teacher be procured. Teachers are also liable to be fined, depressed, or suspended, at all times, when the Commissioners shall deem it necessary, on sufficient cause being shown.

6. Teachers, whose Schools may have declined in usefulness and efficiency, or who may have conducted themselves improperly, or who, from any other cause, may seem to merit punishment, may be fined, depressed, or deprived of salary.

7. *Newly-appointed* Teachers are not *entitled* to any salary from the Commissioners until examined and pronounced competent ; and any Teachers *newly appointed* to National Schools who, after examination by the Inspectors, may be found wholly unqualified, must be removed.

8. If a Teacher who has been dismissed from a National School for any cause be appointed to another National School, the Commissioners reserve to themselves the right to determine whether the appointment can be sanctioned, or any salary paid to such Teacher.

9. No Teacher dismissed for incompetency is eligible for re-entry into the Board's service till after the expiration of at least six months from the date of such dismissal.

10. If a Teacher who has been a considerable period out of the service of the Board shall again enter it, the Commissioners reserve to themselves the right to determine in each case whether such Teacher shall retain the class he was in previous to quitting the service of the Board.

11. The Commissioners regard the attendance of any of the Teachers at meetings held for *political purposes*, or their taking part in elections for Members of Parliament, or for Poor Law Guardians, &c., except by voting, as incompatible with the performance of their duties, and as a violation of rule which will render them liable to dismissal.

12. Teachers to be eligible for entering the service of the Board must, if males, have completed their seventeenth year, and if females, their sixteenth.

13. No Assistant Teachers will be recognised whose qualifications are not at least equal to those required of Probationers.

14. The same rule as to age applies to Assistant as to Principal Teachers.

15. The Commissioners will not grant a salary to an Assistant Teacher in a Boys' School in which there is not an average daily attendance of at least sixty pupils; but in the case of Girls' Schools, or Mixed Schools—that is, Schools attended by both sexes—salary may be obtained for an Assistant when the attendance shall have maintained itself at an average of at least fifty.

16. In Mixed Schools, presided over by a Master, it is desirable, where the attendance warrants it, that a Female Assistant should be selected.

17. The Commissioners will not grant salary to Workmistresses in Mixed Schools, unless there be an average daily attendance of at least forty-five pupils; and the Commissioners require that at least two hours each day be devoted to instruction in this branch.

18. If any Workmistress whose appointment has been sanctioned by the Commissioners, be employed during the remainder of the ordinary school-hours in giving literary instruction to the junior classes, it is competent for the District Inspector, if he considers her qualified, to recommend that she be paid at the rate of salary awarded to "Probationers."

19. In Schools attended by Female Children only, under the care of a Female Teacher, such Teacher must be competent not only to conduct the Literary Department, but also to give instruction in Needlework; but if the average daily attendance amount to forty-five, application may be made for a grant of salary to a Workmistress to take charge of the Industrial Department, which, however, must be superintended by the principal Teacher, who will be held responsible for its efficient management.

20. The following Practical Rules are to be strictly observed by the Teachers of National Schools:—

I. To keep at least one copy of the *General Lesson* suspended conspicuously in the School-room, and to inculcate the principles contained in it on the minds of their Pupils. This should be done at the time of combined ordinary instruction.

II. To exclude from the School, except at the hours set apart for Religious Instruction, all Catechisms and Books inculcating peculiar religious opinions.

III. To avoid fairs, markets, and meetings—but above all, *Political* meetings of every kind; to abstain from controversy; and to do nothing either in or out of School which might have a tendency to confine it to any one denomination of Children.

IV. To keep the Register, Report Book, and Class Rolls, accurately, neatly, and according to the precise forms prescribed by the Board; and to enter or mark in the two latter, before *noon* each day, the number of Children in actual attendance.

V. To classify the Children according to the National School Books; to study these Books themselves; to teach according to the improved method, as pointed out in their several prefaces; and to labour diligently to train up their Pupils in each branch of knowledge to that degree of attainment, or amount of proficiency, pointed out for each Class, respectively, in the *Programme of Instruction for National Schools*.

VI. To observe themselves, and to impress upon the minds of their Pupils, the great rule of regularity and order—A TIME AND A PLACE FOR EVERY THING, AND EVERY THING IN ITS PROPER TIME AND PLACE.

VII. To promote, both by precept and example, *Cleanliness*, *Neatness*, and *Decency*. To effect this, the Teachers should set an example of Cleanliness and Neatness in their own persons, and in the state and general appearance of their Schools. They should also satisfy themselves, by personal inspection every morning, that the Children have had their hands and faces washed, their hair combed, and clothes cleaned; and, when necessary, mended. The School apartments, too, should be swept and dusted every *evening;* and whitewashed at least once a year.

VIII. To pay the strictest attention to the morals and general conduct of their Pupils, and to omit no opportunity of inculcating the principles of *Truth* and *Honesty;* the duties of respect to superiors, and obedience to all persons placed in authority over them.

IX. To evince a regard for the improvement and general welfare of their Pupils; to treat them with kindness, combined with firmness; and to aim at governing them by their affections and reason, rather than by harshness and severity.

X. To cultivate kindly and affectionate feelings among their Pupils; to discountenance quarrelling, cruelty to animals, and every approach to vice.

XI. To record in the Report Book of the School, the weekly receipts of School Fees, and the amount of all grants made by the Board, as well as the purposes for which they were made, whether in the way of premiums, salaries to teachers, or payments to Monitors or Workmistresses; also School Requisites, whether Free Stock or purchased at the reduced prices.

XII. To take strict care of the *Free Stock* of Requisites granted by the Board; and to endeavour to keep the School constantly supplied with the National School Books and requisites, for sale to the Children, at the reduced prices charged by the Commissioners; also, to preserve, for the information of the Inspectors, the Invoices of Free Stock or purchased Requisites, which will be enclosed with the Grant.

XIII. Should it be intended to close a School for a time not included in the recognised Vacations, notice should be given some days previously to the Inspector; and when a Teacher is summoned for training, and means to obey the Summons, or intends resigning or removing to another School, he should intimate his intention to the Inspector a month, at least, before his removal or resignation, in order that the latter may have an opportunity of visiting his School, and reporting upon the state of the Premises, Free Stock, School Accounts, &c., &c.

XIV. To attend to the Ventilation of the School:—I. Immediately after entering the room in the morning; II. At the time of Roll-call; III. About an hour before the School breaks up. The ventilation can best be effected by lowering, where practicable, the upper part of the Windows, so as to admit a thorough air through the room.

21. In cases of illness, and upon Medical Certificates being submitted, the Commissioners allow to Principal Teachers, or Assistants, *one* month's leave of absence from school duty in the year, for which time their salaries will be paid without deduction. If any more lengthened leave of absence be required, there must be competent substitutes appointed, such substitutes to be paid by the recognised teachers, at the rate of, at least, the salary allowed to probationers. In no case can leave be granted for more than six months.

II.—*Training of Teachers.*

1. The Commissioners have provided a Normal Establishment in Dublin, for training Teachers, and educating persons who are intended to undertake the charge of Schools.

2. Teachers selected by the Commissioners for admission to the Normal Establishment, must produce a Certificate of good character; also a Certificate from a member of the Medical Profession that they are in good health, and free from any cutaneous disease; and must be prepared to pass through an examination in the Books published by the Commissioners. They are boarded and lodged at the Establishments provided by the Commissioners; and arrangements are made for their receiving religious instruction from their respective Pastors, who may attend at the Normal Establishment at convenient times appointed for the purpose. On Sundays they are required to attend their respective places of worship; and a vigilant superintendence is at all times exercised over their moral conduct. The Teachers undergo examination at the close of the course, and they then receive a certificate according to their deserts. The Teachers are, for a considerable time previous to their being summoned, required to prepare themselves for the course.

3. During the absence of the recognised Teacher, a temporary Teacher must be provided to take charge of the School, who is to be paid a portion of the salary falling due to the recognised Teacher during such Teacher's attendance at the Normal Establishment.

4. Assistant Teachers of Model Schools, while in training, receive but half their accustomed share of the fees, and a deduction is made from their salaries at the rate of £20 per annum in the case of males, and £18 in the case of females: these deductions to serve as payment for their substitutes.

5. Should any Teachers present themselves in a delicate state of health, or affected with any cutaneous disease, they will not be received or allowed any travelling expenses. No Teacher can be admitted who has not had the Small-pock, or been vaccinated.

6. The Teachers trained in the Normal Institution are divided into three Classes, namely :—

First—The General or Ordinary Class, composed of Teachers (males or females) of National Schools, who have been recommended by the District or Head-Inspectors as eligible Candidates for Training.

Second—The Special or Extra Training Class, composed chiefly of Teachers (males or females) who have been selected from the Ordinary or General Class, for additional Training.

Third—The Candidate or *Extern* Class, composed of a limited number of respectable and well-informed young persons, who wish to qualify themselves to act as Teachers. The Candidates admitted to this Class are permitted to attend, without any charge, the Model Schools and the Lectures of the Professors, and at the end of the course they are examined and classed as Teachers, according to their merits and qualifications. Permission is also given to Teachers of Schools not connected with the Board to attend the Model Schools as *Auditors or Visitors*, for any period that may suit their own convenience.

7. No Teachers can be admitted to the General or Ordinary Class but those who have succeeded in obtaining Classification after Examination by a Board of Inspectors, or who may be *specially* recommended by the Inspectors or Professors.

III.—*Classification of Teachers, &c.*

1. All National Teachers are either "Classed Teachers" or "Probationers." The former are divided into three classes.

The class in which Teachers are ranked depends (I.) upon their qualifications, as determined after examination by the Professors, or by the Inspectors; and (II.) on their proved capacity and efficiency as conductors of Schools.

All Teachers, on first entering the service of the Board, or who have not been classed, are termed Probationers.

2. Besides the Principal and Assistant Teachers included under the foregoing heads, there are Junior Literary and Industrial Assistant-Teachers, Teachers of Needlework, Pupil-Teachers, and Paid Monitors.

3. The Commissioners have determined upon a course of study for each class, in which the Teachers are to be examined, as one of the tests of their fitness for promotion.

4. Every National Teacher will be furnished, on application to the District Inspector, with a copy of the programme of the course of study above referred to, in which is stated the minimum of proficiency required for each class.

5. Teachers already classed are to be admitted to examination, with a view to promotion, only on the recommendation of the District Inspector, and no one on whose School a decidedly unfavourable report has been made within the previous year is to be admitted.

6. (*a*). Teachers will not be eligible for promotion, unless, in addition to satisfactory answering in the course prescribed for the Class to which they aspire, it appears from the reports of the respective District Inspectors that the Schools are properly organised and well conducted; that adequate exertions have been made to keep up a sufficient average attendance; that their Classes are taught according to the *Programme of Instruction for Schools;* that while the junior pupils are carefully taught, a fair proportion of the pupils of the higher classes, besides being proficients in the ordinary branches of Reading, Spelling, Writing, and Arithmetic, are possessed of a respectable amount of knowledge in Grammar, and Geography, and able to write from dictation ordinary sentences with readiness and correctness. In Female Schools it will be further requisite that instruction in plain Needlework, including sewing, knitting, and cutting-out, be given to all girls capable of receiving it, and that they exhibit a due proficiency in this department.

(*b*). It must also appear from the reports of the Inspectors, that the School accounts have been regularly and correctly kept; that the School premises have been preserved with neatness and order; that cleanliness in person and habits has been enforced on the children attending them, and that an adequate supply of *Sale Stock* of Lesson Books and other necessary School Requisites has been regularly kept up.

(*c*). It must also clearly appear that, JUDGED BY THE TOTAL RESULTS PRACTICALLY REALIZED IN THEIR SCHOOLS in the instruction and discipline of their pupils, they are worthy of the higher class to which they aspire.

7. All Teachers, who have not been classed, will be paid as Probationers, until they be classed at the first Examination, to which they shall have been summoned. Those who then obtained classification, will be paid from the commencement of their service under the Board, according to the rate of salary attached to their class. This rule will not extend to those Teachers who when summoned, shall fail, from any cause whatever, to present themselves for examination.

8. All Teachers who have been unsuccessful at their first examination, and who may be retained on trial, will receive the salary of the class to which they may be promoted at any subsequent examination, from the 1st of April of the year in which they offer themselves for such subsequent examination.

9. Teachers who, after their first examination, have been retained on trial as Probationers, if not recommended for promotion by the Head or District Inspectors at the next ensuing examination, cannot be continued in the service of the Board.

10. Classed Teachers who may offer for reclassification will, if promoted, be paid according to their new grade from the 1st of April of the year in which they offer themselves for examination.

11. The Pupil-Teachers of District Model Schools, on taking charge of National Schools after the completion of their course of training, shall, if not already classed, rank as Third Class Teachers (provided they be deemed qualified for that class by the Head Inspector) until they shall have been classed at the first Examination held after their appointment, in the district in which their Schools are situated—when they will be paid according to their classification, from the date of their appointment.

12. All Teachers must remain *at least* one year in a lower *division* of any class, before they are eligible for promotion to a higher division; and they must remain *at least* two years in a lower *class* before they can be promoted to a higher class. These conditions, however, being fulfilled, Teachers of superior attainments, and of eminent usefulness, may be advanced from any division of one class to any division of another, after their first classification, without being required to pass through the intermediate divisions.

13. This regulation does not apply to Teachers who may be promoted on the recommendation of the Professors at the termination of their course of training.

14. Teachers who may have absented themselves from the examinations of previous years, without satisfactory reason assigned, will be liable to be dismissed should they not present themselves when again summoned.

15. All Teachers also who may be *specially* summoned, and who shall be absent without a sufficient reason, will be liable to be fined or depressed.

IV.—*Salaries (Ordinary National Schools).*

1. The Commissioners grant salaries to Teachers of National Schools at the following rates, subject to the foregoing and annexed regulations :—

Principal Teachers :—		Males.	Females.
First Class,	1st Division,	£52	£42
	2nd ,,	44	36
	3rd ,,	38	30
Second Class,	1st Division,	32	26
	2nd ,,	28	24
Third Class,	1st Division,	24	20
	2nd ,,	18	16
Probationers,		15	14

(*a*). As a general rule, a School, to be entitled to be taken into connexion, or to remain in connexion, must exhibit an average daily attendance of at least 30 pupils.

(*b*). Teachers cannot be admitted to the enjoyment of First Class salary, nor allowed to continue in its enjoyment, unless their Schools command an average daily attendance of 35 pupils.

(*c*). Should Schools of the ordinary class be retained in connexion after the attendance shall have fallen below *thirty pupils*, as in certain circumstances they may be retained, their Teachers will be paid according to the provisions of the modified scale given below.

(*d*). But as regards the Schools placed in connexion with the Board *before* the close of October, 1860, in every case where the attendance shall appear to be diminished by the admission of new Schools, the Commissioners will not make any reduction of salary on the *first* occasion of such diminution taking place, but will defer making such reduction until a period of six months shall have elapsed from the termination of the quarter in which the attendance shall, on such *first* occasion, fall below the required *minimum*.

(*e*). And in the case of Schools taken into connexion *since* October, 1860, reduction of salary, proportioned to the decrease in attendance, will be made in the *next* quarter subsequent to that in which it first occurs, should the decrease re-appear.

Assistant Teachers :—	Males.	Females.
Unclassed,	£15	£14
If classed 3^2,	18	16
If classed 3^1, or higher,	24	20
Junior Literary and Industrial Assistants,	—	14
Workmistresses,	—	8

2. To entitle a School to the services of an Assistant, the School, if for boys only, must have an average daily attendance of at least 60 ; but if for girls only, or if a mixed School, an average of 50 will suffice. While, however, the average daily attendance in such Schools, respectively, remains under 65 and 55, no higher salary than that of III^2 can be awarded.

3. In mixed Schools, presided over by a Master, the Assistant should be a female.

4. To entitle an Assistant to the salary of III^1, the School, if for boys only, must have an average daily attendance of at least 65, or if mixed, or for girls only, an average daily attendance of 55.

5. In Schools where the average attendance amounts to 110, salary of Classification, up to 2^1, will be allowed to the First or Senior Assistant.

6. To entitle a Girls' School, or a Mixed School, presided over by a Master, to the services of a Workmistress, an average daily attendance of 45 pupils is required, of whom, in the case of Mixed Schools, 20 at least must be girls. The same rule applies to Junior Literary and Industrial Assistants in such Schools.

NOTE.—In cases where Schools enjoying the services of Assistants (under which term are included Monitors, Workmistresses, and Industrial Instructors) fail to command the average attendance required for the amount of aid awarded for such services, Managers must be prepared for the entire withdrawal or reduction of such aid in the second quarter in which the falling off appears.

A like rule will be applied to Evening Schools.

7. The Commissioners, in certain cases, are prepared to act on the following modification of the above Scale of Salaries provided for Principal Teachers.

I. *Attendance under* 15 *Pupils.*—Schools with an average daily attendance under 15 pupils, conducted on the principles and the system of the Board, will not be admitted to the enjoyment of salary, but may be allowed Inspection, Books, and Apparatus, under existing regulations. The Teachers will be eligible for training, and their service, from their connexion with the Board, will count to their credit in respect to supplemental salaries, retiring allowances, &c., should their Schools afterwards become entitled to regular grants of salary, or should they be removed to others so entitled.

II. *Attendance* 15 *but under* 20 *Pupils.*—When the average daily attendance is 15, but under 20, in addition to Inspection, Books, &c., and training, the Commissioners will make an award of salary to the Teacher to the amount of two-thirds of a Probationer's salary.

III. *Attendance* 20 *but under* 25.—When the average daily attendance is 20, but under 25, the full salary of a Probationer, but no more, will be awarded to the Teacher.

IV. *Attendance* 25 *but under* 30.—When the average daily attendance is 25, but under 30, salary as high as that of First Division of Third Class, but no higher, will be awarded to the Teacher should his qualifications in other respects entitle him to such classification.

NOTE.—These modified grants the Commissioners are prepared to make where the means of religious instruction are not attainable by children of a particular denomination within a reasonable distance of their homes, in any existing National School; but they reserve to themselves the power, in all cases, of preventing the unnecessary multiplication of Schools in any district, and will require as a condition of this modified aid that the Managers of such Schools shall be either clergymen or other persons of good position in society.

8. The Commissioners are anxious that a further income be secured to the Teacher, either by local subscription or School fees, and they require that the payments made by the children shall not be diminished in consequence of any increase of salary which may be awarded to the Teacher.

V.—*Paid Monitors—their Salaries, &c.*

Junior Monitors.		*Senior Monitors.*	
For the First Year,	£2	For the First Year,	£5
For the Second Year,	£3	For the Second Year,	£6
For the Third Year,	£4	For the Third Year,	£8
		For the Fourth Year,	£10

1. No School whose Teacher does not rank at least in 3^1 Class can get the benefit of the services of a Junior Monitor ; nor can any School whose Teacher ranks not at least in 2^2 Class be allowed the services of a Senior Monitor.

2. The Paid Monitors are selected from among the best pupils in the National Schools of each district, and are appointed by the Commissioners upon the recommendation of the District Inspectors.

3. No Manager of a National School is obliged to employ a Paid Monitor, nor will such be appointed without his approval.

CODE XIII., 1869 (Twelfth change).

PART IV.

4. The appointment of a Junior Paid Monitor cannot be held for a longer period than THREE YEARS, nor that of a Senior Paid Monitor for more than FOUR YEARS, at the expiration of which periods respectively the salary will be discontinued.

5. The salary may, however, be withdrawn at any time should want of diligence, of efficiency, or of good conduct on the part of the Monitor, or any other circumstance, render such a course desirable.

6. The Commissioners select (on the recommendation of the Inspectors) the Schools in which the services of Paid Monitors may be employed.

7. When a vacancy in a Monitorship occurs, whether before or after the expiration of a Monitor's term of service, it does not necessarily follow that a successor shall be appointed in the same School.

8. The programme of the course of study for Paid Monitors can be obtained on application to the District Inspector.

9. Paid Monitors who have completed their course in a satisfactory manner are eligible, on examination by the Inspectors, to offer as candidates for Assistant-Teacherships, or for Pupil-Teacherships in District Model Schools.

10. In the case of a few very large and highly efficient Schools the Commissioners are prepared to appoint young persons of great merit to act as First Class Monitors.

Salary for the First Year, ... £15 | Salary for the Second Year, ... £17

VI.—*Salaries, &c., to other than Ordinary National Schools.*

A.—*Evening Schools.*

The Commissioners grant salaries, generally amounting to £5 a year, to Teachers of Evening Schools for every 25 Pupils in average attendance.

B.—*Schools connected with School Farms of the First Class, under the exclusive control of the Board.*

Teachers of this class of Schools receive such amount of salary as the Commissioners deem sufficient, according to the circumstances of each case.

C.—*Schools connected with School Farms of the First Class under Local Patrons.*

Masters of this class of Schools, competent to conduct both the Literary and Agricultural Departments, receive £10 per annum in addition to the salary of the class in which they may be placed; but if their income from the Board, with this addition, should fall short of £30 per annum, the difference will be granted to them, so that in all cases such Teachers shall have secured to them for their *combined* services a salary of £30 a year at least.

D.—*Schools connected with Ordinary School Farms.*

Masters of such Schools receive £5 per annum in addition to the salary of their class, provided they are competent to conduct both the Literary and Agricultural Departments, and that the Commissioners shall have previously approved of Agriculture being taught in the School.

E.—*Industrial Schools.*

In National Schools where embroidery and other advanced kinds of needlework are taught, the amount of salary granted for giving such instruction is regulated by the nature of the work and the number of pupils engaged in it.

F.—*Schools connected with Convents and Monasteries.*

1. In Schools of this description salary is paid according to a percentage on the average daily attendance :—

Average Attendance.		Salary. £	Average Attendance.		Salary. £ s.
30 to 50	Increase at £20 per cent.	10	301 to 325	Increase at £20 per cent.	64 5
51 „ 75		15	326 „ 350		68 10
76 „ 100		20	351 „ 375		72 15
101 „ 125		25	376 „ 400		77 0
126 „ 150		30	401 „ 425		81 5
151 „ 175		35	426 „ 450		85 10
176 „ 200		40	451 „ 475		89 15
201 „ 225		45	476 „ 500		94 0
226 „ 250		50	501 „ 525		98 5
251 „ 275		55	526 „ 550		102 10
276 „ 300		60	551 „ 575		106 15
			576 „ 600		111 0

601 upwards, increase at £15 per cent.

2. As the amount of salary to Schools of this class will in all cases depend upon the average daily attendance of pupils, Managers are to be prepared for augmentation or diminution accordingly at the expiration of each quarter.

3. Schools of this class are entitled to the services of Paid Monitors.

4. For Evening Schools an allowance is made at the rate of £10 for every hundred pupils in average attendance.

G.—*Model Schools.*

(*a.*) *Scale of Salaries to Head Masters and Mistresses of Model Schools.*

1. The Head Master to receive £60 per annum, and after the completion of three years' service to rise by £5 per annum until the salary amount to £100, should he be reported faithful and efficient in the discharge of his duties.*

2. The head mistress to receive £55† per annum, and after three years' service to rise by £2 10*s.* per annum, on the same condition as in the case of males, until the salary amount to £75 a year.

3. Principals, both males and females, enjoy also one-half the school-fees received in their respective departments.

* In case of Head Masters of Model Schools residence is provided, or in lieu thereof, in some cases, allowance for house rent.
† This includes £20 a year for lodging allowance.

(b.) Scale of Salaries and Allowances to Assistant Masters and Mistresses in Model Schools.

1. An assistant master to receive his class salary, a supplemental salary of £16 per annum, and generally a certain proportion of the school fees.

2. An assistant mistress to receive her class salary, a supplemental salary of £12 per annum, and generally a certain proportion of the school fees.

3. The grant of such supplemental salaries to be contingent upon the Report of the Head and District Inspectors.

(c.) Allowances to Teachers of Model Schools who, possessing Certificates of Competency, shall give Instruction in Singing, Drawing, or Physical Science.

1. The head master or mistress to be allowed £10 annually, but to be paid for teaching only *one* of these subjects.

2. The assistant master or mistress to be allowed for

Singing,	£8	When both are taught,	£12
Drawing,	8	And an Assistant Master for teaching Physical Science,	8

3. When the assistant teacher is engaged in teaching both physical science and *either* drawing or singing (for not more than *two* of these extra branches are to be taken by the same assistant), a sum of £12 annually to be granted to him.

4. If in the case of singing or drawing the instructions of the teacher, Principal or Assistant, are confined to but one department of the school, as the Boys' or Girls', but half the assigned rate of payment is allowed.

5. These allowances to be contingent upon the Report of the Head and District Inspectors.

(d.) Paid Monitors and Pupil-Teachers in Model Schools.

1. Monitors are allowed for the

First Year,	£6	Second Year,	£8	Third Year,	£10	Fourth Year,	£12

2. In the case of Pupil-teachers resident in the house, an allowance at the rate of £20 a year is granted to the Master for the board, &c., of each.

3. Extern Pupil-teachers are allowed at the rate of £20 a year each, in lieu of board, &c.

(e.) Gratuities to Pupil-Teachers and Paid Monitors in Model Schools.

1. An annual gratuity not exceeding 30*s.* may be awarded to pupil-teachers (of *first* year) and paid monitors for good conduct, distinguished merit in their studies, and success in the instruction of the classes intrusted to their charge.

2. Pupil-teachers who may be retained for training beyond their first year, will be allowed a gratuity of 30*s.* a quarter, as reward for good conduct, &c.

3. These gratuities are granted on the recommendation of the Head and District Inspectors.

H.—*Gratuities to Literary Teachers of Workhouse Schools.*

1. The Commissioners of National Education (with the concurrence of the Poor-law Commissioners) award gratuities to a certain number (forty males and forty females) of the Teachers of the Workhouse Schools, in connexion with the National Board, who shall be recommended by the District Inspectors.

The gratuities are divided into two classes :—

For Male Teachers,	First Class,	Twenty	at the rate of	£6	a year each.
	Second Class,	Twenty	,,	£4	,,
For Female Teachers,	First Class,	Twenty	,,	£5	,,
	Second Class,	Twenty	,,	£3	,,

2. The awards are made half-yearly, for the periods ending 31st March, and 30th September.

3. It is to be understood that such gratuities are given in *addition* to the salaries paid to the Teachers of Workhouse Schools under the provisions of the Poor Law Act.

4. No Teacher is precluded from receiving the gratuity two or more half years in succession, if recommended by the District Inspector as deserving of it ; but a Teacher having received a gratuity for one half year, is not thereby *entitled* to the payment of another for the succeeding half year.

5. If the Local Guardians know any just cause for withholding the gratuity from the Teacher, they are to return the receipt unsigned, and communicate to the Commissioners of National Education the grounds for so doing.

6. The Teachers of Workhouse National Schools are also eligible to receive the gratuity for instructing pupils in Vocal Music.

VII.—*Gratuities, &c., to Teachers of Ordinary National Schools.*

A.—*Premiums for Order, Neatness, and Cleanliness.*

1. The sum of £22 10*s.* will be allocated to each of the School Districts, and divided into Thirteen Premiums.

One of £4	£4	Two of £3	£6	Five of £1 10*s.*	£7 10*s.*	Five of £1	£5

2. These Premiums are awarded ANNUALLY on the recommendation of the District Inspector, at the expiration of the year.

3. No Teacher is eligible for this Premium for more than three years in succession, or who shall be in receipt of Good Service Salary.

4. These Premiums will be awarded to Teachers of all classes, provided the average attendance in each case shall not fall below that required for Salary of Teacher's Class ; but none will be deemed eligible to receive such Premiums against whom there is any well-founded charge of neglect in the performance of their duties, of impropriety in their conduct, or whose Schools are not conducted in all respects in a satisfactory manner.

5. If the Patron or Manager of a National School knows any just cause for withholding the Premium from the Teacher, he is to return the receipt unsigned, and state his reasons for so doing.

B.—*Supplemental or Good Service Salaries.*

1. Supplemental or Good Service Salaries are awarded to a certain number of Teachers of National Schools on the recommendation of the Head and District Inspectors, subject to the following conditions :—

(*a.*) That the teacher ranks not lower than First Division of Third Class.

(*b.*) That the average attendance at his school amounts to thirty-five at least.

(*c.*) That the teacher has given not less than eight years' service under the Board; period of service to be reckoned from the date from which salary as a Classed Teacher was first paid.

2. No teacher to be eligible for such Supplemental Salary who shall have been depressed or fined for misconduct or neglect of duty, or on whose school a decidedly unfavourable report shall have been made within the preceding three years, or who shall not have shown himself, throughout his whole career, to have been attentive and painstaking, and mindful of all the details of school-keeping.

3. Any teacher to whom such Good Service Salary shall have been awarded, but who shall subsequently cease to exhibit those qualities which first obtained for him this distinction, or whose school shall fall below an average daily attendance of thirty-five pupils, shall thereby forfeit such Supplemental Salary.

4. Teachers in receipt of Good Service Salary who may become entitled to an increase, on the ground of a more lengthened term of service, or on account of promotion to a higher class, must be specially recommended by Inspector for such increase.

5. In case of promotion from a lower to a higher class, teacher will not be entitled to the consequent increase of Good Service Salary until he shall have been a year in his new class.

6. Payments to be made annually; and in no case without the united recommendation of the Head and District Inspectors.

C.—*Allowances for teaching Vocal Music, Drawing, and Navigation.*

1. To every teacher, possessing a certificate of competency, who shall give instruction in vocal music in his school, a gratuity ranging from £2 to £5 a-year, according to the number under instruction and the success of the teacher's efforts.

2. To every teacher possessing a certificate of competency from the drawing-master in the Central Model School, or from the master of a School of Art, who shall give instruction in drawing to a class with sufficient average attendance, an annual gratuity, varying from £3 to £10, according to the number under instruction and the success of the teacher's efforts.

3. Gratuities for teaching singing and drawing are awarded to the conductors of Convent Schools on the same conditions as in the case of ordinary Schools, provided satisfactory proof is afforded of the competency of the teachers, and that the instruction is given during the hours of secular education.

4. To every teacher of a National school, possessing a certificate of competency from the masters of the Dublin, Belfast, Limerick, or Waterford Model Maritime Schools, who shall give evidence of having an average attendance of at least six pupils under instruction in navigation, an annual gratuity of £5 for an attendance of six pupils, and £10 for an attendance of twelve or more.

D.—*Gratuities for Instructing Paid Monitors.**

		£	s.	d.
Junior Monitors,	For each junior monitor, a gratuity of	1	0	0
Senior Monitors,	For each monitor of 1st year, a gratuity of	1	0	0
	do. of 2nd year, do.	1	10	0
	do. of 3rd or 4th year, do.	3	0	0
1st Class Monitors,	do. of 1st or 2nd year, do.	3	0	0

E.—*Gratuities for Extra Instruction to Unpaid Monitors.**

1. A gratuity not exceeding *four pounds* may be awarded to teachers of organized schools, who shall give *extra* instruction to a staff of *unpaid monitors* appointed by the Inspector or Organizer.

a. Teachers must, to entitle them to such gratuities, keep a record of the time devoted by them to the monitors' instruction.

b. No gratuity can be awarded under this or the preceding head unless the answering of the monitors be satisfactory, and that such answering can be fairly referred, in great part at least, to the care bestowed by the teacher during the time of such special instruction.

F.—*Gratuities for preparing Young Persons for the Office of Teacher.**

1. For every pupil who, after having been appointed to a school, shall pass respectably the *first* annual examination, held subsequently to such appointment, the master or mistress by whom such pupil shall have been trained will be entitled to a sum of not less than £2, and not more than £3; but in no year is the amount to exceed £15 to any one school or teacher as the reward of such services.

2. The conditions to be observed in regard to these gratuities are—

(*a*). That such pupil shall have attended in the school not less than two consecutive years immediately preceding his or her appointment as a teacher.

(*b*). That the District Inspector shall certify that the school in which such pupil shall have been trained is efficiently conducted in all other respects.

(*c*). That the Head Inspector before whom such pupil shall have been examined shall certify that the teacher is entitled to the gratuity.

(*d*). That not more than twelve months shall have elapsed between such pupil's first examination and the date of his leaving the school of his former instructor.

* Teachers of Model Schools are excluded from obtaining this class of gratuities.

G.—*Gratuities for preparing Young Persons for the Office of Pupil-Teacher in Model Schools.**

CODE XIII., 1869 (Twelfth change).

PART IV.

1. A gratuity not exceeding £2 may be awarded to teachers from whose schools shall proceed eligible candidates for the office of pupil-teacher in the Model Schools.

2. The conditions to be observed in regard to these gratuities are—

(*a*). That such pupil shall have attended in the school not less than two consecutive years immediately preceding his appointment as pupil-teacher.

(*b*). That the District Inspector shall certify that the school in which such pupil shall have been trained is efficiently conducted in all respects.

(*c*). That the Head Inspector before whom such pupil shall have been examined shall certify that the teacher is entitled to the gratuity.

NOTE.—In regard to the foregoing special gratuities, as in regard to the annual salaries of the teachers of National schools, it is to be distinctly understood that the Commissioners reserve to themselves the right to determine, on cause shown, whether the payment is to be made in whole or in part, or is to be altogether withheld.

II.—*Retiring Gratuities.*

In particular cases the Commissioners have the privilege of granting gratuities of reasonable amount to deserving teachers of long standing in their service, when, from old age and infirmity, they are obliged to retire.

PART V.

PART V.

SUPPLIES OF BOOKS, SCHOOL REQUISITES, AND APPARATUS.

I.—*Nature and Extent of Grants, and Conditions on which made.*

1. The Commissioners furnish gratuitously to each School a First Stock of School Requisites, in proportion to the attendance of Children. These Requisites are to be kept as a School Stock, for which the Master or Mistress is held responsible, and are on no account to be sold or taken out of the School.

2. The funds of the Commissioners do not enable them to give a Free Stock sufficiently large for the entire wants of the School; and they therefore require that the local parties shall purchase a Stock of Books and other Requisites—proportionate to the grant of Free Stock—for the use of the School, and for sale to the Pupils. Any additional maps, stationery, slates, clocks, and other requisites, must also, as required from time to time, be purchased at reduced rates.

A.—*Free Stock.*

The value of the grant of Free Stock is regulated by the average daily attendance of Pupils, as ascertained from the reports of the Inspectors. The Managers of Schools have the privilege of selecting their grants of Free Stock from the following List—being at liberty to choose such of them as they most approve of, and to omit any to which they object :—

Slates, Large.
Do. Small, ruled.
Slate Pencil Holders.
Ink Wells.
Patterson's Sheet of Illustrations to Zoology, No. 1.
Do., Do., No. 2.
One Set Tablet Lessons, Arithmetic, 60 sheets mounted on 30 Boards.
One Set Tablet Lessons, Reading, part 1, 35 sheets, mounted on 18 Boards.
One Sheet of Copy Lines, mounted.
Thirty-hour American Clock, in case.
Professor Sullivan's English Dictionary.
Fleming's Atlas (Outline Maps).
Dower's Atlas, 12 Maps, coloured.
Kirkwood's Atlas, 12 Maps, coloured.
Dawes' Hints on Secular instruction.
Young's Infant School Manual.

Do. do. short.

ARITHMETIC FRAMES:—

Frame and Stand.
Hand Frames, 17 by 19 inches.
,, 15 by 13 ,,

The following requisites are included in the grant:—

District Inspector's Observation Book.
School Register.
Daily Report Book.
Roll Book.
General Lesson.
Commandments.
Time Table.
Commissioners' Rules.
Rules for Teachers.
Religious Instruction Tablet.
Religious Instruction Certificate Book.
Programmes of Instruction.

* Teachers of Model Schools are excluded from obtaining this class of gratuities.

CODE XIII., 1869 (Twelfth change).

PART V.

B.—*Requisites supplied at Reduced Prices.*

1. When Books, &c. purchased from the Commissioners at the reduced prices are sold to the children attending a National School, it is directed that in no case shall any advance be made on these prices; and the District Inspectors have instructions to inquire into and report upon any infraction of this rule.

2. The following is the List of Books, School Requisites, and Apparatus supplied to Schools at reduced prices :—

First Book of Lessons,
Second do.
Third do.
Fourth do.
Fifth Book (Boys').
Reading Book for Girls' School.
Biographical Sketches of British Poets.
Selections from the British Poets, Vol. 1.

6. The Steam Engine.
7. Hydrostatics.
8. Hydraulics.
9. Pneumatics.

Section of Screw Line-of-Battle-Ship, mounted
Table of British Strata, mounted.
Natural Phenomena, 30 prints.
Do. mounted.
Useful Plants, a set of 12 plates, coloured, in wrapper, with Book.
Do., Do., mounted.
Natural History, 150 prints.
Do., mounted.
Animals, illustrated in their comparative sizes, on roller.
Graphic Illustrations of Animals, showing their uses in life and after death, 21 prints mounted.
The Animal Kingdom, 4 sheets, coloured, mounted.
Patterson's Zoological Diagrams (10), mounted on rollers, varnished.
Set of Chemical Apparatus for performing experiments to illustrate Johnston's Agricultural Chemistry.
Tool Box, containing an assortment of most useful Tools.
Compound Portable Microscope.
Magnetic Ship's Compass, 10-inch.
Magnetic Compass, in brass case, 1½-inch.
Do., in mahogany case.
Thermometers :—Box-wood Thermometers.
Models, &c. :—Working Models of Mechanical Powers (Edwards).
Centrifugal Machine.
Archimedean Screw; Working Model.
Cards of Model Tools—Carpenter, Cabinet-maker, Bricklayer, Plumber, Painter and Glazier, Printer, Bookbinder, Goldbeater, Cooper, Farrier, Miner, Roadmaker and Pavior, Gardener, 12 sorts.
Geometrical Solids, set of, in box.
Conic Sections, do.
Dissected Cone, in box-wood.
Dissected Cube, Octahedron.
Do. Tetrahedron.
Do. Dodecahedron.
Do. Pentagonal Dodecahedron.
Steel Goniograph, for illustrating Geometrical figures.
Tangible Arithmetic, consisting of 12 doz. cubes in box.

ILLUSTRATIONS OF THE USEFUL ARTS:—
- The Manufacture of a Needle described, with specimens of wire in its various stages up to the finished needle.
- The Manufacture of a Pin described, with specimens, showing the progress from the rough metal to the finished article.
- The Manufacture of Paper described, accompanied by sixteen illustrative specimens.

EDUCATIONAL CABINETS:—
- Edwards' Educational Cabinet, consisting of Natural Objects to illustrate Lessons on Common Things.
- M'Nab's Object-Lesson Cards, illustrative of the Vegetable Kingdom, with specimens.
- The Silkworm, exhibiting its various changes from the egg; in glazed case.

MATHEMATICAL DRAWING INSTRUMENTS:
- Leather pull-off Case of Patent Instruments, No. 0211, containing 5-inch steel-joint compass, pen-point, pencil-point, hand pen, and 6-inch boxwood scale.
- Mahogany Case of ditto, No. 0212, containing 6-inch steel-joint compass, pen and pencil points, divider, bow pen, hand pen, pencil, box scale, ebony parallel, and brass protractor.

Green's First Studies in Landscape, 6 Nos.
Elementary Studies, by Julien and others.
Heads from the Antique, drawn by Smeeth, plain.
Do., do., tinted.

HARMONIUMS—with each Instrument an Instruction Book is supplied:—
Harmonium (of 5 Octaves) with expression stop.
Do., do., without stop.
Do., (of 4 Octaves).

II.—*Regulations, &c., to be observed by Managers in regard to Grants of Books, &c.*

1. All applications for Books, School Requisites, and Apparatus, at reduced prices, must be addressed to the Secretaries, and be accompanied by a Money Order for the amount, in favour of JAMES KELLY, or WILLIAM HOMAN NEWELL, Esq., and PAYABLE IN DUBLIN ON DEMAND.

2. Half Notes, Cash, Postage Stamps, Orders or Cheques drawn on Country Banks, cannot be received in payment. If remitted, they will be returned at the risk of the sender.

3. When a Post Office Order or Letter of Credit is transmitted, and the amount is under TEN SHILLINGS, the cost of the remittance must be paid by the Person applying for the same; but if the sum exceeds TEN SHILLINGS, the cost of the remittance will be allowed, and Requisites given for the *full amount* PAID.

4. When the Teacher of an ordinary National School advances, from his own resources, the amount of an order for Requisites, and that such amount is not less than the sum of ONE POUND FIVE SHILLINGS, an allowance of 20 per cent. will be made as commission on the order, if demanded.

5. When a National School has had a grant, either as Free Stock or at reduced prices, of a Clock, or of any of the large Maps, another will not be supplied until *three* years shall have elapsed, unless in special cases, the circumstances of which are to be stated, when the grant will be sanctioned, if the reasons assigned be deemed satisfactory.

6. Teachers are not permitted to include, in the applications for Requisites, *Clocks* or *Maps* for their own private use. Managers should, therefore, caution Teachers that such irregularity, if reported, will subject them to a fine, or other serious mark of the Board's displeasure. *Books* for their own use may be purchased by the Teachers at the reduced prices, but then they should be careful to indicate the fact to the Manager, by writing the words "for Teacher" after the name of the book in the List.

7. The Patron or Manager should not sign any application for Books, Requisites, or Apparatus, without first ascertaining that they are actually wanted for the School on behalf of which the application is made. The Inspectors are required to report to the Commissioners whenever it appears that an undue quantity of Requisites, &c., has been ordered for a National School.

8. When there are separate ROLL NUMBERS for Male and Female National Schools, the application should state for which of them the Books, &c., are required; and if for both, *two* forms should be used.

9. Parcels of Books, &c., when so desired, will be forwarded, carriage free, to the Depôt of the District in which the School for which they are required is situated, and the Inspectors will inform the Managers on what day they will be ready for delivery; or to the Depôt of any other District if more convenient: but in the latter case, the Inspector, who may not know the Managers of any Schools not in his District, cannot be expected to give notice.

10. Or the Parcel will be forwarded to the Railway station nearest to the Manager's residence. In this case the Manager must himself incur the risk of its safe delivery, and the expense of carriage.

11. Parcels are sent free to any place within the civic boundaries of Dublin.

12. When Parcels are forwarded to the Depôt of a District it is *not* the duty of the Inspector to transmit the Parcel to the Manager's residence or to the School.

13. On the day appointed by the Inspector for the delivery of parcels, the Manager is required to send a Messenger to the Depôt with the order on the Inspector (with which the Manager will be furnished), and which order the Inspector is required to transmit to the Office as a proof of the delivery of the parcel.

14. If a Parcel is to be sent by a Carrier, he must call at the Office in Dublin not sooner than two days after the Manager's directions shall have been received, and must produce the Manager's order to the Storekeeper here, for its delivery, on the form supplied for the purpose.

CODE XIII., 1869 (Twelfth change).

PART V.

15. The School Apparatus must, on no account, be taken out of the School for which it has been procured, and must be used solely for School purposes. If it, or any portion of it, should be removed from the School, or any improper use be made of it, the Commissioners will adopt such measures as the nature of the case may demand.

16. The Commissioners do not supply Books, Requisites, or Apparatus to the public, or to Schools not connected with the Board of National Education.

17. The amount of each grant must be inserted in the Daily Report Book of the School, and the Invoice of the Articles preserved for the examination of the Inspector, who will be required to report whether the Articles in the School correspond with the Invoice, and are in a good state of preservation.

PART VI.

PART VI.

GENERAL INSTRUCTIONS TO MANAGERS AND CORRESPONDENTS.

1. Persons desirous of obtaining assistance from the Commissioners of National Education, will, upon intimating to the Secretaries the nature of the aid required, be furnished with the Forms, upon which their application must be laid before the Commissioners: and all grants of salary will date from the *first of the month nearest to the return* of such Application Forms to the Office.

2. Applicants for assistance are to understand that the Commissioners are not bound to grant the full amount of aid, as set forth in the foregoing Regulations, in every case; nor can they grant any, unless they have sufficient funds for the purpose, which depends upon the amount placed at their disposal by Parliament.

3. The Commissioners desire it to be distinctly understood that they do not hold themselves bound to grant aid, unless application shall have been made to them in the first instance, on the proper form, and unless the application shall have been favourably and finally decided upon by the Board. Applicants, therefore, should not incur any expense towards the payment of which the expect the Commissioners to contribute, until the decision of the Board shall have been communicated to them.

4. The Managers of National Schools are particularly requested to attend to the following Regulations respecting the payment of Salaries or Gratuities to Teachers, as the Lords of Her Majesty's Treasury and the Commissioners for Auditing the Public Accounts will not, in future, sanction any payments which are not in compliance with these Rules:—

Every Receipt should be signed by the Manager and by the Teacher who is to receive the amount of Salary or Gratuity therein specified.

Whenever a Manager or other person advances money to a Teacher on account of the Salary payable by the Commissioners of National Education, he should *take a Receipt* for the same (Stamped, if the amount be £2, or upwards), in order to have a proper Voucher to produce to the Office for repayment.

If a Teacher die to whom any Salary is due by the Commissioners at the time of his or her death which, with any other property he or she may have been possessed of, would amount to £20 or above, it will be paid only to the representatives or next of kin, on the exhibition, at the Office, of Letters of Administration.

If the amount be over £5, and under £20, payment will be made without the production of Letters of Administration, to the alleged next of kin, on satisfactory proof that the just debts of the deceased have been paid, and on the party claiming payment giving a Bond, on the Form issued from the Office, to free the Commissioners from any claim on the part of other next of kin or of creditors: if the amount be £5, or under, neither Letters of Administrations nor Bond will be required, provided the debts are certified to have been paid.

If a Teacher leave a National School, and authorize the Manager or some other person to receive the Salary due from the Board, such authority must be given in writing, or the amount will not be paid.

5. All communications in reference to National Schools should be signed and made by the Patron or Manager. The Commissioners do not correspond with Teachers of National Schools.

6. No attention can be paid to "anonymous" communications.

7. Correspondents are requested to attend to the following directions, viz.:—

To write at the head of any letter addressed to the Office, the Name and Roll Number of the School referred to, and the County in which it is situated.

To make communications on different subjects in separate letters.

To state in every case the writer's Post Town; and, in the case of persons whose names are not recorded as Patrons or Managers of Schools, to give the name and style of address in full.

In replying to an Official letter, to quote its number and date.

It is particularly requested that all letters may be written clearly, and on paper of Foolscap size, or, at least, large-sized letter-paper.

Letters or other communications addressed to the Secretaries, on the business of the Board, need not be prepaid.

8. All letters, or other communications, in any manner relating to the business of the Board, or to the National Schools, are to be addressed to the Secretaries, and not to any other Officer or person connected with the Board—such communications to be directed thus:—

The Secretaries,

Education Office,

Marlborough Street,

Dublin.

By order of the Commissioners of National Education,

JAMES KELLY,
WM. HOMAN NEWELL, } *Secretaries.*

COLLECTION OF FORMS OF LEASE, &c., OF VESTED NATIONAL SCHOOLS.

INTRODUCTION.

The Trusts of Vested National Schools, set forth in the following collection, have been compiled from Returns furnished to the Royal Commission by the National Board.* The text of the collection consists of a series of extracts from successive Deeds, submitted by the National Board to the Commission for the purpose of comparison. In order to make the provisions of those deeds clearer to unprofessional readers they have been divided into paragraphs, each of which sets forth a separate Trust. Further, to facilitate reference to the corresponding provisions of different deeds, an Index has been prefixed to the collection, showing the successive changes made in the several clauses, and the variations introduced into the Trusts.

The history of the Trusts subject to which Vested National schools are held, naturally divides itself into two periods, one extending from 1832 to 1846, the other coming down to the present time.

Previous to 1846 those Trusts were contained chiefly in two classes of instruments—one consisting of Leases conveying the schools and the ground on which they stood to Trustees appointed by and on behalf of the Commissioners of National Education; the other consisting of formal Declarations of Trust. The former class of Instruments are the conveyances usually required by the Commissioners when granting aid to schools; the latter class consisted of deeds by which the actual possessors of schools covenanted with the Commissioners to hold them, subject to the same Trusts as are attached to the premises conveyed to Trustees. By the former class, the conveyance of the parcel of ground is made to Trustees for the Commissioners; by the latter, persons who already have the conveyance and are the owners of the premises engage to hold them henceforth as Trustees for the Commissioners, precisely as if they had already taken the conveyance in that capacity. Thus, it will be seen that, since the Trusts are the same in both, these two kinds of instruments may, for all practical purposes, be considered as constituting only one class.

It may be remarked that those fiduciary declarations attached to already existing conveyances are few in number; that the earliest of them bears date 22nd June, 1833, and that there were none posterior to 1846.

Under the provisions of the earliest form of conveyance, that of 1832, the position of the Trustees was of the simplest fiduciary character, absolute power being reserved to the Commissioners to remove acting and to appoint new Trustees. By a series of new provisions, however, introduced into the subsequent forms of conveyance, the position of Trustees taking under them was gradually modified till it at length became, subject to the due discharge of the covenanted obligations, one of comparative independence. The power of removing acting Trustees, originally vested in the Commissioners, disappears in the deed of 1833; and the power of appointing is transferred from them to the surviving or continuing Trustee who is empowered to appoint a new Trustee, subject, however, to the approbation of the Commissioners, and it is only in the case of his neglecting to make such appointment within six months after the occurrence of any of the events mentioned in the provision that the Commissioners may appoint. It is not improbable that this relaxation of the original absolute power of removal and

* See Vol. VII., *Returns Furnished by the National Board*, Section VII., Paragraph 6.

appointing was occasioned by the impossibility of maintaining it in the case of the schools to which the second class of instruments, mentioned above, referred. Persons already in legal possession of the school premises, in virtue of a previous conveyance, although declaring by a subsequent instrument that they would continue to maintain the school, subject to the same trusts as would have attached to it, had they originally taken the conveyance as Trustees for the Commissioners, could not be sent about their business and other persons set over the school in their place, in the same way as if in the original conveyance, such absolute power of removal and appointment had been reserved to the Commissioners.

It may be remarked that it is not till 1838 that any provision is directly made for securing the execution of the trusts. In that year the Trustees for the first time covenant to execute the trusts, and, in default, to pay back to the Commissioners a specified sum of money.

Besides Leases to Trustees and Declarations of Trust by persons already in actual possession of school premises, the Commissioners of National Education also had recourse in some exceptional cases to a third class of instruments, namely, Bonds. These extraordinary securities were seldom adopted, and only when the former could not be obtained through peculiar circumstances, chiefly affecting the tenure of the premises. Contrary to the usual practice under which Bonds contain a clause fixing as penalty for breach of agreement a sum notably exceeding the amount intended by the parties to be recovered, by the Bonds to the Commissioners of National Education the parties bound engaged themselves to repay to the Commissioners only the sum of money advanced by them towards building the school, in respect of which the Bond was executed, if they should ever cease to keep a school without eviction or disturbance, under the control of the Commissioners, in strict accordance with their rules and regulations, and the terms and conditions set out in the Bond. These fix the time during which the school should be kept open for moral and literary education, and for religious instruction, the persons who should give the same and the method of giving it, control over books and teachers, visiting powers, and the purposes for which the fabric should not be used, the manner of maintaining it, and of obtaining the teacher's salary. The various provisions contained in the Bonds for securing the above objects are identical with those set out for the same purposes in the leases, and the various changes successively made in these latter are contemporaneously exhibited in the former. Bonds have not been used since 1846.

In 1845 the Commissioners of National Education obtained a Charter empowering them to hold land to the annual value of £40,000. In the next year they discontinued the leases to Trustees, and thenceforward took the conveyance to themselves in their corporate capacity. An obvious effect of this change was to simplify the form of the deed. A long string of provisions for securing that a school should be conducted in conformity with the principles of the National System of Education, which was quite in its proper place in the case of persons who held in trust for the Commissioners, would have been superfluous where the Commissioners themselves being the owners and managers, it was only a matter of course that they would carry on the schools according to their own rules. But this simplicity of form was of short duration. Already, in 1848, only two years after the change, the old complexity re-appears, formal provisions being introduced in distinct clauses to secure all those purposes which apparently were already secured as a matter of course by the fact that the school was in the possession of the Commissioners themselves. The grantors became now invested with the character of "Patrons" of the school, and it is expressly recited that the "management of National schools belongs to the respective local Patrons." The same powers are conferred on those patrons, and the same arrangements for the appointment of new patrons are maintained as formerly existed with regard to Trustees.

This form of deed continued till 1856, when a simpler form was re-introduced. A general clause stipulating that the schools "shall be subject to the rules and regulations of the Commissioners applicable to schools vested in them, the principal of which rules are specified in the schedule indorsed" on the lease is substituted for the several clauses introduced to secure the same result in the deeds since 1848. But the machinery respecting patrons, their powers and appointments, was still preserved. A new and important provision was now inserted, declaring that the schools shall be subject "to such further and other rules and regulations of the said Commissioners as may from time to time be framed by them." Leases to the Commissioners have continued to be made according to this form down to the present time.

But in 1862, at the suggestion of Her Majesty's Government, leases to Trustees re-appear. It is to be remarked, however, that, whereas the conveyances prior to 1846 set forth that the Trustees have been "named and approved of by and on behalf of the Commissioners," it is now stated that "*N.N.*" have been nominated as Trustees of the said intended National school, and have been approved of by the said Commissioners. A general provision that the school "shall be subject to the rules and regulations of the Commissioners, applicable to schools vested in Trustees, which rules are specified in the schedule indorsed" on the instrument, takes the place of the several clauses which in former deeds provided for the same result. An important change was, however, now made in the position and powers of Trustees. It is provided that the Trustees, with the approbation of the Commissioners, testified by deed under their common seal, and with the consent in writing of the grantor or the person beneficially entitled in reversion to the premises then conveyed, may by deed attested by two or more witnesses revoke the trusts of the deed under which they hold, and with the consent of the same grantor or reversioner, declare such new ones as to them shall seem meet. This power of the Trustees, however, was dependent on the will of the Commissioners, and could only be executed by a solemn instrument. But in 1866 a freer discretion is allowed by an additional provision to the effect that if the Trustees repay to the Commissioners of Public Works the amount of original grant, together with such other sums as the Commissioners may have expended in additions or improvements to the schools, the original trusts of the deed shall cease and be void.

A further peculiarity is observable about this form of lease to Trustees which deserves attention. The form of conveyance to the Commissioners in their corporate capacity as it was settled in 1856, and as it exists at the present time, declares that the school to be established "shall be subject to the rules of the Commissioners," the *principal of which* are indorsed on the deed; "AND *to such further and other rules and regulations of the said Commissioners as may from time to time be framed by them, in strict accordance with the fundamental principle*" of the system. In the lease of 1862, to Trustees there is a marked difference in the corresponding provisions. In the first place, the declaration is that the school shall be subject to the rules of the Commissioners "*which rules* are indorsed" on the deed, and not "*the principal*" rules only, as in the lease of 1856 to the Commissioners. In the second place, the clause just quoted from the lease of 1856 to the Commissioners, declaring that the school-premises shall be subject to future rules which may from time to time be framed, is wanting in the lease of 1862 to Trustees.

INDEX to the COLLECTION of "LEASES, &c.," showing the successive changes which were made in the several clauses of the instruments containing these Declarations.

A.—*Recitals.*

p. 701.	Form I. A., 1832.	Original Recitals.	
p. 706.	Form VI. A., 1846.	"Whereas the said Commissioners by Her Majesty's Royal Letters Patent, bearing date the 26th day of August, 1845, have been incorporated for the purpose of administering the funds placed at the disposal of His Excellency the Lord Lieutenant of Ireland, for the education of the Poor of Ireland, on the principle of avoiding all interference whatsoever with conscientious scruples on the score of religion, and, accordingly, that the schools under their control shall be open alike to children of all religious denominations, that no child shall be required to be present at any religious instruction or exercise of which his parents or guardians may disapprove, and that opportunities shall be afforded to all children to receive separately, at particular periods to be specified in the rules of each school, such religious instruction as their parents or guardians may provide for them.	1st Change.
p. 708.	Form X. A., 1856.	"Object of the system of National Education, and fundamental principle thereof.	2nd Change.

B.—*Trusts referring to Moral and Literary Instruction.*

p. 701.	Form I. B., 1832.	Original Provision.	
p. 702.	Form II. B., 1833.	"For six hours on four or five days."	1st Change.
p. 703.	Form III. B., 1835.	"For five or six hours on five days."	2nd Change.
p. 704.	Form IV. B., 1838.	"For a competent number of hours in each day."	3rd Change.
p. 710.	Form X., 1856. Rules, § IV., 20 & 21.	For not less than *two* hours in schools in which industrial instruction is the chief object, in all others for at least *four* hours upon five days.	4th Change.

C.—*Religious Instruction.*

p. 701.	Form I. C., 1832.	Original Provision.	
p. 703.	Form III. C., 1835.	"Remaining day in the week."	1st Change.
p. 704.	Form IV. C., 1838.	"One day in each week, or part of a day, independently of Sunday," "on which day such pastors or other persons as may be approved of by the parents or guardians of the children, shall have access to them for that purpose, whether those pastors or persons shall have signed the original application or not; and also, that convenient opportunity and facility be afforded to them for the same purpose on other days in the week. Provided that where any course of religious instruction is to be pursued in any such school during school hours to which the parents of any of the children shall object, an arrangement shall be made for having such instruction given to those who are to receive it at a stated time, and in a separate place, so as that no children whose parents or guardians object to their being so be present at it."	2nd Change.
p. 705.	1841.	"In the school-room," is added after "have access to them."	3rd Change.
p. 706.	1844.	"And" changed to "or" in sentence "at a stated time and in a separate place."	4th Change.
p. 706.	Form VI. A., 1846.	"Facility" omitted.	5th Change.
p. 709.	Form X., 1856. Rules, Pt. I., § IV. 12.	Religious instruction "not to take place more than *once* at an *intermediate* time between the commencement and the close of the ordinary school business."	6th Change.
p. 716.	Form XIV., 1866. Rules, Pt. I., § IV. 15,	No pupil who is registered by its parents or guardians as a Protestant is to be permitted to remain in attendance during the time of religious instruction in case the teacher giving such instruction is a Roman Catholic; and no pupil who is registered by its parents or guardians as a Roman Catholic is to be permitted to remain in attendance during the time of religious instruction, in case the teacher giving such instruction is not a Roman Catholic. And further, no pupil is to be permitted to remain in attendance during the time of any religious instruction to which its parents or guardians object. Provided, however, that in case any parent or guardian shall express his desire that his child should receive any particular religious instruction, and shall record such desire in a book to be provided in the school, when necessary, for that purpose, this prohibition shall not apply to the time during which such religious instruction only is given.* The entry in the book shall be signed with the name or mark of the parent or guardian, and the book shall be submitted to the Inspector as often as he visits the school.	7th Change.

D.—*Control over Books.*

p. 701.	Form I. D., 1832.	Original Provision.	
p. 704.	Form IV. D., 1838.	Provision in " " regarding books to be used in religious instruction omitted, and the following substituted:—"If any other books than the Holy Scriptures, or the standard books of the Church to which the children using them belong, be employed in communicating religious instruction, then the title of each such book or books shall be made known to the said Commissioners."	1st Change.
p. 710.		And see Rules, Part I., § VI., Schedule annexed to Form X., 1856.	

* *Such expression of desire may at any time be revoked by the parents or guardians, and shall thereupon become inoperative.*

E.—*Control over Teachers.*

p. 701.	Form I. E., 1832.	Original Provision.	
p. 702.	Form II. E., 1833.	Part within brackets in 1832 omitted.	1st Change.
p. 704.	Form IV. E., 1838.	That all masters "shall not only in the first instance, before they shall be so appointed, have received previous instruction in a model school in Dublin," in 1835 is changed by inserting after "first instance" "if the said Commissioners shall see fit;" and instead of "model school in Dublin" "the general normal establishment in Dublin, or at one of the district model schools of the said Commissioners," is substituted. After the last line "upon good and sufficient cause being shown" is added.	2nd Change.
p. 707.	Form VIII. A., 1848.	Local patrons have power of appointing and of removing the teachers, subject to the approbation of the said Commissioners.	3rd Change.
p. 708	Form IX. A., 1852.	Local patrons have power of appointing the teachers, subject to the approbation of the said Commissioners, and of removing them of their own authority.	4th Change.
p. 710.	Form X., 1856. Rules, § VII. 2.	No clergyman of any denomination or (except in the case of convent schools) member of any religious order can be recognised as the teacher of a National school.	5th Change.
p. 714.	Form XIII., 1865. Rules, Pt. IV., § I. 2.	This does not apply to the teachers of convent schools, nor to those of any monastery schools which have been at any time previously in connexion with the Board.	6th Change.
	Ibid. 5.	In non-vested schools the grant of salary will be withheld until a suitable teacher be procured.	
		Teachers are also liable to be depressed.	*Ibid.*

F.—*Visiting Powers.*

p. 701.	Form I. F., 1832.	Original Provision.	
p. 704.	Form IV. F., 1838.	"Officers or Superintendents" instead of "Inspectors." The following is added:— "That clergymen of all denominations and other persons shall also have access to the said school, to observe how the said school may be conducted in the manner and under the restrictions as particularly set forth in the rules and regulations of the said Commissioners, under the head and title of 'Inspection of Schools,' in said rules and regulations mentioned."	1st Change.
p. 705.	1841.	Instead of "clergymen of all denominations and other persons," "the public of all denominations, whether clergy or laity," is inserted.	2nd Change.

G.—*Fabric, Repairs and Teachers' Salary.*

p. 704.	Form IV. G., 1838.	Original Provision.	
p. 707.	Form VIII. G., 1848.	Instead of "political meeting" and "political document," the following is substituted:—"That no meetings of any kind whatever be summoned, held, or convened or permitted so to be in any such school-house, or in any part or room thereof, or on the premises hereby conveyed or intended so to be, save such as may relate exclusively to the business thereof; and that no petition or document of any kind whatsoever, save such as may relate exclusively to the business of the said school, be brought or carried into any such school-house or premises, or any part thereof, for signature or otherwise." And after "sufficient repairs" "by said Commissioners" is added instead of "by local contributions solely."	1st Change.
p. 708.	Form IX. G., 1852.	After "converted into a place of public worship," "or used for any purpose save that of such school" is added.	2nd Change.
p. 710.	Form X., 1856. Rules, § V. 2.	No National school-house shall be employed at any time, even temporarily, as the *stated* place of divine worship of any religious community; or for the celebration or administration of the sacraments or rites of any Church.	3rd Change.
	Ibid, 5.	Vested school-houses must be used *exclusively for the education* of the children attending them, except on Sundays, when they may be employed for Sunday schools, with the sanction of the patrons or managers, subject, in cases leading to contention or abuse, to the interference of the Commissioners.	

H.—*Appointment of New Trustees.*

p. 701.	Form I. H., 1832.	Original Provision.	
p. 702.	Form II. H., 1833.	"Or in case the said Commissioners for the time being shall think to remove any of such trustees" is omitted, and "the surviving or continuing trustees or trustee" is substituted for "such Commissioners."	1st Change.

I.—*Execution of Trusts.*

p. 704.	Form IV. I., 1838.	Covenants to execute trusts, now first introduced.	

K.—*Further Assurance.*

p. 702.	Form I. K., 1832.	Original Covenants for further assurance.	

L.—*Revocation of Trusts.*

p. 712.	Form XI. L., 1862.	Powers to revoke the trusts of the deed, with consent of Commissioners and reversionor, now for the first time introduced.	

M.—*Voiding of Deed.*

p. 712.	Form XII. M, 1865.	Provision that deed shall become void on repayment of certain sum to Commissioners, now first introduced.	
p. 715.	Form XIV. M., 1866.	"Commissioners of Public Works."	1st Change.

Leases to Trustees.

Form I.—1832.

Form I., 1832.

This Indenture, made between and of the first part, and Commissioners appointed for administering the funds placed at the disposal of His Excellency the Lord Lieutenant of Ireland for the education of the poor of Ireland of the second part, and and trustees named and approved of by and on behalf of the said Commissioners appointed for administering the funds placed at the disposal of His Excellency the Lord Lieutenant for the purposes aforesaid of the third part.

A. Recites title of lessors to the premises about to be granted.

that it is the wish of (*the lessors*) and trustees that school, with the approbation and under the control of the said Commissioners, shall be established in the parish of in the county of

that there have been lately built on the ground hereinafter mentioned school-houses for the education of the poor children (male and female) in the parish of aforesaid, which now finished and properly adapted to the purposes of schools such as those intended to be established as aforesaid, and the said Commissioners have, in order to promote the establishment of said school, directed that a sum of £ should be paid to the said trustees, parties hereto, out of the said fund placed at the disposal of His Excellency the Lord Lieutenant of Ireland as aforesaid, which said sum of £ , together with another sum of £ , raised by voluntary contribution or locally subscribed, makes up the sum of £ , which sum has been actually laid out and expended in the erection of said school-house on said lot of ground in the parish of aforesaid, agreeable to the conditions required by the said Commissioners in granting aid for that purpose.

Witnesseth that the said (*lessors*) for the considerations aforesaid, and in order to effectuate the purposes aforesaid, have granted, bargained, sold, assigned, transferred, and made over, and by these presents do grant, bargain, sell, assign, transfer, and make over unto the said trustees, their executors, administrators, and assigns, that lot of ground situate whereon there been lately erected and built school-houses for the education of the poor children in the parish of aforesaid . . they the said (*trustees*) their, &c. . . . yielding and paying unto the said (*lessors*) their, &c. . . during the continuance of this demise the sum of one penny on the feast of St. Michael in each and every year, if demanded. To hold all and singular the said hereby granted and assigned ground, house and premises, with their appurtenances, unto the said trustees, their, &c. . . . upon the several trusts hereinafter declared concerning the same, and to and for no other use, trust, interest, or purpose whatsoever. And it is declared that the said grant hereby made shall be and for ever remain subject to and upon the trusts, regulations, conditions, and purposes . . . declared of and concerning the same.

B. That is to say,—That each and every school to be kept and established on the premises hereby granted, shall be kept open "for hours" on four or on five days in each week, at the discretion of the Commissioners for the time being, acting under the authority of the Lord Lieutenant or other Chief Governor or Governors of Ireland in the application of such funds, as may, from time to time be at his or their disposal, for the purposes of educating the poor of Ireland; and shall during said days, be used for moral and literary education only,

"For six hours," in Form II., 1833.

C. and that the remaining one or two days in the week, as the case may be, shall be set apart for giving separately such religious education to the children, male and female, of all persuasions, as may be approved of by the clergy of their respective persuasions—such clergy, however, to be permitted and encouraged to give religious instruction either before or after the ordinary school hours, on the other days of the week.

D. And further, that the entire control over all books to be used in the said schools, whether for the purposes of combined moral and literary education, or of separate religious instruction, shall be from time to time, and at all times, vested in the said Commissioners, parties hereto or other such Commissioners as aforesaid, their successors for the time being, none of the said books to be used or employed in such combined moral and literary education, except under the sanction of the said Commissioners for the time being, nor in such separate religious instruction, but with the approbation of such of the said Commissioners for the time being, as shall be of the same religious persuasion with the children, for whose use they are intended.

E. And further, that all the master and masters, teacher and teachers, of said schools for the time being, shall not only in the first instance, before they shall be so appointed, have received previous instruction in a model school in Dublin, sanctioned by the said Commissioners, and shall also have obtained from the said Commissioners for the time being testimonials of good conduct and general fitness, but shall be liable to be fined and fineable, removed and removable, or suspended from time to time, and at all times, when and as often as such Commissioners as aforesaid, for the time being, shall deem it necessary, at their will and pleasure, in such way and manner as they shall deem expedient, or see fit; [and that such schoolmasters or teachers, shall teach and instruct all such children as shall be admitted into said schools, according to the system of education sanctioned and approved of, for the said schools, by the said Commissioners for the time being.]

Part within [ ] omitted in subsequent Forms.

F. And further, that the said Commissioners, or their Inspectors for the time being, or any of them, shall from time to time, and at all times hereafter, be allowed and permitted on demand to visit and examine the said schools, whenever and so often as they or any of them shall think fit, or deem it necessary.

H. Provided always, and it is hereby further expressed and declared to be the true intent and meaning of these presents, and of the several parties hereto, that in case any of them, the

FORM I., 1832.

said (*trustees*) or the survivors of them, or his executors, administrators, or assigns, or any trustee to be appointed by virtue of this present provision, shall die or be desirous of being discharged from the trusts hereby created, or shall go to reside out of Ireland, or shall neglect or refuse, or become incapable to execute such trusts, [or, in case the said Commissioners for the time being, shall think fit to remove any of such trustees,] it shall and may be lawful for "such Commissioners" to nominate and appoint a new trustee in the room of any such trustee,* and that thereupon the said premises hereinbefore mentioned, shall be conveyed and assigned, so as that the same shall vest in such new trustee, and such trustees to be nominated by the said Commissioners upon the like trusts, and to and for the like uses, intents, regulations, conditions, and purposes, as are hereinbefore mentioned, expressed, and declared, of and concerning the same;

Part within [ ] omitted in subsequent Forms.

"The surviving or continuing trustees or trustee," in 1833.

K. and the said (*trustees*) do hereby for themselves, and the survivors of them, their and his executors, administrators, and assigns, acknowledge, testify, and declare, that they and the survivors of them, their and his executors and administrators, shall and will from time to time, and at all times hereafter, upon the request of the said Commissioners "and" their successors for the time being, and at their own proper cost and charges do, perform, and execute all and every such further and other act and acts, deed and deeds, assignment, conveyance, release, and assurance in the law whatsoever, as well for corroborating and confirming these presents, as also for the further and better exchanging, assigning, assuring, and confirming, all and singular the hereinbefore granted and assigned lots of ground and premises, or intended so to be, to the several uses and upon the several trusts, intents, regulations, and purposes, hereinbefore and hereby respectively mentioned, expressed, and declared of and concerning the same as by the said Commissioners "and" their successors for the time being, their or any of their counsel learned in the law, shall in that behalf be reasonably advised, devised, required, demanded, or directed. In Witness.

"Or," in 1833.

"Or," in 1833.

FORM II., 1833.

DECLARATION OF TRUST, as to lot of ground and schoolhouse.

Form II.—1833.

Parties—Trustees, first part; Commissioners, the second.

A. Recites title and that a schoolhouse has been lately built on the ground, &c., as in Form I.

Witnesseth that the said (*trustees*) for the consideration aforesaid, and in order to effectuate the purposes aforesaid, do covenant for themselves and their heirs, executors, administrators, and assigns, with the said Commissioners and their successors for the time being that they shall hold the said ground and premises in and by the said in part recited indenture of lease demised and granted for the residue of the said term.

"Five or six hours on five days," in 1835.

B. Upon the trusts . . . that is to say—That each and every school to be kept and established on the premises hereby granted, shall be kept open for "six hours on four or on five days" in each week, at the discretion of the Commissioners for the time being, acting under the authority of the Lord Lieutenant or other Chief Governor or Governors of Ireland, in the application of such funds, as may from time to time, be at his or their disposal for the purpose of educating the poor of Ireland, and shall during said days be used for moral and literary education only;

"The remaining day," in 1835.

C. and that "the remaining one or two days" in the week, as the case may be, shall be set apart for giving separately such religious education to the children, male and female, of all persuasions, as may be approved of by the clergy of their respective persuasions, such clergy, however, to be permitted and encouraged to give religious instructions, either before or after the ordinary school-hours on the other days of the week;

D. and further, that the entire control over all books to be used in the said schools, whether for the purposes of combined moral and literary education, or of separate religious instruction, shall be from time to time, and at all times, vested in the said Commissioners, parties hereto, or other such Commissioners as aforesaid, their successors for the time being, none of the said books to be used or employed in such combined moral and literary education, except under the sanction of the said Commissioners for the time being, nor in such separate religious instruction, but with the approbation of such of the said Commissioners for the time being, as shall be of the same religious persuasion with the children for whose use they are intended.

E. And further, that all the master and masters, teacher and teachers, of said schools for the time being, shall not only in the first instance before they shall be so appointed, have received previous instruction in the model school in Dublin, sanctioned by the said Commissioners, and shall also have obtained from the said Commissioners for the time being testimonials of good conduct and general fitness, but shall be liable to be fined and fineable, removed and removable, or suspended from time to time, and at all times, when and as often as such Commissioners as aforesaid for the time being, shall deem it necessary, "at their will and pleasure," in such way and manner as they shall deem expedient or see fit.

Words within " " omitted in Form III., 1835.

F. And further, that the said Commissioners or their Inspectors for the time being, or any of them, shall from time to time, and at all times hereafter, be allowed and permitted on demand, to visit and examine the said schools whenever and so often as they or any of them shall think fit or deem it necessary.

H. Provided always, and it is hereby further expressed and declared to be the true intent and meaning of these presents, and of the several parties hereto, that in case any of them the said (*trustees*) or the survivor of them, or his executors, administrators, or assigns,

* "Such new trustee or trustees to be first approved of by the said Commissioners or their successors for the time being; and in case such surviving or continuing trustee or trustees shall decline, neglect, or refuse to exercise the powers of appointment hereby given as aforesaid within six calendar months after all or any of the events hereinbefore mentioned shall arise, happen, or take place, that then, and in all or any of such case or cases it shall and may be lawful to and for the said Commissioners or their successors for the time being, to nominate and appoint such new trustee or trustees in the room of any such trustee or trustees as aforesaid, upon the like trusts as are hereinbefore mentioned," inserted in 1833.

FORM II., 1833.

or any trustee to be appointed by virtue of these presents, shall die or be desirous of being discharged from the trusts hereby created, or shall go to reside out of Ireland, or shall neglect, or refuse, or become incapable to execute such trusts, it shall and may be lawful to and for [the surviving or continuing trustees or trustee, to nominate and appoint a new trustee or trustees in the room of any such trustee or trustees, such new trustee or trustees to be first approved of by the said Commissioners or their successors for the time being; and in case such surviving or continuing trustee or trustees shall decline, neglect, or refuse to exercise the powers of appointment hereby given as aforesaid, within six calendar months after all or any of the events hereinbefore mentioned shall arise, happen, or take place, that then, and in all or any of such case or cases, it shall and may be lawful, to and for the said Commissioners, or their successors for the time being, to nominate and appoint such new trustee or trustees, in the room of any such trustee or trustees as aforesaid, upon the like trusts as are hereinbefore mentioned;] and that thereupon the said premises hereinbefore mentioned, shall be conveyed and assigned, so as that the same shall vest in such new trustee and trustees so to be nominated and approved of as aforesaid upon the like trusts, and to and for the like uses, intents, regulations, conditions, and purposes, as are hereinbefore mentioned, expressed, and declared, of and concerning the same.

Passage within [ ] new insertion.

K. And the said (*trustees*) do hereby for themselves, and their survivors of them, their and his executors, administrators, and assigns, acknowledge, testify, and declare, that they and the survivors of them, their and his executors and administrators, shall and will from time to time, and at all times hereafter, upon the request of the said Commissioners, or their successors for the time being, and at their own proper cost and charges, do, perform, and execute all and every such further and other act and acts, deed and deeds, assignment, conveyance, release, and assurance, in the law whatsoever, as well for corroborating and confirming these presents, as also for the further and better exchanging, assigning, assuring, and confirming, all and singular the hereinbefore granted and assigned lot of ground and premises, or intended so to be, to the several uses, and upon the several trusts, intents, regulations, and purposes, hereinbefore and hereby respectively mentioned, expressed and declared, of and concerning the same, as by the said Commissioners or their successors for the time being, their or any of their counsel learned in the law, shall in that behalf be reasonably advised, devised, required, demanded, or directed.

1834.

The lease of this year is the same as that of 1833.

Form III.—1835.

FORM III., 1835.

Parties—As in Form I., 1832.

A. Recitals and conveyancing parts same as in Form I., 1832, except that in the witnessing part, after the description of the parcels, "together with all buildings and improvements erected and made thereon," is inserted..

B. That is to say:—That each and every school to be kept and established on the premises hereby "granted" shall be kept open "for five or six hours on five days in each week," at the discretion of the Commissioners for the time being, [acting under the authority of the Lord Lieutenant or other Chief Governor or Governors of Ireland, in the application of such funds as may from time to time be at his or their disposal, for the purposes of educating the poor of Ireland,] and shall during said days be used for moral and literary education only,

"Demised" in 1838.
"For a competent number of hours in each day," in 1838.
Part within [ ] omitted in 1838, and subsequent Forms.

C. and "that the remaining day in the week" shall be set apart for giving separately such religious education to the children, male and female, of all persuasions, as may be approved of by the clergy of their respective persuasions, such clergy, however, to be permitted and encouraged to give religious instructions either before or after the ordinary school-hours on the other days of the week;

"One day in each week, or part of a day, independently of Sunday," in 1838.

D. and further, that [the entire control over all books to be used in the said schools, whether for the purposes of combined moral and literary education or of separate religious instruction, shall be, from time to time, and at all times, vested in the said Commissioners, parties hereto, or other such Commissioners as aforesaid, their successors for the time being, none of the said books to be used or employed in such combined moral and literary education, except under the sanction of the said Commissioners for the time being, nor in "such separate religious instruction but with the approbation of such of the said Commissioners for the time being as shall be of the same religious persuasion with the children for whose use they are intended;"]

Parts within [ ] altered and new matter added in subsequent Forms.

Passage within " " wholly omitted in subsequent Forms.

E. and further, that all the master and masters, teacher and teachers of said schools for the time being shall not only in the first instance[a] before they shall be so appointed, have received previous instruction in "a model school" in Dublin,[b] sanctioned by the said Commissioners, and shall also have obtained from the said Commissioners for the time being testimonials of good conduct and general fitness, but shall be liable to be fined and fineable, removed and removable, or suspended from time to time, and at all times when and as often as such Commissioners as aforesaid for the time being shall deem it necessary, in such way and manner as they shall deem expedient or see fit;[c]

[a] "If the said Commissioners shall see fit," inserted in 1838. Words within " " changed to "the general normal establishment," in 1838.
[b] "Or at one of the District model schools of the said Commissioners," added in 1838.
[c] "Upon good and sufficient cause being shown," added in 1838.

F. and further, that the said Commissioners or their "Inspectors" for the time being, or any of them, shall from time to time, and at all times hereafter, be allowed and permitted on demand to visit and examine the said schools whenever and so often as they or any of them shall think fit or deem it necessary.

"Their Officers and Superintendents," in 1838.

H. Powers to appoint new trustees same as last.

K. Covenant for further assurance same as last, except that grantor covenants together with trustees.

1836.

The lease of this year agrees with that of 1835.

1837.

The lease of this year is virtually the same as that of 1836.

FORM IV., 1838.

Form IV.—1838.

Parties—Trustees, first part; Commissioners, second part.

A. Recites as in Form I.

Witnessing part as in Form II.

Declaration of Trust as to piece of ground and school.

Instead of "for five or six hours on five days in each week," in Form III., 1835.
" " new insertion.

B. Upon the trusts—that is to say,—That each and every school to be kept and established on the premises by said recited lease demised, shall be kept open "for a competent number of hours in each day," at the discretion of the "said Commissioners, or of" the Commissioners for the time being, and shall, during said days, be used for moral and literary education only,

Part within " " changed from corresponding provision in preceding Form. The words "other persons" introduced for first time. [And facility] omitted in 1846. Part within [ ] new provision, now first introduced.

C. and that one day in each week, or part of a day, independently of Sunday, shall be set apart for the religious instruction of the children, "on which day such pastors or other persons as may be approved of by the parents or guardians of the children shall have access to them for that purpose, whether those pastors or persons shall have signed the original application or not;" and also, that "convenient opportunity [and facility] be afforded to them for the same purpose" on other days of the week. [Provided always and it is the true intent and meaning of these presents, that where any course of religious instruction is to be pursued in any such school as aforesaid, during school-hours, to which the parents of any of the children attending such school shall object, an arrangement shall be made for having such instruction given to those who are to receive it, at a stated time, "and" in a separate place, so as that no children whose parents or guardians object to their being so, be present at it,]

"Or" in 1844.

Passage within [ ] differently worded in preceding Form.

D. and further, that [the titles of all books which are intended to be used in the ordinary school business, shall be reported to the said Commissioners, or to the Commissioners for the time being, and that no other books shall be used in such instruction save and except those which are so reported and sanctioned by such Commissioners as aforesaid, and further, that if any other books than the Holy Scriptures, or the standard books of the Church to which the children using them belong, be employed in communicating religious instruction, then, and in such case, the title of each such book or books shall be made known to the said Commissioners,]

Words within " " new.

E. and further, that all the master and masters, teacher and teachers of said schools for the time being, shall not only in the first instance, "if the said Commissioners shall see fit," before he, she, or they shall be so appointed, have received previous instruction in the general normal establishment in Dublin, "or at one of the district model schools of the said Commissioners," and shall also have obtained from the said Commissioners for the time being, if they shall so think fit, testimonials of good conduct and general fitness, but shall be liable to be fined and be fineable, removed and removable, or suspended from time to time, and at all times, when and as often as such Commissioners as aforesaid for the time being shall deem it necessary, in such way and manner as they shall deem expedient, or see fit, [upon good and sufficient cause being shown;]

Words within " " new.

Part within [ ] now added.

"Inspectors" in 1835.

F. and that the said Commissioners, "or their officers or superintendents" for the time being, or any of them, shall from time to time, and at all times hereafter, be allowed and permitted on demand to visit and examine the said school whenever and so often as they or any of them shall think fit or deem it necessary; [and further, that clergymen of all denominations, and other persons shall also have access to the said school, to observe how the said school may be conducted, in the manner and under the restrictions as particularly set forth in the rules and regulations of the said Commissioners, under the head and title of "Inspection of Schools," in said rules and regulations mentioned;

Part within [ ] new provision; somewhat altered in Form V., 1842.

G. and that no political meetings of any kind whatever be summoned, held, or convened, or permitted so to be, in any such school-house, or in any part or room thereof, or on the premises by said recited lease demised or intended so to be—and that no political petition or document of any kind whatsoever, be brought or carried into any such school-house or premises, or any part thereof, for signature or otherwise; and that such school-house and premises, or any part thereof, shall not be converted into a place of public worship;

and that from and after the day of the date of these presents, every such school-house shall be kept in full and sufficient repair by local contribution solely,

and that local contributions shall also be raised towards payment of the teacher's salary of this school, after the manner set forth in the rules and regulations of the said Commissioners, "under the head and title of 'As to the building and support of schools,' in said rules and regulations mentioned."]

Words within " " omitted in 1842.

H. Powers of appointing new trustees same as in Form II., 1833.

Part within [ ] new provision, not in preceding forms.

I. [And the said the aforesaid trustees, do hereby for themselves, severally and respectively, and for their several and respective executors, administrators, and assigns covenant, promise, grant, and agree to and with the said Commissioners, parties hereto, and to and with their successors for the time being as aforesaid, in manner following, that is to say, that they the said trustees as aforesaid, shall and will, from time to time, and at all times hereafter, well, truly, diligently, and faithfully do, execute, and perform all and every the uses, trusts, regulations, and conditions, and for the purposes hereinbefore mentioned, expressed, and declared, and in them as such trustees reposed. And in case it shall happen that at any time hereafter default shall be made in the due execution and performance of all or any of the said trusts, regulations, uses, conditions, and purposes hereinbefore mentioned and expressed, that then, and in all, or any of such case or cases, they, the said trustees as aforesaid, jointly and severally, and their several and respective executors, administrators, and assigns, shall and will, well and truly pay, or cause to be paid back unto the said Commissioners, or their successors, for the time being as aforesaid, the sum of £ sterling, so paid by the said Commissioners, parties hereto as aforesaid, or otherwise satisfy them as to the said sum of £ in whatever way shall be required by them the said Commissioners, or their successors for the time being; anything herein contained to the contrary thereof in anywise notwithstanding.]

K. Covenant for further assurance same as in Form II., 1833.

1839.

Form IV., 1838.

Lease the same as that of 1838, with one exception, that in this lease, in the proviso for religious instruction, where the word "parents" first occurs, the words "or guardians" are inserted after it.

March, 1839. Modification.

1840.

Lease the same as that of 1839.

1841.

1841. Modification.

Lease the same as that of 1840, except that, in the arrangements for giving religious instruction, after the words "shall have access to them," the words "in the school-room" are inserted; and instead of "clergymen of all denominations," we have "the public of all denominations, whether clergy or laity."

Form V.—1842.

Form V., 1842.

Parties—Trustees, first part; Commissioners, second part.

A. Recitals as in Form I. 1832.

Witnessing part as in Form II. 1833.

B. Upon the trusts, that is to say—That each and every school to be kept and established on the said lot of ground and premises shall be kept open for a competent number of hours in each day, at the discretion of the said Commissioners, [or of the Commissioners for the time being,] and shall, during said "days," be used for moral and literary education only,

Declaration of Trust as to piece of ground and school.

Words within [ ] omitted in 1846. "Hours" in 1845.

C. and that one day in each week, or part of a day in the week, independently of Sunday, shall be set apart for the religious instruction of the children, on which day "or part of a day" such pastors or other persons as may be approved of by the parents or guardians of the children respectively, shall have access to them in the school-room for that purpose, whether those pastors or persons shall have signed the original application or not; and also, that convenient opportunity be afforded to them for the same purpose, on other days of the week. Provided always, and it is the true intent and meaning of these presents, that where any course of religious instruction is to be pursued in any such school as aforesaid, during school-hours, to which the parents or guardians of any of the children attending such school shall object, an arrangement shall be made for having such instruction given to those who are to receive it, at a stated time, "and" in a separate place, so as that no children whose parents or guardians object to their being so, be present at it;

Words within " " newly introduced.

"Or" in 1844.

D. and further, [that the titles of all books which are intended to be used in the ordinary school business, shall be reported to the said Commissioners, or to the Commissioners for the time being,] and that no other books shall be used in such instruction save and except those which are so reported and sanctioned by such Commissioners as aforesaid. And further, that if any other books than the Holy Scriptures, or the standard books of the Church to which the children using them belong, be employed in communicating religious instruction, then, and in such case, the title of each such book or books shall be made known to the said Commissioners.

Passage within [ ] worded differently in 1848.

E. Control over teachers same as in Form IV.

F. and that the said Commissioners, or their officers and superintendents for the time being, or any of them, shall from time to time, and at all times hereafter, be allowed and permitted on demand, to visit and examine the said schools, whenever and so often as they or any of them shall think fit or deem it necessary. And further, that the public of all denominations, whether clergy or laity, shall also have access to the said school, to observe how the said school may be conducted, in the manner and under the restrictions particularly set forth in the rules and regulations of the said Commissioners, under the head and title of "Inspection of Schools,"

G. and that no political meetings of any kind whatever be summoned, held, or convened, or permitted so to be, in any such school-house, or in any part or room thereof, or on the said lot of ground—and that no political petition or document of any kind whatsoever, be brought or carried into any such school-house or premises, or any part thereof, for signature or otherwise; and that such school-house and premises, or any part thereof, shall not be converted into a place of public worship;

and that from and after the day of the date of these presents, every such school-house shall be kept in full and sufficient repair, by local contribution solely,

and that local contributions shall also be raised towards payment of the teacher's salary of this school, after the manner set forth in the rules and regulations of the said Commissioners.

H. Appointment of new trustees same as in Form II., 1833.

I. [and the said the aforesaid Trustees, do hereby for themselves, severally and respectively, and for their several and respective executors, administrators, and assigns, covenant, promise, grant, and agree to and with the said Commissioners, parties hereto, and to and with their successors for the time being as aforesaid, in manner following, that is to say, that they the said Trustees as aforesaid], shall and will, from time to time, and at all times hereafter, well, truly, diligently, and faithfully do, execute, and perform all and every the uses, trusts, regulations, and conditions, and for the purposes hereinbefore mentioned, expressed and declared, and in them as such trustees reposed. And in case it shall happen, that at any time hereafter default shall be made in the due execution and performance of all or any of the said trusts, regulations, uses, conditions, and purposes hereinbefore mentioned and expressed, that then, and in all or any of such case or cases, they the said trustees [as aforesaid, jointly and severally and their several and respective executors, administrators, and assigns, shall and will well and truly pay, or cause to be paid back unto the said Commissioners, or their successors for the time being, as aforesaid, the sum of sterling, so paid by the said Commissioners, parties hereto, as aforesaid, or otherwise satisfy them as to the said sum of in whatever way shall be required by them, the said Commissioners, or their successors for the time being, anything herein contained to the contrary thereof in anywise notwithstanding].

Passage within [ ] differently worded in Form XI., 1862.

Instead of the covenant within [ ], in Form XI., 1862, trustees covenant to repay to Board of Works sum contributed towards the erection of the school.

K. Covenant for further assurance same as in Form II., 1833.

Form V., 1842.

1843.

Lease virtually the same as 1842.

June, 1844. Modification.

1844.

Lease of this year has in the proviso for religious instruction, and in that part making an arrangement to meet any objection on the part of the parents or guardians of any of the children to the course of religious instruction pursued, the following words :—"at a stated time, *or* in a separate place." No difference of any consequence after.

"*Or*" for "*And*." See clause C of Form V., 1842.

July, 1845. Modification.

1845.

Lease the same as that of 1844, except that in the regulation for the time to be devoted to moral and literary education, this lease has during said "*hours*." No difference afterwards of any consequence.

"During said *hours*," instead of "during said *days*." See clause B of Form V., 1842.

THE Commissioners of National Education having, in August, 1845, obtained a charter of incorporation, resolved, in November, 1845, to have all school sites vested in themselves, in their corporate capacity, and not to make any grants on the old plan.

Notwithstanding the above resolution, it is stated that for a few years afterwards, there were leases made to trustees, and the impression is, that they were so, in conformity with Board's orders, made previously to such resolution.

Such leases were made according to the Form V., given above, under 1842, setting out the same trusts and provisions, and embodying the two modifications just given under 1844 and 1845.

Leases to Commissioners in their Corporate Capacity.

Form VI., April, 1846.

Form VI.—1846.—A.*

This form of lease is altogether new.

This Indenture, made the day of 18 , in pursuance of the Act 8 and 9 Victoria, cap. 124, intituled "An Act to facilitate the granting of certain Leases," between of the one part, and the Commissioners of National Education in Ireland of the other part.

Passage within [ ] slightly varied in next succeeding form.

A. [Whereas the said Commissioners, by Her Majesty's Royal Letters Patent, bearing date the 26th day of August, 1845, have been incorporated for the purpose of administering the funds placed at the disposal of His Excellency the Lord Lieutenant of Ireland, for the education of the poor of Ireland, on the principle of avoiding all interference whatsoever with conscientious scruples on the score of religion, and accordingly, that the schools under their control shall be open alike to children of all religious denominations, that no child shall be required to be present at any religious instruction or exercise of which his parents or guardians may disapprove, and that opportunities shall be afforded to all children to receive separately, at particular periods to be specified in the rules of each school, such religious instruction as their parents or guardians may provide for them].

And whereas the said , desirous that a National School, to be called National School, should be established on the lot of ground hereinafter demised.

Now this indenture witnesseth that the said , in order to promote the said purpose, demise unto the said Commissioners of National Education in Ireland all that lot of ground described in the map thereof on the margin of these presents delineated, situated in the townland of , parish of , barony of , and county of , containing , and bounded , from the day of , for the term of thence ensuing,

yielding therefor during said term the rent of one penny on the feast of St. Michael in every year, if same shall be demanded.

K. And the said (*grantor*) doth covenant with the said Commissioners of National Education in Ireland for quiet enjoyment.

In witness whereof the said hereunto affixed hand and seal and the said Commissioners of National Education in Ireland have caused to be affixed hereto their corporate seal.

&c., &c.

Form VII., 1846.

Form VII.—1846.—B.*

[a] As in Form A, just given.

This Indenture, &c.,[a] . . . . . Commissioners of National Education in Ireland of the other part.

Passage within [ ] slightly varied from corresponding recital in form just preceding.

A. [Whereas the said Commissioners, by Her Majesty's Royal Charter, bearing date the 26th day of August, 1845, have been incorporated, and are by said Charter empowered to take and hold lands as therein mentioned.

And whereas the education of the poor of Ireland has been heretofore, and is now carried on by the said Commissioners, on the principle of avoiding all interference whatsoever with conscientious scruples on the score of religion, and accordingly the schools under their control are open alike to children of all religious denominations, and no child is required to be present at any religious instruction or exercise of which his parents or guardians may disapprove, and opportunities are afforded to all children to receive separately, at particular periods to be specified in the rules of each school, such religious instruction as their parents or guardians may provide for them.]

[b] The rest as in Form A, just given.

And whereas the said, &c.[b] . . . . .

1847.

Lease form, the same as that of 1846.

In 1848 two forms of lease to Commissioners were agreed on, one form marked A, for the case of one patron—the other marked B, for the case of two patrons.

* It is stated by the Secretaries of the National Board that the two forms of lease A and B, given above under the date of 1846 were used indiscriminately.

It is sufficient to quote from one of them, viz., A—that for the case of one patron :—

Form VIII.—1848.

FORM VIII., 1848.

Parties—Grantor and patron, first part; Commissioners of National Education, second part.

A. Whereas the said Commissioners, by Her Majesty's Royal Charter, bearing date the 26th day of August, in the year of our Lord one thousand eight hundred and forty-five, have been incorporated, and are by the said Charter empowered to take and hold lands as therein mentioned. This is quite a new form of lease.

And whereas the education of the poor of Ireland has been heretofore, and is now carried on by the said Commissioners on the principle of avoiding all interference whatsoever with conscientious scruples on the score of religion, and accordingly, the schools under their control are open alike to children of all religious denominations; and no child is required to be present at any religious instruction or exercise of which his parents or guardians may disapprove, and opportunities are afforded to all children to receive separately, at particular periods to be specified in the rules of each school, such religious instruction as their parents or guardians approve of.

[And whereas the management of such schools belongs to the respective local patrons thereof, who have the power of "appointing and of removing the teachers, subject to the approbation of the said Commissioners".] . . . And whereas, the said (*grantor*) being desirous that a National school, to be called National School, should be established, on the principles aforesaid, on the lot of ground hereinafter demised; and the said (*grantor*) has been nominated as patron of the said intended National school, and has been approved of by the said Commissioners.

[ ] new matter, now first introduced.

Provisions within " " altered in 1852.

Witnesseth that the said (*grantor*), in order to promote the said object, doth grant and demise unto the said Commissioners all that lot of ground, &c. To hold to the said Commissioners from the date of these presents for three lives, and the survivor of them, or for the term of thirty-one years, whichever shall last the longer, yielding one penny every year, if demanded.

And it is hereby expressed and declared, and it is the true intent and meaning of these presents, and of the several and respective parties hereto,

B. that each and every school to be kept and established on the premises hereby demised, shall be kept open for a competent number of hours in each day, at the discretion of the said Commissioners, and shall, during said hours, be used for moral and literary education only;

C. and that one day in each week, or part of a day in the week, independently of Sunday, shall be set apart for the religious instruction of the children, on which day, or part of a day, such pastors or other persons as may be approved of by the parents or guardians of the children respectively shall have access to them in the school-room for that purpose, whether those pastors or persons shall have signed the original application or not. And also, that convenient opportunity be afforded to them for the same purpose on other days of the week, and that where any course of religious instruction is to be pursued in any such school as aforesaid, during school-hours, to which the parents or guardians of any of the children attending such school shall object, an arrangement shall be made for having such instruction given to those who are to receive it at a stated time, or in a separate place, so that no children whose parents or guardians object to their being so, "be compelled to receive or to" be present at it.

" " new insertion.

D. [And further, that no books shall be used in the ordinary school business, save and except those which shall be reported to and sanctioned by the said Commissioners]. And further, that if any other books than the Holy Scriptures, or the standard books of the Church to which the children using them belong be employed in communicating religious instruction, then, and in such case, the title of each such book or books shall be made known to the said Commissioners.

[ ] words slightly changed from Form V., 1842.

E. Control over teachers same as in Form IV., 1838.

F. And further, that the public of all denominations, whether clergy or laity, shall have access to each and every such school, in the manner and under the restrictions particularly set forth in the rules and regulations of the said Commissioners, under the head and title of "Inspection of Schools," to observe how such school may be conducted.

G. And that no meetings of any kind whatsoever be summoned, held, or convened, or permitted so to be in any such school-house, or in any part or room thereof, or on the premises hereby conveyed or intended so to be, save such as may relate exclusively to the business thereof; and that no petition or document of any kind whatsoever save such as may relate exclusively to the business of the said school, be brought or carried into any such school-house or premises, or any part thereof for signature or otherwise; and that such school-house and premises, or any part thereof, shall not be converted into a place of public worship, or used for any purpose save that of such school,

and that from and after the day of the date of these presents, every such school-house shall be kept in full and sufficient repair by "the said Commissioners,"

" " instead of "local contribution solely" as hitherto, in leases to Trustees. See Form V., 1842.

and that local contributions shall be raised towards payment of the teacher's salary of such school, after the manner set forth in the rules and regulations of the said Commissioners.

H. Provided always, and it is hereby further expressed and declared to be the true intent and meaning of these presents, and of the several parties hereto, that in case the said (*patron*) [or any patron hereafter to be appointed, shall die or be desirous of being discharged from the management of said school, or shall go or reside out of Ireland, or shall neglect or refuse, or become incapable to act as such patron, it shall and may be lawful to and for the surviving or continuing patron or patrons to nominate and appoint a new patron or patrons in the room of any such patron or patrons, such new patron or patrons to be first approved of by the said Commissioners, and in case such surviving or continuing patron or patrons shall decline, neglect, or refuse to exercise the powers of appointment

Words within [ ] instead of similar provisions concerning Trustees in former leases.

FORM VIII., 1848.

hereby given as aforesaid, within six calendar months after all or any of the events hereinbefore mentioned shall arise, happen, or take place, that then, and in all or any of such case or cases, it shall and may be lawful to and for the said Commissioners to nominate and appoint such new patron or patrons in the room of any such patron or patrons as aforesaid, for the management of said school.]

K. For further assurance same as in Form II.

And the said (*grantor*) doth covenant with the said Commissioners of National Education in Ireland, that the said Commissioners, paying the said rent, if demanded, shall and may peaceably and quietly possess and enjoy the said premises for the said term without any disturbance from the said (*grantor*) his heirs, executors, administrators, and assigns.

FORM IX., 1852.

Form IX.—1852.

Parties—Grantors, first part; Commissioners, second.

A. Whereas, the said Commissioners, by Her Majesty's Royal Charter, bearing date the 26th day of August, in the year of our Lord one thousand eight hundred and forty-five, have been incorporated, and are by said charter empowered to take and hold lands as therein mentioned.

Passage within [ ] differently worded, and new matter introduced in Form X., 1856.

And whereas, [the education of the poor of Ireland has been heretofore, and is now carried on by the said Commissioners, on the principle of avoiding all interference whatsoever with conscientious scruples on the score of religion, and accordingly, the schools under their control are open alike to children of all religious denominations, and no child is required to be present at any religious instruction or exercise of which his parents or guardians may disapprove, and opportunities are afforded to all children to receive separately at particular periods, to be specified in the rules of each school, such religious instruction as their parents or guardians approve of.]

"Appointing and of removing the teachers, subject to the approbation of the said Commissioners," in Form VIII., 1848.

And whereas, the management of such schools belongs to the respective local patrons thereof, who have the power of "appointing the teachers, subject to the approbation of the said Commissioners, and of removing them of their own authority" . . .

Recites desire of grantors to establish National school, and nomination and approval of patrons as in Form VIII., 1848.

Witnessing part, &c., same as in Form VIII., 1848, except that the term is for sixty years.

Instead of all the provisions included here within [ ], there is substituted in Form X., 1856, a short general declaration that the Rules and Regulations of the Commissioners shall be observed.

B. [Provision as to times for moral and literary education, same as in Form VIII., 1848.

C. Provisions as to religious instruction same as in Form VIII., 1848.

D. Control over books same as in Form VIII., 1848.

E. Control over teachers same as in Form IV., 1838.

F. Visiting powers same as in Form VIII., 1848.

G. And that no meetings of any kind whatever be summoned, held, or convened, or permitted so to be in any such school-house, or in any part or room thereof, or on the premises hereby conveyed or intended so to be, save such as may relate exclusively to the business thereof; and that no petition or document of any kind whatsoever, save such as may relate exclusively to the business of the said school, be brought or carried into any such school-house or premises, or any part thereof, for signature or otherwise; and that such school-house and premises, or any part thereof, shall not be "converted into a place of public worship, or used for any purpose save that of such school;"]

For important modification of the provision contained within " " see Schedule of Rules attached to Form X., § V., No. 2.

and that from and after the day of the date of these presents, every such school-house shall be kept in "full and sufficient" repair by the said Commissioners,

"Full and sufficient" omitted in Form X., 1856.

This provision, "that local contributions shall be raised towards payment of the teacher's salary," disappears from Form X., 1856.

[and that local contributions shall be raised towards payment of the teacher's salary of such school, after the manner set forth in the rules and regulations of the said Commissioners].

H. Appointment of new patron same as in Form VIII., 1848.

K. For further assurance same as in Form II., 1833, and for quiet enjoyment same as in Form VIII., 1848.

FORM X., 1856.

Form X.—1856.

Parties—Grantor, first part; Patrons, second part; Commissioners, third part.

A. Whereas the said Commissioners, by Her Majesty's Royal Charter, bearing date the 26th day of August, in the year of our Lord one thousand eight hundred and forty-five, have been incorporated, and are by said charter empowered to take and hold lands as therein mentioned.

New statement now first appearing.

And whereas [the object of the system of National education is to afford *combined* literary and moral, and *separate* religious instruction to children of all persuasions, as far as possible, in the same school,] upon the "fundamental" principle [that no attempt shall be made to interfere with the peculiar religious tenets of any description of Christian pupils.]

"Fundamental," new insertion. Passage within [ ] differently worded from corresponding passage in Form IX., 1852.

And whereas the management of such schools belongs to the respective local patrons thereof, who have the power of appointing the teachers, subject to the approbation of the said Commissioners, and of removing them of their own authority. . . .

Recites desire of grantor and nomination of patrons as in Form VIII., 1848.

Witnessing part same as in Form IX., 1852.

Passage within [ ] is a general Declaration of more extensive purview, instead of the specific provisions set out in preceding forms. See B, C, D, E, F, G, Form VIII., 1848.

The provision, that "local contributions shall be raised towards

G. And it is hereby declared [that every school to be kept on the premises hereby demised shall be subject to the rules and regulations of the said Commissioners which are applicable to schools vested in them, and the principal of which rules are specified in the schedule indorsed hereon, and signed by the secretaries of the said Commissioners, and to such further and other rules and regulations of the said Commissioners as may from time to time be framed by them, in strict accordance with the fundamental principle above mentioned;]

and it is hereby agreed, that from and after the day of the date of these presents, the said school-house shall be kept in repair by the said Commissioners.

H. Provided always, that in case any of them the said (*patrons*), or any patron hereafter to be appointed, shall die or be desirous of being discharged from the management of said school, or shall reside out of Ireland, or shall neglect or refuse, or become incapable to act as such patron, it shall be lawful for the surviving or continuing patron or patrons to appoint a new patron or patrons in the room of any such patron or patrons, such new patron or patrons to be first approved of by the said Commissioners; "and in case the office of patron shall from any cause whatsoever be vacant for the space of six calendar months," it shall be lawful for the said Commissioners to appoint one or more persons to be the local patron or patrons of the said school [and also that in case the said (*patrons*), or any person or persons hereafter appointed as patron or patrons, shall neglect or refuse to maintain a school on the said premises in conformity with the rules and regulations of the said Commissioners, it shall be lawful for the said Commissioners to remove such patron or patrons and to appoint one or more person or persons as patron or patrons in his or their stead.]

K. For further assurance same as in Form II., 1833, and for quiet enjoyment same as in Form VIII., 1848.

FORM X., 1856.

payment of the teacher's salary which had been inserted in all previous deeds, is now omitted. Words within " " omitted from Form XI., 1862.

" " Altered from previous forms.

[ ] new.

SCHEDULE OF RULES REFERRED TO IN THE DEED.

PART I.

§ I.—3. The Commissioners by themselves, or their officers, are to be allowed to visit and examine the school whenever they think fit.

§ II.—1. The local government of the National schools is vested in the local patrons thereof.

§ IV.—1. Opportunities are to be afforded (as hereinafter provided for) to the children of all National schools for receiving such religious instruction as their parents or guardians approve of.

2. Religious instruction must be so arranged that each school shall be open to children of all communions; that due regard be had to parental right and authority; that accordingly no child be *compelled* to receive, or to be present at any religious instruction of which his parents or guardians disapprove; and that the time for giving it be so fixed that no child shall be thereby, in effect, excluded, directly or indirectly, from the other advantages which the school affords.

3. A public notification of the times for religious instruction must be inserted in large letters in the "Time Table" supplied by the Commissioners, who recommend that, as far as may be practicable, the general nature of such religious instruction be also stated therein.

4. The "Time Table" must be kept constantly hung up in a conspicuous place in the school-room.

5. The teacher must, immediately before the commencement of religious instruction, announce distinctly to the pupils that the hour for religious instruction has arrived, and must, at the same time, put and keep up during the period allotted to such religious instruction and within the view of all the pupils, a notification thereof, containing the words "Religious Instruction," printed in large characters, on a form to be supplied by the Commissioners.

6. When the secular instruction precedes the religious instruction, in any National school, there shall be a sufficient interval between the announcement and the commencement of the religious instruction; and whether the religious or the secular instruction shall have priority in any National school, the books used for the instruction first in order shall be carefully laid aside, at its termination, in the press or other place appropriated for keeping the school-books.

7. No secular instruction, whether literary or industrial, shall be carried on in the same apartment, during school hours,* simultaneously with religious instruction.

Note.—*The term "SCHOOL HOURS" is always to be understood to mean the entire time, in each day, from the opening of the school to the closing of the same for the dismissal of the pupils.

8. In schools towards the building of which "the Commissioners" have contributed, and which are VESTED in trustees, for the purposes of National education, or which are vested in the Commissioners in their corporate capacity, such pastors or other persons as shall be approved of by the parents or guardians of the children respectively, shall have access to them *in the school-room*, for the purpose of giving them religious instruction there, at convenient times to be appointed for that purpose.

"The State," in Rule 1865.

The following explanation was added to this rule in 1865:—"That is, times so appointed as not to interfere unduly with the other arrangements of the school."

10. The reading of the Scriptures, either in the Protestant Authorized or Douay Version,—the teaching of Catechisms,—public prayer,—and all other religious exercises, come within the rules as to religious instruction.

11. The patrons and managers of *all* National schools have the right to permit the Holy Scriptures (either in the Authorized or Douay Version) to be read, at the time or times set apart for religious instruction; and in all *vested schools* the parents or guardians of the children have the right to require the patrons and manager to afford opportunities for the reading of the Holy Scriptures, in the school-room, under proper persons approved of by the parents or guardians for that purpose.

12. Religious instruction, prayer, or other religious exercises, may take place, at any time, before and after the ordinary school business (during which all children, of whatever denomination they may be are required to attend); but must not take place "*more than once*, at *an intermediate* time," between the commencement and the close of the ordinary school business. The Commissioners, however, will not sanction any arrangement for religious instruction, prayer, or other religious exercises, *at an intermediate time* in cases where it shall appear to them that such arrangement will interfere with the usefulness of the school, by preventing children of any religious denomination from availing themselves of its advantages, or by subjecting those in attendance to any practical inconvenience.

"*At more than one intermediate time*" in Part I., § IV., No. 12, of Schedule of Rules attached to Form XIII., 1865.

13. The secular school business must not be interrupted, or suspended, by any spiritual exercise whatsoever.

Note.—The Commissioners earnestly recommend that religious instruction shall take place either immediately before the commencement, or immediately after the close of the ordinary school business; and they further recommend that, whenever the patron or manager thinks fit to have religious instruction at an intermediate time, a separate apartment shall (when practicable) be provided for the reception of those children whose parents or guardians may disapprove of their being present thereat.

14. Patrons, managers, and teachers are not required to *exclude* any children from any religious instruction given in the school; but all children are to have full power to absent themselves, or to withdraw from it. If any parents or guardians object to the religious instruction given in a National school, it devolves upon them to adopt measures to prevent their children from being present thereat.

15. Patrons, managers, and teachers, are not to use any means, directly or indirectly, to induce children to attend any religious instruction, contrary to the wishes of their parents or guardians. The Commissioners will regard such interference as opposed to the whole spirit of the system of National education.

16. If any child of a religious persuasion different from that of the teacher of any National school, attend during the time or times set apart for religious instruction given by such teacher, it shall be his or her duty on the *first attendance* of every such child, during the time for such religious instruction given by such teacher in such school *forthwith* to notify the same to the parent or guardian of such child, on and by a form to be furnished by the Commissioners.

17. The teachers are required to keep a record of the names of the children to whose parents they have sent the printed form of notification.

18. The registry kept in each school, according to the form furnished by the Commissioners, must show the religious denomination of each child on the school roll.

FORM X., 1856.

19. A sufficient number of hours, to be approved of in each case by the Commissioners, is to be appropriated to the ordinary school business, during which all children, of whatever denomination they may be, are required to attend.

20. In all National schools (except those in which industrial instruction is the *chief* object) there must be literary instruction for at least *four* hours upon five days in the week.

21. In schools in which industrial instruction is the *chief* object, the Commissioners require that not less than *two* hours daily shall be devoted to literary instruction.

This is § III. in Schedule of Rules attached to Form XIII., 1865. The corresponding provision in Form IX., 1852, runs thus:—"Such school-house and premises, or any part thereof, shall not be converted into a place of public worship, or used for any purpose save that of such school."

§ V.—2. No National school-house shall be employed, at any time, even temporarily, as the *stated* place of DIVINE WORSHIP of any religious community; or for the celebration or administration of the Sacraments or Rites of any Church.

5. Vested school-houses must be used *exclusively for the education* of the "children" attending them; except on Sundays, when they may be employed for Sunday schools, with the sanction of the patrons or managers, subject, in cases leading to contention or abuse, to the interference of the Commissioners.

6. No political meetings shall be held in National school-houses, whether vested or non-vested; nor shall any political business *whatsoever* be transacted therein.

"Pupils" in § III., No. 5, Schedule of Rules attached to Form XIII., 1865.

§ VI.—1. The use of the books published by the Commissioners is not compulsory; but the titles of all other books which the patrons or managers of schools intend for the ordinary school business, are to be notified to the Commissioners; and none are to be used to which they object. The approval of any such books is to extend only to the particular edition which has been submitted to the Commissioners.

This is § V. in Schedule of Rules attached to Form XIII., 1865. Words within " " are an addition to the provisions on this subject in former leases.

2. If any other books than the Holy Scriptures, or the *standard* books of the Church to which the children using them belong, be employed in communicating religious instruction, the title of each is to be made known to the Commissioners "whenever they deem it necessary."

3. The Commissioners do not insist on the "Scripture Lessons" or book of "Sacred Poetry" being read in any of the National schools, nor do they allow them to be read as part of the ordinary school business (during which all children, of whatever denomination they may be, are required to attend) in any school attended by children whose parents or guardians object to their being read by their children.

In such cases the Commissioners prohibit the use of these books, except at times set apart for the purpose, either before or after such ordinary school business, and under the following conditions:—

FIRST—That no child, whose parent or guardian objects, shall be required, directly or indirectly, to be present at such reading.

SECOND—That in order that any children, whose parents or guardians object, may be at liberty to absent themselves, or to withdraw, at the time set apart for the reading of the books above specified, public notification of the time set apart for such reading shall be inserted in large letters in the time table of the school—that there shall be a sufficient interval between the conclusion of such ordinary school business and the commencement of such reading; and that the teacher shall, immediately before its commencement, announce distinctly to the pupils that any child whose parent or guardian so desires may then retire.

THIRD—That in every such case there shall be, exclusive of the time set apart for such reading, sufficient time devoted each day to the ordinary school business, in order that those children who do not join in the reading of "the" books may enjoy ample means of literary instruction in the school-room.

"These" in Schedule 1865.

4. When using the Scripture Lessons, the teachers are prohibited, except at the times set apart for religious instruction, from putting to the children any other questions than those appended to the end of each lesson.

5. The Commissioners require that the principles of the following lesson, or of a lesson of a similar import (to be approved of by the Commissioners), shall be strictly inculcated, during the hours of united instruction, in all schools received into connexion with the Board, and that a copy of the lesson itself be hung up in each school.

"V. 18" in Schedule Form XIII., 1865.

Christians should endeavour, as the Apostle Paul commands them, to "live peaceably with all men" (Rom. ch. xii. "v. 17"), even with those of a different religious persuasion.

Our Saviour, Christ, commanded his disciples to "love one another." He taught them to love even their enemies, to bless those that cursed them, and to pray for those who persecuted them. He himself prayed for his Murderers.

Words within [ ] omitted in 1865.

Many men hold erroneous doctrines, but we ought not to hate or persecute them. We ought [to seek for the truth, and] to hold fast what we are convinced is the truth; but not to treat harshly those who are in error. Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his disciples to fight for him.

If any persons treat us unkindly, we must not do the same to them; for Christ and his apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others, not as they do to us, but as we would wish them to do to us.

Quarrelling with our neighbours and abusing them, is not the way to convince them that we are in the right and they in the wrong. It is more likely to convince them that we have not a Christian spirit. We ought, by behaving gently and kindly to every one, to show ourselves followers of Christ, who, "when he was reviled, reviled not again." (1 Pet. c. 2, v. 23.)

6. The use of the tablet furnished by the Commissioners, containing the Ten Commandments, is not compulsory.

7. The rules as to religious instruction do not apply to the matter contained in the common school books, in the Scripture Lessons, in the book of Sacred Poetry, or in any other book, the use of which the Commissioners may at any time sanction for the purpose of the united instruction.

§ VII.—1. The local patrons (or managers) of schools have the right of appointing the teachers, subject to the approval of the Board as to character and general qualifications; the local patrons (or managers) have also the power of removing the teachers of their own authority.

2. No clergyman, of any denomination, or (except in the case of convent schools) member of any religious order, can be recognised as the teacher of a National school.

4. Should the Commissioners consider any teacher in a vested school unfit for his office, or otherwise objectionable, they will require that he be dismissed and another provided. Teachers are also liable to be fined or suspended at all times when the Commissioners shall deem it necessary, on sufficient cause being shown.

§ VIII., Schedule attached to Form XIII., 1865.

§ IX.—1. The public generally must have free access to every National school (whether vested or non-vested) during the hours devoted to secular instruction,—not to take part in the ordinary business, or to interrupt it, but as visitors, to observe how it is conducted.

Words slightly changed in § VIII., No. 2. Schedule attached to Form XIII., 1865.

2. Every teacher of a National school is to receive courteously visitors of all denominations, to afford them free access to the school-room, and full liberty to examine the register, daily report book, and class rolls; to observe what books are in the hands of the children, or upon the desks, what tablets are hung up on the walls, and what is the method of teaching.

§ X.—1. When any school is received by the Commissioners into connexion with them, the inscription, "NATIONAL SCHOOL," shall be put up in plain and legible characters on the school-house or on such other place as may render it conspicuous to the public. When a school-house is built partly by aid from the Commissioners, a stone is to be introduced into the wall having that inscription cut upon it. The Commissioners will not, when granting aid *in future*, sanction the inscription of any title of a *denominational character*, or which may appear to them to indicate that the school is one belonging to any particular religious body. The Commissioners, however, do not object to the terms male, female, or infant; or to the proper local designation of the city, town, parish, street, village, or townland in which the school may be situated; or to the name of the founder being stated on the inscription.

Modified by the insertion of [except such as refer to the legitimate business of school management] in schedule attached to Form XIII., 1865.

3. No emblems or symbols of a *denominational* nature shall be exhibited in the school-room, during the hours of united instruction; nor will the Commissioners in future, grant aid to any school which exhibits on the exterior of the buildings any such emblems.

4. No emblems or symbols of a *political* nature shall at *any time* be exhibited in the school-room, or affixed to the *exterior* of the buildings; nor shall any placards whatsoever be affixed thereto.

6. The Commissioners require that a copy of Part I. of their rules on a form to be furnished by them, shall be suspended in every National school-room.

BUT the Commissioners by order of 8th April, 1862, again approved of leases to trustees, and since that time both forms of lease (to Commissioners and trustees) have been in use.

Leases to Trustees.

Form XI., 1862.
Compare Form V., 1842.

Form XI.—1862.

Leases to Trustees were now re-introduced.

Parties—Grantor, first part; Trustees, second part; Commissioners, third part.

A. Recites object of the system of National Education, as in Form X., 1856.

That (*grantor*) is desirous that a National school to be called National School should be established on the principles aforesaid, and a suitable school-house and premises for the same should be built on the lot of ground hereinafter described; and for that purpose that the said lot of ground should be demised to and vested in the said (*trustees*) who have been nominated as trustees of the said intended National school and premises, and have been approved of by the said Commissioners of National Education.

And whereas the sum required for the building and erecting the said intended school-house and the finishing and furnishing thereof amounts to the sum of £ .

And whereas application hath been made to the said Commissioners of National Education to approve of a grant in aid of the sum so required.

And whereas the sum of sterling has been raised, or is intended to be raised by voluntary contribution or local subscriptions towards defraying the expenses of the building, finishing and furnishing said intended school-house.

And whereas the said Commissioners of National Education have, in order to promote the establishment of the said school, by minute bearing date the day of in the year of our Lord approved of the sum of sterling to make up the estimated sum of sterling, being paid out of the funds voted by Parliament to the Commissioners of Public Works for the erection of National Schools in Ireland. . . . . .

Witnesseth that the said (*grantor*) in order to promote the said object, and in consideration of the said sum of £ , by the said Commissioners so approved to be paid as aforesaid, doth grant, &c. To hold the same for the term of ninety-nine years, yielding therefor the rent of one penny yearly if demanded.

G. And it is hereby declared that the said demise is so made upon trust that a National school in connexion with the said Commissioners of National Education shall at all times, during the term aforesaid, be maintained upon the said premises, and that every school to be kept on the premises hereby demised shall be subject to the rules and regulations of the said Commissioners of National Education applicable to schools vested in trustees, which rules are specified in the schedule indorsed hereon, signed by the secretaries of the said Commissioners of National Education, and by the parties hereto of the first and second parts respectively.

H. Provided that in case they, the said (*trustees*) or either of them, their or any of their heirs, executors, administrators, assigns, or any future trustee to be hereafter appointed by virtue of these presents, shall die or be desirous of being discharged from the trust hereby created, or shall go or reside out of Ireland "for a continuous period of twelve calendar months," or shall neglect or refuse "for three calendar months after demand made in writing by the said grantor, his heirs, executors, and assigns, or by the said Commissioners of National Education, or their successors, to carry out the trusts of these presents according to the true intent hereof," or become incapable to execute such trusts, it shall and may be lawful to and for the surviving or continuing trustee or trustees to nominate and appoint a new trustee or trustees in the room of any such trustee or trustees, every such new trustee or trustees to be first approved of by the said Commissioners of National Education, or their successors for the time being; and in case any such surviving or continuing trustee or trustees shall neglect or refuse to exercise the powers of appointment hereby given as aforesaid within six calendar months after all or any of the events hereinbefore mentioned shall take place, or in case the office of trustee shall, from any cause whatever, be wholly vacant for the space of twelve calendar months, that then, and in all or any of such cases, it shall and may be lawful to and for the said Commissioners of National Education or their successors for the time being to nominate and appoint such new trustee or trustees in the room of any such trustee or trustees as aforesaid, upon the like trusts as are hereinbefore mentioned, and that thereupon the said premises hereinbefore mentioned shall be conveyed and assigned so as that the same shall vest in such new trustee or trustees so to be nominated and approved as aforesaid, either jointly with any surviving or continuing trustee, or solely as the case may require upon the like trusts, and to and for and subject to the like uses, intents, regulations, conditions and purposes as are hereinbefore mentioned, expressed, and declared or referred to, of and concerning the same.

Words within " " New Matter, not in Form V.
Words within " " New Matter, not in Form V.

I. And the said (*trustees*) do hereby for themselves, their "heirs," executors, administrators and assigns, "jointly," and each of them doth for himself, his heirs, executors, administrators, and assigns, severally covenant with the said Commissioners of National Education and their successors for the time being as aforesaid in manner following, that is to say, that they the said trustees as aforesaid, and each of them, their and each of their executors, administrators, and assigns, shall and will from time to time, and at all times hereafter, well, truly, diligently, and faithfully do, execute, and perform all and every the uses, trusts, regulations, and conditions, and for the purposes hereinbefore mentioned, expressed, and declared, or referred to, and in them, as such trustees, reposed. And in case it shall happen that at any time hereafter default shall be made in the due execution and performance of all or any of the said trusts, regulations, uses, conditions, and purposes hereinbefore mentioned and expressed, that then, and in all or any of such case or cases they the said Trustees, [or one of them, their or one of their heirs, executors, administrators, or assigns, shall and will if required by the said Commissioners of National Education or their successors for the time being, well and truly pay or cause to be paid back unto the said Commissioners of Public Works, or their successors for the time being as

"Heirs" new.

The covenant within [ ] to repay to Board of Works sum contributed towards the erection of the school inserted, instead of Covenant in Form V., 1842.

FORM XI., 1862.

aforesaid, the said sum of sterling, so paid in aid of the erection of said National school as aforesaid.]

K. For further assurance same as in Form II.

Within [ ] now first introduced. Important provision, securing to Trustees power of Revocation of this Deed.

L. [Provided always, and it is hereby declared that it shall be lawful for the trustees or trustee for the time of these presents, with the approbation of the Commissioners of National Education in Ireland for the time being, testified by deed under their common seal and with the consent in writing of the said (*grantor*) or other the person or persons for the time being entitled beneficially to the said premises hereby demised, in reversion, expectant upon the term hereby granted, by any deed or deeds executed by the said trustees or trustee in the presence of and attested by two or more witnesses, to revoke all or any of the trusts and purposes hereinbefore declared concerning the premises hereby demised.

And that thereupon it shall be lawful for the trustee or trustees for the time being of these presents with the consent in writing of the said (*grantor*) or other the person or persons for the time being, entitled beneficially to the said premises hereby demised in reversion, expectant upon the term hereby granted, by any deed or deeds attested as aforesaid to declare such new or other trusts concerning the same, as to the said trustee or trustees shall seem meet.]

1863.

Lease the same as that in 1862.

1864.

The same as that in 1863.

FORM XII., 1865.
Lease to Trustees.

Form XII.—1865.

Parties—Grantors, first part; Trustees for the purposes hereinafter mentioned, of the second part; Commissioners of the third part.

A. Recites as in Form XI., 1862.

Witnessing part, &c., same as in Form XI., 1862.

G. And it is hereby declared that the said demise is so made upon trust that a National school in connexion with the said Commissioners of National Education shall at all times, during the term aforesaid, be maintained upon the said premises, and that every school to be kept on the premises hereby demised shall be subject to the rules and regulations of the said Commissioners of National Education applicable to schools vested in trustees, which rules are specified in the schedule indorsed hereon, signed by the secretaries of the said Commissioners of National Education, and by the parties hereto of the first and second parts respectively.

H. Appointment of new trustees same as in Form XI. H., 1862.

L. Power to revoke trusts and declare new ones same as in Form XI. L., 1862.

New clause providing for voiding this deed, upon payment to the National Board of moneys expended on school. In Form XIV., 1866, the power of repayment is reserved to the Trustees.

M. [Provided also, that if the "said (*grantors*) his heirs, executors, administrators, or assigns," shall pay or cause to be paid to the said Commissioners or their successors, the said sum of together with such further sum or sums as they shall hereafter expend in additions or improvements to the said school, then, and in such case, these presents and everything herein contained, shall cease and be void. Provided also, that in computing the amount of any additional sums expended by the said Commissioners, no money laid out in repairs shall be taken into account, nor any sum expended by them in any year in which the entire sum so expended by them shall be less than £25.]

FORM XIII., 1865.
Lease to Commissioners in their corporate capacity.

Form XIII., 1865.

Parties—Grantor of the one part; the Commissioners of the other.

A. Recites charter, object of National system, management of schools, and desire of (*grantor*) to establish school as in Form X. A., 1856. Recites sum required for building school, application to Commissioners, sum raised by local subscription, and that Commissioners have approved of a sum being paid to promote said school as under A., Form XI., 1862.

And the said has been nominated as patron of the said intended National school, and has been approved of by the said Commissioners.

Witnesseth that the said (*grantor*) in order to promote the said object, and in consideration of the said sum of £ by the said Commissioners so approved to be paid as aforesaid, doth grant unto the said Commissioners, all that lot of ground described in the map thereof; to hold to the said Commissioners.

G. And it is hereby declared that every school, to be kept on the premises hereby demised, shall be subject to the rules and regulations of the said Commissioners, which are applicable to schools vested in them, and the principal of which rules are specified in the schedule indorsed hereon, and signed by the Secretaries of the said Commissioners, and to such further and other rules and regulations of the said Commissioners as may, from time to time, be framed by them, in strict accordance with the fundamental principle above mentioned; and it is hereby agreed, that from and after the day of the date of these presents, the said school-house shall be kept in repair by the said Commissioners.

Instead of Commissioners of National Education, as in last deed.

M. Provided always, and it is hereby further expressed and declared to be the true intent and meaning of these presents, and of the several parties hereto, that if the said (*grantor*), his heirs, executors, administrators, or assigns, shall pay or cause to be paid to the said "Commissioners of Public Works," or their successors, all such sum or sums as they shall expend in building and establishing, as well as in additions or improvements to the said school, then and in such case these presents, and everything herein contained, shall cease and

be void. Provided also, that in computing the amount of any additional sums expended by the said Commissioners, no money laid out in repairs shall be taken into account, nor any sum expended by them in any year in which the entire sum so expended by them shall be less than twenty-five pounds.

FORM XIII., 1865.

H. Appointment of new patron same as in Form X. H., 1856.

"Provided always, that the person in whose room any new patron shall be appointed as aforesaid, shall not be liable for anything done or neglected after such appointment."

New clause within " " not in Form X., 1856; but corresponds with similar clause regarding trustees, introduced into Form XII., preceding.

K. For further assurance same as in Form II.; and for quiet enjoyment same as in Form IX., 1852.

SCHEDULE OF RULES REFERRED TO IN THE DEED.

PART I.

§ I.—3. The Commissioners by themselves, or their officers, are to be allowed to visit and examine the schools whenever they think fit.

[§ II.—1. The schools to which the Commissioners grant aid are divided into two classes, viz.:—first, vested schools, of which there are two sorts, namely, first, those vested in the Commissioners; and second, those vested in trustees, for the purpose of being maintained as National schools; secondly, non-vested schools, the property of private individuals. Both these classes of schools are under the control of local patrons or managers.]

[ ] new.

§ III.—2. No National school-house shall be employed, at any time, even temporarily, as the *stated* place of DIVINE WORSHIP of any religious community; or for the celebration or administration of the Sacraments or rites of any Church.

This was § V. of Schedule attached to Form X., 1856.

5. Vested school-houses must be used *exclusively for the education* of "the pupils" attending them, except on Sundays, when they may be employed for Sunday schools, with the sanction of the patrons or managers, subject, in cases leading to contention or abuse, to the interference of the Commissioners.

"The children." in § V. 2, Schedule of 1856.

6. No political meetings shall be held in National school-houses, whether vested or non-vested; nor shall any political business *whatsoever* be transacted therein.

7. When any school is received by the Commissioners into connexion with them, the inscription, "NATIONAL SCHOOL," shall be put up in plain and legible characters on the school-house, or on such other place as may render it conspicuous to the public. When a school-house is built partly by aid from "the State," a stone is to be introduced into the wall having that inscription cut upon it. The Commissioners will not, when granting aid *in future*, sanction "any inscription containing a title" of a *denominational character*, or which may appear to them to indicate that the school is one belonging to any particular religious body. The Commissioners do not object to the terms, male, female, or infant; or the proper local designation taken from the city, town, parish, street, village, or townland in which the school may be situated; or the name of the founder being included in the inscription.

This was § X.–I. in Schedule, Form X., 1856.

"The Commissioners" in Schedule, 1856.

"The inscription of any title" in Schedule, 1856.

8. No emblems or symbols of a *denominational* nature shall be exhibited in the school-room during the hours of united instruction; nor will the Commissioners in future grant aid to any school which exhibits on the exterior of the buildings any such emblems.

§ X. 3 Schedule, Form X., 1856.

§ X. 4, Schedule, 1856.

9. No emblems or symbols of a *political* nature shall at *any time* be exhibited in the school-room, or affixed to the *exterior* of the buildings; nor shall any placards, whatsoever, [except such as refer to the legitimate business of school management,] be affixed thereto.

Words within [ ] new insertion.

§ IV.—1. Opportunities are to be afforded (as hereinafter provided for) to the children of all National schools for receiving such religious instruction as their parents or guardians approve of.

2. Religious instruction must be so arranged that each school shall be open to children of all communions; that due regard be had to parental right and authority; that accordingly no child "be *compelled* to receive, or to be present at" any religious instruction of which his parents or guardians disapprove; and that the time for giving it be so fixed that no child shall be thereby, in effect, excluded directly or indirectly from the other advantages which the school affords.

"Shall receive or be present at" in Schedule of Rules attached to Lease of 1866.

3. A public notification of the times for religious instruction must be inserted in large letters in the "Time Table" supplied by the Commissioners, who recommend that, as far as may be practicable, the general nature of such religious instruction be also stated therein.

4. The "Time Table" must be kept constantly hung up in a conspicuous place in the school-room.

5. When the religious instruction commences after the secular, the teacher must, immediately before the commencement of the former, announce distinctly to the pupils that the hour for religious instruction has arrived, and must at the same time, put up and keep up, during the period allotted to such religious instruction, and within the view of all the pupils, a notification thereof, containing the words "Religious Instruction," printed in large characters on a form to be supplied by the Commissioners. Similarly when the school commences with religious instruction, the teacher is to put up and keep up the same notification.

Slightly different in language from Rule § IV. 5, in Schedule attached to Form X., 1856.

6. When the secular instruction precedes the religious instruction, in any National school, there shall be a sufficient interval between the announcement and the commencement of the religious instruction; and whether the religious or the secular instruction shall have priority in any National school, the books used for the instruction first in order shall be laid aside at its termination, in the press or other place appropriated for keeping the school books.

7. No secular instruction, whether literary or industrial, shall be carried on in the same apartment during school hours,* simultaneously with religious instruction.

Note.—* The term "SCHOOL HOURS" is always to be understood to mean the entire time in each day, from the opening of the school to the closing of the same for the dismissal of the pupils.

8. In the schools towards the building of which the "State" has contributed, and which are VESTED in trustees, for the purposes of National education, or which are vested in the Commissioners in their corporate capacity, such pastors or other persons as shall be approved of by the parents or guardians of the children respectively, shall have access to them *in the school-room*, for the purpose of giving them religious instruction there, at times convenient for that purpose, [that is, times so appointed as not to interfere unduly with the other arrangements of the school.]

Instead of "Commissioners" in same Rule 1856. Words within [ ] added since 1856.

10. The reading of the Scriptures, either in the Protestant Authorized or Douay Version—the teaching of Catechisms—public prayer, and all other religious exercises, come within the rules as to religious instruction.

11. The patrons and managers of *all* National schools have the right to permit the Holy Scriptures (either in the Authorized or Douay Version) to be read at the time or times set apart for religious instruction; and in *all vested schools* the parents or guardians of the children have the right to require the patrons and managers to afford opportunities for the reading of the Holy Scriptures, in the school-room under proper persons approved of by the parents or guardians for that purpose.

12. Religious instruction, prayer, or other religious exercises, may take place at any time, before and after the ordinary school business (during which all children, of whatever denomination they may be, are required to attend); but must not take place "*at more than one intermediate* time," between the commencement and the close of the ordinary school business. The Commissioners, however, will not sanction any arrangement for religious instruction, prayer, or other religious exercises *at an intermediate time* in cases where it shall appear to them that such arrangement will interfere with the usefulness of the school, by preventing children of any religious denomination from availing themselves of its advantages, or by subjecting those in attendance to any practical inconvenience.

"*More than once* at *an intermediate* time," in § IV., No. 12, of Schedule of Rules attached to Form X., 1856.

13. With the above exception, the secular school business must not be interrupted, or suspended by any spiritual exercise whatsoever.

Note.—The Commissioners earnestly recommend that religious instruction shall take place either immediately before the commencement, or immediately after the close of the ordinary school business; and they further recommend that, whenever the patron or manager thinks fit to have religious instruction at an intermediate time, a separate apartment shall (when practicable) be provided for the reception of those children "whose parents or guardians may disapprove of their being present thereat."

"Who according to those Rules should not be present thereat," in note § IV., 13, 1866.

FORM XIII., 1865.

14. Patrons, managers, and teachers are not required to *exclude* any children from any religious instruction given in the school; but all children are to have full power to absent themselves, or to withdraw from it. If any parents or guardians object to the religious instruction given in a National school, it devolves upon them to adopt measures to prevent their children from being present thereat.

Instead of the Rules under Nos. 14, 15, 16, and 17, there is substituted in Schedule for 1866 a new rule, § IV., No. 15.

15. Patrons, managers, and teachers are not to use any means, directly or indirectly, to induce children to attend any religious instruction, contrary to the wishes of their parents or guardians. The Commissioners will regard such interference as opposed to the whole spirit of the system of National education.

16. If any child of a religious persuasion different from that of the teacher of any National school, attend during the time or times set apart for religious instruction given by such teacher, it shall be the duty of the teacher, on the *first attendance* of every such child, during the time for such religious instruction given by such teacher in such school *forthwith* to notify the same to the parent or guardian of such child, on and by a form to be furnished by the Commissioners.

17. The teachers are required to keep a record of the names of the children to whose parents they have sent the printed form of notification.

18. The registry kept in each school, according to the form furnished by the Commissioners, must show the religious denomination of each child on the school roll.

19. A sufficient number of hours, to be approved of in each case by the Commissioners, is to be appropriated to the ordinary school business, during which all children, of whatever denomination they may be, are required to attend.

20. In all National schools (except those in which industrial instruction is the *chief* object) there must be literary instruction for at least *four* hours upon five days in the week.

21. In industrial schools—that is, in schools where industrial instruction is the *chief* object—the Commissioners require that not less than *two* hours daily shall be devoted to literary instruction.

§ VI., Schedule attached to Form X., 1856.

§ V.—1. The use of the books published by the Commissioners is not compulsory; but the titles of all other books which the patrons or managers of schools intend for the ordinary school business, are to be notified to the Commissioners; and none are to be used to which they object. The approval of any such books is to extend only to the particular edition which has been submitted to the Commissioners.

2. If any books other than the Holy Scriptures, or the *standard* books of the Church to which the children using them belong, be employed in communicating religious instruction, the title of each is to be made known to the Commissioners whenever they deem it necessary.

3. The Commissioners do not insist on the "Scripture Lessons" or book of "Sacred Poetry" being read in any of the National schools, nor do they allow them to be read as part of the ordinary school business (during which all children, of whatever denomination they may be, are required to attend) in any school attended by children whose parents or guardians object to their being read by their children.

In such cases the Commissioners prohibit the use of these books except at times set apart for the purpose, either before or after such ordinary school business, and under the following conditions:—

FIRST—That no child, whose parent or guardian objects, shall be required, directly or indirectly, to be present at such reading.

SECOND—That in order that any children, whose parents or guardians object, may be at liberty to absent themselves, or to withdraw at the time set apart for the reading of the books above specified, public notification of the time set apart for such reading shall be inserted in large letters in the time table of the school—that there shall be a sufficient interval between the conclusion of such ordinary school business and the commencement of such reading; and that the teacher shall, immediately before its commencement, announce distinctly to the pupils that any child whose parent or guardian so desires may then retire.

"The" in Schedule 1856.

THIRD—That in every such case there shall be, exclusive of the time set apart for such reading, sufficient time devoted each day to the ordinary school business, in order that those children who do not join in the reading of "these" books may enjoy ample means of literary instruction in the school-room.

4. When using the Scripture Lessons, the teachers are prohibited, except at the times set apart for religious instruction, from putting to the children any other questions than those appended to the end of each lesson.

§ 5.—V. The Commissioners require that the principles of the following lesson, or of a lesson of a similar import (to be approved of by the Commissioners), shall be strictly inculcated during the hours of united instruction, in all schools received into connexion with the Board, and that a copy of the lesson itself be hung up in each school.

"v. 17" in Schedule 1856.

Christians should endeavour, as the Apostle Paul commands them, to live peaceably with all men (Rom. ch. xii. "v. 18"), even with those of a different religious persuasion.

Our Saviour, Christ, commanded his disciples to love one another. He taught them to love even their enemies, to bless those that cursed them, and to pray for those who persecuted them. He himself prayed for his Murderers.

"We ought to seek for the truth and to hold fast" in Schedule 1856.

Many men hold erroneous doctrines, but we ought not to hate or persecute them. "We ought to hold fast" what we are convinced is the truth; but not to treat harshly those who are in error. Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his disciples to fight for him.

If any persons treat us unkindly, we must not do the same to them; for Christ and his apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others, not as they do to us, but as we would wish them to do to us.

Quarrelling with our neighbours and abusing them is not the way to convince them that we are in the right and they in the wrong. It is more likely to convince them that we have not a Christian spirit. We ought, by behaving gently and kindly to every one, to show ourselves followers of Christ, who, when he was reviled, reviled not again (1 Pet. c. 2, v. 23).

6. The use of the tablet furnished by the Commissioners containing the Ten Commandments is not compulsory.

Exception within [ ] new insertion.

7. The rules as to religious instruction do not apply, [except in the way hereinbefore stated,] to the Scripture Lessons, and the book of Sacred Poetry, or to the matter contained in the common school-books, or in any other book, the use of which the Commissioners may at any time sanction for the purpose of united instruction.

§ VII., Schedule attached to Form X., 1856.

§ VI.—12. The local patrons (or managers) of schools have the right of appointing the teachers, subject to the approval of the Board as to character and general qualifications; the local patrons (or managers) have also the power of removing the teachers of their own authority.

§ IX., Schedule, Form X., 1856. Words slightly varied from corresponding § IX., No. 2. Schedule, attached to Form X., 1856.

§ VIII.—1. The public generally must have free access to every National school (whether vested or non-vested) during the hours devoted to secular instruction—nor to take part in the ordinary business, or to interrupt it, but as visitors, to observe how it is conducted.

2. Visitors of all denominations are to be received courteously by all teachers of National schools, and are to have free access to the school-rooms, and full liberty to examine the registers, daily report books, and class rolls; to observe what books are in the hands of the children, or upon the desks, what tablets are hung up on the walls, and what is the method of teaching; [but they are not authorized to interrupt the business of the school, by asking questions of the children, examining classes, calling for papers or documents of any kind, except those specified, or in any other way diverting the attention of either teachers or scholars from their usual business].

Passage within [ ] newly introduced.

§ X., No. 6 in Schedule of 1856. Words within [ ] and [ ] now first introduced. Slightly different in 1856.

5. The Commissioners require that a copy of Part I., [with selections from other parts] of [these], their rules on a form furnished by them, shall be suspended in every National school-room.

PART IV.

Under § VII., Schedule attached to Form X. Passage within [ ] quite new insertion. Passages within brackets [ ] and [ ] new matter.

§ I.—2. No clergyman of any denomination, or member of any religious order, can be recognised as the teacher of a National school. This does not apply to the teachers of convent schools, [nor to those of any monastery schools which have been at any time previously in connexion with the Board.]

5. Should the Commissioners consider any teacher in a vested school unfit for his office, or otherwise objectionable, they will require that he be dismissed and another provided; [in non-vested schools the grant of salary will be withheld until a suitable teacher be procured.] Teachers are also liable to be fined, [depressed] or suspended, at all times, when the Commissioners shall deem it necessary, on sufficient cause being shown.

Form XIV.—1866.

FORM XIV., 1866.
Lease to Trustees.

Parties—As in Form XI., 1862.

A. Recites as in Form XI. A., 1862. Witnesseth as in Form XIII., 1865.

G. And it is hereby declared that the said demise is so made upon trust that a National school in connexion with the said Commissioners of National Education shall at all times, during the term aforesaid, be maintained upon the said premises, and that every school to be kept on the premises hereby demised shall be subject to the rules and regulations of the said Commissioners of National Education applicable to schools vested in trustees, which rules are specified in the schedule indorsed hereon, signed by the Secretaries of the said Commissioners of National Education.

H. Appointment of new trustees same as in Form XI. H., 1862.

Provided always, that the person, in whose room any new trustee shall be appointed as aforesaid, shall not be liable for any thing done, or neglected after such appointment.

I. Covenant to execute trusts same as in Form XI. I., 1862.

K. For further assurance same as in Form II.

L. Provided always, and it is hereby declared, that it shall be lawful for the trustees or trustee for the time of these presents, with the approbation of the Commissioners of National Education in Ireland, for the time being, testified by deed, under their common seal, and with the consent in writing of the said (*grantor*) or other, the person or persons, for the time being, entitled beneficially to the said premises, hereby demised, in reversion, expectant upon the term hereby granted by any deed or deeds, executed by the said trustees or trustee, in the presence of and attested by two or more witnesses, to revoke all or any of the trusts and purposes hereinbefore declared concerning the premises hereby demised. And that thereupon it shall be lawful for the trustee or trustees, for the time being, of these presents, with the consent in writing of the said (*grantor*) or other, the person or persons, for the time being, entitled beneficially to the said premises hereby demised in reversion, expectant upon the term hereby granted by any deed or deeds, attested as aforesaid, to declare such new or other trusts concerning the same, as to the said trustee or trustees shall seem meet.

M. Provided also, that if the "trustees or trustee, for the time being, of these presents" shall* pay or cause to be paid to the said Commissioners of Public Works, or their successors, the said sum of together with such further sum or sums as the said Commissioners shall hereafter expend in additions or improvements to the said school, then and in such case all and every the trusts and purposes, hereinbefore declared, concerning the premises hereby granted, shall cease and be void. Provided that in computing the amount of any additional sums expended by the said Commissioners, no money shall be taken into account expended in any year on which the entire sum so expended by them shall be less than twenty-five pounds.

"* If the grantor desire to reserve to himself and his representative the right of being a party to the revocation of the trusts, the following words, 'with the consent in writing of the said (*grantor*), his heirs, executors, administrators, or assigns,' should be inserted at*" (*Original Note.*)

SCHEDULE OF RULES REFERRED TO IN THE DEED.

PART I.

§ I.—3. The Commissioners by themselves, or their officers, are to be allowed to visit and examine the schools whenever they think fit.

§ II.—1. The schools to which the Commissioners grant aid are divided into two classes, viz.:—first, vested schools, of which there are two sorts, namely, first, those vested in the Commissioners; and second, those vested in trustees, for the purpose of being maintained as National schools; secondly, non-vested schools, the property of private individuals. Both these classes of schools are under the control of local patrons or managers.

§ III.—2. No National school-house shall be employed, at any time, even temporarily, as the *stated* place of DIVINE WORSHIP of any religious community; or for the celebration or administration of the sacraments or rites of any Church.

5. Vested school-houses must be used *exclusively for the education* of the pupils attending them; except on Sundays, when they may be employed for Sunday schools, with the sanction of the patrons or managers, subject, in cases leading to contention or abuse, to the interference of the Commissioners.

6. No political meetings shall be held in National school-houses, whether vested or non-vested; nor shall any political business *whatsoever* be transacted therein.

7. When any school is received by the Commissioners into connexion with them, the inscription "NATIONAL SCHOOL," shall be put up in plain and legible characters on the school-house or on such other place as may render it conspicuous to the public. When a school-house is built partly by aid from the State, a stone is to be introduced into the wall having that inscription cut upon it. The Commissioners will not, when granting aid *in future*, sanction any inscription containing a title of a *denominational character*, or which may appear to them to indicate that the school is one belonging to any particular religious body. The Commissioners do not object to the terms, male, female, or infant; or the proper local designation taken from the city, town, parish, street, village, or townland in which the school may be situated; or the name of the founder being included in the inscription.

8. No emblems or symbols of a *denominational* nature shall be exhibited in the school-room, during the hours of united instruction; nor will the Commissioners, in future, grant aid to any school which exhibits on the exterior of the buildings any such emblems.

9. No emblems or symbols of a *political* nature shall at *any time* be exhibited in the school-room, or affixed to the *exterior* of the buildings; nor shall any placards whatsoever, except such as refer to the legitimate business of school management, be affixed thereto.

§ IV.—1. Opportunities are to be afforded (as hereinafter provided for) to the children of all National schools for receiving such religious instruction as their parents or guardians approve of.

2. Religious instruction must be so arranged, that each school shall be open to children of all communions; that due regard be had to parental right and authority; that accordingly no child "shall receive or be present at" any religious instruction of which his parents or guardians disapprove; and that the time for giving it be so fixed that no child shall be thereby, in effect, excluded, directly or indirectly from the other advantages which the school affords.

"Be *compelled* to receive or to be present at," in Schedule of Rules attached to lease of 1865.

3. A public notification of the times for religious instruction must be inserted in large letters in the "Time Table" supplied by the Commissioners, who recommend that, as far as may be practicable, the general nature of such religious instruction be also stated therein.

4. The "Time Table" must be kept constantly hung up in a conspicuous place in the school-room.

5. When the religious instruction commences after the secular, the teacher must, immediately before the commencement of the former, announce distinctly to the pupils that the hour for religious instruction has arrived, and must, at the same time, put up and keep up, during the period allotted to such religious instruction, and within the view of all the pupils, a notification thereof, containing the words "Religious Instruction," printed in large characters, on a form to be supplied by the Commissioners. Similarly when the school commences with religious instruction, the teacher is to put up and keep up the same notification.

FORM XIV., 1866.

6. When the secular instruction precedes the religious instruction, in any National school, there shall be a sufficient interval between the announcement and the commencement of the religious instruction; and whether the religious or the secular instruction shall have priority in any National school, the books used for the instruction first in order shall be laid aside at its termination, in the press or other place appropriated for keeping the school books

7. No secular instruction, whether literary or industrial, shall be carried on in the same apartment, during [such] school hours,* simultaneously with religious instruction.

[Such] new insertion.

Note.—* The term "SCHOOL HOURS" is always to be understood to mean the entire time, in each day, from the opening of the school to the closing of the same for the dismissal of the pupils.

8. In schools towards the building of which the State has contributed, and which are VESTED in trustees, for the purposes of National education, or which are vested in the Commissioners in their corporate capacity, such pastors or other persons as shall be approved of by the parents or guardians of the children respectively shall have access to them *in the school-room*, for the purpose of giving them religious instruction there, at times convenient for that purpose, that is, times so appointed as not to interfere unduly with the other arrangements of the school.

10. The reading of the Scriptures, either in the Protestant Authorized or Douay Version,—the teaching of Catechisms,—public prayer,—and all other religious exercises, come within the rules as to religious instruction.

11. The patrons and managers of *all* National schools have the right to permit the Holy Scriptures (either in the Authorized or Douay Version) to be read, at the time or times set apart for religious instruction; and in *all vested schools* the parents or guardians of the children have the right to require the patrons and managers to afford opportunities for the reading of the Holy Scriptures, in the school-room, under proper persons approved of by the parents or guardians for that purpose.

12. Religious instruction, prayer, or other religious exercises, may take place, at any time, before and after the ordinary school business (during which all children, of whatever denomination they may be, are required to attend); but must not take place *at more than one intermediate* time, between the commencement and the close of the ordinary school business. The Commissioners, however, will not sanction any arrangement for religious instruction, prayer, or other religious exercises *at an intermediate time* in cases where it shall appear to them that such arrangement will interfere with the usefulness of the school, by preventing children of any religious denomination from availing themselves of its advantages, or by subjecting those in attendance to any practical inconvenience.

13. With the above exception, the secular school business must not be interrupted, or suspended, by any spiritual exercise whatsoever.

Note.—The Commissioners earnestly recommend that religious instruction shall take place either immediately before the commencement, or immediately after the close of the ordinary school business; and they further recommend that, whenever the patron or manager thinks fit to have religious instruction at an intermediate time, a separate apartment shall (when practicable) be provided for the reception of those children "who, according to those rules, should not be present thereat."

"Whose parents or guardians may disapprove of their being present thereat," in Schedule for 1865. § IV., No. 18, in Schedule for 1865.

14. The registry kept in each school, according to the form furnished by the Commissioners, must show the religious denomination of each child on the school roll.

Rule within [ ] substituted for § IV., Nos. 14, 15, 16, 17, of Schedule for 1865.

[15. No pupil who is registered by its parents or guardians as a Protestant is to be permitted to remain in attendance during the time of religious instruction, in case the teacher giving such instruction is a Roman Catholic; and no pupil who is registered by its parents or guardians as a Roman Catholic, is to be permitted to remain in attendance during the time of religious instruction, in case the teacher giving such instruction is not a Roman Catholic. And further, no pupil is to be permitted to remain in attendance during the time of any religious instruction to which its parents or guardians object.

Provided, however, that in case any parent or guardian shall express his desire that his child should receive any particular religious instruction, and shall record such desire in a book to be provided in the school, when necessary, for that purpose, this prohibition shall not apply to the time during which such religious instruction only is given.* The entry in the book shall be signed with the name or mark of the parent or guardian, and the book shall be submitted to the Inspector as often as he visits the school.

* *Such expression of desire may at any time be revoked by the parents or guardians, and shall thereupon become inoperative.*]

16. A sufficient number of hours, to be approved of in each case by the Commissioners, is to be appropriated to the ordinary school business, during which all children, of whatever denomination they may be, are required to attend.

17. In all National schools (except those in which industrial instruction is the *chief* object) there must be literary instruction for at least *four* hours upon five days in the week.

18. In industrial schools—that is, in schools where industrial instruction is the *chief* object—the Commissioners require that not less than *two* hours daily shall be devoted to literary instruction.

§ V.—1. The use of the books published by the Commissioners is not compulsory; but the titles of all other books which the patrons or managers of schools intend for the ordinary school business, are to be notified to the Commissioners; and none are to be used to which they object. The approval of any such books is to extend only to the particular edition which has been submitted to the Commissioners.

2. If any books other than the Holy Scriptures, or the *standard* books of the Church to which the children using them belong, be employed in communicating religious instruction, the title of each is to be made known to the Commissioners whenever they deem it necessary.

3. The Commissioners do not insist on the "Scripture Lessons" or book of "Sacred Poetry" being read in any of the National schools, nor do they allow them to be read as part of the ordinary school business (during which all children. of whatever denomination they may be, are required to attend) in any school attended by children whose parents or guardians object to their being read by their children.

In such cases the Commissioners prohibit the use of these books, except at times set apart for the purpose, either before or after such ordinary school business, and under the following conditions:—

FIRST—That no child, whose parent or guardian objects, shall be required, directly or indirectly, to be present at such reading.

SECOND—That in order that any children, whose parents or guardians object, may be at liberty to absent themselves, or to withdraw, at the time set apart for the reading of the books above specified, public notification of the time set apart for such reading shall be inserted in large letters in the time-table of the school—that there shall be a sufficient interval between the conclusion of such ordinary school business and the commencement of such reading; and that the teacher shall immediately before its commencement, announce distinctly to the pupils that any child whose parent or guardian so desires may then retire.

THIRD—That in every such case there shall be, exclusive of the time set apart for such reading, sufficient time devoted each day to the ordinary school business, in order that those children who do not join in the reading of these books may enjoy ample means of literary instruction in the school-room.

4. When using the Scripture Lessons, the teachers are prohibited, except at the times set apart for religious instruction, from putting to the children any other questions than those appended to the end of each lesson.

§ V.—5. The Commissioners require that the principles of the following lesson, or of a lesson of a similar import (to be approved of by the Commissioners), shall be strictly inculcated, during the hours of united instruction, in all schools received into connexion with the Board, and that a copy of the lesson itself be hung up in each school.

Christians should endeavour, as the Apostle Paul commands them, to live peaceably with all men (Rom. ch. xii. v. 18), even with those of a different religious persuasion.

Our Saviour, Christ, commanded his disciples to love one another. He taught them to love even their enemies, to bless those that cursed them, and to pray for those who persecuted them. He himself prayed for his Murderers.

Many men hold erroneous doctrines, but we ought not to hate or persecute them. We ought to hold fast what we are convinced is the truth; but not to treat harshly those who are in error. Jesus Christ did not intend his religion to be forced on men by violent means. He would not allow his disciples to fight for him.

If any persons treat us unkindly, we must not do the same to them; for Christ and his apostles have taught us not to return evil for evil. If we would obey Christ, we must do to others not as they do to us, but as we would wish them to do to us.

Quarrelling with our neighbours and abusing them, is not the way to convince them that we are in the right and they in the wrong. It is more likely to convince them that we have not a Christian spirit. We ought, by behaving gently and kindly to every one, to show ourselves followers of Christ, who, when he was reviled, reviled not again (1 Pet. c. 2, v. 23).

6. The use of the tablet furnished by the Commissioners, containing the Ten Commandments, is not compulsory.

7. The rules as to religious instruction do not apply, except in the way hereinbefore stated, to the Scripture Lessons, and the book of Sacred Poetry, or to the matter contained in the common school books, or in any other book, the use of which the Commissioners may at any time sanction for the purpose of united instruction.

§ VI.—12. The local patrons (or managers) of schools have the right of appointing the teachers, subject to the approval of the Board as to character and general qualifications; the local patrons (or managers) have also the power of removing the teachers of their own authority.

§ VIII.—1. The public generally must have free access to every National school (whether vested or non-vested) during the hours devoted to secular instruction,—not to take part in the ordinary business, or to interrupt it, but as visitors, to observe how it is conducted.

2. Visitors of all denominations are to be received courteously by all teachers of National schools, and are to have free access to the school-rooms, and full liberty to examine the registers, daily report books, and class rolls; to observe what books are in the hands of the children, or upon the desks, what tablets are hung up on the walls, and what is the method of teaching; but they are not authorized to interrupt the business of the school, by asking questions of the children, examining classes, calling for papers or documents of any kind, except those specified, or in any other way diverting the attention of either teachers or scholars from their usual business.

5. The Commissioners require that a Copy of Part I., with selections from other parts of these, their rules, on a form furnished by them, shall be suspended in every National school-room.

PART IV.

§ I.—2. No clergyman of any denomination, or member of any religious order, can be recognised as the teacher of a National school. This does not apply to the teachers of convent schools, nor to those of any monastery schools which have been at any time previously in connexion with the Board.

5. Should the Commissioners consider any teacher in a vested school unfit for his office, or otherwise objectionable, they will require that he be dismissed and another provided; in non-vested schools the grant of salary will be withheld until a suitable teacher be procured. Teachers are also liable to be fined, depressed, or suspended, at all times, when the Commissioners shall deem it necessary, on sufficient cause being shown

1867.

The same form of lease in use.

1868.

The same form of lease in use.

ABSTRACT OF SEVERAL TRUSTS SET FORTH FROM TIME TO TIME IN

—	1832.	1833.	1835.
A. Recitals, . .	Title of lessors; wish of lessors and trustees that school with the approbation and under the control of Commissioners should be established in the parish. That a school had been built in the said parish, which was properly adapted to the purposes of schools such as those intended to be established, and the said Commissioners had, to promote said school, directed a sum to be paid to the Trustees out of the fund at the disposal of the Lord Lieutenant, which sum, together with another raised by voluntary contribution, makes up £ , which has been expended in the erection of said school.	Same.	Same.
B. Time for Literary Instruction.	For hours on four or on five days in each week, at the discretion of the Commissioners for the time being.	For six hours on four or five days each week.	For five or six hours on five days.
C. Time for Religious Instruction.	The remaining one or two days in the week, as the case may be.	Same.	The remaining day in the week.
How Religious Instruction shall be given.	For giving separately such religious education to the children, male and female, of all persuasions, as may be approved of by the clergy of their respective persuasions —such clergy, however, to be permitted and encouraged to give religious instruction either before or after the ordinary school hours, on the other days of the week.	Same.	Same.
D. Control over Books,	Entire control over all books to be used in the said schools shall be vested in the said Commissioners. None of the said books to be used or employed in such combined moral and literary education, except under the sanction of the said Commissioners for the time being, nor in such separate religious instruction, but with the approbation of such of the said Commissioners for the time being, as shall be of the same religious persuasion with the children, for whose use they are intended.	Same.	Same.
E. Teachers, . .	Teachers of said schools for the time being, shall not only in the first instance, before they shall be so appointed, have received previous instruction in a model school in Dublin, sanctioned by the said Commissioners, and shall also have obtained from the said Commissioners for the time being, testimonials of good conduct and general fitness, but shall be liable to be fined and finable, removed and removable, or suspended from time to time, and at all times, when and as often as such Commissioners as aforesaid, for the time being, shall deem it necessary, "at their will and pleasure," in such way and manner as they shall deem expedient, or see fit [and that such schoolmasters or teachers, shall teach and instruct all such children as shall be admitted into said schools, according to the system of education sanctioned and approved of, for the said schools, by the said Commissioners.]	Same to [ ], which does not appear in future forms.	Same as last, but "at their will and pleasure" is omitted.
F. Visiting Powers, .	Commissioners, or their Inspectors for the time being, or any of them, shall from time to time, and at all times hereafter, be allowed and permitted on demand to visit and examine the said schools, whenever and so often as they or any of them shall think fit, or deem it necessary.	Same save "Inspector" for "Inspectors."	Same as first.
G. Trusts as to Fabric, Repairs, and Salary of Teacher.	None.	None.	None.
H. Appointment of New Trustees.	In case of the death of any of the Trustees, or of the desire of any of them to be discharged, or of their residing out of Ireland, or of their neglect, refusal, or incompetence [or if the Commissioners shall think fit to remove them], Commissioners may appoint new Trustees.	Part in [ ] omitted, and the power of appointment is given to surviving or continuing Trustee to be first approved of by Commissioners, and if not exercised by said Trustee within six calendar months, power to Commissioners to appoint.	Same as last.
I. Covenants to Observe Trusts.	None.	None.	None.

LEASES OR TRUST DEEDS, WITH THE DATE OF CHANGE OR MODIFICATION.

1838.	1841.	——
Same.	Same.	**A.** Recitals.
For a competent number of hours in each day.	Same.	**B.** Time for Literary Instruction.
One day in each week, or part of a day, independently of Sunday.	Same.	**C.** Time for Religious Instruction.
On which day such pastors or other persons as may be approved of by the parents or guardians of the children, shall have "access to them" for that purpose, whether those pastors or persons shall have signed the original application or not; and also, that convenient opportunity and facility be afforded to them for the same purpose on other days in the week. Provided that where any course of religious instruction is to be pursued in any such school during school hours, to which the parents of any of the children shall object, an arrangement shall be made for having such instruction given to those who are to receive it at a stated time, and in a separate place, so as that no children whose parents or guardians object to their being so be present at it.	Same, save after "access to them" "in the school-room" is added.	How Religious Instruction shall be given.
The titles of all books to be used in the ordinary school business shall be reported to Commissioners, and no other books shall be used save those so reported and sanctioned by Commissioners, and if any other books than the Holy Scriptures or the standard books of the Church to which the children using them belong be employed in religious instruction, the title of such books to be made known to Commissioners.	Same.	**D.** Control over Books.
Same, save after "first instance" "if the said Commissioners shall see fit" is added, and in stead of "Model Schools in Dublin," "the General Normal Establishment in Dublin, or at one of the District Model Schools of the said Commissioners," is substituted. After "see fit" "upon good and sufficient cause being shown," is added.	Same.	**E.** Teachers.
Same as first, save "Officers and Superintendents" is substituted for "Inspectors." Clergymen of all denominations, and other persons, shall also have access to school to observe how said school may be conducted in the manner and under the restrictions set forth in the Rules and Regulations of Commissioners, under the head of "Inspection of Schools."	Same, save "Clergymen of all denominations and other persons" changed to "public of all denominations, whether clergy or laity."	**F.** Visiting Powers.
No political meetings of any kind to be summoned or held in school, or any part thereof, and no political petition or document of any kind to be brought into same for signature or otherwise; school to be kept in sufficient repair by local contributions solely, and local contributions to be also raised towards payment of teacher's salary, according to rules of Commissioners, under the title, "As to the Building and Support of Schools."	Same.	**G.** Trusts as to Fabric, Repairs, and Salary of Teacher.
Same.	Same.	**H.** Appointment of New Trustees.
Trustees covenant separately to execute the trusts, and observe conditions, and on default the said Trustees, jointly and severally, shall pay back to Commissioners the sum paid to them by said Commissioners.	Same.	**I.** Covenants to Observe Trusts.

ABSTRACT of several TRUSTS set forth from time to time in

—	1842.	1844.	1846A.
A. Recitals, . .	Same.	—	Incorporation of Commissioners by Letters Patent of 26th August, 1845, for administering fund placed at disposal of Lord Lieutenant for educating the poor of Ireland, on the principle of avoiding all interference whatsoever with conscientious scruples on the score of religion; and accordingly that the schools under their control shall be open alike to children of all religious denominations; that no child shall be required to be present at any religious instruction or exercise, of which his parents or guardians may disapprove, and that opportunities shall be afforded to all children to receive separately, at particular periods to be specified in the rules of each school, such religious instruction as their parents or guardians may provide for them.
B. Time for Literary Instruction.	Same as last.	Same as last.	None.
C. Time for Religious Instruction.	Same as last.	Same as last.	None.
How Religious Instruction shall be given.	Same as last, save that after "which day" "or part of day" is added, and after "parents," in proviso, "or guardians" is added.	Same as last. "At a stated time and in a separate place" changed to "at a stated time or in a separate place."	See recital.

LEASE or TRUST DEEDS, with the DATE of Change or Modification.

1846B.	1848.	1852.	—
Royal Charter by which Commissioners are empowered to hold lands. That the education of the poor of Ireland had been theretofore, and then was carried on by the Commissioners on the principle of avoiding all interference whatsoever with conscientious scruples on the score of religion—the rest of this recital is the same as the last.	Recites as under last date. And that the management of schools belongs to the respective patrons, who have power of appointing and removing teachers, subject to approbation of Commissioners.	Recites as above, but after "patrons" the recital is altered thus "who have power of appointing teachers subject to the approbation of the said Commissioners, and of removing them of their own authority."	**A.** Recitals.
None.	For a competent number of hours in each day.	Same.	**B.** Time for Literary Instruction.
None.	One day in each week, or part of a day, independently of Sunday.	Same.	**C.** Time for Religious Instruction.
See recital.	Same as in 1838, save that "be compelled to receive or to," is inserted before "be present at it" at the end of the sentence under date above.	Same.	How Religious Instruction shall be given.
None.	No books shall be used in ordinary school business save those reported to and sanctioned by Commissioners. As to Holy Scriptures and standard religious books, same as in 1838.	Same.	**D.** Control over Books.
None.	Same as in 1838; but this deed contains the following recital:—"The management of such schools belongs to the respective local patrons thereof, who have the power of appointing and removing the teachers, subject to the approbation of the said Commissioners."	Same; see recital.	**E.** Teachers.
None.	Same, as in 1841.	Same.	**F.** Visiting Powers.
None.	That no meetings of any kind whatever be held, or convened, in any such school-house, or in any part thereof, or on the premises hereby conveyed, save such as may relate exclusively to the business thereof; and that no petition or document of any kind whatsoever save such as may relate exclusively to the business of the said school, be brought into any such school-house or premises, or any part thereof for signature or otherwise; and that such school-house and premises, or any part thereof, shall not be converted into a place of public worship, or used for any purpose save that of such school, and that from and after the day of the date of these presents, every such school-house shall be kept in full and sufficient repair by the said Commissioners, and that local contributions shall be raised towards payment of the teacher's salary of such school, after the manner set forth in the rules and regulations of the said Commissioners.	Same.	**G.** Trusts as to Fabric, Repairs, and Salary of Teacher.
None.	Same, as in 1844, save "patron" is substituted for "trustee."	Same as last.	**H.** Appointment of New Trustees.
None.	None.	None.	**I.** Covenants to Observe Trusts.

ABSTRACT of several TRUSTS set forth from time to time in

—	1856.
A. Recitals.	Recites charter and power to hold land as in 1846B. That the object of the system of National Education is to afford combined literary and moral, and separate religious instruction to children of all persuasions, as far as possible, in the same school, upon the fundamental principle that no attempt shall be made to interfere with the peculiar religious tenets of any description of Christian pupils. Recites management of schools as in 1852.
B. Time for Literary Instruction. **C.** Time for Religious Instruction. How Religious Instruction shall be given. **D.** Control over Books, **E.** Teachers, **F.** Visiting Powers, **G.** Trusts as to Fabric, Repairs, and Salary of Teacher.	Instead of the provisions contained in the previous deeds, and abstracted under the letters B. C. D. E. F. G. respectively, there is in this deed a general declaration "that every school to be kept on the premises hereby demised, shall be subject to the rules and regulations of the said Commissioners, which are applicable to schools vested in them, and the principal of which rules are specified in the schedule indorsed hereon, and signed by the Secretaries of the said Commissioners, and to such further and other rules and regulations of the said Commissioners as may from time to time be framed by them, in strict accordance with the fundamental principle above mentioned." The rules set forth in the schedule are conversant with the teaching and the discipline of the schools, visiting powers, and maintenance of buildings, and teachers' salary; but the provision "that local contributions shall be raised towards payment of the teacher's salary," set out in previous deeds, is omitted, nor is any similar provision contained in either the deed or rules of this date, or in those of any subsequent date.
H. Appointment of New Trustees.	Same as last.
I. Covenants to Observe Trusts.	None.

LEASES or TRUST DEEDS, with the DATE of Change or Modification.

1862.	1865.	—
Recites object of National system as above. That (grantor) is desirous that a National school should be established on the principles aforesaid, and that a suitable school should be built on the lot of ground therein described, and for that purpose said lot of ground should be demised to trustees approved of by the said Commissioners. Recites sum required for building school. Application for aid to Commissioners; that a sum had been raised by voluntary contribution towards building school. Commissioners, to promote establishment of said school, had ordered a sum to be paid towards its erection.	Recites as in last. Declaration that a National school shall at all times be kept on premises, same as last.	**A.** Recitals.
It is declared that the said demise is so made upon trust that a National school in connexion with the said Commissioners of National Education shall at all times, during the term, be maintained upon the said premises, and that every school to be kept on the premises hereby demised shall be subject to the rules and regulations of the said Commissioners of National Education applicable to schools vested in trustees, which rules are specified in the schedule indorsed hereon, signed by the secretaries of the said Commissioners of National Education, and by the parties hereto of the first and second parts respectively.		**B.** Time for Literary Instruction. **C.** Time for Religious Instruction. How Religious Instruction shall be given. **D.** Control over Books. **E.** Teachers. **F.** Visiting Powers. **G.** Trusts as to Fabric, Repairs, and Salary of Teacher.
Same as in 1833.	Same as last, save after "or reside out of Ireland for a continuous period of twelve calendar months," "or shall neglect or refuse for three calendar months after demand made in writing by the said grantor, his heirs, executors, and assigns, or by the said Commissioners of National Education or their successors, to carry out the trusts of these presents according to the true intent hereof," is added; and in the clause giving power of appointment to Commissioners after "shall take place" "or in case the office of trustee shall from any cause whatever be wholly vacant for the space of twelve calendar months," is added. "Provided that the person in whose room any new trustee shall be appointed as aforesaid shall not be liable for any thing done or neglected after such appointment," added.	**H.** Appointment of New Trustees.
Trustees jointly and severally covenant with Commissioners, as in 1846. Provides that it shall be lawful for the trustees or trustee for the time being, with the approbation of the Commissioners of National Education, testified by deed under their common seal and with the consent in writing of the said (*grantor*), or other the person or persons for the time being entitled beneficially to the said premises hereby demised, in reversion, expectant upon the term hereby granted, by any deed executed by the said trustees or trustee in the presence of and attested by two or more witnesses, to revoke all or any of the trusts and purposes hereinbefore declared concerning the premises hereby demised. And then it shall be lawful for the trustee or trustees for the time being, with the consent in writing of the said (*grantor*), or other the person or persons for the time being entitled beneficially as aforesaid by any deed or deeds attested as aforesaid to declare such new or other trusts concerning the same, as to the said trustee or trustees shall seem meet.	Same. The following is added:—Provided also, that if the said (*grantor*), his heirs, executors, administrators, or assigns, shall pay, or cause to be paid to the said Commissioners, or their successors, the said sum of together with such further sum or sums as they shall hereafter expend in additions or improvements to the said school, then, and in such case, these presents and everything herein contained, shall cease and be void. Provided also, that in computing the amount of any additional sums expended by the said Commissioners, no money laid out in repairs shall be taken into account, nor any sum expended by them in any year in which the entire sum so expended by them shall be less than £25.	**I.** Covenants to Observe Trusts.

ABSTRACT of several TRUSTS set forth from time to time in LEASES or TRUST DEEDS, with the DATE of Change or Modification.

—	JUNE, 1865.	1866.
A. Recitals,	Recites as in 1862. Recites nomination of patron and his approval by Commissioners.	Recites as under 1862.
B. Time for Literary Instruction.		
C. Time for Religious Instruction.		
How Religious Instruction shall be given.		
D. Control over Books,	Declaration that school shall be subject to Rules of the said Commissioners applicable to schools vested in them, the principal of which are indorsed hereon, as in 1856. Some of the rules, however, vary from those of the schedule indorsed upon the deed of 1856.	Declaration that schools shall be subject to Rules of the said Commissioners applicable to schools vested in trustees, the principal of which are specified in schedule indorsed hereon, as in 1862. Some of the rules, however, vary from those of the schedules indorsed on deeds of 1862 and 1865.
E. Teachers, . .		
F. Visiting Powers, .

Roman Catholics' efforts to provide schools, 228, 229.
Monastic and Convent Schools, 229–243.
Conclusion, 244–247.

EXPLANATION OF TABLES,

INTRODUCED AT VARIOUS PLACES OF THE REPORT.

Table A, on pages 746, 747, shows the number of children found by the two Royal Commissioners in the several classes of every department, and the number of teachers pupil-teachers and paid monitors in charge of them.

Table B, on page 751, shows the date at which each model school was visited, and also the number of scholars present at that time in each department paying school-fees at the Board's rates of £1 per annum, 10*s.* per annum, and 4*s.* 4*d.* per annum respectively.

Table C, on page 752, shows the number of children (whatever their age) who were individually examined in reading writing and arithmetic in all the classes above the First Book Class in every department of the model schools, and the number in each class and department who passed the examination without failure in any one of the three elementary subjects.

Table D, on page 754, deals exclusively with scholars upwards of twelve years old. It shows, under each department for boys or girls, how many above twelve years were examined in reading writing and arithmetic, how many of them failed in each elementary subject, and how many passed the elementary examination without failure; again, how many of them were examined in grammar and geography, how many failed in each of those subjects, and how many passed in both.

Table E, on page 756, consists of per-centages, by means of which the model schools may be compared one with the other. It shows under every department how many scholars in 100 are more than twelve years of age, how many are above Third Class in school, how many of that age and standing succeeded under examination in each of the three elementary subjects; and again, how many of whatever age or class passed the elementary subjects without failure. The per-centage of success ranges in boys' schools from 81 at Kilkenny down to 15 at Enniscorthy; in girls' schools from 63 at Ballymoney and Kilkenny to 14 at Trim; in infants' schools from 89 at Parsonstown to 8 at Waterford and 0 at Trim.

Table F, on page 758, shows how many years each model school has been in operation, what rent the Board pays yearly for the site, how much public money has been spent on land buildings furniture and repairs, how many children were found present, how much it has cost the State to provide school accommodation for each of these children, how many teachers are paid by the State to instruct them, how many children occupy a teacher, how much the public has paid in establishing and supporting each model school.

Table G, on page 758, shows the cost of teaching staff in each model school in 1867 and 1868, and the average cost of teaching a child in each of them calculated for 1867 upon the Board's average attendance, and for 1868 upon the numbers actually present at the Commissioners' visit. In 1867 the cost of teaching a child, whether boy girl or infant, ranged from £7 19*s.* 2*d.* at Enniscorthy to £2 6*s.* 2*d.* at West Dublin, and in 1868 from £8 19*s.* 3*d.* at Coleraine and £7 8*s.* 11*d.* at Kilkenny to £2 13*s.* 9*d.* at Dunmanway.

Table H, on page 762, shows how many of the children and teachers who were seen in each department of all the model schools belong to the Established Church, the Roman Catholic Church, the Presbyterians and other Dissenters respectively. It also gives from the Census of 1861 the religious return of the towns containing model schools.

Table K, on page 764, gives per-centages. It shows how many in 100 of the general population of each town containing a model school, were, in 1861, Episcopalians, Roman Catholics, Presbyterians or other Dissenters, and also how many in 100 scholars seen in 1868 at each model school, professed the same creeds.

Table L, on page 765, shows how many school-rooms are comprised in each department of the model schools, what is the area of those rooms in square feet, how many children those rooms would accommodate, allowing ten square feet for every child; how many children were actually present, how many square feet of school room were unoccupied, how many children the unoccupied school room would accommodate, and what per-centage of school space is unoccupied and useless. The unoccupied school space in boys' schools ranges from 83 feet in 100 feet at Newtownstewart to 31 at Bailieborough; in girls' schools from 87 per cent. at Kilkenny and Trim to 14 at Bailieborough; in infants' schools from 82 per cent. at Enniskillen to 0 at Bailieborough, Ballymena, Dunmanway, Newtownards, and Omagh, where the attendance of infants is in excess of provision for their accommodation.

REPORT

ON

DISTRICT AND MINOR MODEL SCHOOLS,

BY

REV. B. M. COWIE AND S. N. STOKES, ESQ.

A

My Lords and Gentlemen,

1. On the 29th of April, 1868, the Royal Commissioners sitting in Dublin resolved—

"That the Commissioners accept with thanks the offer of the Rev. B. M. Cowie and S. Nasmyth Stokes, esq., Royal Commissioners, to inspect and report upon the Model, Training, and Convent Schools." Scope of inquiry.

2. In offering to report on these schools, we had in view several considerations of more or less importance. Our acquaintance with the training schools in England receiving aid from the Education Department of the Privy Council would, we conceived, be a qualification for forming a sound judgment on the value of the training schools in Ireland, and we thought that by visiting these model schools in different parts of the kingdom, and also the schools in their immediate neighbourhood, we should be better able to discuss the grave questions connected with National Education in Ireland. We also intended to visit in all the places where model schools are established the bishops and clergy of the different religious bodies, to hear their opinion of present plans, and to inspire them with confidence in the Royal Commission. We hoped that we might be thus enabled to advise our colleagues and to take part in discussions at the Board with greater confidence. It was also, we thought, important to do what we could to save expense to the State, and being already in the Civil Service of the Crown we thought we should do well to offer our services to the Royal Commission thereby avoiding the necessity of appointing two more paid assistant commissioners to undertake this necessary part of the inquiry. Why undertaken.

3. The Royal Commission having accepted our offer in the resolution already quoted, we first of all procured from the offices of the National Board in Marlborough-street a list of all the convent schools connected with the Board in the places where model schools were established. We drew up forms of inquiry to help us in treating all the schools alike, and we determined on the extent to which we would examine these schools; we also thought it would be well to ask the opinions of persons of influence and intelligence residing in or near the schools as to their general reputation and efficiency. The way in which the names were selected was this. We drew up a list from "Thom's Directory" of all magistrates, clergy, and official persons whose address was given at the town where the school was situated, and addressed the following circular to them:— Form used

R. C. 3.

Royal Commission of Inquiry into Primary Education in Ireland.

4. Sir,—We have been deputed by our colleagues, the Royal Commissioners sitting in Dublin, to make a special visitation of the Model Schools established by the National Board; and we also propose, with the concurrence of the ecclesiastical authorities, to see as many of the Convent Schools throughout the country as we can conveniently undertake. to ascertain local opinion.

We are now in ———— for the purpose of performing these duties as far as they are necessary here.

And we think it right to ask you as a person of influence, and one who must be well acquainted with the general public opinion of the neighbourhood, whether (1) the ———— is generally acceptable to the inhabitants; (2) whether it bears a high reputation for successful education of children; and (3) whether, in your judgment, the money paid out of the taxes towards its maintenance is really and truly well expended for the benefit of those who have a just claim on the public aid.

If you will favour us with your views on these points, and any other remarks on the operations of the National Board in this district, we shall be glad to be aided in our inquiries by your experience; and we trust that in so important a matter we may confidently reckon on your co-operation.

We are, your obedient servants,

B. Morgan Cowie,
S. Nasmyth Stokes, } *Royal Commissioners.*

P.S.—If you are unable to reply immediately, please to address us at the Office of the Royal Commission, 46, Upper Sackville-street, Dublin.

5. A vast number of such letters were sent—generally on the day on which we arrived at the school we had to examine—as we intended in all cases to appear at the schools without giving previous notice. Lastly finding that the particulars of inquiry we had agreed upon would be very numerous we applied for the sanction of the Commissioners of Her Majesty's Treasury for the employment of an assistant, and having obtained their consent, we sent for Mr. Harden who had been assisting Mr. Stokes, and whose services were placed at our disposal by the Committee of Council in England. His acquaintance with schools, and with the methods of inspection and examination promised to be of great value to us, and we are glad to record here that we were not disappointed in our expectations. Mr. Harden examined with skill, and got through his work rapidly, and we were glad on one occasion to have the testimony of Mr. Bole, one of the Inspectors of the National Board, who was present during Mr. Harden's examination of children in the Coleraine Model School, to the closeness and clearness of his questions and to the accuracy of his report of the result of his examination. At a subsequent period we also had the assistance of the Secretary, D. B. Dunne, esq., who kindly undertook the examination of some of the classes and so enabled us to proceed more rapidly. We then from time to time, as occasion offered and freedom from other duties permitted, visited the schools in the following order:—

Assistance obtained.

Dates of visit.

West Dublin Model Schools,		June 18; Aug. 14.	Coleraine Model Schools,		Aug. 22.
Inchicore,	„	June 19; Aug. 31.	Londonderry,	„	Aug. 24 & 25.

General appearance and manners of Children.

8. The method of proceeding was this. On arrival at the model school, we took down from the teachers the full particulars of their staff. We counted the children present ourselves. We had the dimensions and number of the rooms—and we formed our opinion of the sufficiency of apparatus, desk accommodation, and school requisites.

Equipment and arrangement of building.

9. With respect to these latter points, it will not be necessary to go into particulars in each case; for we may say at once that we found universally the supply of books, apparatus, desks (in number), maps, &c., abundant; the rooms extremely well fitted, and, except sometimes in the infants' department, not crowded. In all the physical requisites for a school, these model schools are well equipped. The arrangement of the buildings is very much upon one type—and on this we shall have to observe. However convenient it may be to have free access to and from all parts of the building, we were somewhat astonished at the way in which the children and teachers of both sexes were brought perpetually in contact. And it was not an unusual thing to find some of the superfluous young men employed as assistants and monitors in schools where the numbers were small, in the girls' school, or in some of the numerous class rooms, passing the time in conversation with the similarly circumstanced female teachers. In this place we only wish to remark, that the plan on which the model schools have been built generally seemed to facilitate rather than obstruct the meeting of teachers and children in the different schools; and where walls were built to mark separation, there were doors, provided indeed with locks, but generally open. In such case, we thought the ineffectual separation more objectionable than the absence of all lines of demarcation.

10. Mr. Stack, the Clerk of the Board of Works, being asked by the Royal Commissioners, who was responsible for the plans of model schools, replied, that the architect was responsible, and the Commissioners of National Education. (Questions 14,445, 14,448).

11. We are of opinion that there has been a want of judgment in the arrangement of the plan in many of the model schools, and we fear that it would be unsafe to assert that no evil consequences had ever resulted from the facility with which the young people can seek one another's society.

12. The arrangement by which the infants' school is placed centrally, and lighted by a large window behind the gallery, is noticed under the head of Infants' Schools, § 151–2.

13. After the general inspection of the buildings and the staff, we proceeded to examine the children individually. In the boys' and girls' schools, each child was examined in reading, writing, and arithmetic. In the infants' school, the children were examined by classes or drafts, except in some cases, where the numbers were extremely small, but in all cases of infants' schools, all children above First Book were individually examined in reading, writing, and arithmetic. In the boys' and girls' schools, all the children who were in the Fourth and Fifth Books were examined also in grammar and geography.

Method of examination.

14. We determined to make our examination chiefly in the elementary subjects, because the real efficiency of a school is not, in our judgment, measured by the degree of proficiency which a few favourite or clever pupils can exhibit: the service rendered to the State by a model school should rather be measured by the general proficiency of children above a certain age, and we determined that we could judge of that proficiency very fairly by reading, writing, and arithmetic. In reading, if the children read intelligently, knew the meaning of words—could take up a book, open it at any place, and read on in this way without preparation—we should consider them fairly proficient. In the Fourth and Fifth Book this was always required; each child being called separately up to a table, and having a place pointed out to him to read—which then only for the first time met his eye. Questions in spelling and the meaning of words in the passage he had read followed: and then some questions in grammar, and on geography, either of Europe, or of the map of the world, or failing to find much knowledge of these, on the geography of Ireland.

15. In the meantime all the rest of the children were employed in doing sums on paper, which had been dictated to them, and in writing a letter on a subject or subjects which we assigned.

16. The arithmetic for the boys was practice, interest, proportion, three or four questions like the following being given, to be done on paper:—

Boys in Third Reading Book.

Samples of sums.

368 articles, at 9½*d.* each?
7492 articles, at £11 13*s.* 4*d.* each?
7 tons 15 cwt. 2 qrs. 14 lbs. at £10. 10*s.* per cwt.?

Boys in Fourth and Fifth Book.

Divide 16 lbs. of tea equally among 20 persons?
How far will a train run in an hour at the rate of 3½ furlongs a minute?
Make a shop bill of the following articles:—17 lbs. of butter, at 11½*d.* per lb.; 9 lbs. of tea, at 2*s.* 10*d.* per lb.; 3 dozen of wine, at £2 17*s.* 6*d.* per dozen.
A grocer bought 2 cwt. of sugar for 60*s.*, and sold it at 5½*d.* per lb.; what did he gain?
4174 articles, at £2 11*s.* 4½*d.* each?
7 tons 3 cwt. 2 qrs. 15 lbs., at £7 8*s.* 4*d.* per ton?
A train which runs 23 miles an hour, and should reach the station at noon, is then 23 minutes behind time; how far is it from the station?
Interest at 3½ per cent. on £48 9*s.* 8*d.* for 15 months?
If a farm of 70 acres is let for a rent of £125 per annum, what will be the size of a farm for which the rent is £57 10*s.*?
If 16 children can be clothed for £30 15*s.*, what will it cost to clothe 25 children?
If 12 cwt. 2 qrs. 13 lbs. can be carried 47 miles for 7*s.* 4*d.*, how far can 3 tons 11 cwt. be carried for £1 12*s.*?
If land lets at £2 16*s.* per acre, and one man pays £38 more rent than another, what is the difference in the size of their farms?
If a man pays £2 7*s.* 10*d.* rates on a rental of £30 10*s.*, what will be the rent of a man who pays £3 16*s.* 8*d.*?
If on sales producing £240 a man has gained 8 per cent. on his capital, what sum would he get if he invested his capital in a business producing 15 per cent. profit?
A starts for a walk of 26 miles at the rate of 3 miles an hour; 2 hours afterwards B starts to walk the same distance, at the rate of 4 miles an hour; what interval will there be between the times of their arrival at the end of the walk, and where will B overtake A?
A legacy of £300 is left to be divided equally among 9 persons, after 7 per cent. has been deducted for expenses; how much will each legatee receive?

The arithmetic for girls was practice, compound rules, and a shop account or bill to be made out properly and receipted. Here follow some specimen questions:—

Girls in Third Book.

From £10311 8*s.* 3*d.* take £837 19*s.* 6½*d.*
Multiply £17 13*s.* 9*d.* by 28.
Divide £501 3*s.* 8*d.* by 7.

Girls in Fourth and Fifth Book.

4738 articles, at 19*s.* 4½*d.* each?
Divide 10 guineas equally among 37 persons.
Divide 56 days 19 hours 39 minutes by 23.
Multiply 48 yds. 1 qr. 3 nls. by 37.
Divide £18 by 56. Divide £17 0*s.* 8*d.* by 31.
A shop account: 7 lbs., at 4½*d.* per lb.; 13 oz., at 9¼*d.* per oz.; 5½ lbs., at 1*s.* 3*d.* per lb.; 9 yds., at 5*s.* 7*d* per yd. It should be properly made out and receipted.
If a man gains £3 11*s.* 4*d.* on a sale of £16 16*s.*, how much is that per cent.?

Composition.

17. The writing exercise was given out thus:—"Write a letter telling me something about———" (A variety of subjects named.) The writing was estimated both for clearness and neatness, and for facility of expression. As the subjects named were within the reach of the meanest capacity, it was very seldom that we failed to get something original; and by a perusal of such efforts, very fair judgment can be formed of general intelligence in the pupils.

18. The examination of the children being completed, the particulars which were required to fill up the Form of Inquiry were obtained, and we took our departure.

Religious schools.

19. We then ascertained what schools were in existence where children could go whose parents disapproved of the model school, and we endeavoured to see something of all of these, examining if we had time; but, generally speaking, these schools were convent schools and Christian Brothers' schools, and in the south of Ireland they were much too large to allow of a thorough examination of the same searching kind as that we had given to the model school. In the north and west, where the schools were not so unmanageable, we examined several, and the results are given. We have no reason to suppose that a more extended examination would have brought out any great difference.

Visits to managers well received.

20. Before visiting the convent schools we endeavoured to see the bishop of the diocese, his administrator, or, in their absence, some official person to obtain their sanction and to inquire into any special grievances they might have. In cases where the Roman Catholic clergy had vigorously opposed the model school we endeavoured generally to find out the extent of their objection and the suggestions they would make towards the settlement of a difficult question. We are sorry to say that in this last particular we gained very little from our attempt.

Exception.

21. But everywhere we met with a courteous reception, except in Waterford, where alone the Roman Catholic Bishop made us feel that he would rather have our room than our company.

22. In all other cases we were cordially received and every desire shown to make us thoroughly acquainted with the schools, whether under the National Board or not, with the management, the proficiency of the children, and the difficulties or facilities of the work.

23. Before we proceed to lay before the Commissioners the opinion we have formed of the model schools and their value to the State it will be well to recapitulate their history, derived from the published records of the National Board.

History of district and minor model schools.

24. The proposal to establish district model schools makes its appearance very early in the history of the National Board. In their report for 1835—the second which they issued—the Commissioners give their "opinion that, in addition to the general training institution, thirty-two district model schools should be established, being a number equal to that of the counties of Ireland; that those model schools should be under the direction of teachers chosen for superior attainments and receiving superior remuneration to those charged with the general or primary schools; that hereafter each candidate for admission to the training establishments should undergo a preparatory training in one of them; that the salary of the teacher of each model school should be £100 a year, and that he should have two assistants, having a salary of £50 a year each." The Commissioners proposed to

1835. First plan.

erect all the thirty-two model schools in two years, and they estimated the expenditure of the first year for building twenty model schools at £15,000 and of the second year for building twelve model schools at £9,000. Such was the original plan—to erect a model school in every county in Ireland within two years from 1835 at an average cost of little over £700 per school, and to conduct them with a moderate staff of three teachers each at an outlay of £200 per annum. These model schools were to be directed by the head teachers. It will be seen in the sequel that this estimate, like many other estimates, has been greatly exceeded, and a different direction provided.

1844.

25. From 1835 the Commissioners' reports are silent respecting district model schools until 1844. The nine years which were to have witnessed the erection of thirty-two model schools and 5,000 ordinary schools at the expense of the National Board had passed over and little in that way had been done. Towards the district model schools nothing had been done at all.*

Charter.

26. In their report for 1844 the Commissioners "advert to a communication which they had already made to the Lord Lieutenant as to the necessity of having model schools established under their own immediate direction in the several school districts." They were "satisfied that such institutions would tend powerfully to the improvement of their schools in general," and in order to take conveyances of land they recommend that the National Board should be incorporated as "the Board which has the charge of the schools of public and private foundation in Ireland, under the 53 Geo. III., c. 2, was already incorporated." This was done accordingly by royal charter, dated the 26th day of August, 1845.

1845.

27. From the following report—that for 1845—we learn that the newly incorporated Commissioners had "called upon their several superintendents to recommend sites for district model schools," and that the communications made upon the subject were under consideration.

Six sites chosen in 1845.

28. This deliberation resulted in the selection of six sites at Coleraine, Ballymena, Newry, Bailieborough, Clonmel, and Dunmanway. Thus, in securing four out of the six places first chosen for the erection of model schools, the province of Ulster started with the advantage in this matter, which it has ever since retained. Mr. Stanley, in introducing his new plan to the House of Commons, upon 9th September, 1831, explained that the Parliamentary grant must be withdrawn from the Kildare-street Society, because, while "five-sixths of Ireland was Catholic, two-thirds of the whole benefit went to Protestant Ulster." The Board, which superseded the Society, adopted the same proportion in distributing its model schools—two-thirds to Protestant Ulster. "It is our intention," say the Commissioners in their report for 1846, "to establish one of these schools in each district; but we find that the expense will be so considerable that unless Parliament provide us with sufficient funds for the purpose we must proceed in our undertaking by slow degrees." In this year the number of districts was raised from thirty-two to thirty-four, but the intention of establishing a model school

* Early in 1840 the Roman Catholic Bishops acquainted the Lord Lieutenant with their opinion "that it would be very desirable to have a model school in each of the four provinces, as such an establishment would inspire the inhabitants of the province with greater confidence in the system of National education."

in each of them has never been executed, for while a few of the districts contain two model schools each, many districts have no model school at all.

29. In 1846 the Right Hon. A. Macdonnell,* Resident Commissioner, at the request of his colleagues, drew up a plan for the establishment of district model schools. Mr. Macdonnell defines a model school to be a school which it is intended should exhibit a perfect specimen, as far as can be, of the education you mean to have in a particular country, established with the intention that there should be a good specimen in each district of a school suited to that district. 1846.

30. The circular which was issued by the Commissioners in June, 1846, to explain "to their superintendents, for their own information and that of the patrons of the several schools within their districts, the general plan upon which they proposed that the district model schools, when founded, should be conducted," runs as follows :—

Resident Commissioner's plan.

CIRCULAR.

Education Office,
15th June, 1846.

SIR,—We enclose herewith a copy of the plan of the district model schools, in order that you may explain it to any parties desirous of applying for the establishment of such schools in their neighbourhood.

We are, sir, your obedient servants,

(Signed), MAURICE CROSS, JAMES KELLY, } Secretaries.

To Superintendents of N.S.S.

31. PLAN OF DISTRICT MODEL NATIONAL SCHOOLS.

(*a.*) That thirty-two district model schools be established, one in each school district.

(*b.*) That the rent be paid, and the schools be erected by the Commissioners, unless where a site is offered free from rent, and a portion of the expense of building the school is undertaken by the locality.

(*c.*) That in every case the district model school be vested in the Board, and be placed under their sole control, in the same manner as the Dublin model schools are, without the intervention of local patrons; the superintendent of the district acting as manager of the school, under the Commissioners.

(*d.*) That of the thirty-two district model schools, a certain portion be established in the chief towns of Ireland —the remainder in smaller towns and villages throughout the country.

(*e.*) That each model school established in large towns consist of an infant, a male, and a female school, and that each of these schools be capable of accommodating 100 children. That a small play-ground be annexed to each school; the whole school premises to be enclosed with a wall, and contain half an acre at the least.

(*f.*) That in the model schools established in the smaller country towns, the same course be followed, with this difference, that in the place of the infant school, an agricultural school be established.

(*g.*) That in each district model school, a residence for the master, and a dormitory to accommodate three candidate-teachers be attached to the male school. That a residence be supplied to the mistress of the female school in the neighbourhood of the school, and that one female candidate-teacher be placed under her care.

(*h.*) That the candidate-teachers be boarded and lodged at the expense of the Commissioners. The course of training in the district model school to last for six months, so that in each district six male teachers and two females will be annually trained—in all 256.

(*i.*) That the candidate-teachers be selected, after public examination by the superintendents, from among the paid monitors and other meritorious pupils of National schools within the district; and that such of the candidate-teachers as pass with credit through the half-year course of training in the district model school, be recommended by the superintendent to those patrons of schools who apply for teachers.

(*j.*) That after the candidate-teacher shall have passed through the district model school, shall have received the superintendent's certificate, and have served in a National school for two years, he shall be summoned to complete his education at the National model school in Dublin. But that previous to his admission he shall be examined by the professors in a course of study which shall be prescribed for all candidate-teachers as soon as they have received their certificates at the district model schools, and that he shall be rejected unless he be found thoroughly prepared in this prescribed course.

(*k.*) That from all the National schools in the neighbourhood of each district model school, a certain number of the most deserving pupils be annually selected after public examination by the superintendent, and be admitted as free scholars into the district model school, to act as monitors therein, and to receive for their services small weekly payments, as is the case with respect to the monitors in the Dublin model schools.

(*l.*) That the whole expense of building and furnishing each model school must not exceed £800.

(*m.*) That in each case, sufficient space be left for the erection, at a future time, of a middle class school-house, and an industrial department, should the Commissioners desire to establish such in connexion with the District model school.

(*n.*) That in addition to the district model school, there be built, from time to time, in each district, a few small schools, with residences for the teachers, at the entire expense of the Board, in localities too poor to found schools; that of these schools the Commissioners shall be the patrons, and the superintendents the managers; and that candidate-teachers who shall have passed through the district model schools, and young persons educated in the special class in Dublin, shall be selected to teach in those schools for the space of two years; after which time the teachers will be fit to undertake more important schools, and their places will be supplied by other candidate-teachers selected in the same manner.

32. This plan discloses very clearly the main object which district model National schools were originally designed to meet. That object was to train probationary teachers for service in ordinary schools under the Board, with the intent that after a period of trial they should be summoned to the central institution in Dublin, and there complete their course of training. Of such candidate-teachers each district model school was to accommodate three males and one female, who would remain in it for six months only. The female candidate was to reside with the mistress in a residence supplied by the Commissioners in the neighbourhood of the school. The male candidates were to live with the master on the school premises. Each model school was to stand upon an enclosed site of half an acre, and to comprise school-rooms for 100 boys and 100 girls, together with, if in a large town, an infants' school; Object of plan. Size and cost of model schools.

* House of Lords Committee of 1854; question 1570.

if in the country, an agricultural school. "The whole expense of building and furnishing each model school must not exceed £800." And it is manifest that the model schools were not designed to be middle schools, since the plan provides that in each case sufficient space be left (in the half acre, as may be presumed), for the erection at a future time of a middle-class school-house. It is equally plain that those persons who regarded the model schools as the commencement of a scheme of general education to be under the sole control of the Board without the intervention of local patrons, had some ground of suspicion, since the plan contemplates the erection from time to time in each district of small schools, with teachers' residences, at the entire expense of the Commissioners and under their exclusive superintendence.

Not to be middle schools.

Extension of plan intimated.

Instances of departure from plan.

33. Before proceeding further, we may mention a few cases to illustrate the wide departure of the model schools as actually established from the plan proposed to Parliament for their establishment. (1). Instead of adhering to the uniform standard of capacity, the model schools vary immensely in size. Belfast, the largest, will accommodate 1,630 scholars, at eight square feet per child. (2). The sites likewise vary in extent. Nearly all of them exceed the modest half acre; and Enniskillen, the latest and largest, extends to nearly seven acres of play-ground. (3). Similarly the teachers' residences vary in size. The minor schools have no dormitory for candidate masters attached to them, while in other cases there is accommodation for twelve such persons. Residences in the neighbourhood are not supplied to the mistresses, nor are the candidate female teachers placed under their care. (4). The course of training lasts longer than six months. (5). The candidate teachers who pass through the course of training in the district model schools, are often not subsequently summoned to complete their education at the central establishment in Dublin. Some of them even become head teachers of model schools under the Commissioners without any further education in Dublin or elsewhere. (6). The system of free scholars and monitors is not in operation. (7). The maximum cost of £800 for building and furnishing a model school, which must not in any case be exceeded, in no case sufficed for those purposes. Bailieborough, which seems to have been the least costly, as it is the smallest of the district model schools, cost £3,576 11*s.* 1*d.* for building and furnishing, besides £2,066 14*s.* 1*d.* for extensions and repairs. Belfast district model school has cost the country nearly £16,000 for the like purposes. Even the minor schools have every one exceeded the maximum allowance of £800, varying from £1,600 expended on the miserable structure at Ballymoney to £6,000 paid for the spacious schools at Lurgan.

Plan violated two fundamental principles.

34. Thus the plan of 1846 has not been adhered to in the establishment of district model schools. But the plan itself proposed to depart from the fundamental principles of the National Board in two particulars, which appear to us calculated *ab initio* to prove fatal to its usefulness and success. The fundamental principles to which we allude are both set out in Mr. Stanley's letter of October, 1831, constituting the National Board of Education. "The Board," writes the Chief Secretary, "will invariably require, as a condition not to be departed from, that local funds shall be raised, upon which any aid from the public will be dependent." Where aid is required from the Commissioners for building a school-house, "it is required that at least one-third of the estimated expense be subscribed, and a site for building, to be approved of by the Commissioners, be granted to them." This wise rule of requiring local effort as an indispensable condition of aid towards the erection of any school was cast to the winds in the case of district and minor model schools, with consequences to which we will presently advert. In regard to teachers, Mr. Stanley's letter prescribes that the Board "will allow to the individuals or bodies applying for aid, the appointment of their own teacher;" and the Commissioners, in their explanatory document upon the letter, "understand that the control over teachers of schools is vested primarily in their local patrons and conductors."* Similarly, the Board's earliest instructions to their Inspectors, as published in the Report for 1836, define as the first general principle of the system that "the Commissioners do not take the control or regulation of any school except their own model school," (in the singular number, viz., the model school upon their own premises in Dublin), "directly into their own hands, but leave all schools aided by them under the authority of the local conductors. The Inspectors will therefore not give direct orders, as on the part of the Board, respecting any necessary regulations, but point out such regulations to the conductors of the school, that they may give the requisite orders." Again, when, in 1850, there was discovered an ambiguity in the trust deed of vested schools respecting the absolute power of local managers to dismiss their teachers, the Commissioners (Report for 1850, page 6,) declared that "according to our rules the appointment of teachers has always rested with the patrons or managers, subject to our approval, and to them also has at all times been given the unquestioned right of dismissal of their own authority." This rule also has been systematically violated in the appointment and direction of all teachers in model schools.

* The rights of local patrons in the appointment and control of teachers have all along been regarded as of primary importance by the Roman Catholic hierarchy. So early as January, 1826, the Roman Catholic archbishops and bishops of Ireland unanimously adopted resolutions including the appointment and dismissal of teachers and permanent assistants among the measures essential to secure sufficient protection to the religion of Roman Catholic children under a system of combined education. And when, fourteen years later, in February, 1840, four of the prelates submitted to the Lord Lieutenant, an arrangement for obtaining the unanimous support of the bishops for the National system, the first of their proposals was:—"That in every National school for the mixed education of Protestant and Roman Catholic children, the Roman Catholic bishop of the diocese, the parish priest, or the Roman Catholic curate of the parish in which such school is situated, may be a patron of said school, in order that he may prevent the appointment of any teacher whose moral or religious conduct should be found objectionable, and, if necessary direct the dismissal of such teacher from so important a situation." His Excellency, in replying, pointed out to the bishops that "The Board has nothing to do with the selection of patrons, who are usually chosen by those persons whose funds have been subscribed or whose land has been given for the establishment of the schools. With them rest the appointment and dismissal of the masters, over which the Board exercises no control, except what is absolutely necessary to secure their being morally as well as intellectually qualified for the duties which they have to perform." One only exception is made by the Lord Lieutenant:—"The model schools at Dublin are under the immediate superintendence of the Commissioners, and subject to their frequent inspection, a duty which I well know is not more assiduously performed by any portion of them than by the members of your own Church."

35. In abandoning the requirement of local contributions as a condition precedent to national grants, the Board surrendered the best guarantee of economy in building the school and of popularity in conducting it; and they at the same time exposed themselves to suspicion of favoritism in selecting sites for institutions so highly privileged. In some instances, no doubt, memorials were presented to the Board, calling for the foundation of model schools; but this circumstance will create no surprise when it is remembered that a model school is a handsome building erected at the exclusive cost of the State, where the public purse enables a teaching staff of unparalleled strength to dispense the best education on the lowest terms. The description given by Archdeacon Bell* of the process pursued with the memorial in favour of the Waterford model school must be applicable to other cases :— "I am quite satisfied, from what I knew when it was in progress, that it was signed from a great variety of motives. It was carried about from house to house; some signed it for one reason, others for another. I have heard people say that they signed it because, if successful, there would be £8,000 spent in the town upon the building; others thought it would be ornamental; others no doubt approved of the establishment of the school, and thought it would be useful. But I know that it was signed from a great variety of motives. Indeed I know that some signed it because they thought that the bishop and clergy would not like it." Upon such memorials no reliance should have been placed. Had the citizens of Waterford provided a site for the model school, and contributed £2,000 or £3,000 towards its erection, the earnest of their good will would have been justly entitled to weight. No local contribution.

36. Further, in undertaking the appointment and control of teachers in the model schools, the Commissioners seem to have adopted a course which was as unwise in conception as it has proved ruinous in result. But we defer a consideration of this point till we come to the subject of "management" and continue the historical inquiry. Board appoints teaching staff.

37. In their report for 1847 the Commissioners announce that tenders have been accepted for the erection of model schools at Dunmanway, Clonmel, Bailieborough, Ballymena, Newry, Coleraine, and Trim; and that the building of six of them has been commenced. They reiterate their belief that the establishment of a primary model school in each school district, as originally contemplated, is essential to afford unity and full efficiency to the National system. 1847.

38. They further state that they have for some time had it in contemplation to establish in Dublin subsidiary model schools, similar in their general character to those in Marlborough-street, but not on so large a scale; and that they expect within a short time to make a commencement in carrying this desirable object into effect. But they offer no reasons in support of the establishment of Dublin model schools in addition to those in Marlborough-street, nor do they explain the object of such establishments, nor the considerations which induce them to characterize it as "desirable." Since every model school involves a heavy charge upon the country and a violation of the fundamental rules of the Board, we cannot, in the absence of explanation, but regard the establishment of two such schools in one locality as very undesirable indeed. More model schools in Dublin contemplated. Condemned.

39. At the close of 1848 the district model schools in Newry, Ballymena, and Clonmel were reported as ready to be opened; and those in Dunmanway, Bailieborough, Coleraine, and Trim as nearly finished. At this time the Commissioners entertained "sanguine hopes that these schools would receive the cordial support of all denominations;" although in respect to Clonmel they had received notice that the Rector, the Rev. Mr. Palliser, would "remain neutral," while one of the parish-priests the Rev. Mr. Burke, was in 1846, "dissatisfied with the exclusive control to be exercised by the Board in the sole management of the district model schools." 1848. Hopes and fears.

40. In the course of the same year the Trustees and Committee of the School-street schools in the liberties of Dublin transferred to the Board their large school premises, which had been erected in the year 1798 for the education of the poor of different religions. These schools were altered and repaired at the public expense, and continue to be supported by the Board as the West Dublin Model Schools. They are described by the Commissioners as "situated in one of the poorest and most populous localities in the city, at a considerable distance from the central institution, and where it is most desirable that large and efficient National schools should be established." We are of opinion that these reasons fail to justify the step taken by the Commissioners. About the poverty and dense population of the immediate neighbourhood of School-street there can be no question, but we think that the school premises are wholly unsuitable to be proposed as models, and that the schools are not calculated to meet *general* interests so large and pressing as would warrant a departure from the salutary rule of local management and local contributions. The original cost of erecting these schools in 1798 is said to have exceeded £2,000 and the charge on the public funds made on account of them was £435 4*s.* 9*d.* in 1848, and £1,688 1*s.* 11*d.* in 1849, when they were adopted by the National Board as model schools. They had been Sunday schools only up to 1811 when they were converted into week-day schools in connexion with the Kildare-place Society. However, before 1849, funds available for their support had fallen so low, and the attendance of children become so thin, that the Committee transferred the responsibility and the management to the National Board, who willingly accepted the trust, and indeed considered it "desirable that large schools of a similar character, with an industrial department attached to each, should be established under them in other impoverished and populous localities of Dublin," promising "not to lose sight of this important object." This pledge (very wisely, as we think), has not been redeemed. West Dublin Model Schools.

41. The year 1849 witnessed the beginning of the new experiment. In May of that year the district model schools of Newry and Ballymena were opened; Clonmel in June; and Dunmanway in August, Coleraine, Bailieborough, and Trim followed in May of the next year. The model schools at Newry, Ballymena, Coleraine, Clonmel, and Trim are described as comprising three separate departments for boys, girls, and infants, respectively, with a house for the masters, and accommodation for eight resident pupil-teachers and for domestics. To Bailieborough and Dunmanway agricultural depart- 1849. Opening of seven model schools.

* Lords Committee, (1854), q. 4867-4874.

ments were added in place of infants' schools. The cost of erecting and furnishing model schools was at once found very seriously to exceed the modest estimate of £700 or £800. "Including every expense the sum will be nearly £5,000 for each." "The amount required to support them does not exceed £400 per annum each," was the opinion of the Commissioners after one year's trial. This heavy cost induced the Board to restrict their views to the erection of no more than two new model schools in the following year, viz., at Athy and Galway.

Cost.

Fees.

42. The fees to be charged in model schools were fixed at the following scale. In the boys' and girls' room one half of the children were to be admitted at 1*d.* per week, and of the rest four-sevenths at 2*s.* 6*d.* per quarter, and three-sevenths at 5*s.*; in the infants' school one-fourth were to pay 2*s.* 6*d.* per quarter, and the remainder 1*d.* per week.

Newry.

43. The Newry school, designed for 250 children, soon filled with pupils. At the end of the first year it was attended by thirty-eight children paying quarterly 5*s.* each, by ninety-three paying 2*s.* 6*d.* each, and by 188 paying 1*d.* weekly; and the Inspector reports that there is "no reluctance on the part of the better class of artisans to allow their children to frequent the same school with those of the poorer order, provided the instruction be sound and suited to their wants; nor do they show any unwillingness to pay for that instruction a higher rate than can be afforded by their humbler neighbours." It is added, however, that "the highest rate fixed by the Commissioners is much below what the same class had hitherto to pay." At the same date the Ballymena Model School is said to be "attended by children from almost all the varied ranks or grades of society, from the intelligent and industrious labourer and artisan, the small farmer, and more wealthy landholder, up to the more respectable mercantile or trading part of the community, and even on to those of the professional class." Clonmel was very soon overcrowded, and at the end of the first year instead of a total of 210, as proposed by the Commissioners, there were on the school-rolls 128 children at 1*d.* per week, 137 at 2*s.* 6*d.* per quarter, and 102 at 5*s.*, or 367 altogether. Every social grade in the town was represented in the school, and of 528 admissions seventy-eight are returned as children of "parents who live private, clergymen, public officers, professions, &c." At Bailieborough only forty-eight out of 121 are described as children of labourers and mechanics; and even at Dunmanway "the pressure for admission at the higher rates was great, particularly from shopkeepers and farmers." In the West Dublin District Model School it was, of course, deemed miraculous to obtain a penny per head.

Ballymena.

Clonmel.

Bailieborough.

Dunmanway.

44. The earliest reports on model schools afford proof that in them, as in some ordinary schools, children were from the first admitted prematurely and retained too long. Thus, in the first year of the Newry Model School there were three scholars of two years, one of two and a half, fourteen of three, and twenty of four years of age, while fifty-seven young persons continued to attend this elementary school when upwards of thirteen.

Age of pupils.

Instruction.

45. The instruction seems to have at once assumed the form which it retains in model schools. Thus at the end of one year the boys' and girls' schools at Newry had no First-book class, while the course at Clonmel included "geometry, algebra, book-keeping, mensuration, reasoning, first principles of natural philosophy, as mechanics, hydrostatics, hydraulics, pneumatics, optics, heat, chemistry, and geology, processes of analysis and investigation, which are the best and clearest exemplifications of logic, principles of orthography and of orthoepy, natural history and zoology."

Religious difficulty.

46. Even in the infancy of model schools, the religious difficulty was not entirely unknown. Of Dunmanway it is reported that "the clergy of the Established Church, although at first apparently favourable, or at least not opposed to the attendance of the Protestant children, subsequently, however, thought proper to change their opinions, and, through their influence, the natural attendance of the children was interfered with; this influence was also extended to the Protestant operatives, artisans, and even shopkeepers, and has had the effect of inducing some to withdraw their children, and of preventing the attendance of those of the remainder." While in the visitors' observation book at Clonmel, a clergyman of the Established Church is reported to have made the following entry—"Visited this school and have but one fault to find with the system under which it is conducted, and that is that the authority of Almighty God is not acknowledged within it."

Account of Bailieborough model school.

47. The history of Bailieborough model school, county Cavan, is peculiar. It resembles the West Dublin school more nearly than other model schools, inasmuch as the premises were not originally erected by the Board, but were adopted and repaired by them at the public expense, in a locality presenting no recommendations as the site for a model school. In the year 1845, Sir John Young is said to have built, at a cost of £400, the Bailieborough school-house, standing upon an acre of ground, in a low marshy situation, and within a few yards of the fever-sheds of the union workhouse. The building contained two school-rooms, each thirty feet by twenty, with a teacher's house. It was erected as an ordinary National school for the special use of the poor. When taken by the Commissioners for a model school, "the ground was partially walled in, the play-grounds were divided, offices were erected, the walls were cemented and stanched, the teachers' apartments were removed, and converted into two class-rooms, new furniture was made, the earthen floors were replaced by boarded ones, and in fact, except the shell of the building which remains unaltered, the entire premises were re-arranged and refitted." These improvements and alterations were effected at a cost to the country of £3,576 11*s.* 1*d.*, and a further sum of £2,066 14*s.* 1*d.* of public money has been subsequently spent upon extensions and repairs. At this very considerable outlay the Commissioners have obtained a small model school, capable of accommodating 213 scholars, situated upon a low site of about one acre and a quarter, which they hold on lease renewable for ever, at an annual rent of £19. We think that the offer of £100 subscription towards the decoration of the neighbouring agricultural school, and a minister's statement respecting the extent of the Presbyterian population, which we are at a loss to reconcile with the Census returns, were considerations wholly inadequate to justify the establishment of a model school at so disproportionate a cost in the small town of Bailieborough. In 1853, the Inspectors condemned the model school-rooms, and recommended that they should be restored to the special use of the poor for whom they were originally erected.

48. In 1850, two new district model schools were in course of erection at Athy and Galway, and resolutions were taken to build two additional schools of the same class in Limerick and Kilkenny. 1850.

49. A personal change which occurred in this year, has exercised so powerful an influence upon model schools that it cannot be passed unnoticed here. The Most Rev. Dr. Crolly, Roman Catholic Archbishop of Armagh, was succeeded in that see by the Most Rev. Dr. Cullen, who opposed and defeated the design of establishing a model school in Drogheda. About the same time the Synod of Thurles was held; and shortly afterwards the Most Rev. Dr. Cullen took occasion to publish his opinion that the model schools in system closely resemble the Queen's Colleges, which had been condemned as "detrimental to religion, on account of their grave and intrinsic dangers." Henceforward the model schools, which appear from the first to have been widely disapproved by the clergy of the Established Church, encountered the decided hostility of Roman Catholic ecclesiastics. Ecclesiastical changes.

50. Not long afterwards the Commissioners found experimentally how difficult a thing it is for a mixed Board to manage schools without dissension. At the opening of the Newry and Clonmel model schools, certain quasi-religious works, which appeared on the list of books approved by the Board, had, with the knowledge and consent of two of the Commissioners, not been forced into use. Upon discovering the omission, Archbishop Whately, himself a Commissioner, and the author of one of the works in question, which he had designed to be Christian without taint of sectarianism, demanded that in *all* the model schools *all* the Board's books should be read. A protracted controversy arose within the Board, which resulted in the removal of His Grace's work from the approved list of books, followed by the resignation of three Commissioners and a lengthened inquiry before a committee of the House of Lords. Exclusion of books.

51. The Most Rev. Archbishop Murray, who had been on the Commission from its institution, died in 1852. In lamenting his decease, the Commissioners state that "our success has been greatly owing to his constant presence among us, and to the confidence reposed by the members of his Church in his great sense, experience, and integrity." The loss of Roman Catholic confidence which followed upon His Grace's demise, marks an era in the history of model schools. 1852. Archbishop Murray

52. The Board's Report for 1852 contains a phrase which seems calculated to convey a false impression. The Report mentions the success of "our district model schools, where the clergy of different persuasions *co-operate in the management* of them." The West Dublin model schools are more truly described in the same Report as "under the exclusive management" of the Board. However, a return is printed to show that in 1852, the rolls of nine model schools then in operation at Ballymena, Newry, Coleraine, Clonmel, Dunmanway, Bailieborough, Athy, Trim and Galway, bore upon them the names of 763 Protestants, and 1,350 Roman Catholic scholars. Mixed attendance.

53. Two additional model schools were at this time announced in Belfast and Dublin, and preparations were reported for the erection of those at Waterford, Limerick, and Kilkenny.

54. In some of these places the proposal to found model schools created considerable controversy. From Waterford, a memorial and counter-memorial, favourable and adverse, signed in some instances by the same persons, reached the Board. At Limerick, the Protestant bishop promoted the scheme, while the Protestant rector opposed it. Dissension.

55. In 1853, the district model schools at Waterford, Kilkenny, and Limerick, continued to be in progress of erection. At Belfast, the offer of seven large mill-owners to co-operate with the Board in the establishment of a National school, chiefly for the benefit of their workpeople, induced the Commissioners to secure a site of about one statute acre for a model school in that prosperous locality. Towards this object the neighbouring manufacturers raised about £800, which they employed in paying a fine in reduction of the annual rent charged for the site of the school. Nevertheless, the nation pays £60 yearly as ground rent, and the Commissioners have laid out upon the school buildings as much as £15,956 6*s.* 8*d.* 1853. Belfast.

56. In the same year, the Commissioners were induced—by the offer of an eligible site, and a contribution of £500 from the Directors of the Great Southern and Western Railway—to undertake the building and maintenance of a model school at Inchicore, near Dublin, to be under their own exclusive control. They deemed it of great importance that a model school of this character should be established in connexion with every principal railway in Ireland; and they promised their favourable consideration to applications of the kind. Inchicore.

57. Furthermore, as a commencement to the work of founding schools for sailors' children in leading maritime towns, they undertook to defray the expense of erecting the necessary buildings for a marine school in Belfast, and of maintaining the institution. This model school also was to be under their own exclusive management. Marine schools.

58. Upon some of the model schools, already in operation, the Inspectors did not at this time report, or their reports were not presented to Parliament by the Board.

59. In 1854, the Kilkenny model school was opened with a very small attendance, "in consequence of local opposition." Of fifty-two names on the rolls at the end of December, fifty-one were Roman Catholics. The Inchicore model railway school was completed in the same year, but the erection of the maritime school at Belfast had not been begun. 1854. Kilkenny.

60. The Board's Report for this year announces the revision and classification of their rules, and comprises the following chapter:—

DISTRICT MODEL SCHOOLS.

(*a.*) District model schools are built and supported entirely out of the funds placed by Parliament at the disposal of the Commissioners, and are therefore under their exclusive control. New Rules.

(*b.*) The chief objects of district model schools are to promote united education; to exhibit the most improved methods of literary and scientific instruction, and to train young persons for the office of teacher.

(*c.*) In district model schools, the Commissioners appoint and dismiss, of their own authority, the teachers and other officers; regulate the course of instruction, and exercise all the rights of patrons. The Commissioners afford the necessary opportunities for giving religious instruction to the pupils, by such pastors or other persons as are approved of by their parents or guardians, and in separate apartments allotted to the purpose.

(*d.*) Some of the district model schools have farms attached to them, for the purpose of affording instruction in agriculture.

1855.

61. In 1855, the model schools at Limerick and Waterford received pupils; that at Belfast approached completion; and the design of building at Londonderry was made public.

Defects in Galway.

62. By this time the Commissioners began to find, although model schools were still so recent in origin, that their exclusive management did not wholly exclude abuses. Omission to publish reports was not persisted in; and accordingly, respecting Galway model school, we now hear of "many defects in the building and in the management which call for the interference of the Commissioners"; and also, that "the schools have gradually ceased to be attended by the children of the poorer classes, and are attended chiefly by the children of shopkeepers and of the middle classes."* In the same way, the children in Limerick model school "belong to all classes in society, but chiefly to the shopkeeping and farming classes." At Ballymena, it was found that many who "were in a position to pay the higher rates" sent their children to the model school for 1*d.* a week. At Coleraine model school, the Inspector had, twelve months before, reported to the Board, that "in many important respects one of the departments was in an unsatisfactory state," and in the beginning of 1856 the report was "still under consideration." During the whole of 1855, only two visits were paid here by any clergyman, during the time of religious instruction. It is, perhaps, not surprising that the exclusive control of the Commissioners, who had not in a year found means to correct grave moral evils, obtained but little clerical co-operation. At Newry, the Inspector called for "the services of a classical master," to teach Latin and Greek to the model school pupils, at an extra fee of 10*s.* each per quarter. In Clonmel model school, the attendance for three months had been unusually low, "owing to the very severe weather, and to the windows of the school-rooms being broken and admitting the rain very freely, and the delays involved in getting in new sashes, instead of the inferior ones that had been before in use."

Ballymena.

Coleraine.

Newry.

Clonmel.

63. In reference to this model school, the Inspector makes a prudent suggestion, equally applicable to all district model schools, the importance of which could only have been overlooked in boarding-schools under the exclusive control of the Board. "It would be very desirable," he says, "if the importance of detaching the female department from that of the males were kept in view."

Males and females.

64. Of Athy, we learn that, in spite of advertisements and circulars, the model school opened in 1852 with an attendance of thirteen boys, one girl, and one infant; and that in May, 1854, "a laxity of discipline prevailed through the establishment." Similarly at Kilkenny, "though the opening of the schools had been advertised in the local papers, and brought under the notice of the public still more by placards, posted through the town and neighbourhood, yet the attendance on the day of opening was limited to fourteen in the boys' school, four in the girls', and four in the infants' school."

Athy.

Minor model schools contemplated.

65. In 1854 the Government had "empowered the Commissioners to build a limited number of ordinary National schools in the *poorest localities* in Ireland, *in which local subscriptions cannot be raised,* at the entire expense of the State—not to exceed £400 each; these schools to exhibit the best specimens of what good ordinary National schools should be. They are to be under the exclusive control of the Commissioners, who shall have power to appoint the teachers, &c.; and in cases wherever it is practicable, to appoint *Committees composed of Protestants and Roman Catholics to visit and superintend them,* under the direction of the Board." This recommendation originated the Board's minor model schools, which however do not conform to the Government suggestions either in poverty of localities, or in character of buildings, or in cost, or in mode of management.

66. These new schools were at first described as "ordinary National schools, designed to exhibit the best specimens of what this class of schools should be." They are now known as minor model schools, and are included in this Report. They differ from district model schools in containing no boarding establishment for candidate or pupil-teachers; and, being so far in less imperative need of local management, they may be regarded as not equally exposed to censure. But, since in them one of the primary objects of the district schools, viz., the preparation of teachers, is abandoned, so the profligate expenditure incurred in erecting ordinary National schools *e.g.*, £4,494 17*s.* 2*d.* at Carrickfergus, and £6,763 19*s.* 3*d.* at Lurgan, fairly lays them open to the condemnation of the taxpayer. The nomenclature, indeed, is not free from confusion. Thus the very inferior structure at Ballymoney, opened in 1856, is sometimes styled a minor model school, and at others a literary and agricultural model school. In truth, it is unfit for imitation by schools of any class.

Marine schools abandoned.

67. In 1855 the marine schools, which were to have been erected at the national expense and under the Board's control in the leading seaport towns, appear to have been wisely abandoned, or at least to have subsided into the more moderate plan of adding maritime departments to the model schools of Limerick, Waterford, and Londonderry. In the same year the course of training for pupil-teachers in the several model schools was extended from one year to two, and the stipends of paid monitors in the same schools considerably increased.

1856.

Preference shown to Ulster.

68. The Commissioners in 1856 opened the Ballymoney Literary and Agricultural Model School, and resolved upon erecting seven more of their specimen National schools at Carrickfergus, county Antrim; Monaghan, county Monaghan; Newtownstewart and Omagh, county Tyrone; Bandon and Youghal, county Cork; and Parsonstown, King's County. As the schemes in favour of Bandon and Youghal were never carried out, the sites of all these minor model schools which were eventually built, as well as Lurgan subsequently selected, are in the province of Ulster, with the single exception of Parsonstown.

1856.

Enniscorthy built without prospect of success.

69. In their report for 1856, dated 14th August, 1857, the Commissioners state that they "have decided upon establishing a district model school at Enniscorthy, county Wexford, and are in correspondence with reference to a suitable site." We have seen that the district model schools at Athy and Kilkenny were at their opening attended very badly indeed. Doubtless the Commissioners indulged hopes of larger success in those towns; but we now find them laying out £6,500 of public money upon a district model school at Enniscorthy without any support from the Established Church,

* In spite of the respectable position of the children, the Inspector records that, after the public examination, he divided £15 of public money among the most deserving pupils, in sums varying from 1*s.* to 10*s.* Such gratuities to middle-class children, seem too much like State bribes.

in face of a decided and well-reasoned declaration of hostility from the Roman Catholic bishop who represented eighty-eight per cent. of the population, and in spite of a strong remonstrance from their own Head Inspector. In such a case it would really seem as though the squandering of national funds and not the education of the nation were the object of the National Board.

70. Among the interesting facts recorded of model schools in 1856 we observe at Athy that "the private schools previously existing have all but disappeared," while on the rolls of the model school there are twenty-three boys and twenty-seven girls above fifteen years of age; at Coleraine that "nothing has as yet been done towards making permanent improvements in the male department," so that the abuses, now of two years' standing, remain still unredressed under the exclusive management of the Commissioners; at Ballymoney that about £400 had been locally contributed towards the building expenses, and that the Commissioners give the whole amount of fees to the teachers here in place of one-half, as in a district model school.

71. May, 1857, witnessed the opening of the great model school in Belfast. 1857.

72. In the same year a site was obtained for the Londonderry model school, and the resolution taken to erect a model school at Newtownards, county Down, upon a site given by the Marquess of Londonderry. These are district model schools.

73. The Commissioners further report that at Carrickfergus, Monaghan, Newtownstewart, Omagh, and Parsonstown they have leased land "for the erection of schools designed to exhibit the best specimens of ordinary National schools." These were to be minor model schools.

74. We cannot refrain from noticing once more that, with a single exception, all the Board's model schools now spoken of, whether district or minor, are situated in the province of Ulster. It was, doubtless, the opposition generally offered to their scheme by Episcopalians and Roman Catholics throughout three of the provinces of Ireland which at this time drove the Commissioners to pitch their model schools in places inhabited by considerable bodies of Presbyterians in Ulster. But this virtual exclusion from Leinster, Munster, and Connaught should have made the Commissioners reflect that their plans, however acceptable to a particular section of the community, could not fairly be considered national; and further, that the taxpayer may righteously complain of the enormous cost and grave injustice of founding and maintaining model institutions which, under the name of combined education, in reality displeased all sects but one. Presbyterian localities favoured.

75. The reports for 1857 record the failure of the Inchicore Railway Model National School. Already in 1856 it "had not in at least the girls' and infants' departments been a successful institution;" and in 1857 a decrease of attendance took place in the boys' school of thirty-three, or 21·7 per cent. "It was, no doubt, very disheartening to teachers highly qualified and classed and used to schools largely attended to have had to deal daily with small classes and with children who made it a compliment to attend," and these "circumstances, entirely beyond the male teachers' control, caused a large number of pupils to withdraw." This railway model school was intended for persons connected with the Great Southern and Western Railway Works, "but the school register shows that a very large per-centage of the attendance consists of children whose parents have no connexion with these works." The evening school had likewise failed. "It dragged out a kind of lingering existence till 1st June, when it was closed by order of the Board." It was to be re-opened on advantageous conditions for further trial, but "such are the apathy and indifference" that the Inspector "doubts if twenty persons will be found to avail themselves of the opportunity of attending this school." In short, the Board's exclusive management was not more popular with railway mechanics than with clergymen; and though the Inchicore school is still supported at the public charge, yet the experiment of founding railway model National schools has not been tried again. 1857. Failure of Inchicore.

76. As the Inchicore model school will not be further mentioned in this outline of the history of model schools, we may introduce here a remark made in a subsequent report. "The past history of this school," says the Inspector, "short as has been its existence, affords a strong proof of the advantages of exercising a strict and vigilant superintendence over the conduct even of model school teachers." The remark indicates clearly enough one class of difficulties attending upon the exclusive control over schools retained in the hands of a Dublin Board. Model teachers need managers.

77. In the course of 1858 the Commissioners convinced themselves that the central schools were unfitted by their great size and large attendance to serve as models for the teachers in training, whose schools ordinarily are limited in extent and attended by small numbers of pupils. Accordingly, they began to erect seven additional schools in Marlborough-street, varying in their dimensions and corresponding more closely than the central schools in arrangement and attendance with the various grades of ordinary National schools spread over the country, whose teachers it is the business of the central normal institution to instruct and train. The Commissioners failed to perceive that the same reasons would lead to the establishment of various grades of small schools contiguous to most of their district model schools, and that no group of town children, however small, will truly represent a rustic school. 1858. More schools in Marlborough-street.

78. The premises of the Londonderry Model School were at this time advancing under the Board of Public Works, now charged with the building and repair of vested schools, and leases of sites for model schools at Enniscorthy and Sligo had been perfected.

79. At Omagh the building of the minor model school—a designation now first employed—was finished, and contracts concluded for the erection of similar schools at Carrickfergus, Newtownstewart and Parsonstown.

80. The establishment of these model schools, as of others subsequently determined on, received no countenance from Roman Catholics. Of the older model schools it is true to say that the ecclesiastical authorities of the Roman Catholic Church regarded them at their first institution with feelings of neutrality, if not of positive favour. Now, however, the experiment involved in the Board's exclusive management of schools was believed to have been worked out, and proved a palpable failure. Henceforward there was no ambiguity, and the Board spent many thousand pounds upon schools at Londonderry, Sligo, Enniscorthy, Omagh, and the rest, without the slightest hope of conducting them as models of united education. From this time the model schools became for the Roman Catholic opposition.

majority of the people the scene of a contest between the strength of religious principle and the allurements of temporal advantage; and the Board appointed "to superintend a system of education from which should be banished even the suspicion of proselytism" imitated in effect the example of the Charter and Souper schools. The principles of the Roman Catholic Church ("to which in any system intended for general diffusion throughout Ireland the bulk of the pupils must necessarily belong") are totally at variance with the principle of exclusive control over schools and boarding-houses by the National Board. Previous failures might have taught the Commissioners that "when this opposition arose, founded on such grounds," their scheme could not succeed.

Boarding system unsuccessful.

81. About the boarding system even the Board's Inspectors begin now to express doubt. One of them (Mr. Hunter) fears, in 1858, that "the pupil-teacher system, as carried out in the model schools, has not been productive of all the good results that were anticipated from it; while the paid monitress system has been highly satisfactory. The pupil-teachers (who are boarders) are costly, and sometimes inefficient. The paid monitresses (who live at home) cost less, they require less supervision, and their services are generally very efficient; while ultimately they become successful and active when required to engage in the business of teaching on their own account in an ordinary National school."

1859. Omagh.

82. The chief event of 1859 was the opening of the Omagh minor model school, where "no application was made for the admission of any Roman Catholic pupil." Nevertheless, the school is described by the Commissioners as "in a flourishing condition." At Limerick and Clonmel, as well as in Omagh, we now hear of the active opposition offered to model schools by the Catholic clergy.

1860. List of district and minor model schools closed.

83. In 1860 the district model schools at Londonderry and Enniscorthy are reported to be completed, and those at Newtownards and Sligo to approach completion. A site in Cork for the model school had been selected, and the Enniskillen school was in contemplation. Thus the number of district model schools reached nineteen—a number which has not been exceeded up to 1869.

84. At Parsonstown, Carrickfergus, and Newtownstewart, minor model schools were now in operation. Monaghan was nearly finished, and a site had been taken at Lurgan. Minor model schools have not been multiplied beyond seven.

Distinction of "minor" and "district" not preserved.

85. The minor model schools began soon to tread upon the heels of the district model schools. The *minor* model school in Omagh is reported to be in no respect inferior to *district* models in other towns, and the Commissioners were induced to sanction the appointment of additional teachers, and of a small staff of pupil-teachers of a higher grade, and with a higher rate of salary than the paid monitors. These appointments were made, of course, at the public expense. It is further mentioned that "no Roman Catholic clergyman visits the school. The efforts that have been made by their ecclesiastical superiors to prevent the attendance of pupils of that denomination have been wonderfully successful."

1861.

86. In 1861 the sets of additional schools contiguous to the central schools in Marlborough-street are reported to be in satisfactory operation. The district model school at Londonderry had been opened, and Newtownards and Enniscorthy completed. Of minor model schools, Monaghan and Newtownstewart were in operation, and Lurgan was advancing towards completion.

Religious difficulties.

87. At this time Newtownstewart minor model school had admitted one Roman Catholic boy, and one Roman Catholic infant in a total of 103 pupils. At Monaghan minor model school the only clergymen who attend for the purpose of giving religious instruction are the Presbyterian. Carrickfergus minor model school opened "under rather unfavourable circumstances;" but "a kind of kindly feeling sprung up," so that at the end of the year the rolls bore the names of twelve Roman Catholic children out of 204. At Kilkenny the active opposition of the local clergy to the model school had not sensibly diminished; and at Waterford parents frequently withdraw their children without assigning any cause, but subsequently re-enter them at the model school through dissatisfaction with their progress in other schools. We are told that "this of course might fairly be expected, for the ample teaching staff in the model school renders it unnecessary to resort to the baneful practice of leaving any class under the exclusive charge of monitors." We are not, however, reminded that the practice condemned as "baneful" must of necessity be followed in ordinary National schools, while the ample teaching staff of model schools is provided at the public cost.

1862.

88. In the month of August, 1862, the district model schools at Newtownards and Enniscorthy first received pupils.

Newtownards

89. Newtownards had upon its rolls at the close of the year 356 scholars, of whom two were Roman Catholics. Eight of the teachers professed the faith of this small minority. In adverting to these circumstances, the Inspectors explain that Newtownards is peculiarly a Presbyterian locality (of the population, sixty per cent. are Presbyterians), the other denominations being relatively small. The Roman Catholic clergyman having in the spring built a new school-house, naturally made extra efforts to induce the children of his own denomination to attend that school. In any case there could not be any considerable number of Roman Catholic children (of the population, twelve per cent. are Roman Catholics), but they have no doubt that ultimately, and at no very remote date, the Roman Catholic denomination will be fairly represented. At our visit in 1868 we found present five Roman Catholic pupils and four Roman Catholic teachers. From the Inspectors we further learn that the incumbent of the parish, being opposed to the system of National education, does not visit the model school; we had the pleasure of meeting him, and found that his opposition did not certainly arise from want of intimate acquaintance with its working.

Enniscorthy.

90. But if the small proportion of Roman Catholics in Newtownards—only twelve per cent., or 1,126 persons—accounted satisfactorily for the absence of Roman Catholic pupils from the model school, the same could not be said of Enniscorthy, where eighty-eight per cent. of the inhabitants are Roman Catholics, and the professors of all other creeds taken together make up twelve per cent., deemed so small a proportion in Newtownards. Yet at Enniscorthy "the determined opposition manifested to the model school by the Roman Catholic bishop and clergy is such as almost entirely to exclude the people of that denomination from the advantages which the establishment offers. This opposition is the more inexplicable when it is considered that out of the three principal teachers who are appointed, two are Roman Catholics." But the Inspector might have spared the last remark, since the bishops' objection was not pointed in any case at the teachers' creed. It might indeed be a blunder in the Com-

missioners to appoint Roman Catholic teachers to a school which Roman Catholic children would shun. But such appointments were little likely to remove objections founded on totally different considerations. The report goes on to say:—"There is a school in Enniscorthy endowed from Erasmus Smith's funds, and energetically supported by the Protestant clergy. That school would probably afford sufficient accommodation for the Protestant population of the town and neighbourhood. Every effort is made by those interested in that school to prevent any of the children being withdrawn, and to secure for it the largest attendance possible. Under all these discouraging circumstances it is not matter of surprise that hitherto the attendance at the Enniscorthy model school has been very low."

91. All these discouraging circumstances were forcibly impressed upon the Commissioners before the model school was built or the site leased. Yet they deemed it consistent with their duty to the nation to lay out £6,500 of public money upon a school opposed by Roman Catholic and Protestant alike. Dissenters, who form two per cent. of the population, furnished in 1862 twenty-seven per cent. of the very low attendance at the Enniscorthy Model School. The boarding-house has never been inhabited by candidate teachers.

Troubles in model schools.

92. At the older model schools things at this time were not going well. In the West Dublin Model School "the great want of additional class-rooms has ceased, owing to the decrease in the attendance of pupils; but the want of play-grounds, the very lungs of a school, continues as great as ever." At Inchicore, "the attendance of the pupils exhibits a decrease." At Parsonstown, "the small number of Roman Catholics is owing to the active and increasing opposition of the Roman Catholic clergy." At Galway, "on the 4th January the model school was denounced by the Roman Catholic bishop in a pastoral to his clergy. The consequence of this denunciation has been the withdrawal of 199 Roman Catholic children. It is now opposed so actively that not merely the pupils are withdrawn, but the paid monitresses are directed to resign." To meet this influence exerted over monitresses, who resided with their friends in the locality, the Commissioners seem to have engaged female pupil-teachers from a distance at larger salaries, provided of course by the State. At Limerick, "the diminution in the attendance is attributable to the active opposition which the model school has experienced from the Roman Catholic clergy." At Athy, "the attendance had fallen away considerably, owing to the opposition of the Roman Catholic clergy." At Londonderry Model School, of 523 registered pupils, five were Roman Catholics.

Money prizes.

93. We have already reprobated the practice of awarding money prizes from the nation's purse to pupils of model schools.* In one of Dr. Newell's reports for 1862 we find the practice thus defended:—"At the close of our examination, we awarded prizes to the amount of £8 2*s.*, accompanied by the usual parchment certificates. In this model school, and, I believe, in all the Commissioners' model schools, these prizes continue to be highly valued; and their public distribution excites a wholesome rivalry among the pupils, and induces parents to attend and inquire into the working of the schools. Indeed in this school, the annual examinations and prizes have been directly instrumental in enabling it to withstand the opposition and misrepresentation to which it was exposed." To us it appears that if anything could surpass the impolicy and impropriety of a free State taking upon itself the entire charge and exclusive control of a few schools of one type for children of respectable families residing in a few favoured localities, it would be for the National department of education to pay for the attendance of children at those particular schools and at no others.

1863.

94. The Minor Model School at Lurgan was opened early in 1863, and the District Model School at Sligo in the autumn of the same year. By the end of December Lurgan had registered thirty-one Roman Catholic pupils in a total of 396, but Sligo model school had not attracted any Roman Catholic children at all, failing even more completely than Londonderry, which now had three Roman Catholics upon the roll in a total of 359.

Increased opposition.

95. The opposition exhibited in 1862 was still maintained, and grew even more intense. Thus "the Limerick Model School has been made the object of incessant hostility on the part of the Catholic bishop and clergy of Limerick. The result has been so far detrimental to the school, that the vast majority of the Catholic pupils have been withdrawn. Of 110 Catholic pupils, whose names were on the rolls on 31st December, 1862, only thirty-two continue to attend." Of Clonmel likewise, the Inspector reports that "the same influences, exercised in the case of this model school, however, with even still greater stringency than in Limerick, have been employed to secure the withdrawal of the Catholic pupils, and with almost entire success. Although the total number of Catholic pupils, whose names appeared upon the rolls in 1863, was 210, there are now only twenty-seven children of that denomination attending." Of Enniscorthy we read, that "the opposition which these schools had to encounter at their opening from the clergy, both of the Established and Roman Catholic Churches, has been in no degree mitigated. To such an extent has this opposition to everything connected with the establishment been carried, that teachers and monitors have been directed by their managers not to attend the usual and essential examinations, because such examinations were held in a room of the model school." At Kilkenny "steady progress was unexpectedly interrupted in the month of November, in consequence of the exertions of the Roman Catholic clergy to remove from the schools the pupils of that denomination—exertions which were so far successful as to induce the withdrawal of about fifty per cent. of the Roman Catholic children." And again: "the opposition given by the Roman Catholic clergy to the model schools has been felt in Waterford as in other places. It is chiefly owing to this that the decrease which is observable in the attendance has taken place."

Good attendance essential.

96. As the attendance at model schools diminished, some of the Inspectors began in their Reports to the Board to put forth an argument which we consider futile. They urged that the chief object of the model schools was to train teachers, and that for the purpose of training teachers a large attendance of children was not found necessary in England and other countries of Europe. But in truth the Irish model schools follow a type widely different from English normal schools. In the former, the training of teachers is an object subsidiary and inchoate. The pupil-teachers and monitresses engaged in them are regularly employed every day during the entire length of school-hours in teaching classes. If not so employed, they would be without occupation and superintendence.

* See note, p. 13.

Hence the attendance of children in a model school must be regarded as vital to the successful working of the institution.

1864. Attendance further diminished.

97. Nevertheless, concurrently with the erection of new district model schools at Cork and Enniskillen, diminution in attendance was reported year after year in the older model schools. In 1864 the total attendance at Limerick is less by sixty-two than that of 1863, and less by 134 than that of 1862. In Sligo, "only three Roman Catholics have yet been enrolled in the boys' school, and none in either the female or infants' schools. Owing to this cause the attendance is necessarily limited to a number greatly below that contemplated in the erection of the building." At the West Dublin Model School "the opposition on part of the Roman Catholic clergy is not the only one encountered. The opposition of the Protestant clergy, though silent and quiet in its working, is not less effective." At Galway "if the school had been instituted with openly avowed purposes of proselytism, it could not have been more bitterly or more perseveringly assailed. It was not to be expected that these exertions would be unproductive of result in the further diminution of the attendance at the schools." And in Clonmel, Kilkenny, Waterford, Parsonstown, and Enniscorthy "a large number of Roman Catholic parents were constrained to withdraw their children from the model schools in 1864, and others were prevented from sending theirs. The prelates of the Established Church in the dioceses in which four of these model schools are situated, being no less adverse, the schools had double difficulties to encounter in keeping up their attendance." In truth, even in the south of Ireland, model schools under the exclusive management of the National Board, found few supporters beyond the Dissenting communities.

Inefficient master promoted to be Inspector.

98. In the Report upon the Newry Model School for 1864, we find a statement which appears remarkable. "Mr. Brown, the former head master, was at the close of last year, promoted to the office of Sub-Inspector.* Since the new master took charge there is a marked improvement in the school, both as regards discipline and state of instruction!"

1865.

99. In September, 1865, the Cork District Model School was opened at an outlay of £9,762 0*s.* 4*d.*

Lures of medals and rewards.

100. The course of events continued to display unmitigated opposition from the same quarters, with perhaps, increased exertions to secure the attendance of children. Thus, at Belfast, "in addition to the premiums granted by the Commissioners, amounting in value to £40, the Inspectors were favoured with premiums given by Robert Patterson, esq., F.R.S., for knowledge of natural history, with three silver medals presented by Dr. Wales, of Belfast, whose sons attended the school, and with two silver medals given by the Head Inspector." And in Londonderry, the Irish Society granted £50 annually, to be distributed in prizes to the pupils of the model school.

1866. Cork. Presbyterians maintain a separate school.

101. The only novelty presented in 1866, is the first Report upon the district model school in Cork, which had now been in operation for upwards of a year. Of the attendance, we learn that "the Protestants are represented as largely as can be reasonably expected, particularly as the Presbyterians zealously maintain a National school under their own management, and taught by teachers of their own denomination. It is, of course, in the Roman Catholic element that a very conspicuous deficiency is observable, occasioned by the unceasing hostility of the Catholic bishop and clergy."

Ballymoney condemned.

102. We observe this year a condemnation, to which we subscribe, of the buildings of the Ballymoney minor model school. "A great mistake was made at the time of erection, in not building the house several feet wider." Nevertheless, "numbers of advanced boys and girls come from a considerable distance to finish their education at this establishment."

Trouble in Coleraine.

103. Coleraine model school was still in trouble. "The falling off in the attendance at the boys' department has been so rapid and so considerable, that it must be attributed to the unsatisfactory way in which the business of the school has been conducted during the past year." In a previous report, the Inspector had exposed the "low proficiency" of the pupils, but it seems that the exclusive control of the Commissioners applied no remedy until the boys abandoned the school.

The wealthy of Belfast escape fees.

104. In the Belfast model school, the Inspector was "rather surprised at the number and respectability of the parties, who during the year claimed exemption from the higher rates, which are so extremely moderate as compared with the amount and quality of the instruction imparted, and such as can rarely be had on any terms in non-National schools."

Age of pupils in Dunmanway.

105. At Dunmanway, one of the few model schools still freely attended by Roman Catholics, the *average age* of the boys in 1866 was said to be 12·1, and of the girls 12·4 years, and 218 young persons, in a total attendance of 510, were over twelve years of age. A primary school, which detains so many young persons from entering upon the practical business of life suitable to their station, confers, in our opinion, a very doubtful advantage upon any locality.

Trim.

106. The case of Trim model school deserves particular notice, as the Commissioners have treated it differently from any other of their model schools. The general rule of model schools is, that no pupils are admitted free of charge; but at Trim, partly from the poverty of the place, and partly because no ordinary National schools are at hand, the Commissioners not only admit many children without payment of any fee, but are even in the habit of making compensation to the teachers for the loss of the fees. Here then at least, if not in the other model schools, surely the education should be adapted to the sons of poor labouring men, whose first duty it must be, as early as they can, to earn a living by honest toil. In such a school as this, the public examination in 1866—the last year for which full reports are before us—comprised "book-keeping, the different books and accounts used, method of opening and closing accounts, and what the different sides of accounts show; algebra—objects of—how it differs from arithmetic—uses of signs and characters—simple rules and equations; acoustics—nature of sound—sonorous bodies—sonorous waves—velocity of sound—vibrating strings—nature and mode of producing sounds, echoes, resonance, and the general principles of pneumatics; optics—objects of—nature and velocity of light—reflection—refraction—dispersion—lenses—mirrors—microscopes and telescopes; astronomy—solar system—parallax—how the distances of the heavenly bodies are calculated—method of finding the angular unit, with its application to the measurement of distances generally." The unsuitability of such a course to the

High course of education for destitute boys.

* Since 1866, the Sub-Inspector of National schools is called "Third Class District Inspector."

condition of poor working boys in Trim, unable to pay in school-fees even one penny a week, makes the model school a mockery.

1867. Enniskillen.

107. In 1867 the last and most extravagant of the model schools was opened at Enniskillen. Erected at a cost of £9,357 10*s.* 11*d.*, upon a site of 6A. 3R. 23P. held on lease for ever at a ground rent of £68 18*s.* 9*d.* per annum, in a town of 5,774 inhabitants of whom 3,235 being Roman Catholics, will not approach it, and face to face with educational endowments of great magnitude, this model school crowns the Commissioners' work, and forms a complete contrast to the original design.

Selection of localities for district and

108. We are unable to discover the principle upon which the twenty-six localities favoured by the Board in the establishment of model schools have been selected. The returns, which are analyzed in the Appendix I. exhibit a curious diversity in the origin of these schools. The Commissioners themselves in 1845–6 fixed upon Coleraine, Ballymena, Newry, Bailieborough, Clonmel, and Dumanway. A local appeal did indeed issue from Newry, but it contemplated an institution of a different character from the Board's Model Schools, since the memorialists raised local contributions for the school and undertook to form a local committee of management. Want of means of education does not appear to have guided the Commissioners' choice, since they established the Coleraine Model School in the midst of schools of all kinds; the Ballymena Model School, with ten National schools within three miles of it, besides a diocesan school, male and female parochial schools, a Methodist school, and four or five private schools; the Clonmel Model School, where two very large schools for Christian Brothers and Sisters of Mercy were in course of erection in addition to several endowed schools; and at Bailieborough they merely converted an ordinary National school into one of their model schools. At Athy there was no National school within four miles, but here the Duke of Leinster's agent applied for a Model *Agricultural* School, and it was only when the Board informed his Grace that if he was willing to accept "a *district* model school with an agricultural department attached" (instead of a Model Agricultural School which would involve some local contribution), they would undertake the entire cost of building and supporting the school, paying besides a fair rent for the land, that the Athy Model School was resolved on. Ballymoney was actually started as an Agricultural Model School, with a local contribution of £400. At Belfast seven manufacturers, employing 4,000 hands, and determined to have a school for their work-people, raised £800 for the purpose of erecting an ordinary one, and they applied to the Commissioners, who built for them the Belfast Model School, at a cost of £16,000, and of a character suitable for the education of their borough member's relatives. Sir T. Redington, one of the Board, "counselled the application" from Galway. The Commissioners being themselves "desirious that a model school should be built in Limerick," asked the Established Church Bishop to point out a site, which was found close to barracks with six permanent schools within five minutes' walk and another large school about to be erected "immediately opposite." At Newtownards a Presbyterian minister applied for a model school, and the Marquess of Londonderry gave a site of two acres, rent free, with a generosity unique in the history of the Board's model schools. At Sligo the Board's superintendent was "directed by the Commissioners to look out for a site," who thus took the initiative, anticipating the memorial "got up principally through means of the Presbyterians," who numbered 220 in a town of 12,000 inhabitants. At Trim an application for a large ordinary school *or* a model school, came in 1846 from the "scarcity committee," who avowed that their great object was the relief of the starving poor by means of a considerable expenditure upon new buildings, and the Commissioners took occasion to erect one of those model schools which they were "anxious to establish throughout the country." A committee of the Board was appointed to select the localities in which minor model schools should be erected;* and Parsonstown, Omagh, Carrickfergus, and Monaghan were thus chosen, together with Ballycastle, Ballyclare, and Bandon, subsequently abandoned. But the school at Lurgan was demanded by Lord Lurgan, who leased a site to the Commissioners at an annual rent of £34 and obtained peculiar privileges under the trust deed; and Newtownstewart was conceded to the Protestant rector of Ardstraw and built upon a site adjoining the Protestant church. As at Coleraine, Ballymena, Clonmel, and Limerick, so at Sligo, Carrickfergus, Enniskillen, and Enniscorthy, the Commissioners established model schools at the public cost in localities abundantly supplied with means of education. They are therefore precluded from complaining of the competition which in several places has almost emptied their model schools.

Minor Model schools.

Small number of Roman Catholics in model schools.

109. The Board's Report for 1867 claims 6,581 Roman Catholic pupils as having had their names at some time or other during the year, upon the books of one or other of the twenty-seven model schools, including the central institution. Returns of this kind are most fallacious; but taking the figures as given, we observe that of the 6,581 Roman Catholics, no fewer than 5,051 are returned on the rolls of model schools in Dublin, Belfast, Bailieborough, Dunmanway, and Trim, which have enjoyed a kind of ecclesiastical toleration; while the other twenty-two model schools, situated in towns having an aggregate Roman Catholic population of 224,133 persons, only claim 1,530 Roman Catholic pupils as in some sense attending them. In these twenty-two places, the number of Roman Catholic scholars to 100 Roman Catholic inhabitants is just ·68, or 10,000 Roman Catholics yielded sixty-eight children, who at some time or other in 1867, perhaps for a day or two, attended at a model school. The Commissioners in another table show, that 17,631 pupils on the rolls of their model schools, for the year 1867, produced an average daily attendance of 8,059. At the same rate, the 1,530 Roman Catholic pupils on the rolls of twenty-two model schools, would represent an average attendance of 699, or thirty-one model scholars in every 10,000 Roman Catholics. These figures indicate the complete failure of model schools, as part of a National system acceptable to the majority of the people. History, it has been said, repeats itself; and the failure of district model schools under the National Board cannot be better described than in the words employed by the Commissioners of Education, in 1825, to characterize the failure of the Kildare-place and other societies which they considered so complete as to demand a new system of confidence and impartiality to be inaugurated by the National Board. "The Roman Catholic clergy," say the Commissioners of Irish Education Inquiry, "do not rest their opposition to these societies on the ground that proselytism has actually been effected by them, but on an allegation that such is their object; that such is the tendency of their

In their failure model schools resemble Kildare-street schools.

* See Appendix V.

schools, and that such might be the effect of their system if it were allowed to prevail. Whatever may have been the nature of the opposition which the Roman Catholic clergy have given, we had abundant opportunities of seeing that it had been very generally exercised, and its effects were apparent at the time of our inspection, in the altered state of by much the greater part of the schools. That their exertions to remove the children are not made with equal success, or with equal resolution in all cases, is naturally to be expected; but that they have been to a great degree successful, and will to the utmost be persisted in, we are led seriously to apprehend." We entertain a similar apprehension in 1869, and hence we reach the same conclusion, that "the existing establishments, whilst they continue to act on their present rules, cannot provide such a system of education as shall be cordially adopted and generally supported."

POSITION.

Sites generally well chosen. Exceptions.

110. The position of the model schools is generally well chosen. They are often near the railway station, giving an opportunity for children to come who live at a distance from the town, though this is not always the case, for at Coleraine the model school is much too far from the town. The Omagh and Trim model schools are inconveniently placed with respect to the railway, and are in low, damp situations. We were rather surprised to find that such spots had been chosen.

111. The Galway model school is at an inconvenient distance from the town; but on a good and healthy site. In Limerick the school is in the best part of the city, away from the poor, and close to barracks. At Parsonstown the site is low and remote, and at Carrickfergus it is liable to floods. With these exceptions the situation of the model schools has been well chosen; and the contiguity of many to the railway station marks the intention of the Board to make them middle class schools for an area much larger than that of the town where they are built.

BUILDINGS.

Buildings grand.

112. Our first impression of the external aspect of the buildings was that they were very ambitious and needlessly expensive. In Dublin they are no fair specimen. The West Dublin model schools are held in an old building which is commodious enough, and if it were in a better part of the town it would be frequented by middle class scholars as others are; but being in a poor district, it is not a model, but a large school of the National type. It is neither in arrangement or sightliness like any other.

113. The Inchicore model school is only "model" in the sense of having a larger staff of teachers than is necessary to teach the small number of children frequenting it. The buildings are on a modest scale, quite sufficient; with one defect, however, that the infant school must be used as a passage to the girls' school.

114. The Galway model school has good buildings on a large piece of ground which is open as a public promenade, and we thought that the expenditure of money out of the Parliamentary grant for the education of the poor was not justifiable for such a purpose.

Exceptions.

115. At Ballymoney the buildings are poor; the rooms low and small.

116. The schools at Bailieborough were National schools for a small town, made into model schools at the request of Sir J. Young, the proprietor of the site. They present no model school feature in the way of buildings. These are inferior in character and extent.

117. In Dunmanway, the buildings represent good National schools for a small town.

118. We will now give particulars of a few of the more ambitious schools:—

Cases of extravagance.

119. *Sligo.*—An expensive structure, on leasehold land; rent at £48 a year for 500 years. It cost £7,824 16*s.* 5*d.* for erection; £108 5*s.* 6*d.* for furnishing and fitting; and £388 18*s.* in subsequent extensions and repairs; total, £8,321; and the rent of £48 a-year may be looked upon as worth about £1,200. So the cost of this model school building may be taken at £9,500. It is convenient according to the model school plan, which we have criticised before, except as regards the play-ground, which is on a steep stony bank.

120. *Enniskillen.*—Opened only in 1867; cost £9,451 9*s.* 3*d.*; on a perpetual lease; rent at £68, estimated at £2,000, gives the cost of this school about £11,500.

121. *Cork.*—An expensive site, for which a rent of £105 for 200 years is fixed. The buildings are very large and handsome. They cost for erection £9,495 9*s.* 5*d.* Furnishing and fitting, £266 10*s.* 11*d.*; and in subsequent repairs and extension, £79 14*s.* 7*d.* Total, £9,841 14*s.* 11*d.* This makes nearly a total cost of £13,000.

122. These three are the last model schools the Board has erected. They represent over £30,000 invested, and are in striking contrast with some of the earlier model schools in expensive elevation and extent.

PLAYGROUNDS AND OFFICES.

Playgrounds.

123. In general the model schools have good playgrounds attached to them for the separate departments of the school, and in this respect there is everything to commend. With few exceptions the out-offices are conveniently situated, and kept in decent and sufficient order. In one case (Dunmanway) the arrangements were defective and ought to be remedied; at Bailieborough and Newry the drainage was bad.

INTERNAL ARRANGEMENT OF SCHOOL-ROOMS.

Arrangement of interior.

124. There is not much to report as to the internal arrangement of school-rooms, except that the plan adopted has been a very expensive one in the more ambitious establishments. The principal school-rooms are on one type—something like the Lancasterian plan in England. Large blocks of desks in the centre of the room facing the master's rostrum, with space between the desks and the outer walls for classes in small groups.* There is generally an abundance of class-rooms, not only for the general business of the school, but for music and drawing classes, and classes in elementary science.

125. These are less in number, and sometimes inconveniently few, in the minor model schools, which are often not much beyond the type of a good National school.

126. The general arrangement of the infants' school-rooms is faulty. We have mentioned this elsewhere, under the head "Organization." See p. 749.

MASTERS' HOUSES AND PUPIL-TEACHERS' ACCOMMODATION.

127. No residence is provided for the female teachers, but only for the master of the boys' school. Where pupil-teachers are allowed, a portion of the master's house is fitted up for their reception—a common dormitory and common sleeping room, which are generally convenient and sufficient. The separation from the domestic establishment is not always as well managed as we should have desired; but no remarks can be universally applicable.

* Except at Galway, where the parallel desks are arranged on one side of the room.

128. Sometimes, when an agricultural department is connected with the model school, as at Belfast, the pupil-teachers go out to the master's residence on the farm, and are lodged there. This is also the case at Bailieborough, Limerick and Kilkenny. Boarding Accommodation.

129. The special attention of the Inspectors should be called to the question, whether the pupil-teachers' quarters are properly situated, and carefully separated from the rest of the house, and if this is not the case, measures should be taken to secure what is needed, and remedy any defects.

130. As might be expected where the number of teachers is largely above what is needed for the actual work of teaching, the registers are neatly and fairly written in most cases, and they are marked with apparent regularity. Registers. Registers neat,

131. In some cases the admission register is well filled up with the full account of the child's school career and the re-admissions marked in red ink, but this is not invariably the case.

132. The importance of accuracy in matters connected with registration and averages is not recognised. As an example, on examining a model school which we visited on Saturday, and inspecting the registers, we found the average daily attendance for the week was not found in the usual manner. The school being open on Saturday the number of children attending on that day was small, and so the practice in finding the daily average was, to divide the total number of attendances for the six days by five instead of by six, so as to make it appear that the average daily attendance was greater than it really was. The number of children attending on the sixth day was taken, but this number merely served to increase the number of children who had attended on the first five days; and so give a fictitious result, magnifying the popularity of the school. but inaccurate. Example of false calculation.

133. We were assured that this was done by direction of the Inspector, and it was supposed that the plan was adopted by orders from head-quarters. When we expressed surprise at such a trick as this, the head teacher *naïvely* remarked that if the average were taken by dividing by six, it would bring down the average daily attendance for the week too low;" thereby indicating his ignorance of the meaning of average attendance and a total disregard to the value of statistical information.

134. We do not know to what extent this practice has prevailed, but it vitiates all results derived from the stated average daily attendance in model schools, as will be clearly seen by this example. Suppose the school referred to above was open for forty weeks in the year. The average daily attendance actually returned in the report for 1867 for the boys' school is 37·4. This result was arrived at by reckoning only five school days instead of six school days in the week so the actual number of attendances made in the year was $37{\cdot}4\times40\times5=7480$. Restoring the true number of days the school was open instead of the fictitious divisor, we get for the true average daily attendance $\frac{7480}{40\times6}=31{\cdot}2$— or one-sixth less, as it ought to be.

135. It would be very unsatisfactory to the promoters of these schools if it should be found that the scanty average daily attendance in them returned by the Commissioners ought to be corrected by cutting off one-sixth when it is calculated honestly. We are not, however, able to say that the false mode of calculation is universal. But there is a general anxiety to manufacture a high average attendance by every possible contrivance. Thus, at Monaghan, we arrived about 10·30, and found the elder boys all coming away from the school. We stopped some of them and found that there was some Presbyterian function going on in the town, and all the boys of that persuasion were going to it; as this comprised all who were most advanced in the school, and as the District Inspector was examining the pupil-teachers and monitors, we did not examine the boys (see pp. 753, 755, 756); but we found on examining the registers that these boys had all been marked as present for the day, although, in fact, they were absent for the day.

136. Also at Athy, when we arrived the lads at the top of the school were absent, having gone over to the Presbyterian minister to learn Latin.

137. If the rule is that all children present at 12 o'clock are counted present *for the day*, we think it would be well to specify a certain minimum number of hours constituting an attendance, as in State-aided schools in England.

138. A slight haziness on the subject of averages seems to prevail in other quarters. We notice the following passage in the Inspector's report on the West Dublin Model School for 1861:— Misty views of Head Inspector.

"The cost of the education of each child in average attendance on the rolls was, therefore, to the State. £1 1*s.* 7*d.*"

139. "Each child in average attendance on the rolls" is an educational unit of a novel and startling character which we have in vain endeavoured to realize.

140. A careful attention to true principles in this matter is of some importance, for the advocates of the model schools have not failed to perceive that it was a strong ground in their favour to show that the ratio of average daily attendance, compared with the number on the rolls, was greater in these schools than in common schools. It becomes, therefore, necessary to calculate this average daily attendance correctly in both cases; it is undoubtedly true that the ratio is higher; one very influential reason for it may be that the children are of a higher social position and less likely to be called off from school work for any industrial occupation—less likely to be hindered by ill-health or want of decent clothing—and such a test more fairly represents the degree in which the pupils are drawn from the middle classes in model schools than any greater amount of confidence which the parents have in the value of the education, although it does not exclude the latter element. Explanation of regular attendance.

141. That the teaching is more efficient may be granted. The number of teachers enables more subdivision, and individual attention to the slower children, but the multiplication of teachers is not without its drawback. We will, first of all show what the actual proportion is between number of children and number of teachers in the table on the opposite page.

142. In table (F, p. 758) it will be seen that the number of scholars present for each teacher in the model schools ranges between nineteen at Dunmanway to six at Kilkenny (omitting Coleraine, which was visited on a Saturday), and that on an average it is about ten.

143. We proceed now under the head of "Organization," to show the effect of this on the efficiency of the school.

TABLE A.

NUMBER of CHILDREN in each CLASS, and NUMBER of TEACHERS by Rank and Sex present at the Commissioners' Examinations.

	Children, in Classes.						Teaching Staff.

						219								

ORGANIZATION.

Teachers too numerous,

144. The organization of model schools is complicated by the incompatible interests of teachers and pupils. Teachers are too numerous in comparison with scholars. Paradoxical as this opinion may appear, consideration of the conditions under which model schools are conducted will substantiate it. The complete course of reading-books, published by the Board, comprises five graduated lesson-books, to which five school classes should correspond. In most of the model boys' and girls' schools there is no First Book class. Thus those schools should not be divided into more than *four* classes. But many of them besides wanting the First Book or lowest class, have not brought forward any pupils into the Fifth Book or highest class. Thus Athy Model School has no fifth class either in boys' or girls' room (although a class of boys is learning Latin from the neighbouring Presbyterian minister); Bailieborough has no fifth class in the girls' room; Ballymoney the same; West Dublin, Newry, and Dunmanway none in the boys' schools; Enniscorthy, Limerick, and Newtownards, none in the girls'; Enniskillen, Inchicore, and Lurgan, none in the boys' or girls'. Kilkenny Model School has no fourth class in the girls' room, and in the fifth class only three girls in preparation for monitresses' places. So circumstanced the model schools ought to have only *three* classes, which would mark distinctly enough the degrees of the children's progress.

compared with classes.

Must be idle, without excessive subdivision,

145. But the State-paid teachers in model schools are not restricted to any such moderate number, and three or four classes would not find employment for three or four times as many teachers. Many of these teachers are idle as it is during the considerable period devoted to religious instruction and to special lessons in music, drawing, and the like; and some of them would be absolutely unemployed the whole day through, but for a subdivision of classes into drafts more numerous than the interests of the pupils require. Thus superabundance of teachers produces injury to the scholars.

which ruins instruction and discipline.

146. When a school is taught in a large number of small classes, it is usual, and in some sense necessary, to group the desks and benches together in the middle of the room, so as to leave a passage next to the walls free for the formation of a multitude of minute semicircles. Where this plan prevails, the useful method of teaching reading by simultaneous practice, and the habit of dictating exercises in writing and arithmetic must be abandoned. With the instruction, discipline (which is even more material in any rational view of education) also suffers. When many teachers conduct many small classes of heedless children at the same moment, noise and confusion are inevitable; when the children of a school are massed together for writing in a square of eight or ten desks, no teacher can suppress that youthful tendency to prompt or copy, which of all the faults incident to elementary school management, we consider the most pernicious. This grave fault is almost universal in model schools,* and we attribute much of its universality and extent to faulty organization.

Practice in teaching necessary,

147. In school management, indeed, as in other arts, no reliance can be placed upon the method of teaching anybody to do anything simply by seeing others do it. Wherever such plans have been tried in industrial schools, whether agricultural or of other kinds, the common result has been failure; and the preparatory training of pupil-teachers if confined to observation of the master and assistants, would end in failure no less sure and complete. But if the alternative lies between the plan of organizing the model schools, as they are now organized, upon a plan bad in itself, and also unlike what is possible in other schools less prodigally supplied with teaching force, and the plan of permitting the pupil-teachers in a school rationally organized to pass a portion of every school day in watching and serving the master while engaged upon skilful teaching; we think that the latter plan would assuredly involve less evil than the former. Under it, the organization of model schools might be perfect, and discipline and instruction would correspond. The children in model schools would be taught by methods which experience has proved to be the best, and the candidate teachers, even when not actively employed, would, at least, behold before them an illustration, in its highest form, of all that the ordinary teacher should strive to imitate in his own school. Such would have been the prudent course to adopt in the model schools, with the preparatory training of candidate teachers conducted within them; but for reasons assigned in another part of this Report, we recommend that preparatory training be dissociated from middle class model schools and completed in the best specimens of ordinary National schools.

but may be combined with observation.

Mr. Butler's recommendations in 1849.

148. It is due to the sagacity of a gentleman, long in the Board's service, and now filling the responsible position of Professor in the Central Training Institution, to place upon record here that shortly after the opening of the earliest model school in Newry, Mr. Edward Butler, then Head Inspector, observed the defects in organization upon which we have animadverted, and actually remedied them as far as the dimensions of the school-room allowed, by a redistribution of the desks and benches and a modification of the methods of instruction. These changes, based upon experience, were made in 1849; and had the reasons given for them been turned to account in the designs of model schools erected since that date, the effect upon National education in Ireland would have been highly beneficial. Twenty years later we cannot but be amazed to find that in no model school (excepting, perhaps, the boys' room in Galway), has the judicious reasoning of Professor Butler received any attention. Yet the principles upon which it proceeds are unquestionably sound; and though his plan was hampered by unsuitable dimensions in the Newry Model School (*e.g.*, the desks should have been grouped *three* deep rather than *two*, and upon *one* side of the room rather than upon *two* sides), still the newer model schools, had they been designed in accordance with the recommendation of 1849, might easily have afforded examples of the most approved organization. We reproduce an instructive portion of Professor Butler's Report on Newry Model School, as published by the Board in 1850, simply observing that the abandonment of *taking places*, if it involve some loss of emulation, brings with it this great gain, that quick and dull children may be intermingled while seated at their desks, to the signal benefit of the slower sort, who, when places are taken in a standing class, sink inevitably to the bottom of it, and remain there without stimulus or hope, resigned to mental inactivity.

Boys' School.—Organization.—The boys' school is an oblong, thirty-five feet in length, by twenty in breadth. It is furnished with seven desks and seats, each ten feet long, and intended for the accommodation of seven

* Kilkenny forms an honourable exception.

children. These desks at first occupied the centre of the area, leaving a passage of five feet on either side of the room for drafts while at lessons. But this disposition was soon found unsuitable, the space round the sides being too narrow to allow of the head master moving from one draft to another, or of visitors circulating in the room, without disturbing the children; besides, much confusion and unnecessary noise were created when the classes were passing from one exercise to another.

After the school had been a few days in operation, these defects were felt. I therefore had the desks removed and placed lengthwise in the room, in groups of two, leaving a wide space of eight feet in the centre quite free, towards which the faces of the children are turned when seated at the desks, their backs being to the walls. By this arrangement the classes can at all times be kept separate; the changes from one exercise to another can be effected with great order and little noise; and the master and visitors can readily pass from group to group without in any way withdrawing the children's attention from their business. It will be understood, that for the greater portion of the time the children are seated, and though in some respects and for certain exercises it may be desirable they should be in a standing posture ready to *take places*, as it is called, yet, with ordinary care on the part of the teacher, there is but little danger of the children becoming drowsy or listless in their seats. They are never more than two continuous hours in school, during which they have occasionally to proceed to the lecture-room for the gallery lessons; and the play-hour which divides the day's business into two equal periods, affords a further opportunity for relaxation. The classes also may be sometimes kept standing during the lessons either against the desks or in front of the first one, the teacher placing himself in the space between the seat and the desk behind it. I will, however, observe, that although many reasons commend the practice of causing the children to *take places* during their exercises, they mostly acquire, when kept long standing, a careless, sluggish deportment; they soon grow fatigued, and as their limbs lose their elasticity, they are unconsciously brought to lean against the wall, or upon their neighbours. Moreover, this practice tends to render the instruction individual, for the monitor, and often the teacher, places himself before and near each boy in succession as he reads, asks him a question or two, and then leaves him to go to the next, the class having no opportunity of benefiting by the instruction given.

The separate grouping of the classes is the more desirable in a model school, where there are pupil-teachers or regular monitors, as it permits each of these to have his class constantly under his eye, to conduct it to the place appointed for the several exercises without interfering with any other, and moreover it fixes upon him a greater share of responsibility at the same time that it promotes regularity by facilitating a proper distribution of the school-hours.

The arrangement has hitherto worked well, and I am satisfied that upon no other plan could the same number of children have been so conveniently accommodated. A few alterations, with some additions to the furniture, are required to render it more satisfactory. These may be made without crowding the room.

DISCIPLINE.

Discipline faulty.

Copying universal;

149. With few exceptions, we were dissatisfied with the class discipline. Some few teachers of superior power of command, managed to keep the children from talking and copying at the examination; but in most cases, if we had been examining the children in order to ascertain the amount due by the State for the proficiency of each child, we should have had to dismiss the class, and declare the school unworthy of support. This is a strong censure, but we are compelled to let it remain as our deliberate conviction. The children never seemed to have been examined in a proper manner, and they evidently were surprised at being reproved for consulting over their work. No warnings of the necessity of honesty in examination, or hints as to the discredit which would be brought on the school by disobedience, had any effect.

Middle class children not amenable to discipline.

150. The feature of model schools which has already received frequent notice—viz., the attendance therein of children of the middle class, and professional classes—is probably here to be recalled in explanation. The children consider themselves much above the teachers, and do not pay attention to them. They know that there is a great desire to attract them to the schools—and that, consequently, they are the masters of the situation. It is more conspicuous in girls' schools than in boys' schools. The vigorous and self-reliant teacher can do more to check it, than one who is easy and good-natured and timid—but the result was that we formed a very unfavourable opinion of the discipline—the majority of cases certainly proving that the control the teachers could exercise was very small. They seemed to be helplessly inefficient in preventing the children from talking, consulting each other, looking over each other's papers, and comparing results of the sums they had worked. So that though their attainments in elementary subjects are not very creditable, as they stand in our printed tables—we are quite certain that if we had had time to re-examine, and taken the precautions which would have been necessary to ensure accuracy—the per-centage of those who passed in arithmetic would have been *much* lower than it is now.

INFANTS' SCHOOLS.

General plan of infants' schools.

151. The common plan of a district model school embraces a centre and two wings, with a corridor at the back, running from end to end of the edifice. The wings are usually assigned to boys and girls respectively, while infants occupy the centre. On the exterior, the architectural features of such a central building will naturally be a gable, with a large window below it; and since access to the school-room must be gained from the corridor by means of a door in the wall opposite to the window, it follows almost as naturally that in the interior the infants' gallery should be placed under this large window. Few of the model infants' rooms have class-rooms attached to them.

Condemned.

152. These arrangements cannot be approved. In an infants' school, the gallery is the scene of much of the characteristic teaching; but to group babies under a great window, scorched by the sun or shivering in the draught, while their teacher, who has need of incessant vigilance, stands before them blinded by direct rays of light, is to combine cruelty with folly in an unusual degree. The defect seems never to have been pointed out to the Board of Works; since the Enniskillen model school, which is the latest and best furnished of the model schools, exhibits it in a form so exaggerated, that the infants' gallery, and with it the infants' school there, would be useless, if the large window behind the gallery were not covered by a thick blind. If the defect has been known, interior convenience is wilfully sacrificed to an architectural façade. Again, in buildings so commodious and stocked with so many teachers, a class-room should have been provided for every infants' school; because, while the babies enjoy the noisy exercises of their gallery, there are always some children over six

Class-rooms wanted.

years of age capable of receiving solid lessons apart in a class-room. While kept together, the interests of one division or the other must be overlooked.

Apparatus complete.

153. In the infants' rooms, as in other departments of model schools, the supply of apparatus is abundant and complete,* including mounted illustrations of natural objects, black-boards, arithmeticon, and harmonium. The instrument is freely used—indeed, we often considered its use too free. Music is chiefly beneficial in an infants' school, as affording cheerful and suitable exercise for the memory, and voice and lungs of the children, and the main benefit is lost where silent infants march to the notes of the harmonium. A teacher unable to sing, should not be placed over an infants' school, and however desirable it may be for monitresses in such schools to learn "to play a little," we think it far more important that their training should include liberal daily practice in singing and teaching infants to sing some of the school songs, now happily published in great variety.

Singing neglected.

Infants' rooms too small.

154. Model infants' schools are mostly held in small apartments, and, relatively to the capacity of the room, they secure a better attendance than either the boys' or girls' schools. Some of them, indeed, are overcrowded. In many instances, the rule which prudently limits the age of children in infants' schools to seven years has not been observed. This has arisen partly from the natural desire of the infants' teachers to retain the advancing scholars, and partly from the disinclination of the teachers of boys and girls, to admit into their classes any children, however old, who have not advanced beyond the First Book. Whatever may be the motive, we are persuaded that the retention in infants' schools of children who are no longer infants, involves serious mischief. Children above seven years of age only waste their time upon the methodized play which fitly disciplines the opening faculties of infants. They should be removed to the junior schools, and there enter upon a course of real learning, under different methods. While allowed to remain with the infants, besides losing much of their time, they interfere with the proper character of the department.

Pupils too old.

Parsonstown.

155. As an illustration may be mentioned the Parsonstown model school, where, of thirty-one† children present in the infants' room, eighteen were reading the Second Book. These passed an individual examination in reading, writing, and arithmetic remarkably well, and their performances reflected credit upon the skill and assiduity of the assistant, who, in the absence of the mistress through sickness, had chiefly taught them. But they were all above the age for an infants' school. A still more striking instance of the tendency exhibited by infants' schools to depart from the relation which they ought to occupy towards the boys' and girls' schools connected with them, may be seen in the central model schools, where the infants' school‡ contains a numerous class in Third Book, and of corresponding age. Here the so-called infants' school resembles a separate establishment complete in itself rather than a preparatory department for infants, who pass into "boys" or "girls" on completing their seventh year, and should thenceforward be required to attend one or other of the junior departments.

Central model school.

Methods.

156. The efficiency of the methods employed in model infants' schools seems to be impaired by over minute classification, and some want of thoroughness in the teaching. By dividing the children upon the gallery, or in the First Book class, into almost as many drafts as there are letters in the alphabet, or pages in the book, the power which has been called "sympathy of numbers" is sacrificed, and the progress of quick children needlessly checked. Multiplication of classes, distinguished from one another by little or no difference in attainment, fritters away the teaching force, and leads to what we consider want of thoroughness in teaching the elements of reading and writing. In reading, instead of acquiring a knowledge of the general foundation of the art, they learn merely to recognise certain words on a certain page of their book; and in writing, instead of following a complete course from the simple lines and curves up to their combination in the more intricate letters, they learn only to imitate particular copy heads. Thus it happens that the children will not even attempt to read a lesson in their book which they have not "learnt;" and often by "learning" a lesson they mean rather learning to repeat than learning to read, and in many cases even repeat incorrectly. Similarly in writing, many children produce fair copy books who cannot set down without a copy one of the capital letters, or the less familiar of the small ones. In arithmetic, notation forms in the model infants' schools, as elsewhere, a stumbling block to many children.

Excessive subdivision.

Results.

Management.

157. The general management of the infants is kindly and affectionate, and the aspect of the schools very creditable to the teachers.

158. In these rooms, as in other departments of the model schools, the teaching force is more than strong§ enough to accomplish all the work required. Several of the head teachers have not been trained in the Central Institution, *e.g.*, Newry, Newtownards, Carrickfergus, and Omagh. At Dunmanway, by a singular arrangement, there is no head teacher in the infants' room. Some of the assistant-teachers appear older than their superiors, and mature matrons may occasionally be found serving under girls.

Teaching force.

Infants' teachers Protestant.

159. Complaints reached us from Roman Catholic quarters that the infants' teachers in model schools are for the most part Protestants. The Board seems to have fallen into this arrangement from a desire to satisfy the Roman Catholic majority by appointing persons of that religion to head teacherships in the boys' and girls' schools; and then to show consideration for the Protestant minority by nominating a Protestant mistress of infants. That the compromise has not conciliated opponents is but one illustration of the insuperable difficulties which the Commissioners assumed in taking upon themselves the exclusive control of model schools. In a few cases the regulation of the Board that every model department shall exhibit a combination of creeds in the teaching staff is not observed. Thus at the period of our visits no Protestant teacher of any grade was working in the Bailieborough infants' school, and no Roman Catholic teacher of any grade in the model infants' schools at Ballymoney, Sligo, Omagh, and Newtownstewart, or in the model girls' schools at Ballymena and Enniscorthy. In these cases we would not question the prudence of the Board in appointing no more

Some model schools denominational.

* Rarely, *e.g.*, at Omagh, books had to be fetched from other rooms.

† At the time of our visit a cattle market was being held in the town, and this probably lessened the attendance of infants.

‡ See Appendix XII.

§ An exception is seen at Omagh.

Roman Catholic teachers to schools which Roman Catholic scholars have steadfastly refused to attend. Rather, we would observe, that the omission to appoint such teachers, however prudent, is on the part of the Board a virtual abandonment of the model schools under their exclusive management as scenes of mixed education. Such an institution as the model girls' school at Enniscorthy, where the teachers are exclusively Protestant, and all the *pupils Protestants save one*, may or may not be a model of elementary instruction; but most assuredly it affords no model of mixture of creeds in school. The model boys' school at Newtownstewart, like the model infants' school at Sligo, seems to have reached the end to which the other model schools are tending, since we found in them neither Roman Catholic teacher nor Roman Catholic scholar.

Model infants' schools not wanted in Ireland,

160. Another observation will conclude what we have to say about model infants' schools. These institutions are, we readily believe, highly acceptable to many respectable parents of the Established Church and other Protestant denominations resident in the favoured localities where model schools have been founded at the national cost. But among the ordinary National schools of Ireland we heard of separate infants' departments only in connexion with certain convent schools. We doubt whether, outside of model and convent schools, National schools contain many distinct infants' rooms. If this be so, the use of model infants' schools as places of preparatory training for the future teachers of infants' schools is destroyed. Why train a class of teachers for whom the country makes no demand? While so many National boys' schools and girls' schools cannot be placed under trained teachers in consequence of the limited supply of trained teachers suitable for them, why throw away a portion of the restricted means of training upon a class of teachers who are not wanted? As is well known, infants' schools are chiefly of use in dense populations, where mothers work away from home. The population of Ireland is not thus circumstanced. In reference to the particular matter in hand we felicitate Ireland upon the circumstance. Irish mothers are not forced to part with their infants. They can almost universally take personal care of them until the infants grow into children of school age; and it is far better that they should do so.

but rather injurious.

161. If this opinion is correct, then it would follow that the model infants' school has no function in Ireland. And further, assuming that the infants' department in a model school discharges no useful function and effects no real good, we apprehend that positive evil must arise from its institution, because the operation of the separate infants' department is to destroy resemblance between the model boys' and girls' schools and the ordinary National boys' and girls' schools by withdrawing all infants, and, indeed, all children below the second book class, and thus to prevent the candidate teachers trained in the boys' and girls' model schools from gaining any experience in the management of infants and from helping to solve the problem, which appears the hardest of all difficulties proposed to the Irish National teacher, viz.—how to carry children through the first book class, we will not say quickly, but in a time not immoderately and ruinously long.

162. In a word, the infants' school seems to us to have been transplanted from another country very differently circumstanced, and to have taken no root in Ireland.

Boys' and Girls' Schools.

163. We now come to one of the main points of our inquiry—what opinion can we form of the value of the boys' and girls' schools to the State as far as education of the children is concerned, and at what cost is it given? The following tables must supply the data on which we found our conclusions:—

Return of Fees paid quarterly by Children actually present, with Date of Visit.

Explanation of Table B.

164. From Table B will be seen the proportion of the children of different social position, measured by the rate of school fees. No children pay more than 5*s.* a quarter for the ordinary instruction of the school, and none less than 1*s.* 1*d.* per quarter, except at Trim, where we found sixteen children attending without payment. This is the only school in which free pupils are admitted. (*Report for* 1867, p. 105.)

Table C.

165. Table C shows the proficiency of all the children in the schools who were above the second book, according to their classes, reckoned by their power to pass in *all three* subjects of reading, writing, and arithmetic. It will be observed that many of the children may have failed in *one only* or in *two only* of the subjects. We think that this test of the attainments of the children is the best—it shows how many of the children are in a satisfactory state of general progress. They were all examined in the classes in which they were presented by their teachers, and the teachers for the most part concurred with us that the questions put to them were such as the children ought fairly to be able to answer.

Table D.

166. Table D shows the attainments, irrespective of class, and compared with age. We consider that children of the labouring class who are above twelve ought to be ready to begin to earn their daily bread. What, then, has the model school done for them? How many of them can be said to have gained a fair knowledge of the rudiments of education in reading, writing, and arithmetic? and how

many of them, having reached the fourth or fifth class, can show a small acquaintance with grammar and geography? These questions are answered in this table.

Table E.

167. Table E. The age of children at school is generally high—it is important to ascertain what proportion the number of children above twelve bears to the whole. The children are a long time reaching Book IV.: it is important, then, to know in these schools how many are receiving instruction corresponding to that stage. Next, of the whole number of children, how many per cent. passed in reading?—how many in writing?—how many in arithmetic?—and how many per cent. could pass without failure in any one of the three subjects throughout the school?

168. The value of the instruction given in the model schools appears by the foregoing tables which we have drawn up from our own examination of the children, and the data we ourselves collected, except where other sources of information are mentioned. All the sums and written exercises by the children in B V. and B IV. are preserved, marked, and sorted, and are ready for verification, if any of the Royal Commissioners are desirous of examining them.

Proficiency not remarkable.

169. It will be seen that in most cases there is no very remarkable degree of proficiency. In fact in our best English town schools, with which these ought to be compared, a higher per-centage of passes in reading, writing, and arithmetic is generally attained; nor can it be said that the mediocrity of the model schools in these necessary qualifications is balanced by superiority in other subjects, for in geography the result is but indifferent. In grammar a larger per-centage of children showed progress; the examination in grammar was extremely elementary, and proficiency in such a subject, though gratifying, is of small practical value. We are of opinion that a great deal more time is given to it than it deserves, and generally throughout the programme of the Board that it occupies a position of undue prominence.

It is fair, but not superior.

170. Our estimate of the literary proficiency of the pupils in model schools is not on the whole encouraging. We had hoped that from the lavish way in which the schools are supplied with every requisite, and the large amount expended by the State on children, most of whom have social advantages far beyond what can fall to the lot of those whom the State intended to assist, we should have found a corresponding benefit. We regret that this just expectation should not have been realized, and that the children exhibit no very great superiority to those who are without these advantages. A great many children get a fair education; but it is only *fair*, not superior.

Teachers could do better, under wiser regulations.

171. It is due to the teachers to say that on the whole the result is attributable rather to regulations under which they have to conduct the schools than to incompetence on their own parts. They have a very large number of subjects to teach—the children's time is divided too much—a great deal more time is given to religious instruction than is needed—a less ambitious list of subjects taught might well be substituted for the present list, but of course the glaring disproportion between the means provided by the National Board, and the ends to be attained would then strike every sensible person; it is therefore necessary to exhibit these schools as giving an opportunity of acquiring accomplishments as well as every branch of necessary knowledge.

172. Consequently there is too much that is hurried and superficial. The knowledge acquired is wide and shallow; but as the children are quick and intelligent, come from comfortable homes, and hear persons about them talk with tolerable intelligence on questions of the day, this shows its effect in their letter-writing. Many can get on very glibly, and write a fair letter, although their spelling may be somewhat peculiar. They will read with a pleasant tone of voice, and articulate very correctly though unable to give the meaning of words. In this respect, however, we have had some very satisfactory answering. Arithmetic is really the best test of a school, because it does not admit of degrees. The answer to a sum is either right or wrong. If wrong, it is easy to see whether the error arises from haste or carelessness, or whether from ignorance of the subject. In arithmetic, in girls' schools, the result of examination was sometimes very bad.

Benefit to State questionable.

173. It is no doubt an advantage to any town to have a school like a model school accessible to all; but the wisdom of the scheme, when viewed from the stand-point of benefit to the nation, must be tested by the commonplace question—Does the State get a good return for the money it contributes? The proficiency attained may be small, but then the outlay might be small, and then the public might be satisfied. We now proceed to inquire into the annual expenditure on these schools.

174. We show this in tables (F and G). In the first of these tables the total cost of providing the schools is compared with the number of children we found in them, and the staff of teachers is compared with the same number.

TABLE F.

Table of duration, rent, building cost, scholars seen, cost per scholar, number of teachers, ratio of scholars, and whole cost to 1868.

RETURN showing the time in Operation, the Rent and Building-cost of Model Schools, the Scholars seen in them, the Cost of School Accommodation for each Scholar, the Number of Teachers, the ratio of Scholars to Teachers provided at the Public Cost, and the whole Cost of each Model School to the public up till 31st December, 1867.

Expenditure of public money upon District and Minor Model Schools, 31st December, 1867, £411,300 16*s.* 6*d.*, exclusive of schools in Dublin not returned.

* In several cases the numbers under this column are somewhat larger than those returned in Table A, as examined. The schools are here credited with a few children who, though present, withdrew or were withdrawn from examination.

† This school was visited on a very wet Saturday. There were 180 children "on the Roll." Had *all* been present, each would have cost the State £33 13*s.* 4*d.* for school-room, and there would have been 10 scholars to each teacher.

TABLE G.

Table showing for 1867 total cost, average attendance, and cost per scholar; and for 1868 total cost, actual attendance, and cost per scholar.

RETURN showing the Cost of teaching force of each Model School in 1867,* as reported by the National Board, the Average Attendance reported by the Board for the same Year, and the Average Cost per Child; also the Cost in 1868, the Attendance ascertained by the Royal Commissioners, and the Average Cost calculated upon the Scholars actually seen in 1868.

Additional general expenditure in connexion with Model Schools out of Dublin in 1868, £226 0*s.* 11*d.*

* See Appendix II. for complete return of cost.

175. In the second table the years 1867 and 1868 are taken—the annual cost of maintenance is compared in the first year with the average number of children in attendance as returned by the Board, and the average cost per scholar is calculated. But the Board does not report the *whole* cost (see Appendix). Return of average attendance agrees with actual attendance.

176. In the year 1868 the number of children actually present is taken as the divisor, and it will not fail to be noticed that the number we found present often agrees very well with the average number returned for previous year, and where it does not that the cost per head is very much the same as if it did. The enumeration upon 25th June, 1868, confirms this view strongly.

177. We conclude from this that the number present at our visit represents very fairly the average number in attendance. We have verified this also by the following method—we sent for the MS. reports of the Inspectors giving the average attendance for 1868, and compared it with the number found in the schools by us; and here are the results for some few cases :—

		Boys.	Girls.	Infants.
Belfast,	Average for 1868,	437	291	219
	Seen by Commissioners,	380	264	214
Newtownards,	Average for 1868,	131	83	80
	Seen by Commissioners,	128	94	99
Carrickfergus,	Average for 1868,	91	47	66
	Seen by Commissioners,	83	41	74
Cork,	Average for 1868,	186	136	142
	Seen by Commissioners,	171	139	135
Limerick,	Average for 1868,	98	91	81
	Seen by Commissioners,	98	91	89
Enniscorthy,	Average for 1868,	27	22	25
	Seen by Commissioners,	34	23	34
Dunmanway,	Average for 1868,	80	86	94
	Seen by Commissioners,	88	95	120

We are not, therefore, far wrong in taking the number we actually saw in the schools as representing fairly the average number attending throughout the year.

178. If we leave out West Dublin and Inchicore, where the cost per head seems to vary from the average considerably, the lowest cost per head is (1867) at Carrickfergus, £3 5*s.* 8*d.*; and the highest at Enniscorthy, £7 19*s.* 2*d.* In 1868, the lowest cost per head of the same schools is—at Dunmanway, £2 13*s.* 9*d.*; and the highest at Kilkenny is £7 8*s.* 11*d.* We leave out Coleraine as we visited that school on Saturday, and therefore the number actually present does not represent average attendance. Range of cost per head;

179. From £4 to £5 per head is the actual annual cost of each child to the State. Now, the cost of a child's education altogether in an elementary school in England is said to be about 30*s.*, and in elementary schools in Ireland it would be somewhat less. This comparison will show still larger discrepancy if it be remembered that in model schools the number is made up in very large measure by infants, and that it would be ridiculous to suppose it at all necessary the Government should pay from £4 to £5 per head for the education of babies. Higher than English schools.

180. But this is not all. In the elementary school in England the Government contribution is limited to 15*s.* a head. In the model schools in Ireland there is a large number of children (see Table B, pp. 751, 752) paying 20*s.* and 10*s.* a year. Except in Dunmanway and Trim we did not see any large proportion of children who would be of the class entitled to State aid from their want of means. In 1867 (*Board's Report*, p. 82,) there were 464 names on the rolls of Dunmanway; 4 only paid at the rate of 5*s.* per quarter; 100 at the rate of 2*s.* 6*d.*; and 360 at 1*s.* 1*d.* per quarter; and we specially mention this school as an exception because we were pleased with the attainments and good discipline of the children. In respect of the class of children attending, West Dublin might be included: in 1867 (*Board's Report*, p. 92), out of 538 children on rolls, none paid at the rate of 5*s.*; 259 paid at the rate of 2*s.* 6*d.*; and 279 at the rate of 1*s.* 1*d.** Fees of pupils.

181. Leaving out the few cases where the poor children form a considerable part of the school, the State is paying a most extravagant sum for the education of children whose parents can very well afford to educate their own children, and in many cases, as we found, declared themselves very willing to do so. Cost to the State extravagant,

182. When we consider the proficiency of the children and the cost of the schools, we are driven to the conclusion that the result is not commensurate with the outlay, and that a radical reform is needed in the administration of this branch of the Board's operations; and this is our conviction, assuming that our recommendations with respect to the future of these establishments are not adopted: it will be seen further on that we recommend from other considerations that these model schools should be disestablished and disendowed. and indefensible.

183. But we are aware that the expense is by some defended on another ground, viz., that the model schools are training schools, and in this aspect it may be maintained that the money laid out by the State is well expended in promoting the supply of future teachers for the country. This deserves attentive consideration, for there is no doubt that the training of teachers is a most essential part of any national system, and such training must necessarily be more expensive than the maintenance of an elementary school will be. Excuse suggested.

184. In the model schools in Ireland in 1868 there were 467 monitors and pupil teachers of both sexes, as we found by actual counting. The Board's Returns give imperfect information on this head for 1867, the number of teachers in the care of these model schools being omitted—Sligo, Limerick, Cork, Dunmanway, Athy, Omagh, Londonderry, Galway, Bailieboro', Trim, Coleraine, Newtownstewart. In the other model schools there appear to have been 191 pupil-teachers and monitors.

185. To the pay of these pupil teachers and monitors might be added a certain annual sum to represent the cost of their own education; and this being deducted from the total cost of the model schools, would leave a more reasonable sum as the cost to the State of the education of the children of the farmers and shopkeepers.

* This school affords an instance of the confusion in which the statistical returns of the Board have become involved. Take the National Board's Report, 1867 :—

Page 26—We have given for West Dublin Model School, under the head No. of pupils on the rolls for year ending December 31, 1867—*Boys*, 403; *Girls*, 268; *Infants*, 291. (A).

Page 92—Classification of pupils on the rolls at end of year 1867—*Boys*. 241; *Girls*, 152; *Infants*, 145. (B).

Page 93—Classification of pupils for same year according to religious denomination—(agrees with preceding).

Page 93—Average number on Rolls—*Boys*, 252; *Girls*, 154; *Infants*, 162. (C).

Page 93—Number of individual pupils whose names appear on rolls, 1867—*Boys*, 403; *Girls*, 268; *Infants*, 307. (D).

Explanations probably can be given by the initiated, but it is clear that the public at large can hardly be expected to conclude that (A) and (C) are consistent.

186. We therefore proceed to discuss the question of training and of the suitableness of model schools as they now are organized and frequented for this purpose, giving first of all a brief account of the rise of the system.

PREPARATORY TRAINING, time of, was limited to six months.

187. In 1835 the Commissioners proposed that every candidate for admission to the central training establishment in Dublin should undergo a preparatory training in one of the district model schools; and the complete plan of district model National schools put forth in 1846 provided that in each district model school three male candidate teachers should be lodged with the master, and one female candidate teacher placed under the care of the mistress; that candidate teachers, selected by competitive examination, should be trained for six months in the district model schools, and after serving for two years in a National school, should be summoned to complete their education at the central model school in Dublin.

Pupil-teachers and monitors now retained for two years, but are free to leave.

188. Candidate teachers of either sex are now called "pupil-teachers" or "monitors" in the district model schools;—"pupil-teachers," if the cost of their board and lodging is defrayed by the State either in the master's house or elsewhere; and "monitors" or "monitresses" if the State does not pay for their board and lodging. Their course of preparatory training in the district model schools lasts for two years, and the numbers admitted in each model school vary at the discretion of the Commissioners. We did not find that any competition exists for admission. The candidate teachers receive their appointments from the Inspectors, and they are not bound by legal instrument to any period or other conditions of service. The practice is that during school-hours they teach classes of children in the model school, and in the morning and evening they study and get lessons from their teachers. They are free to leave at pleasure.

Model schools are unsuitable for training, because they differ from ordinary schools in management, religious instruction, conditions of school work, and remuneration;

189. The general principle of preparatory training appears to us to deserve approval, and we do not question that all candidates for admission to the central training establishment might with advantage be required to show a certain proficiency before obtaining that benefit at the public cost; but considerations are not wanting which create doubts whether the district model schools, as now constituted, afford a suitable field for the preparatory training of ordinary National school-teachers. For the great object of such training should be to familiarize the youthful teacher from an early age with the conditions of his future service; the work to be performed by the ordinary schoolmaster; the difficulties to be surmounted by him; and the relations to be maintained with scholars and school-managers. Hence the scene of preparatory training ought to resemble the ordinary school. But the district model schools differ most materially from ordinary National schools. (1.) The scheme of management is different. While the ordinary school is subject to its local patron or manager, the model school is under the exclusive control of a Dublin Board; and thus the teacher, who in the one case is beyond doubt the servant of private individuals, may in the other reasonably regard himself as independent of all masters but the State. (2.) Provision for religious instruction is different. In the ordinary school, whatever rights the covenants of trust-deeds may in certain vested schools confer upon others, religious instruction is in fact conveyed exclusively by the individual manager in person or through the teacher; but in the model schools ministers of various Protestant persuasions attend periodically to afford religious instruction. (3.) School-work is different. In the ordinary school children are mostly poor and so backward that 45 per cent. read only the First Book; the teaching force is limited to such an extent that classes must be generally large; there is seldom an infants' department; the apparatus for illustration, and often the very reading books or writing materials are deficient: while the model school is attended by children of the most respectable residents; all the scholars have advanced beyond the First Book; there is always a separate infants' school; teachers provided at the public cost are so numerous that the instruction is individual rather than collective, and the classes no larger than those of a private tutor; the State-supplied apparatus comprehends every mechanical contrivance for lightening the teachers' labour. (4.) Salaries are different. The ordinary school-teacher for heavy labour among poor children receives a moderate salary from the Board, and with many free scholars collects but a small amount of school-fees, while the model schoolmaster is paid at the highest rate with every opportunity of gaining extra allowances from his own Board and the Science and Art Department, augmented by half the school-fees which are paid by all, and in many instances at the rate of £1 a year. These differences are wide enough to constitute the model schools a separate class from the ordinary schools, and to divide the model school* teacher sharply from the teacher of an ordinary school.

and on the score of their prodigal resources.

190. The very prodigality of resources supplied to the model schools renders them unfit for the training of ordinary teachers, who will subsequently be required to perform harder tasks without the aid of the same appliances. A model school frequented by middle class children paying school-fees quarterly in advance, and attending with regularity for years together, may, while exhibiting admirable results, lie beyond the imitation of the ordinary schoolmaster. It is not by eliminating the special difficulties of the primary poor-school that a poor-school teacher can be trained to meet and overcome them; and the exclusion of trials, which are certain to be encountered in the future, may breed a fleeting vanity, but will never produce a lasting store of temper, judgment, and sagacity.

Boarding department condemned,

191. The arrangements for preparatory training in model schools are open to still further objection, inasmuch as the pupil teachers are lodged and boarded in them. Brought from distant homes, and so withdrawn from parental and pastoral care, these young men, professing a variety of creeds, pass their days and nights under a schoolmaster who, however skilful as an elementary teacher, has not been selected for ability to mould the character and form the manners of boarders, and who, sincere and well instructed as he may be in his own religion, cannot undertake to enforce the obligations of

* This is contrary to the original plan, which designed the masterships in model schools to be places of advancement for the encouragement of ordinary teachers, as explained by Mr. Blake (see first volume of Board's Reports, p. 96).

"I have no doubt that we shall promote as we have opportunities the most deserving of the teachers from the primary schools to the Normal schools, and from the Normal schools to the professorships in the general National Establishment. Those Normal schools will be model schools also for each county, or rather district schools. We propose to have one chief school for each county, and that the master there should have £100 a-year; that would be an advancement beyond the primary school; then we propose that he should have two assistants, who should have £52 a-year each; thus there would be about 90 places of advancement."

religions which are not his own. This portion of the model school system appears to us to be extremely ill advised, costly without being effective, and calculated to alienate those most deeply interested in the real welfare of the young men without securing a sound class of teachers.*

on general principles, and has failed.

192. Our disapproval is not based upon the detection of occasional scandals, from which no system can calculate upon being wholly free, but upon general grounds. The responsibility of conducting boarding houses involves a burden which no government department should have taken upon itself. Were all the boarders of one creed, the impropriety would be glaring; but not even the Queen's Colleges have attempted boarding houses of mixed religions. Instinctive objection to institutions so novel, so alien to all the customs and traditions of Irishmen, accounts at once for the unpopularity which has overwhelmed the Commissioners' model schools. And then the national object has not been gained. As one familiar with the system observed to us, "The model schools in seeking pupil teachers for middle class children have tapped too high a social stratum." The son of a poor family who would cheerfully accept the humble laborious life of a National teacher, is out of place among the smart scholars of a model school: the youth, suitable in station and manners to manage such children, despises the lowly lot of the ordinary master. Hence the training system of the Board never overtakes the wants of schools. Many young persons are trained at the country's expense; comparatively few adopt the teacher's profession.†

Preparatory training should be conducted in good ordinary schools.

193. The end proposed might, as we think, be more safely, more surely, and more cheaply reached, by confining preparatory training to the best of the ordinary schools, and by prolonging the length and improving the conditions of the service of candidate teachers in them. Managers, if they had the privilege of recommendation, would find for this class candidates with the needful tastes, character and disposition, who remaining under their parents' care and acquiring in the day school actual experience of the labour and trials of a teacher's life, would be prepared in virtuous perseverance to face as trained teachers the realities of their future career.

Model school a misnomer.

194. In the preceding remarks, directed chiefly to the expediency of using model schools as training schools, we have touched upon a point which was constantly before us—viz., the impropriety of giving them the name of "model." How is it possible ever to secure such schools in country places? A name is of small consequence perhaps, but in this case it is calculated to mislead, and it certainly assumes, what we have endeavoured to controvert in the preceding remarks, that these are fit places to train those who are to be future teachers of elementary National schools.

Mischief of mixture of classes.

195. The mixture of classes has been referred to; but some persons will defend this as a good thing in itself; and probably there will be much diversity of opinion thereon. The consequences which we have noticed are these—the power and influence of the teachers over the children of richer parents are not nearly so great as they ought to be in an efficient school; this applies not only to the junior teachers, but to the senior. If children come in private cars to school, or furnished with their season ticket by railway, or are attended by servants in livery (which we have ourselves witnessed),‡ such children frighten away the poor and barefooted, who do not like to have their social and fiscal deficiencies made conspicuous by contrast; and in some cases we have actually been requested to recommend that there should be a separation of classes, as the parents of well-dressed children found it offensive to their feelings that they should mix with their inferiors; on both sides the mixture is found unpalatable; it discourages attendance as regards scholars, and as regards teachers there are disadvantages to counterbalance the palpable benefit of bringing classes together, as in Scotland, on the benches of the school.

For the middle classes education should be provided, but not gratuitously.

196. Another reason has been alleged that really has weight. The National Board schools have displaced the schools to which the children of the higher middle class might have resorted. This is, we believe, true, and no doubt the education of these children should be promoted; but we are of opinion that such children should pay the full cost of their education, and we shall hereafter suggest a plan by which some of these model schools might be made useful for that purpose without calling on the State to provide a nearly gratuitous education for children of architects, barristers, clergymen, physicians, millowners, &c. (See *Returns of National Board*, § iv., par. 4, pp. 170-1.)

197. In such schools the demand for classical education, which is supported by such high authorities as Dr. Moriarty, Roman Catholic Bishop of Kerry, and Dr. M'Ivor, the rector of Ardstraw, might be met; though it is probable that even such an advantage might be considered by Dr. Moriarty as too dearly purchased by the erection of a model school within his diocese. (See *Dr. Moriarty's Memorandum*, § 6.)

RELIGIOUS QUESTION.

Union not secured in model schools.

Roman Catholic children desert them.

198. We now come to the most important aspect of these schools. They were designed on the united plan of the National Board—to be useful to all religious denominations without any favour or distinction. We believe that the Board and its officers have desired faithfully to carry out this intention; and yet the fact remains that the model schools are, with few exceptions, avoided by the Roman Catholic people. It is well known to what cause this is due. The Roman Catholic clergy have proclaimed that these schools are unsafe places of education for the children of their communion,

* Are the teachers in model schools appointed as a reward for previous good service in the same capacity in other elementary schools? Certainly not uniformly—for more than half the teachers of girls' and infant schools were appointed before they were 23, according to the returns furnished by the Board.

Of the 52 principal teachers in these schools—

7 were appointed when they were 19 or younger,		6 were appointed when they were 22 years of age.	
6 " "	20 years of age.	5 " "	23 "
7 " "	21 "	21 " "	over 23.

Of the 26 male teachers in the model schools only 5 were appointed when under the age of 27, so that in this case there is ground for supposing that the first may have been given for meritorious service as National schoolmaster; but other qualifications have evidently guided the Board in appointing the teachers of girls and infants. In some places we were told that superior manners, and ladylike deportment were considered essential, in order to attract the children of the more prosperous class; and indeed the teachers of elementary schools have in great measure ceased to look forward to these posts as the reward of professional exertions.

† See returns from National Board, § iv., par. 5, p. 170. 2,304 pupil teachers and monitors have been in the model schools, of whom 731 only are known to be in the Board's service (excluding those serving at present as pupil teachers and monitors).

‡ In the Belfast model school we examined the niece of one of the then members for the borough.

Explanation of exceptions.

and the people have (whether willingly, or as is sometimes alleged unwillingly) obeyed the monitions of their spiritual guides, and deserted the model schools. The exceptional cases are—1st. The model schools in Dublin. The Cardinal Archbishop has not issued any prohibition, chiefly, as his Eminence tells us, because he has not yet provided sufficient schools for the people; and he submits to what he considers an evil in order to avoid the greater evil of leaving the children wholly without the means of getting a good education. 2nd. Certain parts of the country where the local ecclesiastical authorities have not so strong an objection apparently as others have, and where the Roman Catholic element has always preponderated in the model school. 3rd. In the case of the children or relatives of Roman Catholic teachers employed in the schools.

Number of Roman Catholic pupils small;

199. While the Roman Catholics form five-sixths of the population, only thirty-seven per cent. of the children whose names were on the registers by some means or other in 1867 were of the Roman Catholic religion. This includes the model schools in Dublin, whose numbers are one-fifth of the whole number of children in model schools.

and diminishing.

200. The number of Roman Catholic children attending model schools is diminishing even from this scanty proportion, and their place is not supplied by others—the schools are *pro tanto* emptied. Of the former fact we give this evidence:—

Proof.

Roman Catholic clergy object to management of Model Schools.

201. The objections of the Roman Catholic clergy to the model schools are founded chiefly on the management and the necessarily undenominational character of these schools. The latter objection belongs to a wider view of the subject. The former we shall examine in detail.

202. In order to do this the question of local management of schools should be carefully studied, as it was one of the chief difficulties of the National system.

MANAGEMENT.

Scheme of management proposed by Mr. Carlile in 1836,

203. Shortly after the issue of the Board's second Report for 1834-5, Mr. Carlile, then Resident Commissioner, undertook at the request of his colleagues, to make a tour of inspection among National schools, and to report the result of his observations. For our present purpose Mr. Carlile's report* chiefly deserves notice, because he clearly assumes in it that the county model schools then in contemplation would be managed by local committees, and he even suggests a system of county inspection, which, he remarks, "might easily be effected by giving the committee of the model school a certain allowance for employing a supernumerary master, whom they might send to the different schools in the county from time to time, or who might take charge of the school while the head master of the model school might be sent out on a tour of inspection, and who also should act as secretary to the committee, and maintain a correspondence with the National Board." He proceeds further to recommend that, "connected with each proposed county model school, the most influential gentlemen in the counties respectively, both of clergy and laity, as, for example, the bishops of both the Protestant and Roman Catholic Churches, resident noblemen, and other landed proprietors, might be invited to become guardians or patrons of these model schools, with power to sit and vote on the committees, and might thus be vested with official authority to visit and inspect all schools within the county." We have seen that, in a somewhat similar spirit, when modifications in the National system were recommended, after the Lords' inquiry of 1854, the Government, in authorizing the foundation of the schools now called "Minor Model Schools," directed the Commissioners, "in cases wherever it is practicable, to appoint Committees composed of Protestants and Roman Catholics to visit and superintend them under the direction of the Board." But when the Board began to give effect to the resolution in favour of founding model schools, no attempt was made to form local committees of management, or to give influential residents any authority over them. On the contrary, the Board sitting in Dublin reserved to itself and its officers exclusive control of the country model schools in the way which we proceed to describe.

not adopted.

Inspector is manager for the Board.

204. The management of a district model school resides in the District Inspector, who usually occupies an office within the institution, and is required to live in the vicinity. Until 1854, it was his duty most carefully and particularly to look after the school, and to examine and report upon it once a week (M'Creedy, in Lords' Committee, 3255). Since 1854 the regulations affecting the Inspector's management of a model school have not required a weekly examination, but they still impose duties of anxious nature and frequent recurrence. They are as follow:—"Where a district model school is placed in charge of an Inspector, he is expected, besides his stated and ordinary visits, to pay as many occasional or incidental calls as in his power, and such at all times of the day, as well during the ordinary school-hours, as both before and after, in order that he may see not only that the principal teachers and their several assistants are observant of the rules of the institution as regards the employment of their time and the prosecution of their studies, but how also are the domestic arrangements carried out. Instead of a weekly inspection of these institutions, as at present, three inspections in the term—each, however, to be separately reported on the form prescribed—will in future suffice; but these inspections, it is to be distinctly understood, are to be of a serious and searching character; and with the view of making them truly such, the Inspector, instead of examining in detail all departments at each of those visits, should take them in succession, without, however, at any visit, neglecting to inquire into, and report on the attendance and classification of pupils in the others, and the *general* state of the whole establishment. The teachers will still be required to furnish weekly returns of the attendance, &c., of the pupils, and these the Inspector, who will attend each Saturday at the model school to receive them, after having checked and countersigned, will forward to the office." He distributes among the teaching staff the various duties to be performed. He receives from the teachers and remits to Dublin the fees paid by scholars. And under the Head Inspector, he is generally responsible for the working of the school. Nevertheless he does not appoint the teachers, nor can he dismiss any of them without reference to the Board, who may revise his action, sustaining or reversing his judgment upon the production of evidence satisfactory to them.

Inconveniences of this plan.

205. It is obvious that the discharge of the duty of management exercised possibly by a young unmarried inspector over a troop of teachers of both sexes and all ages and creeds, brought from different quarters, and working together without perfect subordination among themselves, in schools where boys and girls often over thirteen years of age occupy adjoining rooms and share a common corridor, must be a matter of extreme delicacy. And though we saw reason to believe that one at least of the district Inspectors—and probably more than one—possessed discrimination and firmness enough to perceive what needed correction, and to apply vigorous remedies regardless of the possible consequences to himself; yet we think that qualifications so rare cannot reasonably be calculated on, and that where they exist they may be more profitably employed than in composing squabbles among teachers, or animadverting upon a young woman's dress.

Duties and temptations of school manager incompatible with position of Government Inspector.

206. In fine, we consider that no Inspector should be placed in a position attended with constant anxiety which must interfere with the regular discharge of his proper functions, and exposed to the risk of mistake where errors of judgment involve not only his personal character for prudence, but the repute of the central Government. A private patron may fail in managing his school-teachers judiciously; he may overlook intemperance in one case, levity of conduct in another, an unbecoming style of dress in a third, or inattention to religious observances in a fourth; he may maintain as models to the growing youth of a parish married persons separated from their partners, whose wrongs and misery fill the schools with gossip of a kind never to be named before the young; or again, actuated by too keen a sense of responsibility he may remove a teacher for reasons which exist only in imagi-

* Appendix to House of Commons' Report, 1837.

nation: all that he risks in either case is his own character for prudence or kindliness. But the errors in school-management into which an Inspector may fall reflect upon his department, and lower Her Majesty's Government in popular estimation. Should he act too promptly, the Government is tyrannical; should he wait for positive proof before applying correction, the Government is suspected of designs upon the morals or religion of the people. It is conceivable that a school manager might here and there marry one of the teachers under his management without sacrificing more than self-respect and social position; while a few alliances of the same kind contracted between school Inspectors and the teachers or monitresses of model schools cannot fail to destroy the proper relation of the two classes by undermining the authority of the one class and unduly exciting ambitious hopes in the other.

Bishops and clergy on this account denounce Model Schools,

207. Thus it happens that a scheme originated in the best intentions has not in its working conciliated general favour. For confidence in the management of model schools has gradually been lost, and many of the clergy of the Established and Roman Catholic Churches regard the institutions with silent disapproval if not with active hostility. The Roman Catholic bishops with whom we had the advantage of an interview, expressed a judgment adverse to the model schools as unsafe places of education for the young of their flock; and attendance at them, continued after public warning, is regarded as a sinful breach of discipline, involving teachers and parents as well as school-children in its consequences. In some places the condemnation is carried further than in others. Where no other provision of a suitable kind has been made for the education of Roman Catholic children of either or both sexes, there one or other or both departments of the model schools are tolerated until the want can be supplied. Such is the case not only in Dublin, but also Dunmanway and Bailieborough, and with the boys' schools at Trim and Parsonstown. At Dunmanway, in order to obtain this toleration, resort has been had to the expedient of keeping vacant the place of head mistress over the infants' school, as it was apprehended that the appointment of a Protestant teacher to that office would lead to ecclesiastical censures, and the emptying of the school. Near relatives of persons officially engaged about the schools, as inspectors and teachers, are generally exempted from the prohibition to attend them; and in certain cases this exemption accounts for the presence of several out of the small total of Roman Catholic scholars. Thus at Enniscorthy the whole number of Roman Catholic scholars present in the boys', girls', and infants' rooms was five, of whom three were the children of the head master, while another was the offspring of a mixed marriage. But in places where schools of good repute have been opened under Roman Catholic management, the prohibition to attend model schools is actively and strictly enforced upon all other children of the Roman Catholic Church, and it was stated to us, that in case of non-compliance, ecclesiastical censure and public denunciation have sometimes been extended even beyond the classes of teachers, scholars, and their parents. Even in places where model schools are as yet tolerated, the establishment of schools is contemplated for the purpose of withdrawing the Roman Catholic children and preventing their further attendance; and there can be no doubt that in the absence of remedial measures, among which change in the principle of management must hold the first place, the object will be finally effected in the abandonment of model schools.

with certain exceptions,

which, however, are temporary.

208. The objection entertained against the present plan of management is definite and determined, and we met in the county Wicklow with proof that ordinary National schools similarly managed excite hostility equally inveterate.

Objection to non-local management illustrated by case at Glendalough National School.

209. The Glendalough National school in several particulars affords a remarkable illustration of the working of the Irish system. This school was built in 1862 by the Mining Company of Ireland for the benefit of their workmen and other tenants. It is a vested school, built with the aid of public grants amounting to £277 10*s.* towards the premises, and £50 for boundary fence. The site includes, besides the school, a pretty cottage, romantically situated, for the master, and land enough to feed his cow. In the school, which though small, is well built and suitably furnished, are two rooms designed for boys and girls respectively. These rooms bear upon the Board's roll two numbers, viz., 8909 and 8966, and it seems strange that if two adjoining rooms under one roof must be distinguished by different numbers, those numbers should not be consecutive. No. 8966, characterized as Glendalough female school, vested and under Roman Catholic lay management, is returned by the National Board in the Reports for 1864, 1865, and 1866 upon the "List of schools in operation on the 31st December" in each year. Yet it has never been in operation at all. The Report for 1864 leaves blank all particulars of attendance and aid, and states in a foot note that the "pupils are taught in the male school." The Report for 1865 leaves similar blanks, and notes the school as "temporarily inoperative." In the same way the Report for 1866, the last issued, describes the school as "not in operation." The condition of things in 1868 is precisely the same. The vested school No. 8966, built to the extent of two-thirds of the cost by the Board in 1862, is this year also not in operation. The adjoining room No. 8909 has not proved so totally useless, but in the small attendance, as well as in liberality of treatment by the Board, it resembles and illustrates the district model schools. The Mining Company opened the school in 1864 under a Roman Catholic master of high classification, who appears well qualified to teach, and in fact has taught his few scholars efficiently. They allow the master free use of the residence and land. They make up his salary to £58, and they annually distribute £12 in premiums among the handful of scholars. The Board also has acted with exceptional liberality in the case, allowing to the master his full class salary of £38 for three years, in spite of the small attendance of children, which averaged 10 in 1864, 14 in 1865, 14 in 1866, and remains at the same number in the present year. If the failure in attendance arose from sparsity of population, the Board would be culpable for having built schools on a spot without inhabitants. But the failure is not attributable to that cause. St. Kevin's schools in the immediate neighbourhood draw large numbers, and many boys there, under a worthy master of long service, occupy a school which, though returned as "vested," is a wretched structure, unfit for the purposes of education. It would in our opinion be a wise and merciful arrangement to transfer these poor boys from the hovel called a vested National school at St. Kevin's to the excellent empty room,

equally a vested National school, at Glendalough. Meantime it is ecclesiastical objection to the management which empties the Glendalough school. Though the master is a Roman Catholic, and the manager a Roman Catholic, yet all the scholars (excepting the master's own children) are Protestants. The parish priest opposes and denounces the school, and Roman Catholic children shun it, just as they avoid a model school. The objection, as we understand it, is that though the nominal manager is a Roman Catholic officer of the Mining Company, who resembles the District Inspector in his relation to a model school, yet the real power of management resides in the Company itself, whose head-quarters are in Dublin, and who occupy a position analogous to that of the National Board towards model schools.

Exclusive management of schools by Board not tolerated.

210. We have described this case at some length, because it proves how deep-seated is the objection to non-local management of schools, and how hopeless, where the objection exists, the task of attracting into condemned institutions the children of the majority of the Irish people. The failure of the Glendalough school further shows that had the National Board carried out their plan of 1846, and in addition to the model schools built a few small schools in each district at their exclusive cost and under their own management, these schools would likewise have failed to secure the attendance of children, and at a large expenditure of good intentions and public money would have purchased nothing but discredit and disappointment. It is vain to lavish national funds upon school buildings, apparatus, teachers, and rewards, while the management remains such as to scare away scholars. Once at least before in the history of attempts to promote education in Ireland by means of parliamentary aid, similar well-intended efforts had, through the same mistake, resulted in similar failure. Between 1819 and 1826 grants were made from the Lord Lieutenant's school-building fund "under circumstances which led to the belief that it was not intended to give Roman Catholics control over the schools, or any voice in their management; and accordingly the system did not enjoy the confidence of members of that religious persuasion" (Report on Endowed Schools, p. 127). The Commissioners of Education Inquiry of 1825 condemned this system, and the grants were discontinued. Experience failed to warn the Board of National Education against a repetition of the blunder.

Previous failure.

Objection fatal.

211. For this reason amongst others the model schools have proved a failure, as far as it was intended to attract Roman Catholic children into them; and they have become middle-class schools for Protestants of different denominations; though not exclusive of Roman Catholics in the theory or intention of the Board, they have become in fact places of nearly gratuitous education for non-Catholics. We do not see how, with the objections entertained and enforced by the Roman Catholic clergy, they can ever recover their popularity or general usefulness.

PUBLIC AID GIVEN IN INVERSE PROPORTION TO THE NEED OF IT.

Roman Catholic population needs schools.

212. Let us again revert to the original idea, and then we will show how unreasonable it is to expect that public aid should be lavishly given for the advantage of the smaller section of the community. We will recapitulate a few facts showing how much the Roman Catholic population needed the assistance of the State, and how amply the education of Protestants has been provided for by direct encouragement, and by diverting for their benefit funds and endowments which had a wider scope in the intentions of the founders.

Objects of Board, as defined by Resident Commissioner,

213. The Resident Commissioner, when under examination before the Lords' Committee in 1854, defined the objects of the National Board in words which we consider memorable. "I think," said Mr. Macdonnell, "that the first and greatest object of the National system was the sound education of the poor of Ireland of all denominations, free from all suspicion of proselytism, affording at the same time every facility that could reasonably be given for the separate religious education of the children attending the schools. Then the second great object was the united education of Protestants and Roman Catholics in the same schools—a very important object of course, but quite subordinate to the great object of all which was a sound education for the poor of Ireland of all denominations, free from the suspicion of proselytism." It may reasonably be questioned, as we have shown, how far, if at all, the model schools can be taken as designed for the benefit of the poor. However that may be, it is certain that the education given in them is regarded as so far from sound and free from all suspicion of proselytism, that the children of the most numerous and most needy denomination are virtually precluded from participation in it.

are not met.

Comparative illiteracy of Roman Catholics.

214. Yet this is precisely the section of the population which most largely stands in want of education and of public help to procure it for their children. The Census of Ireland for the year 1861 (Part IV., p. 45) points out that "the per-centage of members of the Established Church receiving instruction in primary schools was 9·8; those attending superior schools, 1·1 per cent.; those in colleges, 0·04; and the sum of all these 10·9 per cent. of the population belonging to the Established Church. Roman Catholics in primary schools were 6·6 per cent.; in superior schools, 0·2; in colleges, 0·03; and altogether 6·9 per cent. of the Roman Catholic population. Presbyterians in primary schools were 8·3 per cent.; in superior schools, 0·4; and altogether 8·7 of the Presbyterian population." Hence, taking the whole number of Roman Catholics at 4,505,265, as returned by the Census Commissioners, we find that there are no fewer than 144,168 Roman Catholic children not at school, who, if the Roman Catholics reached the proportion actually attained by members of the Established Church, would be under instruction in primary schools, and 40,547 Roman Catholic children not at school who on the same condition would be attending superior schools. Similarly, if Roman Catholics reached the proportion actually attained by the Presbyterians, whose school attendance falls considerably below that of the Established Church, 76,590 Roman Catholic children not at school would be receiving instruction in primary schools, and the number of Roman Catholic scholars in superior schools would be exactly doubled.

215. It follows, therefore, that whether model schools are regarded as primary or as superior schools, the Roman Catholics above other classes of the population have need of the educational advantages which they were designed to confer.

Carrickfergus contrasted with Galway and Mayo.

216. If further proof of this point were required it might be found in the Census tables of illiteracy, which rises in different localities as the proportion of Roman Catholics increases. Thus in the county

of the town of Carrickfergus, where, of all divisions in Ireland Roman Catholics form the lowest proportion, being only 11·1 per cent. to 88·9 Protestants, there the whole population of five years old and upwards, excepting 9·23 per cent., are returned as able to read or write; while in Galway county and in Mayo, where the proportion of Roman Catholics is highest, being 96·8 Catholics to 3·2 Protestants, there ignorance is greatest, as 63·93 and 65·53 per cent. respectively of the inhabitants of those counties in 1861 could neither read nor write, 65·6 and 67·2 per cent. of the Roman Catholics being in that illiterate condition.

Roman Catholics likewise excluded from Endowed Schools.

217. The object of the foregoing remarks is to show that if one denomination in Ireland more than other denominations deserved on the score of numbers and want of education to have its views consulted and even its prejudices treated with tenderness, it is the very denomination which has been alienated from model schools by an ill-considered and injudicious scheme of management. Nor beyond the model schools do Roman Catholics enjoy educational advantages compensatory of exclusion from these national institutions. Their children, when virtually thrust out of the model schools, have no opportunity of obtaining admission to other schools of public foundation which might reconcile them to the deprivation. The endowed schools of all grades are equally closed against them. "The high proportion," remark the Census Commissioners (IV., 60), "of members of the Established Church receiving intermediate instruction is due in a great measure to the numerous endowments in connexion with that Church, and to the relation existing between many of these endowments and the University of Dublin."

Number and value of school endowments.

218. The number of school endowments in operation is reported by the Endowed School Commission to be 976, with a total acreage of 75,600A. 0R. 2P. The Commissioners estimate the annual value of the school premises at £14,615 9*s.* 7½*d.*; the net annual value derived from land at £37,564 4*s.* 2*d.*; and from trust funds at £16,391 2*s.* 7*d.*, making up an aggregate value of £68,570 16*s.* 4½*d.* per annum. The number of schools supported by these endowments is 1,321. Endowed schools may be classified into Diocesan Free Schools, Royal Free Schools, Erasmus Smith's Schools, Incorporated Society's Schools, and schools of private foundation, whether grammar or English schools, under the "Commissioners of Education," who form a corporation wholly distinct from the "Commissioners of National Education." The estates held by the Irish Society and Colonel Robertson's fund are further instances of trusts available for education.

Diocesan schools,

Royal Free Schools,

219. In reference to the religious question, it is stated that there is nothing to preclude a Roman Catholic from being appointed to the mastership of a Diocesan School, and that the religious tenets of Catholics attending these schools should not be interfered with; and the Royal Commissioners on Endowed Schools report "that the diocesan schools are by their constitution essentially non-exclusive; they are not intended for pupils of any religious persuasion in particular, and the master has no power to compel all the pupils to receive religious instruction in his own tenets." The Royal Free Schools, endowed by James I. and Charles I. are also in theory non-exclusive. A Committee of the House of Commons on Foundation Schools in 1835 reported that "though the course pursued in the instance of diocesan schools of appointing masters from the Church of England, and generally clergymen, prevailed also in the case of the Royal Schools, it does not rest on any law. The Lord Lieutenant, as in the case of the diocesan, has the appointment solely in his own hands, unshackled by any limitation of a religious exclusive character. The assistants also are usually Protestants, but chosen from the laity. The Royal Schools have at all times been considered open to all religious persuasions." And the Royal Commissioners on Endowed Schools in 1858 "are of opinion that the Royal Schools are by their constitution essentially non-exclusive; they are not intended for pupils of only one religious persuasion, and the master has no power to compel all the pupils to receive religious instruction in his own tenets." And "the masterships of the Royal Schools are open to persons of all religious persuasions."

Erasmus Smith's Schools,

The Governors of Erasmus Smith's Schools hold in trust for education considerable estates extending to between 13,000 and 14,000 acres out of lands confiscated by Oliver Cromwell in the counties of Limerick, Tipperary, town of Galway, Westmeath, Sligo, and King's. There can be no doubt, from the date of this foundation and the persons concerned in it, that the scheme was exclusively Protestant; but the Commissioners of 1791 observe that though originally in the intentions of a private individual, it might nevertheless from the repeated interpositions of the Legislature and the Crown, be considered as a public institution; and the rule of the foundation by which the masters were bound to catechise their scholars on each Lord's Day in the catechism of Archbishop Ussher seems to be wholly neglected.* Meantime the charter provides that the schools shall be free for twenty poor children to be named by the Governors dwelling within two miles of the school, and for all the children of the tenants of Erasmus Smith without limitation. E. Smith's trust supports four grammar schools and 140 schools of primary instruction.

Charter Schools,

The Incorporated Society, chartered in 1733, founded the notorious Charter Schools for the education of Roman Catholic children in the tenets of Protestantism. It received a large amount in private bequests and donations, annual grants from Parliament for about 100 years, and the proceeds of a tax on hawkers and pedlers. Its property now includes more than 17,000 acres of land, yielding an income of upwards of £5,000 a year, besides nearly £100,000 stock. In 1803 Protestants were admitted as pupils to the Charter Schools; and after 1825 the nature of the schools was changed, and from being schools for the conversion of Roman

* Rev. J. W. Hallowell, head master of E. Smith's grammar school, Galway, gives the following evidence to the Endowed Schools Commission:—

20281. How would you deal with this rule with regard to religious instruction which is given in the charter?—That rule practically does not exist at all. I never heard of instruction being given in Archbishop Ussher's Catechism. It was never used in Drogheda, where I was seven years—first as pupil and afterwards as master.

Did you ever hear of that rule being enforced?—Never; it certainly was never enforced in my time.

Had you Roman Catholic pupils in the school at Drogheda?—Yes.

What system was pursued with regard to their religious instruction?—It was not interfered with; they were allowed to attend the chapel. The Roman Catholic boarders who lived at a distance from the town went home on Sunday, went to chapel, and received religious instruction; but it was not interfered with during the week.

Catholics they became schools for the education of Protestants. In 1820 the Society took the opinion of the Attorney-General as to whether they were at liberty to receive Roman Catholics in their day-schools, without instructing them in the Protestant religion; but he was of opinion that they could not do so. Thus the very denomination for whose benefit (though doubtless upon a mistaken view of it) this large school fund was accumulated is now excluded from participation in it, just as the industrial education contemplated in the charter is no longer given.

supply education for Protestants.

220. This brief reference to the principal classes of endowed schools, gathered from the Commissioners' Report, is necessary to explain our position that not only is Ireland already well supplied with public funds for secondary education, which it is one of the objects of the model schools to provide, but further that in some instances model schools have been built at a heavy cost to the taxpayer, and are maintained as a burden on the National treasury in the very places where ample endowments for education, primary and secondary, already exist. If these endowments can be made generally available for the education of the inhabitants of all denominations, without injury to the faith of any, we shall regard the measure as one of justice and sound policy; but meantime we further observe that since school endowments are practically limited to the uses of the Protestant minority, so in building model schools alongside of endowed schools the National Board was bound by every rule of prudence to take care that the new institutions should be acceptable to the Roman Catholic majority.

Model Schools ought not to exclude Roman Catholics.

In fact they do so, though built in places already having Endowed Schools for Protestants.

221. Such foresight was not however exercised, and model schools under management acceptable only to the minority of the people have in many places been built at large outlay to the public in juxtaposition with endowed schools limited in practice to the same minority. Thus Ballymena has a Diocesan Free school with annual endowments to the value of £139 9*s.* 8*d.*; Belfast has a Royal Academical Institution with premises and income valued at £589 0*s.* 3*d.* a year, and an Academy with £85 11*s.* 9*d.*; Clonmel has a grammar school endowed with £564, and a Charter school with £54 3*s.* 7*d.*; Monaghan has a Diocesan school with £136 15*s.* 4*d.*, besides private endowments; Enniscorthy has an E. Smith school which also receives £20 from the landed proprietor; Lurgan, and Newtownards, and Sligo likewise have E. Smith schools; Trim has a Charter school with £63 10*s.*; at Ballymoney and Galway the model schools seem to have emptied the E. Smith schools; and similarly it is reported of Sligo "that at a former period the governors of E. Smith's schools had joined the Incorporated Society in maintaining for some time in the old Charter school a school that met the wants of the middle classes. This school had however been discontinued." Cork has a Diocesan Free school with £73 16*s.* 11*d.*; a Greencoat school with £133; Moses Deane's schools, in three parishes, with about £300; a Bluecoat school, an old endowment existing in 1297, and applied in later times to education, which is said to own estates now worth £7,000 yearly, which through malversation yield to the charity an annual revenue of only £335 5*s.* 2*d.* Kilkenny has a grammar school with £291 2*s.*, held in buildings erected about 1773 by a grant of £5,064 from the Irish Parliament. It has also the Pococke Institution, endowed in 1765 with £536 14*s.* 9*d.*, "for founding a school for Papist boys to be bred to linen-weaving, and instructed in the principles of the Protestant religion," upon which it is reported "that the founder's directions as to industrial training are not carried into effect; and that the rule confining the admission to the children of Roman Catholic parents is not observed." (*Endowed Schools Report*, p. 94.) Kilkenny has also the Evans' school, with endowments which ought to yield £300 a year, but have been diminished through mismanagement. Limerick has a Diocesan Free school with £200 12*s.* 10*d.*; a Charity Blue school with £59 10*s.* 4*d.*; Villiers' endowments, partly educational, £704 3*s.* 1*d.*; Dr. Hall's schools, £200; and Leamy's Free schools, founded out of a bequest of £13,300, and designed to benefit all denominations, but managed under a scheme of the Court which makes them unsuitable for Roman Catholic children. Waterford has a Free Grammar school with a yearly income of £78 9*s.* 2*d.*; Foy's school, with more than £1,400 per annum; and a Blue girls' school with £60 a year.

Examples at Ballymena, Belfast, Clonmel, Monaghan, Enniscorthy, Lurgan, Newtownards, Sligo, Cork, Kilkenny, Limerick, and Waterford.

222. Model schools have been established and are maintained on a costly scale in all these places, where either they were not wanted at all, or certainly not for the Protestant inhabitants. But of all such cases the worst for extravagant and unjustifiable expenditure are found in Enniskillen, Galway, Coleraine, and Londonderry.

Particulars of a monstrous instance at Enniskillen,

223. Enniskillen is a town of less than 6,000 inhabitants, of whom more than half are Roman Catholics. It contains the most richly endowed of all the Royal schools, with four school-scholarships of £20 a year, besides exhibitions to Trinity College. The school estate is reported to consist of forty-one townlands in the county of Fermanagh, distant from four to nine miles from the town of Enniskillen on the road leading to Swanlinbar; together with Portora, adjoining the town of Enniskillen, and a tenement in the town. The forty-one townlands contain 5,512A. 2R. 22P. statute measure (including about 685A. 1R. 27P. of mountain and bog); Portora contains 53A. 1R. 20P. The present annual rent, as stated in the rental, is £2,094 12*s.* 11*d.* for the land, £22 for the constabulary barracks built on the estate by the Commissioners, and £26 for the tenement in the town of Enniskillen, making together £2,142 12*s.* 11*d.* Portora yields no rent. The Royal school is built on it, and the master of the school occupies the land free of rent. It was valued at £120 0*s.* 9*d.* per annum. The school thus munificently endowed is intended for all denominations; and the Endowed Schools Commissioners are of opinion that the inhabitants of Enniskillen are entitled to require that a complete course of English and commercial education should be provided for their sons in some department of the school as a preparation for their entering upon civil and mercantile pursuits, even though they should refuse to receive the classical instruction which, if it be the primary, is not the exclusive trust of the foundation. They also recommend that sufficient school accommodation should be provided at a convenient distance for the children of the tenantry on the Enniskillen estate. While the prospects of education in Enniskillen were so happy, with a fine estate of 5,500 acres running up to the town, and held on trust to provide for all the inhabitants, without restriction of creed, an English and commercial as well as a classical education, it will scarcely be credited that the Board of National education with full information before them, and with an explicit warn-

ing from a friendly quarter regarding the character a model school would be likely to assume (Letter from Mr. N. C. Magee, dated September 21, 1861), and with a confirmed assurance of the hostility of the Roman Catholic majority, actually proceeded, in 1862, to rent from the Hon. H. L. Corry nearly seven acres of ground outside of Enniskillen, on lease for ever, at the annual rate of £10 per acre, and to build upon this large site a model school for 800 children at a cost approaching £10,000. Of course nearly eighty per cent. of the school accommodation remains unoccupied; many of those who attend either come daily from a distance by railway, or are the children of shopkeepers and others in Enniskillen who formerly attended Portora Royal School; and we found present only six representatives of the 3,000 Roman Catholics, viz., two boys, no girls, and four infants. We consider it worthy of remark that while the Portora estate of fifty-three acres adjoining Enniskillen, with a good house upon it, all which is already held in trust for education, is valued at £120 per annum, the National Commissioners in taking additional land for education from the Hon. H. L. Corry upon the opposite side of Enniskillen, have undertaken to pay for it a yearly rent of £10 per acre for ever.

224. A great part of the county of the town of Galway is likewise held in trust for education. The trustees are the governors of Erasmus Smith's schools. The estate contains 2,738A. 0R. 17P., and comprises eleven denominations. Newtownsmith, Fairgreen, and Bohermore, which are now almost entirely occupied by buildings, are valued by Griffith at £3,378 7*s.*, and the rest of the estate at £2,194 6*s.* Forthill, between the town and Lough Attalia, has the Smith's grammar-school erected on it, and 26A. 3R. 22P. of land about the school are occupied by the master. Upon this school the governors spend about £470 a year. Like the rest of E. Smith's schools, this is distinctively Protestant. An English school on the same plan was established in Galway; but, as 92 per cent. of the inhabitants are Roman Catholics, the failure of such a school can cause no surprise. Still it remains the fact that an estate in the county of the town of Galway, worth £5,500 a year, is held in trust for education, and that in terms of the charter twenty poor children dwelling within two miles, and all the children of the tenants without limitation are entitled to free education. Thus the Protestants at least of Galway, who numbered 1,712 in a population of 25,161, are richly supplied with public funds for all school purposes. Yet the National Board have erected here a model school* at the cost of more than £5,000 upon a site of nearly four acres, for which they yearly pay £9 per acre for ever (there is discrepancy between the table and the correspondence furnished by the Board regarding both area, tenure, and rent); and have so constituted the management as to draw down upon the school the unmitigated censures of the bishop of the majority who alone stood in need of educational facilities. The case of Sligo bears a strong resemblance to Galway.

and another in Galway.

225. The cases of Coleraine and Londonderry may be conveniently taken together. The whole of the town of Coleraine and the city of Londonderry, together with 3,000 acres of land adjoining the former, and 4,000 acres next adjacent to the latter, slob, fisheries, &c., are held by the Irish Society —a Committee of the Corporation of London—as bare trustees to provide for the religion and education of the inhabitants; and since religion is otherwise supported, the whole of the large surplus, of about £12,000 a year, which remains after feeing most irregularly the trustees, and paying the annually elected officers, should be available for that object, which seems most to bear the character of a continuing and unfulfilled trust, viz., the education of the district. It is probable, though not quite certain, that the Irish Society are precluded by their charter from promoting Roman Catholic education. If so, the funds available for Protestant education are so much the more abundant. And the Irish Society does much for Protestant education. They have recently rebuilt at great cost, and liberally maintain a large free school in Coleraine,† and they spend about £1,000 a year upon the Foyle College at Londonderry, for which they appear to hold a separate estate of 300 acres. They also contribute £500 annually to the Magee Institute for Presbyterian education in Londonderry. Derry is likewise the site of one of the finest schools in Ireland, known as the Gwyn Institution, and endowed with £1,700 a year, where the master and assistants must be Protestants or Dissenters, and all the children are required to be instructed in the Scriptures. Another bequest of more than £1,000 a year, subject, however, to some life-interests, has been left by a Mrs. Young for the establishment of a girls' school in Derry under Presbyterian management. We consider it impossible to find two places where Protestant education is more lavishly endowed than Coleraine and Derry. Nevertheless, these two places have been selected by the National Board for model schools, which cost the State about £6,000 and £9,000 respectively for the erection of buildings, and a considerable sum annually for support, and yet serve no purpose of public utility, since the Protestants are well provided for, and the Roman Catholics regard the model schools as a baneful snare. So plethoric for educational purposes is the purse of the Irish Society, that it annually bestows upon the Derry Model School, supported though it be without stint from the public funds, the sum of £50 to be divided in premiums amongst the scholars. We found that this model school,

Extravagance at Coleraine and Derry,

* The head master of the Galway grammar school complained in his evidence before the Endowed Schools Commission (20,226) that "the mode in which the model school at Galway has been conducted of late years has seriously interfered with the English department of my school. When it was first opened we were told that the object was to train young men and women as teachers for the different schools established under the National Board throughout the provinces; but after a while they seemed to think a more ambitious field was open to them, and they applied themselves to the education of the children of the most respectable classes—of physicians, merchants, and shopkeepers; and they were received on the same terms that they admitted the lowest class, at the rate of 2*s.* 6*d.* a quarter." And Mr. Thos. Killeen, the second master, speaks to the same effect (5.604) :—"When the model school was opened several boys left us, and there were several we expected to get; several respectable people in the town sent their sons there, their terms are so very low, and the system of education very good, I suppose, for an English school; and I am told they are teaching Latin there at present. That school interferes with the success of ours."

† One of the Board's Head Inspectors in a Report for 1863 thus describes the state of Coleraine:—"Coleraine is admirably provided with educational establishments for all classes of its inhabitants. Exclusive of the model school and the Academical Institution, there are twelve excellent public schools in full operation, which, with a few private schools, are abundantly adequate to meet the educational wants of a population barely exceeding 6,000 souls. Few of these schools (owing to their comparatively large number) command a good average attendance."

with all its allurements, had succeeded from among the 12,000 Roman Catholic inhabitants in attracting four Roman Catholic children—two boys, one girl, and one infant—to attend it. The practical condemnation of failure could not be more thorough. In Derry, where the Protestant inhabitants were already supplied with richly endowed schools, and where the whole city belongs to Protestant education, the National Board provides from the national exchequer another sumptuous school of a character so ill-adapted to meet the conscientious views of Roman Catholics, that out of a Roman Catholic population of 12,000, the Roman Catholic Inspector and six Roman Catholic teachers backed with the influence and the money of the State and the Corporation of London draw into its classes but a few Roman Catholic children, whose numbers may be counted upon the fingers of one hand. Model schools have then not promoted "the first and greatest object of the National system, which was the sound education of the poor of Ireland of all denominations, free from all suspicion of proselytism."

has failed in attracting Roman Catholics, and in educating poor without suspicion.

Sincerity of opposition

226. Many friends of education will lament the opposition shown by the Roman Catholics to the model schools, and rest satisfied with the reflection that they were intended for their benefit. This we consider neither wise nor statesmanlike. The ascertained facts are that there was abundant provision made for the secondary education of Protestants, and that the model schools have served practically to increase it, and have not succeeded in extending the benefits of such superior education to the Roman Catholics.

proved by sacrifice.

227. The sincerity of their opposition is proved by the great efforts made by them to provide at their own cost the advantages which they could not gain from the National Board. We will enumerate them in the places where the model schools exist—premising this, that the educational institutions which they prefer are Christian Brothers' schools for boys and convent schools for girls.

ROMAN CATHOLIC VOLUNTARY EFFORTS TO SUPPLY SCHOOLS.

228. In Major O'Reilly's paper handed into the Commissioners (*Evidence p.* 664) the numbers on the rolls are given. For reasons which will be well understood by every member of the Commission, we have here only given the numbers in actual attendance, which as we have already explained represent very nearly the average daily attendance. If this number be multiplied by 2·5 it probably gives a fair *estimate* of the number of children who have been under instruction during the year. Somewhat less than the number on the rolls, which is about three times the average attendance.

Examples at Athy.

Athy.—There is a Christian Brothers' school. 140 were present on the 25th June, and three girls' schools taught by the Sisters of Mercy, in which there were 396, 123, and 50 Roman Catholic children present on the 25th June. We visited two of these schools on the 23rd November, 1868. There were present about 400 children. The two rooms were together hardly suitable for so large a number, but yet they seemed comfortable, well lighted and ventilated, except a small cupboard in which babies were kept, which seemed a very unsuitable receptacle for them. The Christian Brothers' school was in good reputation in the town, but we had not time to visit it.

Belfast.

Belfast.—There are two boys' schools taught by the Christian Brothers, in which there were on the 25th June, 1868, 511 and 362 boys present. One girls' school taught by Sisters of Mercy, present on 25th June, 164 children. We visited this school August 6, and we did not think it remarkable for good discipline or the proficiency of the children. The Sisters teach another school in a distant quarter. Mr. Richmond, Assistant Commissioner, examined the schools at a later period.

The Christian Brothers' school was in vacation.

Clonmel.

Clonmel.—There are two boys' schools under the Christian Brothers. Present on 25th June, 230, 408 boys respectively.

A girls' school, under the Sisters of Charity, with an attendance of 441. And another under Sisters of Mercy available for the town, which appear in the Census table under the entry "Greenane, No. 44, Ballinamult District, county Waterford."

We had not time to visit these schools.

Cork.

Cork.—Here are abundance of schools. We visited several.

In the Lancasterian school, under the Presentation Brothers, an old building of the type indicated by the name, we found three rooms with 117, 157, 110 boys respectively (the latter room for infants was too small). In each room one Brother, nine monitors paid by the National Board, and three paid by the Brothers.

Greenmount school for boys, under the same Brothers, 238 boys in two rooms. This school is not under the Board. There were besides the two Brothers, one in each room, two paid monitors, and three unpaid, who came from St. Joseph's Orphanage, close by the school. The school seemed very much in want of additional teachers. The buildings were fairly good.

A school in Douglas-street, under the same Brotherhood, near their dwelling. This is under the National Board. Three Brothers and nine paid monitors were in charge. In six rooms, containing 113, 95, 116, 42, 44, 70 boys respectively, or 480 in all, including 33 who were being taught in the open air, as it was a fine warm day. Two of the teachers were elderly men; in the other schools there were young men, Brothers of the order, who seemed very intelligent and active.

The Christian Brothers' school in Peacock-lane is a magnificent establishment, thoroughly well managed, and the discipline admirable. Mr. Duggan, the Director, showed us over it, and we were struck by his thorough knowledge of the whole educational question, and his superior intelligence. In eleven rooms, under thirteen Brothers, we counted 899 boys and young men, and there had been a larger number, who were allowed to leave before 3 o'clock, as they lived at a considerable distance, and we did not arrive until 2.30. This is one of the best schools we have seen in the country. The elder youths were learning drawing, architectural and mechanical, as well as ornamental, and their proficiency was deserving of special mention.

In another school at Sullivan's-quay, under the same Brothers, there were 274 children in three rooms, one very small and crowded. In another in Blarney-lane (same management), there were 356 children in five rooms. In each room in these schools there is a Brother, assisted by monitors.

Of the schools for girls we could only see two, one called the National Convent school of St. Joseph. Eight Sisters attended in four rooms of fair size, assisted by eleven monitresses, and one pupil teacher, paid by the Board. There were 467 children present, of whom 190 were infants.

Another also under the National Board taught by the Presentation nuns. There were sixteen Sisters, and fifteen monitresses engaged in the work. It was an old house like an ant-hill, full of busy life. There are 801 children, and four deaf mutes separately instructed, in nine separate rooms of more or less convenience; better accommodation, and more airy passages and staircases are much needed.

These are specimens only of the educational work in Cork, carried on at the expense of the National Board and the Roman Catholic community.

In the Census table are enumerated six schools under Christian Brothers and Presentation Brothers, and four under nuns; in the latter, the constable found 450, 341, 794, 546 children in attendance respectively.

Enniscorthy.—The Christian Brothers conduct a school in newly erected premises of excellent character. Enniscorthy.
There are three school-rooms under distinct teachers. In the upper school we found 56 boys, in the middle school 81, and in the junior 94. The Brothers have lately introduced Latin. The school-rooms are all on the ground floor, and the sleeping apartments of the Brothers are over them.

The schools formerly occupied by the Brothers were, upon their removal to the new premises, handed over to Sisters of Mercy. Here are two rooms separated by a partition of glass and wood, and appropriated to girls and infants. The infants' room is not suitably furnished, but both rooms are airy and cheerful. We found present 56 girls; and in the second room 31 infant boys and 57 infant girls. The school is connected with the National Board, which pays three monitresses—one first-class, one senior, and one junior. We thought well of the management here.

In the Presentation Convent school—also National—we found 10 Sisters busily employed in teaching needlework to 111 girls in a good room. The infants—78 present—are poorly accommodated. The Sisters have amongst them a trained National teacher; and the Board pays one first-class and four senior monitresses.

We also visited a private school, mixed boys and girls, under a mistress who is a classed National teacher, and found present 47 children, whose fees support the mistress, some paying as high as 6*s.* a quarter. The room is not bad, though too small for the number of pupils, and imperfectly supplied with desks, &c. All the children are Roman Catholics, and priests visit occasionally. This self-sustaining school is close to the Model school. In none of the above schools is there a Protestant child.

The Protestants attend Erasmus Smith's School, which we saw. This Endowed School is supported by the Protestant rector, and is in effect the Established Church school. It has two large rooms for boys and girls respectively. The master gets £50 from Erasmus Smith's endowment, and the mistress £30; and Lord Portsmouth subscribes £20 a year. We found in the boys' school 24 boys, and in the girls' school 26 girls and one little boy. The mistress stated that five of her girls were the offspring of mixed marriages, and their mothers meant them to attend mass later on, but meanwhile were content that she should give them religious instruction as she pleased.

In Enniscorthy the schools appear to be purely denominational.

Enniskillen.—A school under Christian Brothers, had 162 children in it on the 25th June. It was Enniskillen.
in vacation when we were at Enniskillen on the 27th and 28th July.

A convent school, under Sisters of Mercy, contained 252 children on the 25th June. On the day we visited it there were but 73 present in two rooms, we examined them, and they seemed to be very fairly taught; there were ten in Fourth and Fifth Books out of the seventy-three. The premises are poor and inadequate for the numbers.

Galway.—A school under the monks of St. Patrick, containing 366 boys when visited on the 25th Galway.
June. When we visited it, 2nd July, we found a large number, but did not count them. They were very poor boys, many of them ill-clad, and the monks give breakfast daily to about 250 children. The boys were well conducted, and cheerfully obedient, yet the schools were noisy. They are doing good work of a humble kind. The school is much thought of in the town, and the cursory examination we held was satisfactory. There were four Brothers and eleven monitors.

Another school in Nun's Island was also taught by four Brothers. It is called St. Joseph's school. It contained about 100 boys. The constable counted 97 on 25th June. It was fairly managed. It is intended for children of the middle class.

There is, besides, a Jesuits' seminary for superior education, containing about 50 boys. Of girls' schools we visited—

St. Nicholas' school, Claddagh, under Sisters of Mercy. Two rooms with infants, containing 46, and 17 respectively, and a room with 31 girls. The constable reported 194 children present, but it appeared afterwards that he had not counted them. We had our attention specially directed to this school, because it was reported that there was one Protestant child, and 193 Roman Catholic children. This glorious instance of united education we particularly wished to verify. It turned out that a small child had accidentally strayed in for an hour, at some indefinitely remote epoch, and never reappeared, but ever since this school has flourished as an example of mixed or united education. *Ex pede Herculem.*

In the Claddagh Piscatory National school, under the Dominicans, a similar phenomenon occurs. One Established Church child was returned with 131 Roman Catholic fellow-citizens of both sexes.

The Sisters of Mercy have another school in Galway called the Newton Smith school.

There were four rooms: two for infants, in which 55 and 85 children were found; examined a few of them, they read fairly, but their notions of number were only moderate. In two other rooms 149 and 53 children were found. They passed very fairly in reading and spelling; in arithmetic and geography pretty fair. The monitors were examined, their reading was good, and parsing fair; other things moderate. Our general impression was, that the school is conducted kindly, in a genial and pleasant manner, but that the children do not learn very much.

There were 385 children present on June 25, according to the constable. On July 3, there were 342.

There is also a Presentation Nun's school, Rahoon. On 25th July 444 were returned as present; we found, July 3rd, 263. The day of our visit was Friday, considered to be a day of poor attendance. Four Sisters taught the children in four rooms, assisted by thirty monitresses, of whom 12 only were paid by the National Board. The rooms were large, airy, extremely well ventilated. We examined the roll, and found that the children were mostly of a class who may very fairly receive State aid in their education. The nuns cannot receive any payment for themselves, but in some cases fees are insisted on, to be expended in the general improvement of the school.

The general proficiency of the children was creditable. Handwriting being the least satisfactory subject.

This is a sufficient specimen of the educational means provided by the Roman Catholic body in Galway.

Kilkenny. *Kilkenny.*—Here are two schools under Christian Brothers, poorly accommodated. On the 25th of June they contained 207 and 209 boys. In the schools of the Presentation nuns we found 376 girls and infants Mr. Renouf, Assistant Commissioner, had examined these schools.

Limerick. *Limerick.*—In four schools under Christian Brothers there were 864, 160, 270, 392 boys on June 25. In five schools under Sisters of Charity, 400, 610, 580, 449, 122 girls were present In two more, under the Faithful Companions of Jesus, there were 84, 66 respectively.

In Major O'Reilly's paper, a school under Presentation Nuns is mentioned.

We visited the Christian Brothers' school in St. Michael's parish. In ten rooms we found 805 boys. 139 were reading Book IV. and History; 236 were in Book III.; 182 in Book II. and Sequel; 115 in Books I. and II.; 122 in Book I., and 81 infants in an alphabet class. It is carried on with good result. Mr. Welsh, the Brother Director, went over the school with us, and took us to the other schools in Limerick. A Christian Brothers' school in St. John's parish in two rooms, with 251 boys, including infants. Another in St. Mary's parish—an old building, formerly the court-house, turned into a school—two rooms above and two below; next to it an old ruined hermitage. It is close to the Cathedral. There was 363 boys present; 65 in Books III. and IV.; 84 in Books II. and III. A very close room. Eighty-six in Book II. and Sequel, and 128 in I. and II.

Of convent schools in Limerick we visited that of the Presentation Nuns, close to the convent. In six rooms, which were very crowded, we found 521 girls divided as follows:—

82 in upper school, under one nun and three paid monitors;
76 in Book III., under three nuns and three monitors;
84 in Book II. under one nun and three monitors;
139 in two rooms, in Book I., under two nuns and six monitors; and
138 infants under one nun and three monitors

The convent school of Sisters of Mercy in St. John's-square—an old building, formerly barracks, and then a parish school. There are ten paid monitresses, with several Sisters; 307 girls, 35 infant boys, and 94 infant girls; altogether 436, in eight rooms. The building was a very unsatisfactory one; but the nuns told us they hoped soon to have better schools, and were doing the best they could under difficulties.

Convent school under Sisters of Mercy, St. Mary's, close to the convent. In four rooms, two of which were very large, there were 525 children, of whom 271 were infants. There were several nuns in each room and 16 paid monitresses. Close to this large convent school where the children paid nothing, we found a small hedge school kept by a cheerful old woman without shoes or stockings, in a small room, which also contained her bed. She gave secular instruction only, which the parents preferred. There were forty-two children, paying 1½*d.*, 2*d.*, 3*d.* a week; they went home to dinner in the middle of the day, a custom foreign to the habits of the rising generation in Ireland, and come back to remain till 4·30. Some of the children sat on the bed, some on the floor, and the atmosphere would have been depressing had it not been for broken windows and the smell of the turf fire.

Derry. *Londonderry.*—Here was a Christian Brothers' school, containing 284 boys on the 25th June. When we visited it on the 25th August we only found 148 boys in four rooms—a Brother in each room. It was an old building, formerly used as a seminary; the upper room was an attic, with too low a roof, and quite unfit for the purpose.

Mr. Sidgreaves had examined this school. The writing and arithmetic seemed very good. The director told us that they were compelled to admit children of a higher class than the poor, although very unwilling to do so. This necessitated a further inconvenience—in having to keep a sort of separation between classes. He lamented this, and hoped he would not long be required to persevere in it.

A convent school under Sisters of Mercy—a large and convenient building, newly erected; simple, but useful; well ventilated and well lighted.

There were four rooms, but only three were used, and we found very few children present on the 25th August; 69 infants (all girls) under two nuns and three monitresses; 20 girls under two nuns and two monitresses; and 43 girls under one nun and five monitresses. On the 25th June there were 209 children present. Mr. Sidgreaves had examined this school also.

There is another superior convent school, in which 29 girls were present on the 25th June. This we did not see.

Monaghan.—A Christian Brothers' school; 153 boys present 25th June. It was in vacation when we saw it, July 30th. The rooms were cheerful and convenient. The brother who showed us the building only complained of want of teaching power. Monaghan.

The convent school under Sisters of St. Louis is carried on in three rooms rather inconveniently small.

In one room	22 by 16	there were	64 children;
In another	32 by 16	„	121 infants;
In another	36 by 16	„	36 children.

We examined eighteen who were in Book IV. after the same plan as in model schools, with this result:—In reading all passed, 14 read well; in writing 17 passed, 12 wrote well; in arithmetic 14 passed, 8 did well; in geography 17 passed, all answering very creditably; and in grammar 10 passed, 7 doing very well.

Newry.—A convent school, opposite the model school (and like it in the county of Armagh). It is under Sisters of Mercy, who have just completed some large new rooms, which will be very convenient. On the 23rd April, 1869, the children were found scattered in different rooms in the convent and the orphanage adjacent. In two larger rooms 57 and 51 girls were found, and others were seen here and there. This school is in connexion with the National Board. There were 98 girls present on the 25th June. They will now be much larger schools. They said that their Sunday school had sometimes as many as 300 children. Newry.

In the town (co. Down) we visited the convent of St. Clare, whose schools are also under the National Board. In two rooms there were 135 and 187 children, and others were in smaller rooms. These two rooms were excellent for light and ventilation. There were eight monitresses paid by the Board. The Reverend Mother was a very sensible and intelligent person, with very sound and practical views on education of the poor children. On the 25th June there were 288 girls present.

The Christian Brothers have two schools. One in the centre of the town, a new building, well-appointed, very convenient, and very full. Two hundred and forty were counted in two rooms, under two Brothers. Also a school near their dwelling on the hill to the south of the town. 139 were present—all of the labouring poor (April 23, 1869.) There were 101 present on the 25th June.

The director, Brother Keown, said that he hoped to have another school in a poor and ill-supplied part of the town, near the St. Clare Convent.

Omagh.—A Christian Brothers' school in vacation in August when we were there. 131 boys were present on the 25th June. Omagh.

A convent school also in vacation, under Loretto Sisters. 120 children were returned as present on 25th June.

Parsonstown.—A convent school under Sisters of Mercy. It had 355 children on 25th June. We did not visit this school, being pressed for time. There is a large infant department here where boys are admitted. Parsonstown.

Sligo.—There are two schools under the Marist Brothers for boys, containing, 25th June, 101 and 194 children. They were in vacation. Sligo.

There are also two convent schools; one under Sisters of Mercy, with 279 children, on 25th June; and one under Ursuline nuns, containing, on the same day, 79 children.

Trim.—There is a new convent school under Sisters of Mercy. 285 were present on June 28th. We visited this school and examined it on the 4th September. This is not under the National Board. There were four rooms, not very large. (*a.*) A school of a superior kind, the children paying £1 17*s.* 6*d.* a quarter. 22 were present; they were learning French and music under one nun and one postulant. Trim.

(*b.*) An infant school, 82 present; examined by Mr. Harden, under one nun and two paid monitresses.

(*c.*) A girls' school; 60; 5 in Book V., 7 in Book IV. These children were examined with this result:—11 did well in reading, 10 in writing, 6 in arithmetic, 10 in geography, and 5 in grammar.

(*d.*) A small boys' infant school; (37). This is held in a room away from the convent, in what had been a National school under the parish priest before the model school was opened. The room for the permanent infant school was not furnished. They were merely learning the alphabet and habits of obedience and order.

This school had only been opened two months. The buildings are only partially furnished. It has been in preparation ever since 1857. The rooms are well lighted and ventilated. Two of the Sisters with whom we conversed about the schools were very intelligent, and under their management we thought the school will be very satisfactory and useful. They both spoke highly

of the teachers in the model school, and were anxious that their school should be placed under the National Board. They had had previous experience in schools at Tullamore.

This, as a specimen of the efforts made by the Roman Catholic body, is sufficient to show the reality and efficiency of the work they have undertaken.

CONVENT SCHOOLS.

229. We proceed to make some general remarks on the question of convent schools, which was specially referred to us.

Religious schools aided, from the first, with Government sanction.

230. Almost at the commencement of the Board's administration, the question whether schools conducted by Nuns and Brothers should be admissible to aid, was discussed and decided. In 1832, while Mr. Stanley was still Secretary for Ireland, the point attracted the attention of the Government, and after mature deliberation of all the circumstances, it was unanimously agreed to be "desirable" that such schools should be brought into connexion with the Board, and receive equal aid upon the same terms with all other schools.

No inquiry into religious position ought to be made.

231. When the Board, with the sanction of Government, had arrived at this wise and equitable decision, prudence should have suggested the policy of making no further inquiry about what is called the "religious character" of teachers. Since schools under nuns and Brothers were to be received upon precisely the same conditions as other schools, the inquiry ought to have been strictly limited to the point, whether the conditions were or were not fulfilled. The question whether the teacher of a school was a nun or Brother had been authoritatively decided not to affect the admission of the school to connexion, or the amount of aid granted to it. Therefore, no such question ought now to have been asked by the Board or its officers.

But inquiry is made.

232. Unfortunately this line of prudence was abandoned, and led by a curiosity which it is impossible to defend, the Board introduced into their query sheets and forms of report, an inquiry whether the school was in connexion with any religious establishment, and if so, what was the nature of the connexion. In making such inquiry, the Board must have well known that the Emancipation Act (10 Geo. IV., c. 7, § xxxiii.–xxxvi.) holds every brother of a religious community guilty of a misdemeanor, and liable to the penalty of banishment and transportation.

233. Nevertheless, the Commissioners sought for this information, so improper for them as a Government Board to possess, and it has never ceased to hamper and embarrass them, leading to invidious and unfair distinctions between one class of schools and another, to special and useless investigations, to unpopularity with influential sections, and to hostile motions in Parliament. The opposition which they courted has proved too powerful for resistance, and in the thirty-eight years, during which advance in liberality has been so rapid and general, the National Board has positively retrograded. The convent and monastic schools, which the present Earl of Derby, and the original Board of seven Commissioners, including five Protestants, admitted to aid in 1831, are, in 1869, proscribed by a Board of twenty Commissioners, one half of whom are Roman Catholics.

Disastrous consequences seen in penal rules,

excluding Brothers from aid, and restricting Nuns.

234. The Report of the Commons' Committee of 1837 gives a list of eighteen schools taught by Brothers, and two more under their patronage, all aided by the Board; in 1869, there are but five such aided schools, and no new applications for aid are entertained. Aid is given to no more than one school in connexion with a convent, however numerous the teaching nuns in it may be. The manager of a National school must build a convent, and place a separate community in it, if he desires to have this school taught by nuns. And this, whilst managers are not asked to provide residences for ordinary teachers, and whilst the Board's officers concur with all independent witnesses in declaring nuns to be amongst the most efficient of the National teachers, and the most exact in observing the Board's rules. Religious teachers, as a class, labour under but one disqualification in the religion which they share with the majority of their fellow-countrymen.

Exceptional grants to Religious explained

235. But the most grievous injury to schools taught by nuns springs from an arrangement which was probably intended by the Board to act as some compensation for the niggardly restrictions imposed upon their usefulness. In 1837, as we have seen, National schools under "religious" teachers received precisely the same aid and upon the same conditions as other schools, *i.e.*, a gratuity was paid to teachers at the rate of £1 per every ten children borne upon the roll, and teaching nuns signed receipts for this salary just like ordinary teachers. But in 1839, a change of a liberal character was introduced into the mode of paying ordinary teachers, to whom graduated class salaries were now offered, while the allowance to nuns was actually reduced being calculated no longer upon the number enrolled, but upon the average daily attendance of scholars.

and condemned.

236. Among all the modes of distributing public aid to schools scarcely one could be found open to more objection than payment upon average attendance; because, confounding the means with the end, it leads those who profit by it to seek the teacher's grand object in attracting and retaining the largest number of children at school, and not in preparing as many as possible solidly and quickly for the useful and conscientious discharge of the duties of life. Hence there may be seen in nuns' schools the youngest and the oldest scholars—babes, as yet quite incapable of learning, and young women who would have done well to enter upon some active employment three or four years earlier. Here, too, are seen striking specimens of overcrowded schools.

Inspection fails to counteract the mischief.

237. Nor can the Board's inspection be trusted, as we think, to counteract these harmful tendencies. Unhappily, the character and condition of nuns' schools have been made party questions, and the Inspectors, being persuaded that these schools are, as a class, substantially well conducted, may very naturally shrink from giving a handle to animosity by reporting defects even where improvement is required. Again, there is not, so far as we can learn, any direct connexion between the Inspector's report and payment of the allowance upon average attendance; so that the most candid report may be but a *brutum fulmen*, loud but innocuous. The want of thorough inspection deprives these schools of one great aid towards improvement.

Nuns ought not to be accepted as "managers."

238. Another of the Board's regulations which appears to us questionable, is that which allows the manager of a nuns' school to be one of the nuns. We are of opinion that the managers of all National schools ought to be men, and above all others in nuns' schools, because when any censure has to be

passed upon such schools the Board and its officers may fairly decline to communicate with a religious lady; and on the other hand if the Board should give cause of complaint the defence of the nuns will more fitly be undertaken by a male representative than by one of themselves. We think further, as a general rule, and without casting any reflections, that the returns upon which public money is granted ought in every case to be authenticated by the signature of a man of standing and character having no pecuniary interest in the Board's award.

Managers should be free to employ nuns in vested schools.

239. The Roman Catholic Bishop of Kerry, in the memorandum submitted to the Commission, complains that "no building grant can be obtained for a school to be conducted by nuns." Among the Rules and Regulations of the Board we do not find any such restriction expressed; but if the exclusion of religious teachers from schools which the Board has helped to build be implied in the regulation that "convent schools receive aid under the conditions applicable to non-vested schools," we think that such a permanent limitation of the freedom of school managers in selecting and appointing the most efficient teachers available for their purposes, whether secular or religious, is impolitic, wholly unjustifiable, and ought to be repealed.

Remedy suggested.

240. The fundamental change necessary in dealing with this class of schools is for the Board to revert to the decision of the Government and Commissioners of 1831–32, and, abolishing every distinction between conventual schools and ordinary schools to offer aid to all elementary schools for poor children upon equal conditions and at the same rates, which may well vary with the varying merit and success of the schools, but ought in no way to be modified by the shape and colour of the teacher's dress, and still less by his religious profession.

Religious teachers should be examined, and should give regular attendance in school.

241. Religious teachers, on their side, while receiving aid from the National exchequer should give the same guarantees to the public as are required from all other aided teachers. It would be preposterous to assume that the religious habit will convert an ignorant person into a good teacher or communicate to an untrained one the power of maintaining discipline in a large school. Ecclesiastics undergo a long course of preparation and are strictly examined before ordination, and what is found necessary in their case may not unreasonably be asked of religious teachers. The charity which devotes a life to the tedious employment of teaching poor children need not shrink from the sacrifice of personal feeling involved in affording proof of the possession of qualifications which are requisite in teaching poor children with advantage to themselves and the community. A nun in Ireland may without impropriety be invited to follow the example of her sisters in England or France. Again, religious teachers aided by the country should be required to give the same regular and punctual attendance at school which is demanded as an indispensable condition of aid from all other teachers. Multiplicity of mistresses beyond the number sufficient to provide an efficient teacher for every class of children is not a good in itself, and it becomes a positive evil when school duties are occasional only and interrupted by superintendence of a laundry and visitation of the sick. A sister varying the occupations of the day by taking a class in school for an hour may distract the minds of the children and interfere with the plans of the head mistress, but she can render no effective aid in imparting solid instruction or perfecting the discipline of a school. In the latter particular, Orders devoted to teaching as their sole work possess an incalculable advantage over such as have been induced by obedience or by charity to add teaching to the variety of duties prescribed by their Rule. In fine, we consider that the State in offering to religious teachers equal advantages with others, should in return demand of them equal qualifications and service of equal value in regularity and punctuality.

Contrast between treatment of meeting-house schools and Brothers' and nuns' schools.

242. The report of the Commissioners for 1839 contains the following passage:—"We are aware, of course, that schools in which the patrons themselves provide religious instruction for children only of a particular communion, leaving it to the parents or guardians to provide it for all others, bear, in some degree, a peculiar religious aspect; but schools of such a description, when connected with Presbyterian meeting-houses, appear to us to stand upon the same principle as schools connected with communities* of the Roman Catholic persuasion, and to those we have been from the commencement of our labours granting aid, having first communicated with his late Majesty's Government upon the subject and being sanctioned by it in doing so." In this train of reasoning the Commissioners justify the extension of aid to schools connected with Presbyterian meeting-houses by the analogy they see between such schools and the monks' and nuns' schools, which, with the sanction of the Government, they had all along been desirous of aiding. Such was the argument held conclusive in 1839. But thirty years later, while, to meet the views of a religious minority, schools connected with Presbyterian meeting-houses are still

* The above is one of several painful instances in which it is impossible to reconcile the conflicting statements of the Board's officers. The report for 1839 intimates that schools connected with Presbyterian meeting-houses have been admitted to aid upon the same terms as schools connected with Catholic communities. But the Synod of Ulster never consented to admit the priest into a meeting-house school to instruct the Roman Catholic scholars. The utmost they undertook was that Roman Catholic pupils might retire from the Presbyterian instruction. This was in 1833. But Mr. Carlile, Resident Commissioner, in his evidence before the Commons' committee of 1837, thus describes the relation of a conventual school towards the Board:—"993. Mr. *Gladstone*.—Do you think that in any case a religious body, having a school in connexion with the Board, would be disposed to afford the use of their school-house for the purposes of separate religious instruction to Protestant pupils?—They are bound to do so by the rules, and they must come under an engagement to do so if required. 994. Do you mean where the school was a part of the nunnery itself?—We require an engagement to that effect in all cases, without exception. 995. Therefore, supposing a Protestant clergyman, willing to give religious instruction to the Protestant children who might be in attendance on the school, should require the use of the school at a particular time for the purpose of giving Protestant instruction, you conceive the religious body would be bound to afford the use of the room?—They would be bound to do it, or we should strike off the school. 998. Lord *Stanley*.—You are of opinion that the Protestant clergyman would not put himself under any obligation to the religious body, as he would only claim that which was agreed to be done at the time of the school being established?—Certainly." But Dr. Cooke, explaining objections of the Presbyterians before the same committee, stated, 6458 sqq.: "We must, before getting the public money, acknowledge the right of a Roman Catholic priest officially to visit our school whenever he pleased, and that we could not do. The official visitor cannot be a Roman Catholic clergyman in a school established by Presbyterians. In his clerical capacity I cannot recognise his having anything to do with the education of our children. I object to His Majesty's Government investing the Roman Catholic priesthood, as such, with the power of visiting my school. Our object was to bring the Board to a modification, so far as regarded us, and to leave them as between God and themselves as regards the remainder." The object was accomplished.

Inequalities should be redressed,

freely admitted to aid, and properly so, as long as they conform to the rules of the Board, the analogous schools connected with communities of the Roman Catholic persuasion, which, from the beginning of this system, the highest authorities agreed in aiding, and which have never ceased to enjoy the esteem and confidence of the majority of the people, are now subjected to invidious restrictions and lower rates of aid, if taught by nuns, and if taught by brothers are excluded from aid altogether. The reversal of inequalities so flagrant, so likely to alienate the good will of the public, and to check the progress of National education, ought, in our opinion, to be distinctly recommended.

and penal clauses of Emancipation Act repealed.

243. We think further that the Royal Commission should recommend the repeal of those sections of the Emancipation Act which bring the Brothers of teaching communities within the danger of the law.

Conclusion.

244. It only remains that we indicate the course which we think should be taken with the model schools. We have stated our opinion that these schools are practically schools of intermediate instruction for the middle class and professional classes, and not schools for the poor; we think the Commissioners are not justified in maintaining them out of funds voted by Parliament for the Primary Education of the Poor in Ireland.

What should be done with Model schools.

Some might be National schools of an ordinary type.

245. We think they ought to be given up, that some (*e.g.*, Ballymoney, Bailieboro', Trim, Newtownstewart,) might be restored to the condition of ordinary elementary National schools—others may be assigned to the different religious bodies as places for denominational training of teachers, should the scheme contemplated in Mr. Fortescue's letter ever be carried out; and others, such as Belfast, Waterford, Cork, &c., in the principal towns, should be offered to some local committee elected by the parents of the children, if they would undertake the annual expense, and then such committee might provide the education which was in demand—the Government giving the building for nothing, and reserving right of inspection.

Denominational training schools, or middle schools locally supported and managed.

246. By such means the annual cost of these model schools would be saved; there is no doubt that in some places local support would be found for them; in other cases there is no reason why the State should be burdened with an annual expense, which is often superfluous, and for an object which the independent classes do not sufficiently value to care to pay for it.

It is hopeless to expect they will ever be useful for Roman Catholics.

247. If these views are not adopted by the Royal Commission, we think that our Report contains many suggestions for the improvement of the model schools, but we do not expect that any such improvements will make these schools acceptable to the Roman Catholics, and therefore we cannot convince ourselves of the policy of maintaining them. We have not been able in any quarter to gain from the Roman Catholic ecclesiastics even a hint as to the changes in the system which would conciliate their support. We therefore look upon it as hopeless to expect the removal of the opposition to them, and we are bound to say that we consider the objections to the management, and to the education of pupil teachers by masters of a different denomination to their own, as well founded. The money spent in buildings and land is gone; but the annual expense may be largely reduced, and we are of opinion that the sum saved should be diverted to more useful and necessary objects, viz., providing better premises in place of ruinous school-houses, and improving the condition of the more meritorious among National school-teachers.

Employ the money in improving school-houses and raising salaries.

We have the honour to be, my Lords and Gentlemen,

Your obedient servants,

Benjamin Morgan Cowie.

Scott Nasmyth Stokes.

March, 1869.

APPENDIX.

I.

In answer to a demand from the Royal Commission for the "names and position of the local parties who applied for the establishment of each model school," and for "copies of correspondence and minutes in reference to the establishment of each of the model schools, including any communications from the Board's Inspectors," the Commissioners of National Education have made a return of documents which, with more or less completeness and accuracy, detail the origin of each model school. The following is an epitome of the information so supplied in each case:—

Origin of each of the Board's Model Schools.

Athy.

Athy.

November, 1848, Duke of Leinster offers land for a model school, and in following month the Board's *Agricultural* Inspector visits and approves the site of a model agricultural school. The Board then ask the Duke if he wishes to have a district model school with an agricultural department, or merely a model agricultural school, stating that "in the former case the Commissioners undertake the entire cost of the erection of buildings and support of schools, paying a fair rent for the land," but in the latter case there must be a local contribution. The Duke naturally preferred the district model school, which has been built furnished and extended accordingly at a cost to the public of £8,224 2*s.* 1*d.*

Bailieborough.

Bailieborough.

An ordinary non-vested National school already built by Mr. J. Young, M.P. was in March, 1846, offered by him for a model school. In July, 1846, a Presbyterian minister supported the claim of Bailieborough in preference to Virginia, selected by Commissioners as site for the district model school. The Board accordingly suspend their decision and direct Inspector to report. Mr. Butler reports in favour of Bailieborough, which he describes as "a small country town of about 12,000 inhabitants" (this is probably an error in the Board's return, as the Census of 1861 gives the population of the *town* at 1,139, and Mr. White states that in 1834 there were in the *parish* 1,000 Episcopalians, 2,060 Presbyterians, and nearly 5,000 Roman Catholics). Mr. Butler says that the interests of the school will be warmly promoted by the parish priest and Presbyterian minister, and perhaps even by the rector, who "has visited the National school on two or three occasions;" that Mr. Young's school, calculated for 400 children, has not been attended by more than 110; that no contributions could be expected from the inhabitants, but Mr. Young might contribute. In October, 1846, the Commissioners, after a report from Mr. Kavanagh, reject Mr. Young's application, pronouncing the school-house unsuitable and the land insufficient. In March, 1847, Mr. Young again applies. Again Mr. Kavanagh reports, this time favourably, and the Board then accepted Mr. Young's proposals, and proceeded to spend £5,643 5*s.* 5*d.* in converting the Bailieborough National school into a district model school.

Ballymena.

Ballymena.

In September, 1846, Mr. Robertson, Inspector, reports that "no better place could be chosen" for a district model school than Ballymena, though there are in the town three National schools (one "with a large endowment"), besides a parochial school, a Methodist school, about half-a-dozen private schools, and "very many small National schools within three miles around the town;" "there is also a diocesan school for those of a more respectable grade." In December, 1846, Mr. M'Creedy, superintendent, reports favourably of a site offered by Sir R. Adair at £5 per annum for half an acre unenclosed. He states that there are ten National schools within three miles of the site, besides other schools, that nothing in the way of local contribution could be looked for, though Sir R. Adair "might, perhaps, contribute some little to provide an ornamental design;" that an infants' school will not be required; that besides the landlord and his agent, the only other parties particularly interested are two Presbyterian ministers and the parish priest. In November, 1846, the Commissioners approved the site, and have spent on the school buildings and furniture £5,806 7*s.* 8*d.*

Ballymoney.

Ballymoney.

Professedly aided as a model farm under conditions set forth in Sixteenth Report (1849), page 26, but instead of £400 (*see* sec. 4) the Board has spent £1,878 13*s.* 9*d.* on the school buildings.

Belfast.

Belfast.

In February, 1853, the Board seems to reject a site offered by the "Harbour Commissioners for a district model school, with a maritime department in the town of Belfast." In June, 1853, Mr. Butler reports in favour of the Falls-road as the most suitable locality for the district model school, proposing that the maritime school should be a separate building near the quay. A plot of nearly two statute acres is offered at a rent of £94, but the Commissioners object to a higher rent than £40, and urge the proprietors of mills in the neighbourhood to subscribe for the purpose of fining down the rent. Upon this, seven firms, employing nearly 4,000 workers (who would chiefly gain by the school), being determined to have a school for their people, propose to raise such a sum (about £800) as would fine down the rent to £60. The Commissioners accept these terms "upon the understanding that the site consists of nearly two statute acres, as reported by their architect, and not of *one statute acre or thereabouts*," and proceed to spend upon the buildings, &c., £15,956 6*s.* 8*d.* Nevertheless the site is described to us as only one acre and eleven perches in extent, held on lives renewable for ever, at £60 per annum. Bishop Denvir, National Commissioner, in July, 1854, urged forward the building of this school.

Carrickfergus.

Carrickfergus.

Selected by Committee of the Board as the site of a minor model school, and approved, August, 1856, by Commissioners, who have spent £4,494 17*s.* 2*d.* on buildings, &c.

Clonmel.

Clonmel.

In March, 1846, Mr. Bagwell, proprietor of a large part of the town, after conversation with an Inspector, recommends Clonmel to the Commissioners, who in June send Mr. Robertson to examine the proposed site. He reports that one of the parish priests has erected a very large school for 500 boys (to be under Christian Brothers), and has begun a girls school (to be under Sisters of Mercy) in the vicinity, and that these schools for 1,000 children will be likely to interfere with attendance at the proposed model school. He adds that no local contribution will be made that the supporters of the National system will doubtless approve of it, but that the Rev. Mr. Burke opposes its establishment, "appears dissatisfied with the exclusive control to be exercised by the Board in the sole management of model schools, and expresses himself in strong terms against the principle of vesting schools in the Board." In the following month, July, 1846, Mr. Bagwell writes again to the Commissioners, who, in January, 1847, direct Mr. Quinlan to report. He recommends a site out of Dr. Burke's parish. In March Mr. Robertson is again desired to report. He, "upon the whole, can now recommend this case to the favourable consideration of the Commissioners," who thereupon lease two acres of land from Mr. Bagwell, at a rent of £16 per annum, and spend £7,865 2*s.* 3*d.* upon school buildings. In May, 1849, Mr. Kavanagh reports that "we have had the warmest assurances of the support and co-operation of all classes," but Dr. Patten adds that the rector will remain neutral.

Coleraine.

Coleraine.

In January, 1846, the District Inspector recommends Coleraine as the most suitable locality for a model school, as a site for which the Clothworkers' Company will grant half an acre of land. July, 1846, Mr. Robertson reports that the persons most interested are the Clothworkers' Company of London, who have "endowed with small sums annually a number of schools in and about Coleraine, many of which are National;" that the model school "will not affect the Coleraine National Schools much, but will naturally interfere with the attendance at the Killowen National schools, which are in the same portion of the town, much nearer;" and that the Irish Society of London maintains a large free school with liberal endowment. He recommends Coleraine, and the Commissioners approve the site and execute the lease. In July, 1847, however, the architect declared the leased site to be "very objectionable on several grounds," and the Commissioners surrender their lease, and obtain another lease of a smaller plot, where they expend £6,060 3*s.* 8*d.* on buildings, &c.

Cork.

Cork.

In January, 1857 (probably an error for 1858), the Mayor of Cork wishes to obtain for his city a model school, and is told that "the Commissioners would be happy to receive a memorial in favour of the project numerously and influentially signed by persons of different religious denominations." Accordingly, in May, 1859, a memorial praying for a model school comes from Lord Fermoy and seventy more. The gratified Commissioners entertain the application favourably, lease one and a half acres of ground at a rent of £105 per annum, and in spite of threatened remonstrance from the Treasury spend £9,841 14*s.* 11*d.* upon buildings, &c., for the Cork Model School.

Dunmanway.

Dunmanway.

June, 1846, Mr. Robertson reports on proposed site; parish priest gives his "unqualified approbation," and wishes to lease a farm to the Board. Parties differed about price—the Board offering £5 per acre for building land and £3 per acre for remainder; the priest asking £14 for less than two acres of building land and £3 5*s.* per acre for the rest; and when at length the priest acceded to the Commissioners' terms, they declined as being "in communication on the same subject with another party." The new plot is described by Mr. Robertson as adjoining last house on west side of the town, while the Rev. Mr. Doheny's site is in the centre. Nevertheless the Board took it; and though said in April, 1847, to contain five acres, it is returned to us at 2A. 0R. 9P. only, held at a rent of £17 per annum. The public money spent on model school buildings here amounts to £8,876 9*s.*

Enniscorthy.

Enniscorthy.

In January, 1856, the Board of Guardians of Wexford Union, instigated by Inspector H. P. Clarke, resolved that "it is very desirable that the Commissioners of National Education should establish for this district a model school for the purpose of training young persons as teachers," with land attached for an agricultural school, and "with a nautical department for the port of Wexford;" and they memorialized the Board. In February, 1856, the Commissioners decline to incur "so large an expenditure in establishing a school, the success of which appears so uncertain" since "the educational wants of the locality are already well supplied by the existing National and other schools." May, 1856, Mr. Clarke reports favourably of Enniscorthy. August 8th, the Commissioners "approve of the building of a district model literary school, consisting of male, female, and infants' departments," and instruct their architect to report on site proposed by Mr. Clarke. September 19th, 1856, the Board have before them a letter from Mr. Kavanagh, Head Inspector, stating, for reasons which he mentions, that the success of a model school at Enniscorthy is very doubtful, and suggesting that the matter should be reconsidered. The Board reply that "they cannot now recede from their engagement having accepted Lord Portsmouth's offer of a site." Nevertheless it is not until 26th June, 1857, that the Commissioners receive the architect's report on the site, which they then only approve conditionally. In September, 1857, the site is finally sanctioned. In December Inspector reports that the rector will not offer any opposition. In August, 1858, the lease is executed. In June, 1859, the plans are approved, and on 2nd, December, 1859, the contract is let. On 14th December the Roman Catholic bishop formally protested against the model school as long since repudiated by him. It is more than two years since he informed the Inspector that he was decidedly opposed to the establishment of a model school, and that he should exert all his authority and influence to prevent Catholic children from frequenting it. Ample provision is already made for the educational wants of the Catholic youth. He therefore objects to the establishment of a model school as a wanton waste of public money, and as an attempt to impose on the Catholic people a degrading and demoralizing intellectual servitude. In reply, the Commissioners, upon 21st January, 1860, plead the resolutions of the Wexford Guardians in 1856, and the strong recommendations of the Inspectors. They have erected such institutions in various towns, notwithstanding the want of concurrence of prelates and clergy of the Established Church, and they decline controversy. The Bishop rejoins, February 4th, 1860, that the Commissioners, as discharging a public trust and dispensing the public money, are bound to respect the wishes and feelings of the vast majority of its population; that the Wexford application had been declined in 1856 because the educational

want of the locality was already well supplied; that in Enniscorthy neither the Board of Guardians nor any individual guardian nor any Catholic inhabitant nor, as far as he knows, any Protestant had applied for the establishment of a model school, while he had repeatedly declared his decided opposition to it, and shown that the educational wants of the locality were abundantly supplied by existing schools. Yet the Commissioners persisted in spending £6,635 15*s.* 10*d.* on model school buildings, but have failed to secure a respectable attendance of children, and have never appointed pupil-teachers for training in the school. To recapitulate: In 1856 the Wexford Guardians ask for a model school in Wexford town for the purpose of training young teachers, with an agricultural school and a maritime department. The Commissioners, upon a report from Inspector, refuse, because existing schools in Wexford are sufficient. Enniscorthy is then recommended by District Inspector, but the Head Inspector at once gives warning that the success of a model school there is very doubtful. It is the middle of 1858 before a site is legally secured, and the end of 1859 before the contract is concluded with the builder. When the Roman Catholic Bishop protests that the model school is not wanted, and that if built he will oppose it to the utmost, the Commissioners rely upon the Wexford application (although they have not trained young teachers at Enniscorthy, or established agricultural and maritime departments) and upon the "strong recommendation of the Inspectors" (although the Head Inspector had reported against the scheme at Enniscorthy as of very doubtful success, and the District Inspector against the scheme at Wexford as unnecessary). After a large expenditure on buildings and on annual maintenance, the school is a complete failure.

Enniskillen.

Enniskillen.

In August, 1857, Mr. T. G. Porter presents a memorial from residents in Enniskillen asking for a model school. Inspector reports in December that the Portora Endowed school has opened a branch in the town. Board put off decision; and, in October, 1859, Mr. Porter again applies, and is again put off. December, 1859, some of the inhabitants again memorialize, but are told that the Commissioners have no funds at present. In September, 1860, Mr. Porter attacks Mr. Cardwell, and the Board then give way. In September, 1861, Mr. N. C. Magee warns the Board of the danger of "a great abuse of the money of the State—a *select* school for the children of the middle classes, and none, or hardly any, of the poorer classes (for whose benefit surely the State grant was mainly intended) able to avail themselves of it." The Board, however, proceeded to lease nearly seven acres of ground for ever, at £10 per acre, and to spend £9,451 9*s.* 3*d.* on school buildings.

Galway.

Galway.

In September, 1849, Sir T. Redington, National Commissioner, counselled Mr. O'Flaherty, M.P., to apply to the Board, through him, for a model school. The Commissioners assented, and laid out £5,241 18*s.* 1*d.* on buildings, &c.

Kilkenny.

Kilkenny.

In 1846, a deputation from Kilkenny appears to have applied for a model school; and in September, 1849, the town council draw up a memorial with a similar prayer, and offer a site. The Commissioners did not accept the proposed site; but in December, 1851, they agree to found a model school, upon the buildings of which they have spent £4,888 17*s.* 10*d.* It is erected on a site of one acre, held on lease for 500 years, at £25 per annum.

Limerick.

Limerick.

In February, 1851, the Commissioners, being desirous that a model school should be built in Limerick, invite the Protestant bishop to point out a suitable site, which he does in the next month. Mr. H. Clarke, District Inspector, at once reports to Board that "it is very doubtful whether model schools, if built there, will be attended by even a moderate number of pupils, the immediate neighbourhood being already supplied with well-endowed schools. Within five minutes' walk of proposed site there are Sisters of Mercy school (250 in attendance), Christian Brothers' school (214), Lemmy's Endowed Protestant school (60), two Villier's Endowed Protestant schools (87), and on the other side of the road, immediately opposite, the Sisters of Charity have paid £500 for a site, upon which they are about to build a very extensive new convent with an orphan asylum and four school-rooms. He quotes the opinion of the rector of St. Patrick's that, "the proposed site was most ineligible, if it be considered necessary to have a large attendance of pupils; sites of the most desirable character can be obtained at the opposite side of Limerick, where there are but two schools, and the population is of the humble classes, whilst that about the military-road is the most respectable part of the city." In April, 1851, the Board communicate the Inspector's unfavourable judgment to the bishop, who affords no explanation. In July, Messrs. Kavanagh and Clarke report jointly that the proposed site "is not central, or at all in the city, and the operative classes and humble traders, as well as the chief portion of the poor, live in the very opposite side of the town; nevertheless it is as central as Newry or Clonmel, and they think it probable "that all the National and other public schools will rather derive strength than decay from the opening of the model school;" religious relations are all satisfactory; Bishop Higgin, Established Church, Bishop Ryan, Roman Catholic, and Mr. Wilson, Presbyterian, are ready to co-operate, but the Protestant rector is not favourable; on the whole, they recommend the Board to adopt the site, "immediately between the military barrack and the road." The Commissioners did so, and have spent £6,463 11*s.* 4*d.* upon buildings, &c.

Londonderry.

Londonderry.

In December, 1854, persons of various denominations apply for a model school in Derry; the Commissioners approve of the application, and in May, 1855, lease a site for ever at a rent of £67 10*s.* per annum. In October, 1858, Bishop Higgin complains that no steps have yet been taken towards the erection of the building. The school was opened in 1862, and the buildings, &c., have cost £8,895 18*s.* 1*d.*

Lurgan.

Lurgan.

August, 1858, Lord Lurgan asks for a minor model school, and the application is favourably considered; in November, 1859, he fears that a minor model school will be hardly adequate, and applies for a "first-class model school;" same month inhabitants, including "the clergy of all denominations," petition for a district model school, instead of the minor one already determined on, and their request is supported by Bishop of Down, &c. December, 1859, the Commissioners give way, so far as to promise that the Lurgan minor model school

shall afford a much larger amount of accommodation than is usual in that class of schools, and shall be so built as to admit of the erection of a training department, &c., at some future period. The Board then leased a site from Lord Lurgan, at a rent of £34 per annum, and have spent £6,763 19*s.* 3*d.* upon the buildings, &c., of the Lurgan minor model school, which has thus already cost more than eight of the nineteen district model schools.

Monaghan.

Monaghan.

August, 1856, Committee of Board selects Monaghan as the site of a minor model school; and the Commissioners proceeded to spend £4,415 8*s.* 0*d.* upon buildings, &c.

Newry.

Newry.

September, 1845, "The clergymen and ministers and members of different religious denominations" request the Commissioners to erect and establish a model school in Newry, which is "a thoroughfare to every part of the north of Ireland;" and they offer to "assist in every way in the establishment and management of the school," and promise to "at once form a *local committee* for that purpose." To this memorial the name of the Roman Catholic bishop is the first attached, and the Protestant vicar of Newry presents it to the Board. In January, 1846, the Commissioners approve a site for the school upon certain conditions, and the vicar at once begins to collect money, and in five hours raises £190 towards the purchase of land for the model school. A site is selected, and after some hesitation from the large amount of rent demanded, viz.: £18 7*s.* 6*d.*, per annum, the Commissioners, on the recommendation of their Head Inspector, and "understanding that the school will be supported by persons of all denominations, and in such a populous town," agree "to pay the increased rent of £18 7*s.* 6*d.*, per annum, instead of the £12 10*s.* at first proposed," and proceed to lay out £6,671 8*s.* 0*d.* upon buildings, &c. The correspondence proves that the memorialists were unaware that the Board's model schools were to be built without local contribution, and conducted without local management.

Newtownards.

Newtownards.

January, 1857, Lord Londonderry offers to grant two acres of land, rent free, as site for a model school. In August the Commissioners accept this offer, but in October following they object to covenant by deed that the lands shall be held "for the purposes of said model school, and for no other use or purpose whatever," and that the "buildings to be erected shall be used only as a district model school;" and they propose that the land shall be held "for the purposes of a model or other National school under the control of the Commissioners of National Education;" and, having secured a site upon easy terms, they proceed, with even more than their usual prodigality, to lavish £10,394 16*s.* 3*d.* upon school buildings, &c., in a town of 9,000 inhabitants.

Newtownstewart.

Newtown-stewart.

In 1853 an undated memorial from all the clergy (excepting the priest), and other inhabitants, asks for a district model school at Newtownstewart, a small town with 1,232 in population. In reply, the Commissioners, July, 1853, offer to aid an ordinary National school; January, 1857, application is made for a minor model school, and granted; in June, 1857, a "site adjoining the parish church" is chosen, and, subsequently, a sum of £2,038 15*s.* 9*d.* has been spent on buildings, &c.

Omagh.

Omagh.

From Omagh, eight miles distant from Newtownstewart, two undated memorials reached the Board in 1855, asking for a "district model school, which would afford a useful, solid education to the sons of small farmers traders and artizans, and would also serve to train efficient teachers." Of these memorials, one proceeded from the Commissioners of the town of Omagh, and the other from the gentry clergy merchants and inhabitants; in January, 1856, the Board reply, that they do not approve of establishing at Omagh a district model school, but they "will be prepared to erect and maintain at their sole cost, and to be under their exclusive management, a literary school for the accommodation of such number of children as may probably attend;" in April, 1856, the Inspector reports, that an attendance of 100 boys, 100 girls, and about 80 infants may reasonably be expected; in January, 1857, the Commissioners secure a site of two acres, and build a school, which is opened in February, 1857; same month some of the inhabitants state that the school is found quite inadequate, and ask that the minor model school "should be at once altered into a district model school;" Commissioners reply, "that there is accommodation for some twenty or thirty boys in addition to the number already on the rolls;" December, 1860, the inhabitants again memorialize that "the accommodation provided will soon be wholly inadequate to the wants of the people," and demand "that it be raised to the rank of a district model school;" the Commissioners rejoin that they have, at present, no funds, but will reconsider the subject in the following year; and, after much further pressing, they undertake, in December, 1861, to provide increased accommodation at the minor model school, but decline to convert it into a district model school. They have spent £3,622 4*s.* 11*d.* upon buildings, &c.

Parsonstown.

Parsonstown.

The papers do not show that any application for a model school came from Birr, or that* it was selected for a minor school by the Board's committee. In September, 1857, Head Inspector Newell selects the site; in February, 1859, the lease is executed; in March the parish priest writes that the model school about to be established must meet with all the opposition he can bring to bear against it, and asks that the erection be suspended until modifications in the management of model schools be introduced—if not, the public money is very certain to be uselessly expended; the Commissioners reply in April that they had completed their arrangements. They have spent £3,499 11*s.* 6*d.* upon the buildings, &c., here.

Sligo.

Sligo.

Early in 1847, the Board's superintendent, by direction of the Commissioners, was applying for a site for model schools here; the town council, perceiving with pleasure the Board's intention, apply in January, 1847, for an "institution on the most complete plan and the most extensive scale," to consist of a normal school of

* See, however, Appendix B, *infra*.

two departments, one for elementary, and the other for scientific instruction, also a model farm with lectures on agricultural chemistry and other subjects, likewise a middle-class school with lectures on natural philosophy in all its departments. February, 1847, the Commissioners consider it "most desirable to establish a district model school in Sligo," but their plan does not embrace all the objects specified, "the Commissioners *not being authorized to include arrangements for the instruction of middle classes;*" upon this the Corporation offered a site, but not in the town; the Commissioners declined it, and the scheme was allowed to sleep for ten years; on 16th November, 1857, a memorial from the Town Council, reviving the memorial of January, 1847, and asking for a maritime school in addition to those then set forth, is adopted; another memorial from forty-five inhabitants, with the same prayer, is next day transmitted to the Commissioners by a Presbyterian minister, the first signature being "John M'Gowan, Mayor;" same day (17th November, 1857,) the Mayor and all the members of the Corporation (four Protestants excepted) "withdraw their request, having ascertained that model schools, being exempt from the control of local patrons and managers, by whom the ordinary National schools are governed, do not present sufficient safeguards for the faith and morals of the pupils who attend them, and are therefore disapproved of by the bishop and clergy; Mr. Rochfort, T.C., in forwarding this document, 20th November, 1857, tells the Commissioners that "the bishop and clergy are strongly opposed to the establishment of such a school, and they possess both the confidence and affection of the whole Catholic body, rich and poor, in town and in country;" another memorialist, in cancelling his signature, says, "I affixed my name, taking for granted that the model school would be conducted on the same principles as now adopted in the National schools throughout Ireland." December, 1857, the Commissioners postpone their decision for further information; same month Inspectors report in favour of the scheme; one Established Church clergyman, the priests of the town, and some of the gentry are opposed, the rector and curate are at least neutral, "the Presbyterians, through whose means principally the memorial was got up," some of the gentry, and a large number of people are friendly; the population numbers 1,800 of the Established Church, 9,550 Roman Catholics, 220 Presbyterians, and 430 others; they think an attendance of from 150 to 200 may be calculated on, and when the rivalry existing among the different religious bodies has been overcome, success will be certain. August 21st, 1858, the Roman Catholic bishop addresses the Commissioners; it was intimated to them some months ago that the Catholic clergy and laity were opposed to the establishment of a model school in Sligo; in despite of this opposition, and in compliance with the petition of a small section of dissenters, they still appear determined to erect it; he therefore declares formally that he is opposed to its erection, that (if it be erected) himself and clergy will use all legitimate influence and authority in preventing Catholic children from attending it, that Catholics have several National schools in operation in the parish and are erecting new schools, but they will never accept schools over the teachers and teaching of which they could exercise no immediate or efficacious control. In September, 1858, the Town and Harbour Commissioners vote thanks to Board for having determined to establish district model school; but at the same time the chairman of the meeting notifies his fear that the result of the school will not be such as all wish unless the objections of the Roman Catholic bishops are remedied; without that remedy the school will lead to discontent and disturbance, and he offers £50 towards the school if placed under approved management. The Commissioners reply to the bishop that they consider themselves pledged to erect the school, and to the layman that "this school will be built and maintained at the sole cost of the State, and be under the exclusive control of the Commissioners of National Education." They secure a site of 1½ acres at an annual rent of £48, and spend £8,321 19*s.* 10*d.* on the buildings, &c.

Trim.

Trim.

In January, 1846, the vicar of Trim addresses Mr. Corballis, one of the National Commissioners. In the following April the parish priest and the vicar write that they can secure from the Corporation a site of nearly two acres for a large National school, "or one of those model schools, which the National Education Board are anxious to establish throughout the country." "Our great object," they say, "in this case is the relief of our starving poor; the expenditure during the summer of £700 or £800 amongst labourers and tradesmen of various descriptions will contribute much to alleviate their distress." The Inspector, when asked to report, recommends Trim as the site of a model school, and states that should the Commissioners decide in favour of an ordinary school, a local contribution of £200 will be raised. January, 1846, the municipal authorities grant two acres of the Commons "for the purpose of having erected thereon an extensive public school in connexion with the National Education Board." September, 1847, "the Commissioners contemplate an expenditure of not less than £2,000 on the buildings," &c., of a model school. In November they accept a lease of seventy-five years, and they have expended on buildings, &c., £6,829 10*s.*

Waterford.

Waterford.

July, 1851, the clergy and laity of various denominations, "feeling an anxious desire to promote the general education of the poorer and middle classes on the principle of the National system," memorialize the Board for a model school in Waterford. The Commissioners at once resolve to comply. Before the end of 1851 the Roman Catholic bishop published his objections to the model school, and a counter memorial against its establishment was got up. But the Commissioners leased two acres of land at £40 per annum, and have spent £7,420 17*s.* 7*d.* on buildings, &c.

II.

The Cost of maintaining each of the Model Schools in the years 1867 and 1868, as given in Table G, upon page 34, was taken from the Reports of the National Board. Returns subsequently presented by the same Board to the Royal Commissioners, show that the figures of the Board's Reports err by defect, and represent the Cost of maintaining the National Model Schools in 1867 to have been below the Expense really incurred in supporting them. The Returns of the Board (section iv., paragraph 2), do not afford

means for checking the Expenditure returned by the Board in their Report for 1868; but the total Expense of each Model School in 1867, and each of four previous years, is returned at the following amounts.

Name of Model School.	Total Expense in 1867.	1866.	1865.	1864.	1863.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.

Newtownstewart (Minor),	540 8 2	402 6 1	372 2 4	553 13 9	446 11 8
Omagh (Minor),	863 19 11	830 4 2	801 11 10	782 18 0	1,541 10 9
Parsonstown (Minor),	846 5 3	624 19 6	634 0 7	688 17 9	1,196 19 0
Sligo,	877 0 5	877 14 3	798 10 2	836 4 9	2,521 10 5
Trim,	903 16 6	921 2 11	856 12 10	940 17 9	1,494 7 0
Waterford,	1,096 8 4	984 8 3	995 17 8	1,041 12 10	944 10 3

Comparison will show that the total Expense of each Model School for 1867, as returned by the Board to the Royal Commission, is in every case larger than the Cost reported by the Board to Parliament. In some cases the excess of Expenditure is considerable.

Cost for 1867.	Board's Report.	Board's Returns.	Difference.
	£ s. d.	£ s. d.	£ s. d.
Bailieborough,	711 3 0	1,001 2 3	289 19 3
Belfast,	3,527 15 10	3,960 8 6	432 12 8
Enniskillen,	513 1 0	2,864 6 5	2,351 5 5
Newtownards,	1,307 6 4	1,621 16 2	314 9 10

In all cases the Returns disclose an excess above the Expenditure charged against the Model Schools in the Board's Reports; but the excess is greatest in the four Model Schools named, and these four are all in Ulster. The following explanation of the difference is given by the Board under date 25th February, 1870:—

"The cost of these schools as set out in the Commissioners' Report for 1867, includes salaries and allowances to Teachers and Monitors, and the maintenance of resident pupil-teachers for that year, while the information supplied, under Section IV. paragraph 1, of the Returns furnished to the Royal Commission of Primary Education, includes the expenditure under various 'other' heads."

III.

RETURN of the AMOUNTS (Totals) spent upon each of the DISTRICT and MINOR MODEL SCHOOLS, in the year ended 31st December, 1868, made by Board, 27th February, 1869.

V.

Choice of Sites for Minor Model Schools.

Extract from Board's Minutes, Dated 8th August, 1856.

The Secretary submits the Report of the Committee appointed by minute of Board, of the 18th April last, to select the localities in which a limited number of ordinary National schools should be erected at the sole expense and be conducted under the exclusive control of the Commissioners. The sites recommended by the Committee, are the following:—Carrickfergus, Ballycastle, Ballyclare, county Antrim; Omagh, county Tyrone (previously selected); Monaghan, county Monaghan; Bandon, county Cork; Parsonstown, King's County.

Ordered—That the Commissioners approve of the above, with the exception of Ballyclare, and that instructions be given to the Head Inspectors in whose districts the towns are situate, to institute immediate inquiries as to eligible sites, &c., and to report full particulars for the information of the Board. This order does not apply to Carrickfergus or Omagh, sites having been already recommended in these towns.

VI.

Return showing the extent of Site, the Tenure, Rent, and Trusts of Model Schools, abstracted from the Original Deeds by John Behan, Esq., Barrister-at-Law.

School.	Quantity of Land.	Tenure.	Rent.	Covenants, &c.
1. Athy,	5A. Irish Plantation measure.	99 years,	£10 per annum, if demanded.	The witnessing part of this lease concludes as follows:—"Provided always, and this demise is upon the express condition that said premises shall be used only as a District Model school, and for the uses and purposes thereof, under the control of the Commissioners of National Education in Ireland for the time being." Commissioners covenant to keep said premises and all buildings then or thereafter to be erected thereon in good repair, and quietly yield them up to lessor, &c., at the end of term. Clause of surrender at any time on giving six months' notice.
Ditto,	Further grant of 150 feet frontage.	Same,	3*s.* 9*d.* per annum, if demanded.	This grant is made by indorsement on last referred-to deed, and is subject to the covenants and conditions contained in it.
2. Bailieborough	8A. 1R. 27P.	Lives renewable for ever.	£16 per annum, and a peppercorn on renewal.	"All that and those that part of the said manor of Bailieborough, &c., allotted and intended as a site for a District Model schoolhouse." Commissioners covenant to keep all buildings and improvements in good and tenantable repair, and to insure school in the sum of £1,600. Provides that in case the buildings to be erected shall cease to be used by the said Commissioners, their successors or assigns, as a District Model school for a period of three years successively, the said Commissioners, &c., shall, at the request and cost of the grantors, their heirs or assigns, or of the trustees therein mentioned, execute such deed for conveying to the said grantors, &c., the said piece of land, with the buildings and improvements thereon as shall be approved of on their behalf, and by and on behalf of said Commissioners, upon the said grantors, &c., paying to the said Commissioners the full value at the time of all buildings and improvements then standing on said land, but so as the value of the said parcel of land shall not be taken into account, or any sum required to be paid in respect thereof: Provides that in case of disagreement as to value of improvements, arbitrators shall be appointed as therein; and further, that the sum by them awarded as the price of said buildings shall be paid to the said Commissioners, &c., within six months after the same shall be awarded, and notice thereof given to the said grantors, &c., otherwise said Commissioners shall not be bound by said award, but shall be at liberty to dispose of said parcel of land and building as they shall deem fit.
3. Ballymena,	2 roods.	99 years from 24th May, 1847.	£5 per annum,	"All that and those that parcel of land, &c., allotted and intended as a site for District Model schoolhouse." Commissioners covenant to keep in repair the said premises and all buildings and improvements to be erected or made thereon, and at end of term quietly give up same to lessor in like good repair, and not to use said land or any part thereof, or any building to be erected thereon, for any shop or warehouse or other place for carrying on any noisy, obnoxious, or offensive trade, nor for the sale of spirituous liquors, without the consent of lessor, &c.
4. Ballymoney,	2A. 1R. 2P.	61 years from 1st Nov., 1852.	£5 1*s.* 9*d.* yearly,	To have and to hold all and singular the said lands, tenements, and premises hereby demised, or intended so to be with their appurtenances, from the 1st day of November last, for and during the term, time, and space of sixty-one years, to be used as a site for farm or other buildings for the said Model Agricultural School, or for general educational purposes, but for no other use or purpose. Commissioners covenant to preserve, uphold, support, maintain, and keep the demised premises, and every part thereof, and all improvements made or thereafter to be made thereon, in good and sufficient tenantable order, and at the end or sooner determination of the demise, to yield up the same in like good tenantable order. Clause of surrender at the end of the first year, and of any subsequent year, on giving six calendar months' notice in writing.
5. Belfast,	1A. 0R. 11P.	For three lives renewable for ever.	£60 per annum, and a peppercorn on renewal.	Clause of surrender every year on giving six months' notice. Commissioners covenant to keep all buildings and improvements of a permanent character then or thereafter to be made on said premises in good repair, provided that due allowance be made in respect thereof in consequence of said premises being used for school purposes; and at the end or sooner determination of the demise to yield up same to the lessor, &c., and also to observe all the covenants and stipulations in the original lease from the Marquis of Donegal to the lessor on the tenant's part to be kept, except the covenants therein for payment of rent, renewal fines, fees, heriot, and duties.

RETURN showing the extent of SITE, the TENURE, RENT, and TRUSTS of Model Schools, abstracted from the Original Deeds by John Behan, Esq., Barrister-at-Law—*continued.*

School.	Quantity of Land.	Tenure.	Rent.	Covenants, &c.
6. CARRICKFERGUS	1A. 2R. 0P.	For ever, . .	£24 per annum, .	Commissioners covenant to keep the premises and any improvements of a permanent character then or thereafter to be made thereon in good repair: "Provided, however, that due consideration shall at all times be taken to all allowances made in respect thereof," in consequence of said premises being used for educational purposes; and at the end of the grant to yield up same in good condition, due allowance being made as aforesaid. Clause of surrender at the end of the first year, or at any subsequent period, on giving six months' notice or paying six months' rent in advance.
7. CLONMEL, .	2A. 1R. 30P.	99 years, . .	£16 per annum,	Commissioners covenant to keep premises and all improvements to be made thereon in good tenantable order, and at the end of the term to yield up the same in good order. Clause of surrender at the end of the first and every subsequent three years on giving six months' notice.
8. COLERAINE, .	A piece of ground measuring N. 185 feet, W. 395 feet, S. 175 feet, E. 345 feet.	1,000 years from 1st November, 1847.	A peppercorn if demanded.	Commissioners covenant to pay tithes, or rent in lieu of tithes, sewer rate (if any), land tax, and all other rates, taxes, assessments, and impositions. Also that it shall be lawful for the lessors, their successors and assigns, at any time during said term, to affix their armorial bearings or other marks of proprietorship in, upon, or against the buildings erected on the said premises, and to renew, change, or remove the same at their discretion, and which armorial bearings the said lessees shall preserve and maintain during said term. And further that the schoolhouse buildings erected on said premises shall be used for a school only during the whole of said term. Provided that, if the said lessees shall assign all or any part of said premises, or underlease all or any part of it, or in any manner whatsoever part with the possession of said premises or any part thereof without the license or consent of the lessors (to be given as therein), or if any of the covenants therein on the part of the said lessees be broken or not fully performed, it shall be lawful for the lessors to re-enter.
9. CORK, . . .	1A. 3R. 14½P.	200 years from 25th March, 1862.	£105 per annum, .	Commissioners covenant to keep premises and all buildings to be erected thereon in good and tenantable repair, and at the end of the term so yield up the same.
10. DUBLIN, WEST,	The north side of Crilly's yard and premises thereon, save the piece of ground enclosed with walls at the upper end of said yard, next to Belview.	Lives renewable for ever.	£21 4*s.* 7½*d.* per ann. with a penal rent in case of noisome trade being carried on, and a covenant for abatement of said rent, and a sum of £10 3*s.* 1*d.* on renewal.	It is declared that the premises are assigned to the said Commissioners for the purpose of a school or schools to be conducted according to the principles of the National system of education in Ireland.
11. DUNMANWAY,	5A. 0R. 0P.	999 years, . .	£17 per annum, .	Commissioners covenant well and sufficiently to preserve, uphold, support, maintain, repair, and keep premises and all improvements made or to be made thereon in good and tenantable repair, and at the end of the term to yield up the same in like good repair.
12. ENNISCORTHY,	3A. 0R. 38P.	99 years, . .	£8 per annum, .	Commissioners covenant to keep premises and all buildings and improvements of a permanent character then or thereafter to be made thereon in good and sufficient order, provided that due allowance shall be made in respect thereof in consequence of said premises being used for educational purposes, and at the end or sooner determination of the demise yield up the same in good order, due allowance being made as aforesaid. Clause of surrender at any time on giving six months' notice, or paying six months' rent in advance.
13. ENNISKILLEN,	6A. 3R. 23P.	For ever, . .	£68 18*s.* 9*d.*, . .	Commissioners covenant to keep said premises and all buildings to be erected thereon in good repair, and at the end or sooner determination of the demise so yield up same, and that they shall repair and maintain in good working order all drains and culverts then existing upon the demised premises for carrying off the water of that portion of the lands remaining, belonging to grantor; and that they shall use all proper precautions, so far as was then effected by the drains and culverts then existing, that the drainage of said lands and that of the adjoining lands of the Earl of Belmore should be no way injured by the buildings or works to be erected on the said demised premises.
14. GALWAY, .	3A. 3R. 21P.	For three lives renewable for ever.	£21 10*s.* 10*d.* per annum.	Commissioners covenant before the expiration of the first three years of the demise to expend not less than £3,000 in building, and to keep said premises and all improvements made or thereafter to be made thereon in good repair, and at the end or sooner determination of the demise to yield up same in good repair. Clause of surrender every three years on giving six months' notice as therein.
15. INCHICORE, .	1A. 0R. 0P.	For ever, . .	1*d.* per annum, if demanded.	Commissioners covenant to keep the premises and all improvements made or thereafter to be made thereon in good repair, and at the end or sooner determination of the term to deliver up same in good repair. Clause of surrender every year. Proviso that if the Commissioners shall use the lands and premises for any other purpose than a National School, the lease shall be void.
16. KILKENNY, .	1A. 0R. 32P.	500 years, . .	£25 per annum,	Provides that if the Commissioners, their successors or assigns, shall not build on the premises demised, a District Model National School within five years from the date of these presents, then the present lease shall be void, and it shall be lawful for the lessor, his executors, administrators, or assigns, to re-enter, it being the true intent and meaning of these presents that the said premises are hereby demised for the purpose of the erection thereon by the said Commissioners, their successors or assigns, of a District Model National School. Commissioners covenant to uphold and keep said premises, and all improvements made or to be made thereon in good order and repair, and at the end or sooner determination of the demise to yield up same in good order and repair. Clause of surrender at the end of every three years on giving six calendar months' notice.
17. LIMERICK,	1A. 0R. 22P.	For lives renewable for ever.	£12 per annum, .	Commissioners covenant to keep said premises and all improvements to be made thereon in good repair, and at the end of the demise to yield up same in good repair. Clause of surrender at the end of every three years on giving six months' notice.
Ditto, . .	0A. 3R. 1P.	Same, . .	Same, . .	Same.

RETURN showing the extent of SITE, the TENURE, RENT, and TRUSTS of Model Schools, abstracted from the Original Deeds by John Behan, Esq., Barrister-at-Law—*continued.*

School.	Quantity of Land.	Tenure.	Rent.	Covenants, &c.
18. LONDONDERRY,	3A. 2R. 0P.	For ever, . .	£60 per annum, .	Commissioners covenant to keep said premises and all improvements of a permanent character made or thereafter to be made thereon in good repair, and at the determination of the demise to give up same in good repair. Clause of surrender at the end of the first five years, or of any subsequent year, on giving six months' notice or paying six months' rent in advance.
19. LURGAN, .	2A. 1R. 16P.	100 years from 1st May, 1860.	£34 per ann., "which rent is the full value of the said lands, and more than said premises produced at the time of filing the rental in the Court of Chancery, on 26th April, 1852."	Commissioners covenant to keep the said premises and all improvements made or thereafter to be made thereon in good repair, and at the end or sooner determination of the demise leave the same in like good repair. Clause of surrender every three years, on giving six months' notice. "Provided always, and it is hereby declared and agreed upon between the parties to these presents, that if the hereby demised premises, and the buildings which are to be erected thereon, shall not for the space of any three consecutive years be used and applied by the said Commissioners, their successors and assigns, for the education of young persons, either as a Minor Model school, with or without residences for the teachers and other persons employed therein, or for some other institution, with or without like residences, for education on principles that shall admit all the inhabitants of Lurgan, and of the estates of [the lessor], or his assigns, or other the person or persons entitled as aforesaid, who may desire to avail themselves of the benefits thereof without religious distinction," then the present lease shall be void.
20. MONAGHAN, .	1A. 2R. 2P.	99 years from 1st Nov., 1857.	£12 per annum, .	Commissioners covenant to keep the said demised premises and any improvements of a permanent character made or thereafter to be made thereon in good order and condition, and at the end or sooner determination of the demise, to leave the same in good and sufficient order and condition. Clause of surrender at the end of the first year, or at any subsequent period, on giving six months' notice, or paying six months' rent in advance.
21. NEWRY, .	Plot of ground measuring N., 272ft.; S., 219ft.; W., 177ft.; E., 214ft.	Fee-farm grant,	£18 11*s.* 2*d.* per annum.	Yielding and paying, &c., said rent over and above all Ministers' money, and all Church and Ministers' dues as paid in the adjacent diocese, and over and above all taxes and county charges whatsoever, ordinary or extraordinary, which then were or thereafter should be imposed on said premises by Act of Parliament or otherwise, and also rendering service at the Courts Leet and Courts Baron to be held within the manor and lordship of Newry, as often as they (the Commissioners, &c.), shall be summoned to attend the same, and also yielding and paying for every head-tenant of the premises 4*d.* sterling, and for every under-tenant and cottier 2*d.* head-money or leet-silver, at each of the two Leet Courts to be held in the year in the manor aforesaid, and grinding their and their under-tenants of the premises' corn and grain that shall be expended on the premises, as shall be by them ground for sale, at such of the mills of the said lordship as the grantor, his heirs or assigns shall appoint, and pay the accustomed mulcture or grist for grinding the same. Commissioners covenant to render the above services.
22. NEWTOWNARDS	2A.	For ever, . . .	No rent, . . .	To hold the said lands, &c., to the use of the Commissioners of National Education in Ireland and their successors for ever, for the purpose of said Model or other National school under the control of the said Commissioners, and for no other use, intent, or purpose whatever. Commissioners covenant that the buildings to be erected on the ground granted, shall be used only as a District Model or other National School, under the control of said Commissioners; and in case of their conversion to any other purpose without the consent in writing of the grantor, the grant shall become void: also not to let, underlet, or assign the said premises without such consent.
23. NEWTOWN-STEWART.	1R. 23P.	99 years from 1st Nov., 1857.	£3 per annum, .	Commissioners covenant to keep the premises and any improvements of a permanent character to be made thereon, in good and sufficient condition, provided that due allowance shall be made in respect thereof, in consequence of the said premises being used for educational purposes, and at the end or sooner determination of the term, to yield up the same, due allowance being made as aforesaid, and that said premises shall not be used for any other purpose than for a Model or other National school, under the control of the said Commissioners. Clause of surrender at the end of the first, or any subsequent year, on giving six months' notice, or paying six months' rent in advance.
24. OMAGH, . .	Plot of ground, 400ft. by 218ft.	999 years, . .	£21 per annum, .	Commissioners covenant to keep the said premises and any improvements of a permanent character, made or thereafter to be made thereon, in good order and condition, provided that due allowance shall be made in respect thereof, in consequence of said premises being used for educational purposes, and at the end or sooner determination of the term, yield up the same, in good order and condition, due allowance being made as aforesaid. Clause of surrender at the end of the first year, or at any subsequent period, on giving six months' notice, or paying six months' rent in advance.
25. PARSONSTOWN,	1R. 19P.	For lives renewable for ever.	£2 per annum, . .	Commissioners covenant to keep the said premises and all improvements of a permanent kind made or thereafter to be made thereon, in good tenantable repair, and at the end or sooner determination of the demise, yield up the same in like good tenantable repair. Clause of surrender every three years, on giving six months' notice.
Ditto, . . .	A piece of ground, containing in front, 51ft.; in rere, 46ft. 6in.; and in depth, 72 yards.	99 years, . .	£7 per annum, . .	Commissioners covenant to keep the said premises and all improvements made and to be made thereon, in good repair, and at the end or other determination of the demise, so yield up the same. Clause of surrender at any time on giving six months' notice, or paying six months' rent in advance.
26. SLIGO, . .	1A. 2R. 10P.	500 years, .	£48 per annum, .	Commissioners covenant to keep said premises and all improvements made or thereafter to be made thereon, in good order and condition, and at the end or sooner determination of the demise to yield up same in good order and condition.

RETURN showing the extent of SITE, the TENURE, RENT, and TRUSTS of Model Schools, abstracted from the Original Deeds by John Behan, Esq., Barrister-at-Law.—*continued.*

School.	Quantity of Land.	Tenure.	Rent.	Covenants, &c.
27. TRIM, . .	2A.	75 years from 1st May, 1848.	4*s.* 6*d.* if demanded,	Commissioners covenant to build at their cost on said land a District Model school of greater yearly value than said premises, and keep the same and all improvements made thereon in good and sufficient tenantable order. Provides that at the expiration of the term the Commissioners, at the request and cost of the grantors, shall convey to them the said ground, with the buildings and improvements then erected thereon, upon the said grantors paying the said Commissioners the full value at the time of all buildings and improvements, but so that the value of the said land shall not be taken into account nor any sum required to be paid in respect thereof: Provides in case of disagreement that price of improvements shall be awarded by arbitrators appointed as therein, and that the sum so awarded shall be paid to the said Commissioners by the said grantors within three months after the same shall be awarded, and notice thereof given to the said grantors, otherwise the said Commissioners shall not be bound by the award, but shall be at liberty to sell said piece of ground, with the buildings and improvements thereon, as they shall think fit.
Ditto, . .	15P. statute measure, of the Maudlins or South Commons of Trim.	75 years from 30th Nov., 1849.	1*s.* if demanded, .	Commissioners covenant well and sufficiently to keep the demised premises, and all buildings and improvements made or to be erected or made thereon, in good and sufficient tenantable order. Provision to reconvey the premises at expiration of the term as above, save that the sum to be awarded in case of disagreement is to be paid to the Commissioners by the grantors within two months.
28. WATERFORD, .	2A. 1R. 16P., late Irish Plantation measure.	99 years from 25th March, 1852.	£40 per annum, .	Commissioners covenant to keep the demised premises and all improvements made or thereafter to be made thereon, in good and sufficient tenantable order, and at the end or sooner determination of the demise, yield up same in like good tenantable order.

VIII.

Board's Explanation of Money Premiums to Model School Children.

Office of National Education,
22nd June, 1868.

Sir,—In answer to your letter requesting to know the conditions under which gratuities are awarded after examination to pupils in the National Model Schools, we are to state that in 1850, the Commissioners decided that premiums should be awarded at the annual public examinations to the most deserving pupils in attendance at the Model Schools. These premiums they ruled should be paid in money only.

The Commissioners ordered that the amount should be limited to the sum awarded by the Commissioners; and that the Head-Inspectors were in no instance to exceed this amount.

It was further ordered that receipts should be taken from the pupils on a form supplied to the Inspector, a copy of which we enclose; and that, in cases of young children unable to sign their names, the signature of the Inspectors should be deemed sufficient.

The Inspector was required to transmit the account to this office within one week after the examinations.

We beg to transmit a copy of the form of certificate awarded to each successful pupil.

We are, sir, your obedient servants,

James Kelly.
William H. Newell. } *Secretaries.*

IX.

Contrast in the Board's Treatment of Model Schools and Ordinary Schools.

Model Schools.	Ordinary Schools.
Site.	
Provided at the exclusive cost of the Board, without local aid.	Provided by local promoters, without aid from the Board in any case.
Buildings.	
Erected by the Board, wholly at the public charge, up to £16,000 (Belfast Model School).	If conveyed to the Commissioners or to trustees *for them*, the Board may give two-thirds of the cost, up to a maximum of £325.
Conditions of Building Grant.	
May be in the midst of other schools, *e.g.* Ballymena, Coleraine, Limerick, &c.; Site may contain seven acres, *e.g.* Enniskillen; Rent may be heavy, *e.g.* Cork, £105; Enniskillen, £68 18*s.* 9*d.*, &c.; Room provided regardless of local wants and wishes (see Table L); Buildings "ambitious and needlessly expensive;" Existing buildings converted at pleasure (West Dublin and Bailieborough); Teachers' residences generally erected.	Must not be within three miles of another vested school; Site should contain one rood; Rent must be nominal; Accommodation must be adapted to local wants; No ornamentation sanctioned, but only "plain, substantial buildings;" Conversion of existing buildings not permitted; Residences for teachers not erected. If the school property is not vested in the Commissioners, they contribute nothing towards the building. Thus, 5,000 schools have been built without the Board's aid.
Repairs.	
Executed invariably at the public cost.	Executed at the public cost in the (365) schools vested in the Board; but in schools vested in trustees for them, and in all non-vested schools, the Board gives nothing towards repairs; 1,258 schools are kept in repair by the teachers.
Management.	
The Board sitting in Dublin has exclusive control.	Local patrons manage by themselves or their nominees.
Patronage.	
The Commissioners appoint and dismiss of their own authority the teachers and other officers, and regulate the course of instruction.	Local patrons appoint and remove teachers, as the Commissioners do not take the control or regulation of any school into their own hands.
Inspection.	
The district inspector, who acts as resident manager of a Model school, also inspects and reports on it.	Ordinary schools are inspected by an officer unconnected with the management.

Model Schools.	Ordinary Schools.
Principal Teachers.	
Teachers provided with furnished residence, fuel, light, and service. Salaries independent of examination or classification or attendance. Masters begin at £60, and rise by £5 a year to £100. Mistresses begin at £55, and rise by £2 10*s.* a year to £75. They take one-half the school fees, and may obtain from the Board an extra £10 for teaching drawing, singing, &c. They claim pensions as civil servants.	Free residences are attached to 1,430 schools; but in 633 cases the teachers find school-houses, and in no case does the Board provide residence. Salaries depend on examination and attendance. Advance in classification requires re-examination. In the eight grades masters get from £15 to £52, and mistresses from £14 to £42, with the chance of a retiring allowance.
Assistants.	
Whether male or female, are allowed full class salary, and one-fourth of school fees, together with a "supplemental salary" of £16 to a male and £12 to a female, and the chance of earning £8 or £12 more for singing, drawing, &c. Like the principals, they are paid monthly by the Board, and are independent of attendance.	Only allowed in the larger schools, and never receive more than second-class salary; paid quarterly.
Pupil-teachers.	
Get free board and lodging, or £20 a year, together with gratuities.	Not employed.
Monitors.	
Largely employed, and paid monthly by the Board at the rate of £6 for first year; £8 second year; £10 third year; £12 fourth year, with an annual gratuity of £1 10*s.* extra.	Employed under restrictions, and paid quarterly at various rates:—Junior, £2; senior, £5; first-class, £15, first year. Junior, £3; senior, £6; first-class, £17, second year. Junior, £4; senior, £8, third year. Senior, £10, fourth year, without any extra gratuity.
School-children.	
Get parchment certificates and gifts of public money from the Board. In the boys' and girls' schools no First-Book children are received; separate infants' schools are provided where young and backward children acquire the first elements.	Get no rewards from the Board; are for the most part taught together, young and old, backward and forward, without separate infants' rooms; nearly one-half are in letters and First Book.
Books and Apparatus.	
Freely and abundantly supplied with every requisite without any charge to the teachers.	Partial grant of "first stock" made by Board, to be met by proportionate expenditure on the part of the school; everything further must be bought, but prices are reduced. In 5,906 schools the teachers provide books and requisites.

The above features of contrast between the treatment of the Board's Model Schools and Ordinary National Schools show that it can only be a spirit of mockery which leads the Commissioners to propose their Model Schools as models for the imitation of the ordinary National teacher.

X.

Life in a Model School Boarding-house.

The following description of life in a Model School boarding-house is given in a paper sent to Mr. Stokes from Mr. Denis M'Curdy, formerly a pupil-teacher in the Ballymena Model School, and now the certificated master of St. Mary's Roman Catholic school, Wigan, Lancashire (Evidence, p. 989):—

"I think it necessary to state for the better understanding of the position of 'a Catholic P. T. while in a Model School, that in the elementary National schools of Ireland,' the pupils scarcely ever get any positive instruction in religion—in explanation of prayer, commandments, sacraments, &c., neither Catholic nor Protestant clergyman taking so much interest in the religious instruction of the pupils as I find they do in England, when they have the sole charge of their own schools. In fact, religion comes to be a very secondary matter in the minds of the pupils, when they see so little notice taken of it by their teacher or clergyman. This instead of making Catholics and Protestants more charitably disposed towards each other, makes them more inclined to religious controversy, endeavouring to find out the weak points in each other's creed, neither party knowing in what true religion consists—making it more a polemical study than a motive for the guidance of their actions.

"This will account for the fact that when I entered Ballymena model school in 1850, at the age of eighteen years, I was unable to explain the Lord's Prayer.

"Ballymena Model School.

"The teaching staff consisted of the master, Mr. John Given, three Catholic, four Presbyterian, and one Protestant pupil-teacher. The master never interfered in our religious belief. No instruction in religion whatever of any sort given to the pupil-teachers—might pray or not as we liked. The Protestant joined with the Presbyterians in the master's room at night prayers. No morning prayers whatever. Two or three times I took the Catholic pupil-teachers into the dining room at night to say our prayers, but were interrupted by the others when their prayers were over, so gave it up.

"For the Catholic pupil-teachers there was worse than a negation of religious instruction, for though the master never interfered, the whole air of the place was non-Catholic. Craig * said to me shortly after entering, that I was admitted because I was a 'Romanist.' First time I heard the term applied to a Catholic. Had many polemical debates with the Protestant pupil-teachers, such as the 'Celibacy of the Clergy,' with Beatty;* 'the Infallibility of the Pope'; 'the

Inspiration of the Bible,' with Hewston;* about 'Holy Water,' with Lamont.* Brought to task by Craig* for studying zoology on Sunday—he saying the Bible was the only book for that day. Protestant pupil-teachers often whistled party tunes. On Ash-Wednesday, after coming from church, was asked by the school children did I get a rub with the burnt stick, meaning the ashes. The evil influence exerted on Catholic pupil-teachers is heightened by the bigotry and prejudice of the townspeople. An instance of their feelings may be gathered from a copy of a placard announcing a sermon in one of the Presbyterian chapels:—

'Popery,
A Modern Invention;
The
Anti-Christ of Scripture.
A Lecture by
The Rev. Dr. Stewart,
In Wellington-street Church,
On Sabbath evening, 23rd March, 1851.'

From the above it may be easily understood that when I left after the expiration of my year's pupil-teachership, I cared less for religion than when I entered."

John C. Smith, . . „ 8½	Peter D. Reardon, . „ 11¼	
Arthur Bright, . . „ 12	Matthew W. Lawless, . „ 12½	

Thus of 40 boys in the Third Class of the Model Infant School there were aged—

Between 8 and 9, ...	1	Between 12 and 13, ...	6
„ 9 „ 10, ...	2	„ 13 „ 14, ...	7
„ 10 „ 11, ...	8	„ 14 „ 15, ...	1
„ 11 „ 12, ...	14	„ 15 „ 16, ...	1

These boys read in the Third Book—they wrote on paper, from dictation, the following passage:—"Some years ago I kept a sloth in my room for several months. I often took him out of the house and placed him upon the ground in order to have an opportunity of observing his motions." They also worked upon paper the following sums:—(1). £17,035 4*s.* 6*d.* – £9,608 17*s.* 10½*d.*; (2). £837 15*s.* 9½*d.* × 21; (3). £711 12*s.* 4*d.* ÷ 6. Thirteen of them passed in all three subjects; twelve in Reading and Writing; one in Reading and Arithmetic; three in Writing and Arithmetic; two in Reading only; three in Writing only; four in Arithmetic only; and two (both aged eleven) failed in all the subjects. The exercises are preserved.

In two divisions of Second Class there were examined 37 children. Of these there were aged—

Between 6 and 7, ...	3
„ 7 „ 8, ...	16
„ 8 „ 9, ...	12
„ 9 „ 10, ...	6

Three of them passed in all these subjects; three in Reading and Writing; two in Reading and Arithmetic; four in Writing and Arithmetic; eleven in Reading only; three in Writing only; one in Arithmetic only; and ten failed in all the subjects.

REPORT

ON

THE TRAINING INSTITUTION AND MODEL SCHOOLS

IN

MARLBOROUGH-STREET.

---

1. The second Report of the Commissioners of National Education in Ireland, for the year ended 31st March, 1835, consists of answers to several queries transmitted to the Board by the Lord Lieutenant. The fourth question proposed to them by the Government was—"Is it the expectation of the Board that a new class of schoolmasters may be trained, whose conduct and influence may be beneficial in promoting morality, harmony, and good order in the country parts of Ireland?" To this question the Commissioners replied—"If we are furnished with adequate means by the State, not only for training schoolmasters, but for inducing competent persons to become candidates for teacherships, through a fair prospect of remuneration and advancement, we have no doubt whatever that a new class of schoolmasters may be trained, whose conduct and influence must be highly beneficial in promoting morality, harmony, and good order in the country parts of Ireland. It is only through such persons that we can hope to render the National schools successful in improving the general condition of the people." The next query is—"What extension can be given to the new system of education consistently with due regard to the preparation necessary for training schoolmasters upon whom reliance can be placed in respect to competency, character, and discretion?" and the Commissioners are desired in answering it to have regard to the recommendations of the Commissioners of 1812 and 1825, and of the Committees of the House of Commons of 1828 and 1830 that reported upon the subject, as well as to their own experience. Under this direction the Commissioners develop their plan of training. "We think," they say, "that the new system may be gradually extended through the agency of such teachers as we have contemplated until its benefits are enjoyed by the great mass of the population. To secure the services of such persons it is material that suitable means of instruction should be provided for those who desire to prepare themselves for the office of teaching, and that persons of character and ability should be induced to seek it by the prospect of adequate advantages." They then suggest the establishment of five professorships in the training institution—I., of School Management, to be the head of the institution; II., of English; III., of Natural History; IV., of Mathematics; V., of Mental Philosophy—and they continue: "We propose that no person shall be admitted to the training institution who does not previously undergo a satisfactory examination in an entrance course to be appointed for that purpose; and that each person who may be admitted shall study in it for at least two years before he be declared fit to undertake the charge of a school; that during this time he shall receive instruction in the different branches of knowledge already specified, and be practised in teaching in the model school under the direction of the professor of teaching." They then recommend the establishment of thirty-two district model schools—one in each county of Ireland—and add, "that hereafter each candidate for admission to the training institution should undergo a preparatory training in one of them." The prospect of remuneration and advancement which they regard as adequate inducement is then set out: "We consider that the teacher of each primary school should have a certain salary of £25 a year; and that the Commissioners for the time being should be authorized to award annually to each a further sum, not exceeding £5, provided they shall see cause for doing so in the Inspector's report of his general conduct, and the character of the school committed to him. We are also of opinion that each teacher should be furnished with apartments adjoining the school."

Original scheme of training.

Professors proposed

Scale of teachers' salaries.

Residences.

2. The report presented in 1812 by the Commissioners for inquiring into the state of all schools on public or charitable foundations in Ireland similarly estimates the annual salary of a qualified schoolmaster at £30. This report, to which the Government specially referred the National Board in 1835, declared "that a more essential service could not be rendered to the State than by carrying into effect a practicable mode of supplying a succession of well qualified instructors for the children of the lower classes." It is very remarkable that these Commissioners of Inquiry, being eight eminent personages, all Protestants, and including three bishops, regard the easy adaptation of denominational training schools as a happy circumstance, adding, "It fortunately happens that there are in this country existing establishments, as well Roman Catholic as Protestant, which we are persuaded might, with little difficulty, give effectual assistance towards this great national purpose. This the Commissioners would find no difficulty in arranging with the governors of the several institutions. In such arrangements, and indeed in the whole of this part of the scheme, much will of course depend upon the discretion of the Commissioners."

Denominational training schools.

3. The National Board, in the exercise of its discretion, set aside the Commissioners' recommendation of denominational training institutions, and never carried out its own scheme for providing a new class of teachers trained for two years and thoroughly qualified before appointment. At one time indeed the Board appears to have contemplated the elevation into model schools of all schools in Dublin, with the prospect of training in them as many as two thousand masters simultaneously; and the

Dublin schools to be Model Schools.

central school of the Christian Brothers in North Richmond-street, while in connexion with the Education Department, actually bore over the public entrance the inscription, "National Model School."

4. In those early days the Commissioners were "anxious that all schools in Dublin and its immediate vicinity may be such as will fit them for becoming model schools for the rest of the kingdom." But the Christian Brothers withdrew from connexion, and the ordinary national schools in Dublin remain, as they were described by Dr. Sullivan in 1837, "with few exceptions, the worst schools," inferior in every respect to schools in the country. Meanwhile, the attention of the Board has been concentrated upon its own central establishment.

Their actual condition.

5. Its gradual development we will now trace. Among the purposes to which the proposed Board were to apply the funds annually voted by Parliament for the education of the poor in Ireland, Mr. Stanley's letter of October, 1831, included "establishing and maintaining a model school in Dublin, and training teachers for country schools."

School in Merrion-street.

6. Soon after the establishment of the Board a house was assigned to it in Merrion-street, Dublin, with a range of offices and lofts, which the Commissioners converted into model schools for boys and girls. They then brought up from the country schools as many young masters as they could accommodate, and kept them for three months in attendance at the model schools for the purpose of acquiring a knowledge of the methods there pursued. These masters while in Dublin received an allowance of 12*s.* a week, and provided themselves with board and lodging. Towards the close of 1835 the Commissioners removed to Tyrone House in Marlborough-street, and proceeded to build, in 1836 and 1837, the existing model schools and training establishment, at a cost of £29,000. In April of 1837 Mr. Carlile, the Resident Commissioner, returned the number of masters who had thus been brought to Dublin and had spent three months in the model schools at about 250. This system was regarded as purely provisional.

Marlborough-street

Mr. Stanley's letter prescribed as a condition antecedent to the appointment of every National schoolmaster, that "he shall have received previous instruction in a model school, to be established in Dublin." Temporary exception was indeed made in favour of "masters and mistresses of schools already established who may be approved of by the Commissioners, and of such as the Board may think fit to appoint before the proposed model school may come into full operation;" but the ultimate view of the Commissioners was that all masters should be examined and trained previous to appointment, and this regulation was contemplated even with respect to teachers in the schools of religious societies, some of whom had been brought up for training before 1837. At that time it was not proposed to train schoolmistresses, either religious or seculars, nor indeed to employ any female teachers except for sewing and the like. In 1840, however, the Board allocated £1,000 towards the erection of a suitable building for the training of female teachers, and Mrs. Drummond, widow of the lamented secretary, contributed an equal sum upon condition that the name of Mr. Drummond was connected with the proposed building. Hence the boarding-house assigned to female teachers in training is known as the Drummond Institution.

7. Had the main features of the original scheme been adhered to, all young masters would have been completely trained before appointment to schools, and no teachers would now be recognized who had not been either trained, or at the least approved after examination by the Commissioners. In other words, the injury to the education of the poor, springing from the employment of unqualified "probationers" as masters, would have been obviated, and a different class of students would in 1869 occupy the training institution in Marlborough-street. These latter, instead of being, as now, actual teachers inconveniently drawn away from country schools, would be young persons approaching the close of their training course, and looking forward to early appointment as National school teachers.

Premises.

8. The chief department of the training institution in Marlborough-street is termed the "Normal Department." A building opposite the house of the Resident Commissioner and the offices of the secretaries contains four large lecture rooms. There is also an office for the professors, and some dormitory accommodation for male teachers. The men are partly provided for here, partly in Great George's-street, in a house hired for the purpose, where they are under the superintendence of one of the professors, Mr. O'Sullivan; and partly at Glasnevin. The females are separately lodged in another part of the establishment, the "Drummond Institution," mentioned above, with an entrance in Talbot-street.

Number and classification of residents.

9. There were 146 in number—75 males, 71 females—in the ordinary class, and 39 in the special class—21 males and 18 females; the distinction being this: all teachers called up for training must go first of all into the ordinary class or general class. They stay in this class a greater or less part of one session, its length being not more than twenty weeks. If they are distinguished by special ability or aptitude for training, and seem suited for the more responsible situations, they are retained for further training, and constitute then the special class.

10. Besides these two classes the "Rules and Regulations," IV., I., II., § 6, provide for an Extern Class or Class of candidates. These last are no expense to the State, being merely allowed to attend the instruction given to the teachers who are in training in the general and special classes. There were six female teachers in this class, March, 1869.

11. This class will not be again noticed while the arrangements for training are under consideration.

12. The students in the general class are in two divisions: one division is employed in the model schools, and is supposed to be learning how to teach practically, by observing the teaching of others, examining the organization of the schools and the methods employed, and by teaching small classes themselves under the supervision of the head teachers of the model schools, or watched by professors or assistant professors.

13. The distribution of the work of Lecturing is thus described in a time table, showing what is the daily employment of each of the three Professors—Messrs. Butler, Rintoul, and O'Sullivan:—

14. The Professors give us the following account of their duties:—

PROFESSOR BUTLER.

Professor Butler.

The general class of teachers attends lectures in two divisions:—Teachers already classed third and upwards, and pupil-teachers of district model schools, constitute the first or senior division; the others form the second or junior division.

General Class of Male Teachers.—Each division of male teachers attends me three hours a week, and both divisions are united for one hour's instruction from me on the afternoons of two Tuesdays out of three.

With the second division I go over the First and Second Books of Euclid, and with the first division the Third and Fourth Books. A certain number of propositions is to be got up for each day, and in the presence of the class I examine one, two, or three, as the case may be, of the teachers on the appointed business, pointing out, as the examination proceeds, such inaccuracies and deficiencies in matter or form as present themselves, or are most likely to occur. My chief aim in these examinations, and during my whole intercourse with the teachers, is to make them accurate in thought, and accurate in expressing their thoughts. With few exceptions, our teachers are exceedingly deficient in these respects. In furtherance of this main object. I show them how to apply the rules of logic to Euclid's arguments, and require of them to write out in syllogistic form the arguments in the demonstration of a few propositions. Their attention is specially directed to the geometrical principles upon which the rules in mensuration are based. Some of the more easy deducibles are set as exercises; the chief properties connected with the harmonic section of a line, and with the polar in reference to a circle, are explained, as also the derivation of the conic sections and their fundamental properties from the cone.

They learn the elements of trigonometry, so far as to be able to solve by means of the logarithmic tables, a plane triangle, and to know the principles upon which the solution depends in each case.

They work out, during their study hours, a set of exercises in mensuration and in trigonometry, which are submitted to me at the end of the course.

They also receive instructions from me on the "practical rules for teachers," and on such of the "rules and regulations of the Commissioners" as bear upon the position and duties of a National teacher, and should be known and understood by him.

Among the teachers in training there are some sufficiently advanced to be able to devote a portion of their study hours to extra branches, without interfering with the proficiency required in those subjects which are of primary importance to elementary teachers. For such as these I appoint some chapters in the treatise on "Natural Philosophy" (those on mechanics, hydrostatics, and pneumatics, or those on heat and light, at the option of each), and, before the end of the course, examine those who desire it upon those subjects. When time permits I give a few lectures by which I supplement certain omissions in the treatise, and endeavour to present some details in a clearer and more accurate form.

General Class of Female Teachers.—Each division of the female teachers in the general class receives one hour's lesson from me in the week, and both divisions attend together for one hour on Tuesday or Saturday. The following is an outline of the subject-matter of the lessons I give them:—

> Different kinds of number—naming of numbers—notation—numeration—fundamental operations—reduction—British system of weights and measures—metric system—*unit-method* of solving questions in profit and loss, fellowship, interest, proportion—application of this method to examples of a miscellaneous kind usually solved by alligation, by position, &c.—multiples and measures of numbers—fractions—ratio and proportion.

What I aim at in these lessons is to give the teachers a clear insight into the principles from which the common rules are derived; to lead them by the method of analysis, comparison and generalization, to frame the rules themselves, and to depend in the solution of arithmetical exercises upon their own judgment and powers of investigation, rather than upon their recollection of special or technical rules. Besides the exercises which they work out on paper for me, they are practised on the slate in classes once a week, for three-quarters of an hour.

I devote a few lessons to the explanation of the more usual geometrical terms, and to the indication of some of the elementary properties of angles, triangles, squares, rectangles, circles. Without some definite knowledge on these points it is impossible for them to understand clearly the nature of superficial and cubic measures

(British or metric), or many of the technical terms they meet with in mathematical geography, in linear drawing or perspective.

I explain to them and comment upon the "practical rules for teachers," and the "rules and regulations of the Commissioners" in the same way as in the case of the male teachers.

Special Class of Male Teachers.—During the first half of their course, the members of the male special class receive one lesson a week from me, and go through the elements of solid geometry as contained in the first twenty-one propositions of Euclid's Eleventh Book, and then proceed to spherical trigonometry, which is treated from both a geometrical and analytical point of view.

Properties of a solid trihedral angle—supplementary trihedral—the cosine of the hypotenuse of a right-angled trihedral angle is equal to the product of the cosines of the sides—angular functions of a dihedral angle—solution of right-angled trihedral angles—Napier's rule for circular parts—relations of the angular functions of the sides and angles of a trihedral angle—Napier's and Delambre's, or Gauss', analogies—solution of oblique-angled trihedral angles—connexion between the trihedral angle and the spherical triangle—Cagnoli's and Lhuilier's formulæ for the spherical excess—measure of a trihedral angle—area of a spherical triangle.

The parallelism between the principles and formulæ of spherical trigonometry, and those of plane trigonometry, is maintained as far as possible, in order the better to imprint them upon the memory.

All the members of the special class attend me once a week, and during that hour they receive instruction in mechanics. The points dwelt upon are:—

In Statics.—Composition of concurrent forces—composition of parallel forces—principle of moments—centre of a system of parallel forces—mechanical powers—angle and laws of friction.

In Dynamics.—Motion, velocity, time—laws of motion—relation connecting the statical force, the quantity of matter, and the dynamical force—work—principle of constancy of work done by a machine without friction, with friction—constant force—relations connecting space, velocity, time, in rectilinear motion—gravity—motion on inclined planes—centrifugal force—pendulum—impact and collision of bodies—projectiles.

Professor Haughton's "Manual of Mechanics" is the text book used, and a large number of the exercises it contains are worked out during the course.

Special Class of Female Teachers.—With the members of the female special class the same course of lessons on arithmetic as with the general class is gone over a second time, with this difference, that they have to prepare the lesson, and are in turn called upon to teach it as to a class. The exercises they are required to work out are of a more advanced character than those given to the general class.

EDWARD BUTLER, A.M., T.C.D.
Professor and Superintendent of Central Model and Training Schools.

Professor Rintoul.

PROFESSOR RINTOUL.

Preliminary.—After examination of certificates and registration of the teachers who come up to the Central Training Establishment, I hear each read a passage in one of the lesson books, and examine each in grammar in presence of the others, who are appealed to when mistakes are made, so that the less advanced acquire a considerable knowledge of the subject during these examinations. The results are noted down in order to ascertain what progress has been made by each during the course. As a fair knowledge of grammar has always been considered essential to the obtaining of a respectable class, I intimate to those whom I find deficient in this branch to pay special attention to it during the course.

General Class, Male—Reading.—After these preliminary examinations and instructions I enter on the subject of reading, in which the teachers generally, the male teachers especially, are very deficient. I commence with the principles of pronunciation, exemplifying and classifying as simply as possible the various powers of the vowels, and pointing out those districts of the country in which these are sounded erroneously. I then proceed to intellectual reading as based on grammatical principles, and show that all who are acquainted with the rules of syntax may attain to this style of reading, and that all should aim at its acquisition. In connexion with this I explain and illustrate the contents of the Introduction to the Art of Reading and of the Literary Class Book. I take also a brief glance at the subject of rhetorical reading for the sake of the ten or twelve in each class who can appreciate or make a practical use of its principles, and who may be desirous of pursuing the subject when they return home. Passages in prose and poetry are read occasionally both by myself and by the students for the purpose of putting into practice what has been taught.

Grammar.—Simultaneously with the above I take up grammar, but without formally using a text-book, though the students are supplied with a copy of both the Board's Grammar and Sullivan's to assist them in their studies. I show by a few familiar lectures how this subject should be taught so as to remove its natural repulsiveness to beginners, and to make it as attractive as possible. Passages from the lesson books both in prose and poetry are parsed from time to time. These are sometimes prescribed beforehand to be prepared at study, and sometimes they are selected at the moment in the class-room. The former plan is, however, more generally adopted. There are also examinations in prefixes, affixes, and derivation of words.

Geography.—In geography attention is paid principally to the mathematical and physical branches, as embracing the general facts and leading principles of the science. The text-book used is "Sullivan's Geography Generalized," all the chapters of which are gone through with greater or less minuteness as time allows or occasion requires. I explain particularly the chapter on the "Method of teaching Geography," and consider the chapters on the physical geography of the great divisions of the world in the "Epitome of Geography." I then take up the introduction to astronomy in the "Geography Generalized," and make the students work the problems on the globes. Towards the end of the course there is an examination of the general geography, of the map of the world, and more particularly of the British Isles.

Elements of Logic.—I take up also the elements of logic as far as relates to categorical arguments, using as a text-book Archbishop Whately's "Lessons on Reasoning." This I consider useful to the teachers chiefly as a discipline of the mind, and as teaching them accuracy of thought and expression.

Composition.—A few lessons on composition are given—a skeleton outline from the first principles up to the construction of sentences—transposition of sentences, &c.

Principles and Practice of Teaching.—Principles and practice of teaching. I commence by explaining the different methods that have been proposed for teaching the alphabet, and the plan intended agreeably to the structure of the First Book—the method of teaching this book step by step, and the principal points to be attended to in each section. Various lessons are taught in the other reading books, sometimes by bringing up pupils from the model schools, and sometimes by proposing the questions to an imaginary class on the platform, the performance being subsequently criticised to some extent by the others. I consider these exercises very important; they are of a practical character, and show what should be done in the every-day business of the school; but the time required to practise them to a sufficient extent cannot be obtained under present arrangements

Written Exercises.—The teachers write three exercises for me during the course; one intended to test their composition, spelling, and penmanship; another consisting of questions taken from the subject-matter of the lesson books; and a third consisting of a few questions from the different subjects that have come under our review during the course.

General Class—Female.—The course for the female general class is similar to that pursued by the male class, except the "Lessons on Reasoning," but the ground gone over is more limited, as the females are not so far advanced as the men generally, but they are very superior in reading.

Special Class—Male.—The same subjects are pursued by the male special class as by the general class, but the instruction is more minute, and the ground traversed more extensive. More attention is paid to one subject than to another at different times according to the deficiencies of the members of the class. The "analysis of sentences," showing the connexion between one clause and another, a subject new to most of our teachers, is taught in this class more fully than can be done in the general class, from want of sufficient time. Much more time also is spent in exhibiting their teaching power and their facility in communicating the instruction which they have received to classes formed of themselves or of pupils brought up from the model schools. The special class writes the exercises given to the general class along with the latter.

Special Class—Female.—The same remarks apply with some slight modifications to the female special class.

Remarks.—Note—If it be considered that there are in reality six distinct classes going on with their work simultaneously (the general classes, male and female, being each conducted in two divisions which are united once a week for certain subjects), and that each attends me but twice a week during a session of barely five months, with the exception of the special classes, which remain longer, an impression will be formed, and justly so, that some of the subjects must be treated in a very cursory manner. But it must be borne in mind that the present arrangement is temporary, and that the duties which I am now discharging have hitherto been performed by two persons. I have not alluded to the hours spent in taking notes of the students when engaged in teaching classes in the model schools, which form the substance of incidental remarks now and then in the class-room. Much of my time also is occupied in examining and checking the weekly reports and accounts of the model schools, noting and writing letters for the office, examination of pupil-teachers and monitors to fill up vacancies as they occur, and in correcting all the exercises of the classes, which last must be done at home.

JOHN RINTOUL, A.M.,
Professor and Superintendent of Central Model Schools.

PROFESSOR O'SULLIVAN. Professor O'Sullivan.

The subjects assigned to me by Professor Butler are arithmetic and algebra.

In dealing with these subjects, I aim at accomplishing a two-fold object: the improvement of the teachers (1.) as scholars, and (2.) as instructors; because I find—session after session—that, of those sent up for training, there are very few whose scholarship, when they arrive in Marlborough-street, is either sufficiently extensive or sufficiently accurate.

On account of the great disparity which always exists between the young people in the training department, both as to acquired knowledge and as to natural capacity, I deliver a comparatively small number of formal lectures. A good deal of my time in the lecture-room is employed in this way: on coming to a "new lesson," I begin by pointing out the several parts into which the subject-matter naturally divides itself, as well as the sequence of those parts, giving, at the same time, with respect to the way in which the lesson should be taught, such general hints as I consider useful; I then call upon a number of the masters, or mistresses, as the case may be, to teach the lesson, one after another, to a class of children* brought for the purpose from one of the schools; I next invite the friendly criticism of the other teachers, previously to giving my own opinions; and I finish by teaching the lesson myself.

The teachers are all required to take notes of my lessons; to write out the lessons, in books supplied for the purpose, from the notes so taken, and to submit those books for inspection from time to time.

In the schools, when the masters and mistresses are in charge of classes, I observe and note the character of the teaching, to which, when necessary, I call attention, according as opportunities arise for my doing so.

30th March, 1869. D. O'SULLIVAN.

15. In arithmetic the syllabus seems to include all the usual branches—compound interest, involution, evolution, and logarithms (arithmetically considered) are taught to the male teachers only. Extent of course of Arithmetic and Algebra.

In algebra the syllabus includes the usual elements up to and including simple and quadratic equations, and simultaneous equations; all these are for the *general classes.*

SPECIAL CLASS.

16. The members of the male special class are taught continued fractions, the binomial theorem, the exponential theorem, logarithms, and the resolution of the higher equations (Horner's method).

The members of the female special class learn the transformations of which a proportion is susceptible, circulating decimals, compound interest, and (this session for the first time, merely as an experiment) as much algebra as will enable them to resolve simple equations.

17. The distribution of time for the pupils is returned as follows:— Distribution of Pupils' Time.

MALE TRAINING DEPARTMENT.

Course of Instruction.

The course of training for Male Teachers includes instruction in the Principles and Practice of Teaching, in the Organization and Management of Schools, and in those portions of the Rules and Regulations of the Commissioners which concern the teachers of National Schools.

I. Special instruction in the English department is given by Mr. RINTOUL, on the following subjects:—Grammar and Composition—Geography and the Elements of Astronomy—"Easy Lessons on Reasoning" or *the Elements of Logic*—the *Elements* of *Political Economy*, taking as the basis Archbishop Whately's "Easy Lessons on Money Matters" and the lessons in the National school books on the same subject; and touching only on those topics which are *plain, practical,* and *corrective* of *popular prejudices*—an *Outline* of *English Literature* and *General History.*

II. In the Science department, special instruction is given by Mr. BUTLER, assisted by Mr. O'SULLIVAN, on the following subjects:—Arithmetic and Algebra—Geometry—Mensuration—the Elements of Trigonometry

* The class occasionally consists of a number of the more backward teachers.

and Navigation—the most useful and important principles connected with Mechanics, Hydrostatics, Pneumatics, Optics, Heat, the Steam Engine, Electricity, Geology, Physiology, and Chemistry.

The teachers are constantly practised in class teaching, the classes being formed sometimes from among themselves, sometimes of children from the schools. They also receive instruction in Agriculture, in Singing, in Drawing, and in Land Surveying.

Daily Occupation of Male Teachers' Time in the Lecture Rooms and Model Schools.

GENERAL CLASS.

The General Class of Male Teachers is divided into two Sections. The First, or Senior Section, consists chiefly of Teachers already classed in the First Division of Third Class or above. The Second Section consists of those who do not as yet rank higher than Second Division of Third Class. The two Sections are occasionally united for common instruction.

Monday, Wednesday, Thursday, Friday.						Tuesday.	Special Class.

6 0	„	9 0	Study.
9 0	„	9 30	Supper and Relaxation.
9 30	„	10 0	Preparing for Bed.

The Teachers are under the superintendence of Mr. Ryan, assisted by Mr. Hanna.

On Saturdays all the Teachers are required to attend at Glasnevin, to receive instruction in the practice of Agriculture, Horticulture, and Land Surveying.

Opportunities are afforded to all the Teachers to receive Religious Instruction from their respective Pastors, and to attend their Places of Worship on Sundays.

* During the winter months the Teachers do not rise so early.

Female Training Department.

Course of Instruction.

The course of training for Female Teachers includes instruction in the Principles and Practice of Teaching, in the Organization and Management of Schools, in those portions of the Rules and Regulations of the Commissioners which concerns the Teachers of National Schools, in all kinds of Plain Needle-work, in Dress-making, and in Household Economy.

Special instruction in the English department is given by Mr. Rintoul, on Grammar and Composition—Geography and the Elements of Astronomy—the Outlines of English Literature and General History.

In the Science department, special instruction is given by Mr. Butler, assisted by Mr. O'Sullivan, on Arithmetic, and on such of the Lessons of a scientific character, contained in the Books of the Board, as may prove of use to Female Teachers in their Schools.

The Teachers are constantly practised in class-teaching, the classes being formed sometimes from among themselves, sometimes of children from the Schools. They also receive instruction in Singing, in Drawing, and on the Management of Poultry and of the Dairy. A limited number are taught the Harmonium.

Daily Occupation of Female Teachers in the Lecture Rooms and Model Schools.

GENERAL CLASS.

The General Class of Female Teachers is divided into two Sections. The First, or Senior Section, consists chiefly of Teachers already classed in the First Division of Third Class or above. The Second Section consists of those who do not as yet rank higher than Second Division of Third Class. Each Division is subdivided into two Sections (A. and B.) for convenience in performing the duties appointed for them in the Schools.

Monday, Wednesday, Thursday, Friday.						Tuesday.	Special Class.

7 0	„	7 30	Tea.
7 30	to	9 30	Study.
9 40	„	10 0	Separate Devotional Exercises.

The Teachers are under the superintendence of Miss Byrne.

On Saturdays *a portion* of the Class is engaged in various useful employments in Household matters—Cleansing, Washing, Ironing, &c., &c., in weekly succession—in repairs of Clothes, correspondence with Parents, &c., &c., exclusive of two hours for Exercise.

Opportunities are afforded to all the Teachers to receive religious Instruction from their respective Pastors, and to attend their Places of Worship on Sundays.

* During the winter months the Teachers do not rise so early.

18. In order to see to what extent the printed regulations of the Board are carried out, as the forms were very old ones, we thought it best to require some of the teachers in training to give their own account of the way in which they suppose they ought to be occupied.

19. We selected, on the dual system which prevails extensively in the arrangements of the Board, two teachers, a Roman Catholic and a Protestant.

MALE TEACHERS.—P. B.—FIRST DIVISION—GENERAL CLASS.

Sunday.—On Sunday morning at 7.45 the dormitory bell rings, and immediately I arise. Having dressed, I spend about 10 minutes at prayer, and then proceed to perform the usual ablutions and make my toilet, which duties take up nearly all the time till a quarter to 9 o'clock, when the second bell rings. At the ringing of this bell I go down stairs, and spend the time until 9½ in walking and reading religious works; at 9½ the bell rings for breakfast, at which time, I, of course, go to breakfast, and give over walking. Breakfast being over at 10 o'clock, I walk out through the town, and as mass can be heard at any particular half hour in Dublin, up to 12 o'clock, I am not exact about going immediately to church. I sometimes, if the morning is enticing, take a walk the whole length of the quay, and afterwards go into the nearest Catholic church at hand, where I generally hear two masses, which occupies about an hour and 15 minutes. It being now 12, sometimes 1 o'clock, and the whole time till 5 being at my disposal, I think for a few minutes where I might enjoy a walk likely to offer any traits of scenic beauty. I decide on some particular place, go there, and so spend my time till about 4 o'clock, then direct my course to the dining-hall at George's-street with a clear mind and a keen appetite, ready to do justice to the dinner there laid out at 5 o'clock precisely. Sometimes the Sunday is raining, and then I return to George's-street about 1 o'clock, read till 2½, then go out to evening prayers, return about 3½, and spend the time in various ways, such as talking, walking, reading, till 5 o'clock. The time from 5 to 6 is nearly all taken up by the dinner. From 6 to 7 the same as from 3½ to 5. From 7 o'clock to 8 the time is spent as follows. The bell is rung at 7 for religious instruction and prayer; the members of the Established Church, the Presbyterians, the Roman Catholics, each go to their respective and separate apartments, and there have religious instruction and prayer until 8 o'clock. Of how this hour is spent in the Presbyterian or Established Church department I know nothing; but it is occupied in the Roman Catholic department, the one to which I belong, in this way:—"The whole number present are divided into 4 or 5 different companies, and each company sit at a table. One person reads aloud (at each table) for the edification of the company, some religious book for 5 minutes or so, and then passes it to the next, who reads where he stopped for about the same length of time, then passes it to the next. In this way the time is profitably and agreeably passed till 7.45, the other quarter of the hour is spent in prayer, all kneeling down together. From 8 o'clock to 10 is spent in the same way as from 3½ to 5. At 10 o'clock the bell rings to denote that we are to proceed to our dormitories; here the day ends, and we enjoy soft sleep till Monday morning.

Monday.—The hour at which the morning bell now rings is 6½. From the 1st of April it will be 6 for all week-days. I say week-days to distinguish them from Sundays and holidays. As soon as the sound of the bell strikes my ear I tumble out of bed, and spend the time until the ringing of the second bell, in the same way as I spent the hour from 7.45 to 8.45 on Sunday morning. I go down stairs when the second bell rings, that is at 7.15, spend 15 minutes walking about, and after which I go to study. Study is each morning now from 7½ to 8½; but from the 1st of April it will be—that is the morniug study—from 7 to 8½. Our study both in the mornings and evenings is always presided over by Mr. Martin, George's-street. When describing the evening study I need not repeat that gentleman superintends. Study being over at 8½, breakfast takes up the time till 9. I go now to Marlborough-street to the schools, and Mr. Glover has us at vocal music till 10. This is the only day of the week Mr. Glover has us at this hour. From 10 till 10½ we are at religious instruction in the schools, from 10½ to 11½ attending a lecture on arithmetic delivered by Mr. D. O'Sullivan, 11½ to 12½ at a lecture on geometry or trigonometry, given by Professor Butler, 12½ to 1 relaxation; from 1 to 3 in the school (No. 1) teaching, and learning to teach, observing how things go on. It is not necessary to say how each hour is spent in the schools, as it is different every week, we being removed to a different class that we may observe all; from 3 to 4 drawing; 4 to 5 dinner; 5 to 5½ relaxation; half-past 5 to 9.45 study; then supper, and after till 10 o'clock preparing for the next day.

Tuesday.—Up to 9 o'clock the same as Monday, from 9¼ to 10, with Mr. Joyce learning school management. This is the same on every day save Saturday, from 10 to 12, religious instruction; 12 to 12½ relaxation; 12½ to 1, writing; and from 3 to 4, a lecture on agriculture; the rest of the day from 1 to 2, at mathematics, Mr. Butler; 2 to 3, lecture, Mr. Rintoul, the rest of the day same as Monday.

Wednesday.—Entirely the same as Monday; Thursday the same as Monday, except having agriculture from 3 to 4, instead of drawing. Friday entirely the same as Monday.

Saturday.—Up to 9 o'clock the same as every other day, at 9 go to Glasnevin, there from 10 to 11 o'clock; horticulture, Mr. Carroll, 11 to 12. Agriculture, Mr. Smith, and every second Saturday from 12½ to 2 surveying, Mr. M'Carthy. The time then till 5 o'clock relaxation, and at 5 dinner. The remainder of the day reading, writing letters, &c., &c.

This completes the week; every second week our lecture hours are changed, the first division being in the schools in the forenoon, and the second division at lectures in the forenoon.

MALE TEACHERS—J.R.—FIRST DIVISION—GENERAL CLASS.

Sunday.—First bell rings at ¼ to 8, and the second at ¼ to 9; then breakfast at 9½; from 10½ to 2 Sunday school and public worship; walk from 2 to 5. Dinner at 5 o'clock, and relaxation to 7, and from 7 to 8 religious instruction. Then relaxation to 9, and supper at 9. Relaxation from 9 to 10; then go up to the dormitories, and lights put out at 10½.

Monday.—First bell at 6½, second at 7¼; study from 7½ to 8½. Breakfast at 8½, and with Mr. Glover at singing from 9 to 10; 10 to 10½, religious instruction with children; from 10½ to 11½, with Mr. O'Sullivan; 11½ to 12½, with Mr. Butler; 12½ to 1, relaxation. Then from 1 to 3, in schools teaching for one hour, and observing for the other; 3 to 4, drawing with Mr. Smeethe; 4 to 5½, dinner and relaxation; 5½ to ¼ to 9, study in the schools; 9 to 10, supper and relaxation; 10 to 10½, in dormitories.

Tuesday.—First bell, 6½; second bell, 7¼; study from 7½ to 8½; breakfast and relaxation to 9¼; then with Mr. Joyce to 9.50; 10 to 11½, religious instruction under the superintendence of a clergyman; 11½ to 12, teaching children religious instruction; 12 to 12 50, relaxation; 12½ to 1, writing with Mr. Joyce in schools; 1 to 2, with Mr. Rintoul; 2 to 3, with Mr. Butler; 3 to 4, agriculture; 4 to 5½, dinner and relaxation; 5½ to ¼ to 9, study; 9 to 10, supper and relaxation; 10, go up to dormitories.

Wednesday.—First bell, 6½, dressing and devotion; second bell, 7¼; 7½ to 8½, study; 8½, breakfast; 9¼ to

9.50, with Mr. Joyce; 10 to 10½, religious instruction with pupils; 10½ to 11½, Mr. Rintoul; 11½ to 12½, Mr. Butler; 12½ to 1, singing, Mr. Glover; 1 to 1½, play; 1½ to 3, in schools; 3 to 4, drawing with Mr. Smeethe; 4 to 5½, dinner and relaxation; 5½ to ¼ to 9, study down in schools; 9 to 10, supper and relaxation; 10 go to the dormitories.

Thursday.—First bell, 6½; second, 7¼; 7½ to 8½, study; 8½ to 9.15, breakfast; 9.15 to 9.50, Mr. Joyce; 10 to 10½, religious instruction; 10½ to 11½, Mr. O'Sullivan; 11½ to 12½, Mr. Butler; 12½ to 1, singing with Mr. Glover; 1 to 1½, relaxation; 1½ to 3, in schools teaching and observing the organization, &c.; 3 to 4, agriculture; 4 to 5½, dinner and relaxation; 5½ to ¼ to 9, study; 9 to 10, supper—relaxation; 10, go to the dormitories.

Friday.—First bell 6½, second, 7¼; 7½ to 8½, study; 8½ to 9.15, breakfast and relaxation; 9.15 to 9.50, Mr. Joyce; 10 to 10½, religious instruction with pupils; 10½ to 11½, with Mr. Rintoul; 11½ to 12½, with Mr. O'Sullivan; 12½ to 1, singing with Mr. Glover; 1 to 1½, relaxation; 1½ to 3, in the schools teaching and observing; 3 to 4, drawing with Mr. Smeethe; 4 to 5½, dinner and relaxation; 5½ to ¼ to 9, study; 9 to 10, supper and relaxation; 10, go up to dormitories.

Saturday.—First bell, 6½, morning devotions and dressing; second bell, 7¼; 7½ to 8½, study; 8½ to 9, breakfast and relaxation. At 9 we got out to Glasnevin where we arrive about 10; 10 to 11, horticulture with Mr. Carroll; 11 to 12, agriculture with Mr. Smyth; 12 to 12½, relaxation; 12½ to 2, land surveying with Mr. M'Carthy; 2 to 5, walking; 5 to 9, dinner and voluntary study; 9 to 10, supper and relaxation; 10, go up to the dormitories, where the lights are always extinguished at 10½ precisely.

The first and second divisions change places every fortnight (*i.e.*) instead of the first division going to schools in the evening, and to lectures in the morning, they go to the schools in the forenoon, and to lectures in the afternoon. In a few days we will rise at the ringing of the first bell in the morning at 6 o'clock. Then from 6 to 6¾, dressing and morning devotions. Study will commence at 7, and end at 8½ o'clock.

Female Teachers, J. A.—Junior Division—General Class.

Every morning we are obliged to rise at 7 o'clock, and are allowed from that hour until a quarter to 8, to dress. A bell is then rung, and we go from our bed-rooms to the study for roll-call, after which we separate for prayers, each religion going to a different apartment. These are generally over by a quarter past 8 o'clock, when we are summoned by the sound of a bell to breakfast, which occupies us until a quarter to 9 o'clock, when we all proceed to the cloak-room to prepare for going to the school-room, where in a gallery, from 9 o'clock until 10, we receive instruction from Miss Byrne, generally on the method of teaching; the only exception is, that on every Friday morning we are arranged in classes round the school-room, to work arithmetic in the quickest manner possible.

On every day except Tuesday, we separate for religious instruction from 10 until half-past, but on Tuesday it lasts from 10 until 12 o'clock, when a clergyman of each denomination attends and instructs both teachers and children, for on the other days we have each to take a class.

We never have any change in these arrangements up to half-past 10 o'clock, from that hour until half-past 11, the first half of the division, of which I am a member, attends lectures, delivered either by Professor Butler, Rintoul, or O'Sullivan, while the second part of the division is employed in the school-rooms, either listening to or taking part in the teaching.

From half-past 11 o'clock until half-past 12, the first division go to drawing (taught by Mr. Young, assisted by Miss Harper), after which we all meet in the play-ground for a little exercise, and to receive any letters which Miss Byrne may have received for us, as this is the only spare time we have during the day for reading them. We are allowed to remain for half an hour in the play-ground.

At 1 o'clock the two parts of the class change, that is, the first half go to the school-room, where the Professors attend to mark for manner of teaching, &c., while the second half go to lectures from that time until 2 o'clock, when they go to drawing until 3 o'clock, at which hour both parts assemble in a gallery to be taught singing by Miss O'Leary for four days of the week, and on Friday Professor Glover takes up that hour in examining us on what Miss O'Leary has taught.

From 4 until half-past, we take a little exercise in the play-ground before going into the house, which from the time of leaving in the morning, we are not permitted to enter. About half-past we leave the play-ground, go to the house and prepare for dinner, which is usually over by 5 o'clock, after which we retire from the dining-halls to the studies, where we are allowed to amuse ourselves for half an hour; very often we employ that time in dancing. At half-past 5 o'clock the roll is called by Miss Shaw, and from that time until 7 o'clock, we are employed at needlework of various kinds. At 7 we are summoned to the dining-halls for tea, which is over by half-past, and then we return to the studies for *study*, either in the preparation of lessons which may have been given us by the Professors, or else reading for our own improvement.

Study is at an end at half-past 9 o'clock, when we again separate for prayers, after which we retire to our rooms, and at half-past 10 the lights are put out, for all are supposed to be in bed at that time.

On Sunday morning we are allowed to make our own time of rising, but must be down at breakfast at 9 o'clock. As soon as that is over we are obliged to attend our respective places of worship, and after that can employ our time as we please until half-past 4, at which hour we dine, and all must be in. After dinner the members of each religion assemble, and remain together for the remainder of the evening, reading, singing, or any other religious devotions they may please to engage in. We all meet for tea at 7 o'clock, but separate immediately after, and retire to rest at the same hour as on week days.

I omitted mentioning that on Saturday we are allowed to go for a walk from 12½ o'clock until 4½ p.m., and that on this evening, instead of studying, we settle all little household matters, and receive what we denominate a "*National shilling*" for pocket-money, from Miss Byrne.

Female Teachers, N. S.—Junior Division—General Class.

We are obliged to be down in the study at a quarter to 8, at which time Miss Byrne calls the roll. From this until breakfast time, which is at 8, we devote to prayers. After breakfast we proceed to the gallery, where Miss Byrne instructs us in the methods of teaching. From 10 to half-past we have religious instruction, except on Tuesdays, when it lasts till 12. From half-past 10 to half-past 12 I was (last week) teaching in the schools, and in the work-room alternately. From 1 to 2 at lecture, and from 2 to 3 at drawing, except on Tuesdays—we do not attend drawing on these days. We are engaged from 3 till 4 every evening at singing, except on Tuesdays, on which days Miss Byrne gives us an exercise to write at that time. On Friday mornings we arrange ourselves in classes to work sums as quickly as possible, and in the evenings we are allowed the time (usually employed in studying) for writing letters to our friends. On Saturdays we write from Mr. Foster's printed headlines. On Wednesdays I get a lesson on music from Miss Herbert, from half-past 12 till 1, and am allowed a half hour's practice every evening from half-past 5 to 6. Dinner being over at 5, we are engaged at sewing till 7, when we have tea, after which we are allowed study till half-past 9. From this until 10, we

devote to prayers. We are not required to be down to breakfast on Sunday mornings till 9. All the Roman Catholics attend Marlborough-street chapel at 12, with Miss Byrne, and in the evenings we employ our time in reading pious works.

SPECIAL CLASS.—MALE TEACHER, S. H.—FIRST DIVISION.

Sunday.—We rise at half-past 8 o'clock. Three-quarters of an hour is allowed for the toilet, private devotions, &c. At a quarter past 9 we proceed to George's-street for breakfast. After breakfast all the Presbyterians go to Rutland-square Church, where we are taught by Mr. Gibson from half-past 10 to 12. Public worship then commences in the church, at which we attend.

After service we have liberty to walk about till 5, the dinner hour.

From dinner time to 7 o'clock, relaxation—the different denominations keeping separate. From 7 to 8, separate religious instruction. From 8 to 9, relaxation. Supper at 9, after which we return to Marlborough-street, and retire immediately to our respective dormitories.

Monday.—Rise at half-past 6. The same time allowed for toilet, &c., as before. From a quarter past 7 to half-past 8 with Mr. Savage, at Latin and Greek. Breakfast from half-past 8 to 9. 9 to 10, vocal music with Mr. Glover. 10 to half-past, separate religious instruction with the children of the school. Half-past 10 to half-past 11, teaching in the large school. Half-past 11 to half-past 12, algebra with Mr. O'Sullivan. Half-past 12 to 1, recreation. 1 to 2, teaching. 2 to 3, classics with Mr. Savage. 3 to 4, drawing with Mr. Smith. Dinner at 4. After dinner, up to 5½ o'clock is allowed for relaxation, or for conducting any private correspondence. 5½ to 9, study, with fifteen minutes' intermission from 7 to 7¼.

Supper at 9. From 9 to 10, relaxation, after which we retire to our dormitories.

Tuesday.—Up to 9 o'clock same as Monday. 9 to 10, navigation with Mr. M'Carthy. 10 to 12, religious instruction under a clergyman. 12 to 12½, recreation. 12½ to 1, teaching. 1 to 2, classics. 2 to 3, teaching. 3 to 4, drawing. After 4, same as Monday.

Wednesday.—Up to 10½ o'clock, same as Monday, but navigation instead of music.

10½ to 11½, mechanics with Mr. Butler.

11½ to 12½, reading, grammar, geography, &c., with Mr. Rintoul. After 12½, same as Monday.

Thursday.—Up to 3 o'clock, same as Monday (9 to 10, navigation).

3 to 4, vocal music.

After 4, same as Monday.

Friday.—Up to 11½, same as Monday (9 to 10, navigation).

11½ to 12½, reading, grammar, &c.

12½ to 5½, same as Monday.

5½ to 6, vocal music, after which we proceed with our studies as usual.

Saturday.—Same time for rising, for toilet, &c., as on Monday. 7¼ to 8¼, study. 8¼ to 10, breakfast and relaxation, or voluntary study. 10 to 10½, religious instruction as on Monday. 10½ to 1, examination on the week's business by Mr. Savage, the teacher of classics. From 1 to 5 we have liberty to walk about through the city. Dinner at 5. From 5 to 9 we may conduct any correspondence we have, or have voluntary study. After 9, same as Monday.

SPECIAL CLASS.—MALE TEACHER, D. H.—SECOND DIVISION.

Sunday.—I rise at 8.30, A.M. Three-quarters of an hour is allowed to prepare toilet, devotional exercises, &c. At 9.15, A.M., we proceed to George's-street for breakfast. After breakfast, which is over about 10 o'clock, the Roman Catholics go to public worship. After service we are at liberty to walk about, or return to George's-street, till 5 o'clock (dinner hour). After dinner we take relaxation till 7 o'clock. From 7 to 8, P.M., we have separate religious instruction. From 8 to 9, P.M., we take relaxation again. At 9 o'clock, P.M., we take supper. After supper we leave George's-street and proceed to Marlborough-street, and each goes immediately to his respective dormitory.

Monday.—I rise at 6.30, A.M. The same time allowed for toilet, &c., as before. From 7.15 to 8.30 with Mr. Savage at Latin and Greek. Breakfast from 8.30 to 9, A.M. From 9 to 10, A.M., with Mr. Glover at vocal music.

From 10 to 10.30 at religious instruction with the pupils in the school. From 10.30 to 11.30, teaching in No. 1 school. From 11.30 to 12.30, at algebra with Mr. O'Sullivan.

From 12.30 to 1 o'clock I take recreation. From 1 to 2, teaching in No. 1 school. From 2 to 3, at drawing with Mr. Smith. From 3 to 4, P.M., with Mr. Savage at Latin and Greek. Dinner at 4, P.M. After dinner we leave George's-street and proceed to No. 1 school. We are allowed till 5.30 to take recreation or for private correspondence, &c. From 5.30 to 8.45, P.M., we are studying the lessons for the next day. At 8.45 we proceed to George's-street to take supper. After supper we proceed to Marlborough-street, and take relaxation till 10, when we go to our dormitories. From 10 to 10.30, P.M., private devotion, &c. At 10.30 I retire to bed.

Tuesday.—The same business as on Monday up to 9 o'clock. From 9 to 10, A.M., at navigation with Mr. M'Carthy. At 10, A.M., I go to Divine Worship till 10.30. From 10.30 to 12 o'clock, teaching catechism in No. 1 school. From 12 to 12.30, recreation. From 12.30 to 1, P.M., teaching. 1 to 2, classics. From 2 to 3, P.M., teaching. 3 to 4, P.M., drawing. 4 to 8.45, P.M., same as Monday.

Wednesday.—Up to 9 o'clock, same as Monday. From 9 to 10, navigation. 10.30 to 11.30, A.M., mechanics with Professor Butler. 11.30 to 12.30, geography at present with Mr. Rintoul. After 12.30 same as Monday.

Thursday.—The same business as on Wednesday up to 10.30, A.M. From 10.30 to 11.30 with Professor Butler (trigonometry). From 11.30, A.M., to 10.30, P.M., same as on Monday.

Friday.—The same business as on Wednesday, up to 10.30, A.M. 11.30 to 12.30 with Professor Rintoul at geography. 12.30 to 5.30, P.M., same as Thursday. 5.30 to 6 o'clock, vocal music. From 6 o'clock till 10.30, as on Thursday.

Saturday.—Rise same time as Friday. From 7.15 to 8.20, study the lessons for Mr. Savage and the Professors. From 8.30 to 9, breakfast. 9 to 10, study in No. 1 school. From 10 to 10.30, religious instruction. From 10.30 to 1, P.M., classics. 1 to 5, at liberty to walk about. 5, dinner. After dinner to 9, voluntary study. From 9 to 10.30, as on other days.

SPECIAL CLASS—FEMALE TEACHER, J. C.

Sunday.—We breakfasted at 9, A.M., before which the Presbyterians assemble at their pleasure for prayer conducted by Miss Shaw. After breakfast the members of each denomination are expected to attend their respective places of worship. The Presbyterians are conducted to their place of worship by Miss Shaw. From the conclusion of the service until 4½, P.M., we can employ our time as we think fit, but are obliged to be in for dinner at the last-mentioned hour. After dinner, which is over at 5 o'clock, we retire to the different apartments appointed to the several denominations, where we remain until 9½, P.M., and are engaged in reading, singing, or other devotional exercises (at 7 o'clock we all meet for tea in the dining halls, but separate immediately afterwards).

At 9½, P.M., we retire to our bed-rooms, and at 10½, P.M., all lights are extinguished, we being supposed to be in bed at that hour.

Monday.—We are obliged to rise at 7, A.M., and are allowed three-quarters of an hour to dress. During that time also, each of the occupants of a room in turn sweep and dust the apartment, but all must appear in the studies for roll-call at ten minutes to 8 o'clock. After roll-call we separate for religious services. At a quarter past 8 we assemble for breakfast, after which we repair to the cloak-room to equip ourselves for the day, and take a little exercise in the play-ground until 9¼, A.M., when we enter the school-room and teach until 10 o'clock. At 10 o'clock the teachers and pupils of the different denominations repair to their appointed apartments for religious instruction, which lasts for half an hour. At half-past 10 we again enter the school-room and teach until 11½, A.M., when we attend the lecture-room to receive a lecture from Professor Rintoul, which lasts an hour. From 12½, o'clock until 1 we take exercise in the play-ground. From 1 o'clock until 2, part teach in the school-room, while the remainder receive instruction in drawing. From 2, P.M., until 3 those who taught in the school-room while those who were drawing give instruction in the scientific method of dress-making. At 3 o'clock we assemble in the gallery-room to receive a lesson in singing for an hour. From 4 to 4½ we take exercise in the play-ground. From 4½ until 5, P.M., we dine. From 5 to 7, P.M., we occupy ourselves with needlework. At 7, P.M., we assemble in the dining halls for tea, after which we study until 9½, P.M., when each denomination separates for religious exercises. At 11 o'clock we retire to our bed-rooms.

Tuesday.—On Tuesdays religious instruction is given from 10 until 12; the clergyman of each denomination (except the Roman Catholic) imparts instruction to both teachers and pupils. We take exercise from 12 to 12½ o'clock, and then teach until 3 o'clock. We draw from 3 to 4 o'clock. The rest of the business is the same as that of Monday.

Wednesday.—We receive a lecture from Professor O'Sullivan.

Thursday.—We receive a lesson on parsing from Miss Byrne instead of a lecture from the professors.

Friday.—We receive a lecture from Professor Butler, and during our study hours—from 7, 9½—we are allowed to write letters, with the exception of the special who is in charge of the laundry.

Saturday.—We teach from 10½ to 12½ o'clock, and from 12½ to 4½ o'clock we are permitted to go into the city or country for a walk. At 4½ we dine, and during the rest of the evening we repair our clothes, &c.

Each member of the special class receives half an hour's instruction on the harmonium from Miss Herbert in the week, and during the study hours is allowed to practice for forty minutes each evening. The business of Wednesday, Thursday, and Friday is the same as that of Monday, with the exceptions already mentioned.

Special Class—Female Teacher.

Sunday.—We are expected, except detained by illness, to be down to breakfast at 9, A.M., on Sunday mornings. The Roman Catholics have permission to go out on Sunday mornings to their place of worship any time before 9 o'clock, on condition that they are in in time for breakfast. After breakfast, which is generally over at 9.30, A.M., the members of each religion are allowed to go to their own place of worship; the Roman Catholics under the supervision of Miss Byrne. After divine service we are allowed to remain out until half-past 4; we dine at half-past 4, which usually occupies half an hour. The members of the different religions then go to different rooms for the purpose of reading any religious books they choose, provided it belong to their own religion. At 7 the tea-bell rings and we all go in together, and again separate after tea as before dinner for the same purpose. From tea until 10 o'clock, the religious instruction of the Roman Catholics is conducted by Miss Byrne. At 10 we go to our bed-rooms.

Monday.—On Monday we are all obliged to be out of the dormitories and assembled in the study for roll-call. After roll-call, the members of each religion separate for the purposes of attending the public prayers which are said every morning in the week, except Sunday. Each member of the class is obliged to attend the prayers of her own religion.

At a quarter past 8 the bell rings for breakfast, which occupies the time until a quarter to 9; from a quarter to 9 until a quarter past 9 is for recreation in the play-ground; from a quarter past 9 until 10 we teach a morning class in the school-room; from 10 until half-past 10 we are at religious instruction; from half-past 10 until half-past 11 we teach secular instruction in the school-room; from half-past 11 until half-past 12 we attend a lecture given by Mr. Rintoul; from 12.30 until 1 o'clock we have recreation in the play-ground; from 1 until 2 we teach in the school-room; and from 2 until 3 we are taught drawing by Mr. Younge; from 3 until 4 we are taught singing by Miss O'Leary. All the special class are not employed in teaching in the school from 1 until 2; some are employed in teaching drafting to the general class; those go drawing from 1 until 2, and teach the drafting from 2 until 3; and some are employed in the cottage kitchen in teaching the general class, a few at a time, the art of cooking. From 4 until half-past we are allowed recreation in the play-ground; at half-past 4 the bell rings for dinner and we all assemble in the dining halls; we are allowed half an hour to eat our dinner. At 5 o'clock we go to the study and are employed in needle-work of all kinds, both fancy and ornamental. At 7, P.M., the tea-bell rings and we are allowed the same time to it as we had for dinner; from half-past 7 until ten minutes past 8 we practise on the harmoniums provided for our uses; from ten minutes past 8 until half-past 9 we are employed in studying; at half-past 9 a bell rings which is the token for us to separate, as in the morning, for our night prayers. We are all obliged to be in bed at half-past 10, when a servant comes and puts out the light.

Tuesday.—The employment of Tuesday differs slightly from that of Monday, owing to a greater length of time being devoted to religious instruction. On this day the religious instruction commences at 10 o'clock and does not terminate till 12 o'clock. On Tuesdays we do not get a lecture, nor a singing lesson. The afternoon, from 4 until half-past 9, is occupied in the same way as the previous one. On Wednesday, Thursday, and Friday we are employed in the same way as Monday, except on Thursday we get no lecture from any of the professors, but receive instead a lecture from Miss Byrne. On Friday evenings we are allowed to write our letters from tea until half past 9. The forenoon of Saturday is occupied in the same way as that of the other days of the week, but from half-past 12 until half-past 4 we are allowed out into the city or the country. On Saturday night we each receive a shilling from Miss Byrne, provided we have no fines to pay for carelessness or neglect of duty. Each member of the special class receives a music lesson from Miss Herbert, I get mine on Saturday from 12 o'clock until 12.30.

20. We attended lectures on grammar, arithmetic, and geography (physical).

Lectures. *Mr. Rintoul.*

21. The lecture on grammar to (18) students in the special class did not seem to us to show that these students had made any considerable progress. Exercises in parsing and analysis of sentences were given which were done with various degrees of intelligence, and criticised in a somewhat superficial manner. We felt at a loss to know why the students in the special class before us had been selected, as we did not perceive any very striking evidence of superior skill or aptitude; and we naturally

supposed that the students called upon to answer when strangers were present, would not be those whom the lecturer considered the least proficient.

22. The exercise was only examination of the students, no general rules being given or deduced from the examples as they passed in review; and the capacity shown or expected did not seem to us much more than what is exhibited by pupil-teachers of the fourth or fifth year in England.

23. Mr. Rintoul's method was also catechetical in physical geography. The students (32) had been desired to prepare a certain portion of the book used on this subject (Dr. Sullivan's), and they were examined on that portion. This as part of a larger system is excellent; but the text-book having been studied, there is need of an oral exposition of the principles, in which the information in the book is supplemented out of the lecturer's own stock, and in which the subject is vivified and freshened, enlarged and deepened, and the interest and attention of the pupils fixed on the main points.

24. The mere oral examination is insufficient, though good as far as it goes. There should be repeated *written* examination; the papers should be well criticised, and the exercises in composition, in grammar, and physical geography are admirably suited for grappling with incompetence and self-sufficiency.

25. We saw some exercises in composition which had been examined; but what was further needed was conference with each student upon the work done, and a rigid and close scrutiny of the errors and mistakes in company with the perpetrators thereof.

26. It is essential that a teacher of teachers should be able to hold his own, and speak with an authority that cannot be gainsayed. We were not surprised to hear that the teachers in training were sometimes of opinion that they knew better than those who were appointed to train them, but we were surprised that such an impression was allowed to remain, and had prevented the return of exercises, with faults marked, to their owners.

Mr. Butler. 27. A lecture given by Mr. Butler on arithmetic to the junior division of the female students was mostly on principles of the subject, and seemed fluent, clear, and useful.

28. A great deal of lecture time is devoted, we were assured, to noticing and indicating how children should be taught.

Mr. O'Sullivan. 29. Mr. O'Sullivan took the senior division of the men (thirty-six). The subject was Multiplication and the Method of Teaching it. He called down three men, who sat in front of the others and were catechised; but the questions did not turn on points of great practical importance, and the subject seemed somewhat dry and unprofitable. Mr. O'Sullivan told us afterwards that there were special private reasons which affected him on this day, and made him feel unequal to his work.

TEACHING. 30. The attendance of the teachers in the model schools we also examined, going round with Mr. Rintoul when he "noted the teaching." Each student in training has a small class standing around. They were reading, and answering questions on the subject of their reading lesson. The number of students engaged at the same time was much too great to allow of anything but the most cursory and superficial oversight of each. In fact this part of the scheme seems to be merely kept up as a form, and the Professors agreed that the opinion of the head teacher of the model school was taken on the teaching power of individual students.

STAFF. 31. Up to 1867 there were two Professors and two Professors' Assistants; now three Professors only are appointed. Such a number of Professors, when the number of persons in training is considered, their various degrees of proficiency, and the number of subjects they are supposed to study, is quite insufficient.

Official reports. 32. The information given by the Board on the training department in their annual report is of the most miserable description. The same paragraph, expressing general satisfaction and giving no details, appears in the successive blue books.

33. Report, 1867, § 35, 36, 37.—§ 35 gives the number of students trained, and no account whatever of the result of their examination after residence to show whether they had benefited by their training. § 36 is about navigation schools. § 37 is the general panegyric, giving no information at all. It is repeated *totidem verbis* in the following places:—Report, 1865, X., § 29; Report, 1864, X., § 32; Report, 1863, X., § 34; Report, 1862, X., § 35; Report, 1861, X., § 36; 1860, X., § 36; 1859, IX., § 37. In 1860 the training establishment was enlarged. The Report gives, however, no means of finding out the number of officials.

34. In Report, 1859, IX., § 35, 37, corresponds to the first and last of the sections already quoted—Report 1859, § 38, and Report 1860, § 37.

"We subjoin two tabular returns: No. I., showing to what class the teachers belonged at the commencement of their course of training, and at its termination; No. II., showing the classification of the National teachers trained during the year."

35. This account of the training work done has not appeared since. Although classification by examination at the end of the period of training, if the examination be held by the professors engaged in the training work, is not worth much as a test of the progress made by the pupils; yet it gave some notion of what the normal establishment thought of its own work, and its discontinuance leads to the suspicion that it was not considered very trustworthy by the Commissioners.

36. It has, however, been furnished at the request of the Royal Commission, and will be found on page 118 of the Returns made by the Commissioners of Education. A glance at that table shows that the teachers in training have been advanced in classification much more rapidly, and in larger numbers in late years than in former years. To this, as well as to the facility afforded to externs, may perhaps be attributed the result that trained teachers do not gain the entire approbation of skilled Inspectors. (See Mr. *Sheehy's Evidence*, No. 26292, and *Report*, 1867, p. 265.)

37. In p. 118 of the returns of the National Board, will be found the Board's account of the present staff of the department—name, age, religious denomination, rank and duties, date of appointment, and general salary of each member.

Statistics. 38. In 1867, 66 men attended the first session, and 87 attended the second session. Of the men, 1 was recalled by the manager of his school, 10 left from illness, 5 of their own accord, 1 was dismissed, and two died. So that 134 were trained, or an average of 67 in each session. Of 149 women, 1 was recalled, 4 left from illness, 4 of their own accord, and 1 was dismissed; so that 139 were trained, or an average of 70 in each session.

39. There were then 70 women and 67 men teachers in training in each session, or 137 individuals.

40. To instruct them it took 4 professors, 3 head teachers, 3 teachers of music and singing, 1 to teach drawing, 2 to teach dress-making and needlework, 1 to teach navigation, 2, agriculture, 1 classics.

41. This seems a fair proportion, but it is probable that Dr. Sullivan could not do much if his health had already broken down; at any rate, during 1868, and up to the present time, the effective staff of professors has been only three.

42. All these teachers are paid under different heads, and it would be impossible from the data supplied to separate the expense of the training department from the expense of the model schools.

43. The Board returns, however, tell us—p. 123—that the cost of training in 1867 was £7,806 16*s.* 5*d.*, and this we suppose to be exclusive of the cost of the model schools, which is returned at £3,772 8*s.* 7*d.* for the same year, 1867.

44. If we take the former sum as the cost of training, exclusive of model school, it gives us the average annual cost to the Board for training per head, £57 yearly, *i.e.*, to say each student who stays *one session* costs the Board about £28 10*s.* Cost.

45. This seems a high charge. The annual average cost of a man in training in the English training schools in 1867 was £57 0*s.* 10*d.*, and for a woman, £33 17*s.* 8*d.*; and where training is carried for both masters and mistresses, £43 11*s.* 3*d.* per head.

46. If we compare the Marlborough-street Training Establishment with the Colleges where the larger number are trained in England (and it is evident that there ought not to be any comparison instituted between Marlborough-street and some small College where the teaching and domestic staff are excessive in proportion to the numbers trained), it appears that the Marlborough-street Training Establishment is unduly expensive.

47. The Wesleyan Training Institution in Westminster contains 127 inmates, male and female, and the average cost per head is £50 19*s.* 10*d.*

48. We think there is room for economical arrangement, which need not interfere at all with the due comforts, or efficient instruction of the teachers in training. General remarks.

49. Fewer subjects should be taken up, and the pupils in training should be more frequently examined. No classification should be made on the final examination, but advanced classification should depend on efficient school-keeping, and success in education of children.

50. They should attend at the model schools in smaller numbers, their teaching of classes should be more closely watched and tested, they should write short themes on school management, organization, class-teaching, discipline—which should be publicly criticised without any shrinking or tenderness on the part of the professor or head teacher.

51. Finally, the class-rooms or lecture halls should be cleaner and more cheerful—their aspect is depressing and repulsive; a good library and museum of educational appliances, as well as collections of objects of natural history and natural philosophy should be maintained, and the use of the library should be encouraged and promoted; less meagre fare for the mind than the "Books of the Board" should be put before students. This perpetual feeding on husks, stunts and dwarfs the minds of these people. Having no taste for reading, stimulated by good, wholesome and entertaining literature, they are sure to prefer the exciting trash of cheap newspapers and periodicals, and look to them as their chief resource.

52. The "public examination" in this and other model schools is unreal, and ought not to be continued. There is a pretence of unpreparedness; sometimes this is detected by the public, as it frequently would be by those who are acquainted with schools. Flattering the public by the appearance of appeal to their judgment, and assuming that chance listeners are competent to criticize the answers is unworthy of a public department. If a recitation of exercises, which have obtained praise, and a performance of vocal music were accompanied by a declaration of the results of a careful written examination, this would be more satisfactory. A few prizes of real value given afterwards by the Resident Commissioner, would fill up the outline of such a public "examination" as a sensible man might attend without feeling that he was being made a fool of. The examiners in no case should be the teachers of the classes—a teacher examining his own class, when the results are to be made public, is, in fact, sitting in judgment on his own exertions, and the result is what might be expected.

53. The money spent on premiums to the pupils of model schools, who are not in want of any pecuniary assistance, might be more justly and more fruitfully employed in rewarding the *poor* teachers in training (not the privileged monitors and pupil-teachers from model schools, who have already had so much advantage) for proficiency and self-improvement, while in the Marlborough-street training institution.

54. If this training institution is to be preserved for its present purpose of calling up teachers from the country to be "improved" and made more competent, the time of training should be longer. To spend twenty weeks in incessant occupations, wandering from one subject to another, and from one room to another, is hardly the most promising method of changing an inefficient teacher into a competent one. The teaching staff should be completed; it should be set free from troublesome correspondence and official returns. Too much of the time and attention of the Professors is taken up in these things. The attendance of a Professor to enter the children who apply to be admitted at the Model School, for example, which we watched for some time, seems to us a needless requirement.

55. While we recognise with pleasure the skill and genial influence of Mr. Edward Butler, by seniority and standing, the head of the Training Department, we should be glad to have been able to record that the system he has to carry out was thorough and vigorous, that the residence was of sufficient duration, and that the humanizing effect of collegiate life was brought to bear upon the pupils more directly and closely.

56. No system, however carefully devised, which ignores the power to be derived in forming the character from unity of religious conviction, can be effectual.

57. In Marlborough-street, at every turn, religious differences are kept before the pupils. It is no happy family which is divided into these sects, continually separating from each other for religious duties, who cannot even say "Our Father" in common.

58. These young people are not any longer children, fresh and light-hearted; they have learned to

feel already the bitterness and difficulty which religious differences create. Would it not be far better that the training of teachers should be denominational, even if no other part of the system should be altered? This question, so urgently brought before the Commission, and already answered in the affirmative by the Executive Government in Mr. Chichester Fortescue's letter—has been constantly before us. And we wish to record our decided opinion of the impolicy of the present arrangements, while we are glad to do full justice to the scrupulous endeavours of those who are entrusted with the administration to make them as effectual as they can, under conditions essentially wrong in principle. We refer to a few remarks we have made further on about the Kildare-place Training Institution (pp. 827, 828), where, under great difficulties, and on a very limited scale, a much more efficient and satisfactory system is in operation.

59. Further we consider it essential that any plans which may be adopted for the training of teachers shall offer equal advantages to all. This equality, as we conceive, will not result from the establishment of denominational training schools of a preparatory character, while the central institution in Marlborough-street is still maintained upon its present basis to complete the training of the comparatively few, and virtually to exclude the majority of teachers.

60. Improvements in the training of teachers have been from time to time proposed to the Board. We refer here to two which seem to us justly admissible as evidence that the active officers of the Board have been anxious to widen and improve the present system.

61. 1. Mr. *Keenan* in his report to the Board for 1858 had made the following remarks on the inadequacy of the existing Training Department.

Training.—The only branch of the National system which is really inadequate to the wants of the country, is that recognized as the Training Department, and of all the agencies in operation in the system, this department is, perhaps, by far the most vital and important.

Of the 1,025 teachers in my circuit only 60 per cent. of the masters, and 49·3 per cent. of the mistresses have been trained. A large number of unprepared, and, in many instances, poorly qualified persons are therefore in charge of schools. For the supply of trained teachers we are dependent upon one normal establishment, which is plainly incommensurate to the wants of between five and six thousand schools. It may be said that the model schools are so many training schools, producing every year large numbers of skilful masters and mistresses, but the fact is, that we profess to prepare only monitors and pupil-teachers in these institutions. In some of the model schools the monitors and pupil-teachers attain to a high order of skill and education, but training in the strict and comprehensive sense of the term is not attempted. I am of opinion, however, that it ought. I think that each of our model schools ought to be a training school, an institution in which a person could receive the philosophical and professional training requisite to make him an accomplished teacher. The minor object of training pupil-teachers and monitors, I would hand over entirely, as is done in England and other countries, to the masters and mistresses of good ordinary National schools. Nor would I confine the training of teachers to institutions belonging exclusively to the State, and wholly governed or managed by the Commissioners.

Perhaps I may be permitted to advance a reason or two for entertaining this view. In the first place, the model schools are anything but equally distributed over the face of the country; and experience shows that their influence does not travel much beyond the limits of the districts in which they are situated. For instance, there are at present, in my circuit of ten districts, *thirty-nine* teachers who had been pupil-teachers or monitors in model schools, and thirty-one of them are employed in the only districts, Trim and Bailieboro' in which there are model schools, whilst the remote districts of Westport, Swineford, and Roscommon, having 231 schools in them, are without a single ex-pupil-teacher or monitor of a model school. It is plain that besides the inequality of their distribution, the number of existing model schools is wholly inadequate to the wants of the country. I would, therefore, leave it to private enterprise to extend the number of such institutions, to establish them wherever philanthropy would suggest or local circumstances show, that they might be required. By opening up in this manner the model school system, the field of their development would be widened, and their usefulness and efficiency materially promoted. The literature of education would also, I conceive, derive incalculable advantage from the adoption of this plan. Public officials, especially in Ireland, and under such a system as ours, are scarcely at liberty to enter upon the speculative and debateable questions involved in the discussion of the science of education. The managers of non-vested model schools would suffer from no such embarrassments, and, from the competition which local enterprizes would doubtlessly inspire, an extensive and valuable literature—reports, essays, and school manuals might naturally be expected to emanate.

The details of the practical working of the scheme could be easily regulated.

In the district model schools there would be very little occasion for a change of arrangements. Additional dormitories, &c., would have to be provided, so as to accommodate eighteen or twenty students in each school. The only increase to the existing staff of officers which it would be necessary to make would be the appointment in each school of a training master, who should also be lecturer on the principal branches of science and literature, and be head of the whole institution. The scholarships or places should, except in rare cases, be open as prizes to monitors who would have completed their period of service in ordinary National schools. The course of training should extend to three years, and for each year there should be a clearly defined amount of business to be performed. The district model schools alone would, I estimate, produce about thirty fully trained teachers annually.

In respect to the constitution of the non-vested model schools, I would suggest a very simple code of regulations. As in the case of an ordinary National school, a non-vested model school should, during school hours, be open to children of all persuasions, and proselytism in any form should be rendered impossible; but the boarding and lodging of the students, being a private undertaking, might be conducted on whatever principle and discipline, moral and religious, the promoters of the school might choose to adopt. To obtain for a school the rank of a "non-vested model school" it should be only necessary to show that its resources would be equal to the task of training up teachers; that its attendance, mechanical appliances, and organization would be ample enough and complete enough to afford the students opportunities of practising the art of teaching; that its conductors would have the requisite scholarship and skill to instruct the students; and that suitable accommodation should exist for the lodging and boarding of the inmates. The minimum number of students to constitute a non-vested model school might be fixed at eighteen or twenty, and should the number fall below the minimum no recognition should be made of the establishment beyond that of any ordinary National school. An examination of the students should be held once a year, and a grant of some fixed sum, by way of reimbursement to the superiors of the schools, should be made for each student whose answering would be satisfactory. The grant for each student might correspond in amount to the sum

expended on a student in one of our own model schools, which would be about £20. For very superior merit I would, however, add to the grant a few pounds available to the student himself. In concluding my observations on this important suggestion, I beg to urge its adoption by the Commissioners on the double ground of creating a stimulus to thought and action in the working out of the practical details of education, and of supplying a great want, which, owing to our inadequate means of training teachers, would otherwise long remain an imperfection in the National system.

62. EXTRACT from the MINUTES of the BOARD of NATIONAL EDUCATION, dated 2nd December, 1859.

Present:—Right Hon. M. Brady, Lord Chancellor; Marquess of Kildare; Sir T. N. Redington, K.C.B.; Robert Andrews, Esq.; James Gibson, Esq.; Right Hon. J. Hatchell; Right Hon. A. Macdonnell.

The Secretary lays before the Commissioners Mr. Keenan's report, proposed to be included in the Appendix to the Twenty-fifth Report, and calls attention to the passage at pages 183-4, designated "training."

Ordered—That the passage read be expunged, and that Mr. Thom be authorized to cancel the sheet in which it is contained, it appearing to the Commissioners that the plan proposed by Mr. Keenan for the establishment of *non-vested* model schools involves an organic change in the system.

The Commissioners also decline to sanction Mr. Keenan's further proposal that the present district model schools should be altered in their constitution, so as to serve as training schools for National teachers in addition to the other objects they were designed to carry out.

63. Professor *Butler* also presented to the Commissioners the following memorandum:—

Object of the Training Institution.

The Central Normal Establishment have been provided for—

(*a*) Training teachers; and—

(*b*) Educating persons who are intended to have charge of schools.

The distinction between these two classes should be more clearly defined in the training course than has been done hitherto, both as to business and time in training.

For this purpose the students in training should be divided into—

I. A teachers' class;

II. A candidates' class.

The former to consist of actual teachers of schools, principals or assistants, the latter of pupil-teachers and paid monitors, who have completed their course in a satisfactory manner, and of other young persons of suitable age and qualifications, who purpose becoming teachers of schools.

Two courses of five months for teachers.

For the *teachers' class*, a five months' course, as at present, should be provided. Considering the difficulties teachers experience in obtaining proper substitutes, the family discomforts and pecuniary losses, many of them have to submit to during the short period they now remain in the training establishment, and the detriment their schools suffer during their absence, to prolong for this class the course of training would be to exclude many from ever becoming practically acquainted with the improved methods of teaching, with the best plans of school organization and management, and thereby retard for many years the progress of a very large number of schools.

One course of ten months for candidates.

For the *candidates' class*, on the other hand, the course may properly and most beneficially be extended over a period of ten months. The objections which can be urged against a long course of training in the case of actual teachers of schools, will not apply to the young persons included in this class, who will be free from the responsibilities of a school or cares of a family, and to whom a year's residence under instruction will be unattended with any drawback.

Numbers in training.

With the accommodation at present available in the training establishments, the numbers of males and females in each class might be as follow:—

	Males.		Females.	
Teachers' class—(five months,)	70		50	
Candidates' class—(ten months.)				
Pupil-teachers and paid monitors, ...	25	40	15	25
Others, ...	15		10	

There would thus be 240 teachers (140 males, and 100 females) trained each year, besides 65 candidates (40 males and 25 females.)

Selection of persons for training.

The teachers, pupil-teachers, and paid monitors should be recommended as heretofore by the Head and District Inspectors. The other places in the candidates' class (15 males and 10 females) should be filled by competitive examination, among young persons recommended by the Inspectors or local patrons.

Instruction given in the Training Institution.

In a letter addressed to the professors on the 23rd January, 1847, the Commissioners direct that the professors "take into mature consideration what alterations it may be necessary to adopt in order to abridge and simplify the course of instruction for teachers in training, in order that their attention may be *principally* devoted to those branches which are *most essential* to an efficient performance of the duties devolving upon them as teachers of the poorer classes."

The main guiding principle by which the amount and kind of instruction to be imparted in the training department should be determined, is here most distinctly defined; and the subjects most essential to teachers of primary schools are easily singled out.

Mode of instruction.

The mode in which this instruction is to be communicated must depend upon the attainments of the persons under training, and their capability of receiving and retaining the instruction which is given to them.

Of those who come to the Central Normal Institution, it can be said that they have not acquired those habits of thought, or that amount of mental discipline, which are necessary for the retention and digestion of the instruction delivered to them by lectures. For most of them the food should be broken up and given out bit by bit; every step and detail should be gone over several times by each; the teaching in a word must be of an individual, personal, tutorial character, and not professional. Grinders, and not professors, are required for the due performance of this work.

Another point which must be kept in view is that the attainments of the persons in training are so widely different in degree, that it is all but impossible to adapt the lecture to the capacities of the hearers. If it is of so elementary a character as to be within the grasp of the less advanced, much valuable time is lost by the more forward pupils; if, on the other hand, it aims at instructing the latter, the former are discouraged, lose all hope of success, and every interest in the business.

These considerations point to a subdivision of the classes in training into small sections, as the great desideratum at present required. If it were introduced, persons of nearly equal attainments would be grouped together, and worked on step by step from the precise stage they have reached; the progress of each group would be steady and continuous; no one would be unnecessarily delayed by the shortcomings of his neighbour; and all would acquire a better grounded and more thorough mastery of the subject.

Not that lectures should be wholly superseded, they will always be found of great use in breaking new ground, or in summing up and grouping the results at the end of the journey; but the interval should be filled up, and the actual inculcation and practical acquisition of the matter to be learned should be effected by individual teaching, by *grinding*, as it is called.

As an additional reason for this individual teaching in preference to the professional, it may be urged that most of the branches of primary importance to teachers of schools for the poorer classes cannot be thoroughly taught by lecture; for instance, spelling, English grammar, and composition, geography, arithmetic, and mensuration, &c. Most of those admitted to the training establishment have no doubt acquired a fair knowledge of these branches, but it is rather a school-boy's knowledge, than the accurate, well grounded, practical knowledge which will render their teaching effective. In one point, however, the deficiency is very great, namely, in English composition, and in this respect no permanent improvement can be expected, except by frequent written exercises, carefully corrected and re-written.

Staff required. To carry out in the Central Normal Institution the views put forth in this paper, there would be required—

Two heads, or superintendents, or professors (one Protestant, and one Catholic), and seven first-class teachers (four male and three females.)

The superintendents, or heads would have the general superintendence of the training establishments and central model schools, and the direction and control of the instruction given to the persons in training. They would give the requisite lectures, appoint the work to be done in the several sections by the *training teachers* under them, watch over and take part in the instruction of the different classes.

The head teachers of the central model schools would continue, as heretofore, to give lessons on school organization and management, and to have the care and supervision of the students in training, while engaged in the schools in the practice of teaching. Two hours on each Monday, Wednesday, Thursday, and Friday, are now spent by each teacher in this way. The practice of teaching and the arrangements introduced in this course are such that every teacher is present in the model schools, and takes part in the business carried on there, eight days in each month, instead of eight hours a month, as in previous courses.

The instruction in agriculture, drawing, music, household economy, and needlework, would continue as at present.

Should the Board at any future time deem it desirable to have externs, or to increase the accommodation for interns, all that would be required in the literary department would be an additional first-class teacher for every twenty-five persons added to the number specified in the third paragraph.

No reference is made in this paper to the special class. I would propose that it cease to exist on its present footing, and be merged with the candidates' class, from which a larger supply of equally well qualified teachers could be forthcoming.

(Signed), EDWARD BUTLER, Training Department.

14th December, 1868.

CENTRAL MODEL SCHOOLS.

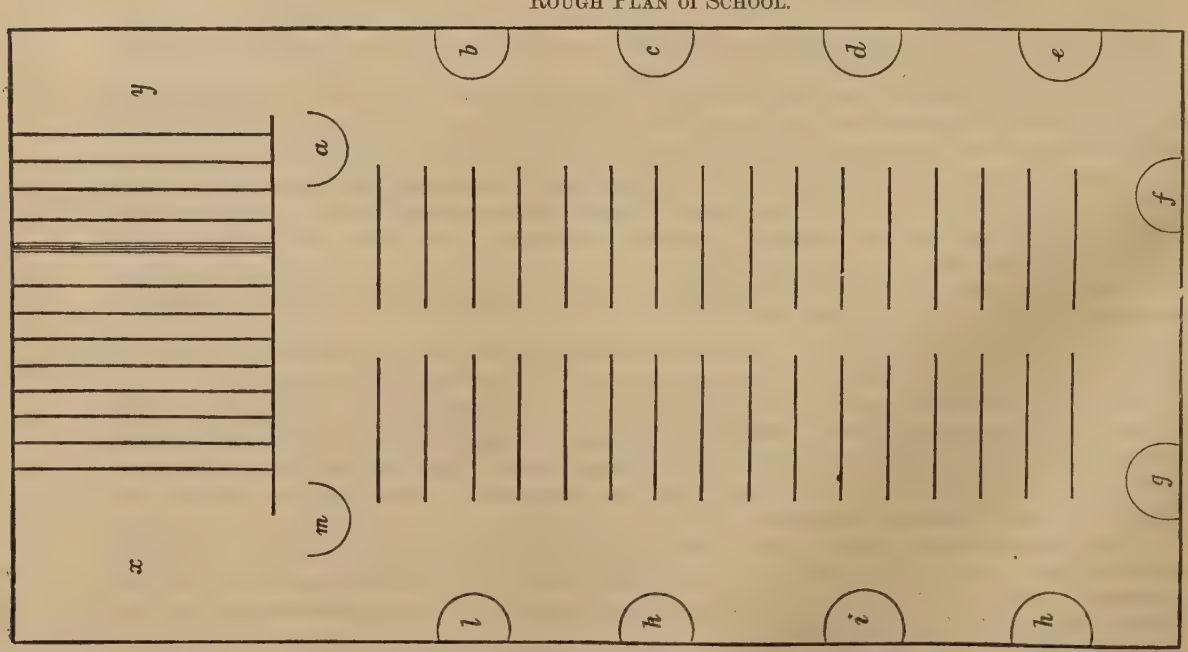
Boys' school. 64. BOYS.—The following account of the school and its complex organization was furnished to us by Mr. Joyce, the zealous and efficient head master:—

ORGANIZATION.

Organization. The system of organization is quadripartite or four-part. The pupils are divided into four great sections, which are always kept equal, or nearly so, in numbers.*

The following will give a general idea of their positions and movements during the day, which will be better understood by reference to the plan of the school.

ROUGH PLAN of SCHOOL.



The pupils of two sections (half the entire school) are at draft lessons round the room at the same time, but at the other lessons the same two sections separate, one going to the desks, and the other to the galleries: at

* There is another half section (one-ninth of school) not included here; it consists of one of the highest classes, the pupils of which are taught in a detached room, and take no part in the general movements of the school.

the next desk-and-gallery lesson for the same two sections, their positions are reversed, the section that sat last time in desks now taking the galleries, and *vice versâ*.

At every lesson during the day, therefore, the pupils are disposed in the following manner:—half are standing round the room, one-fourth are sitting in desks, and one-fourth in galleries; and at the movement after each lesson, the two sections that have been on the floor separate into desks and galleries respectively; while the two that have been in desks and galleries now both stand round the room to the draft circles. The following scheme will render this clearer. As there are altogether eight lessons, each draft, as well as each child, receives during the entire day, two lessons in desks, two in galleries, and four at the draft circles.

	1st Section.	2nd Section.	3rd Section.	4th Section.
1st Lesson, . .	Floor.		Gallery.	Desks.
2nd ,, . .	Gallery.	Desk.	Floor.	
3rd ,, . .	F.		D.	G.
4th ,, . .	D.	G.	F.	
	Play.			
5th ,, . .	F.		G.	D.
6th ,, . .	G.	D.	F.	
7th ,, . .	F.		D.	G.
8th ,, . .	D.	G.	F.	

SUBDIVISION of SCHOOL TEACHING STAFF. Staff.

The preceding is so far a general description of the four-part system; but in its application to this school, there are several peculiarities which it will be necessary to notice.

Each of the four sections is subdivided into two equal divisions: that is, eight divisions in the whole school (not including fifth class pupils who form a *ninth* division), each with from 45 to 50 pupils on roll, or with about 35 or 40 actually present, who are formed into three drafts of about twelve each.

1st Section,	1st	Division consists of	9th, 8th, and 7th	Drafts of	Second Class.
	2nd	do.	6th, 5th, and 4th	do.	
2nd Section,	3rd	do.	3rd, 2nd, and 1st	do.	
	4th	do.	9th, 8th, and 7th	do.	Third Class.
3rd Section,	5th	do.	6th, 5th, and 4th	do.	
	6th	do.	3rd, 2nd, and 1st	do.	
4th Section,	7th	do.	6th, 5th, and 4th	do.	Fourth Class
	8th	do.	3rd, 2nd, and 1st	do.	
	9th	do.	3rd, 2nd, and 1st	do.	Fifth Class.

Over each division there is placed a teacher assisted by two monitors,* or by one pupil teacher and one monitor. The head teacher of each division has the entire teaching and management of it, subject only to the head master; he has no further duty or responsibility that might in any degree divert his attention from the teaching of his own three drafts, so that he is entirely accountable for their proficiency. His two assistant monitors are also for the time being attached permanently to his division; each has a draft of his own, for the proficiency of which he is to some extent accountable to his own teacher; and it is part of his duty also to arrange the judgment books, assist in the correction of the written exercises, and write out the weekly lesson sheets of his draft. Each head teacher of a division has his own set of rolls. He calls them every day, and enters the attendance in one common report book.

This arrangement of breaking up the school into nine divisions is attended with this one great advantage, that it perfectly concentrates the attention of each teacher, and renders him completely responsible for the state of his own division. For in the first place, he has only about forty children to attend to; secondly, they are nearly all on the same level of proficiency in all the subjects; and thirdly, they are always together immediately under his eye, viz., either standing at the three draft circles, sitting in one place at the desks, or receiving a collective lesson from him in the gallery.

As there are altogether (including fifth class) nine divisions, nine teachers are required, while there are only four assistant masters in the school. To meet this difficulty, when the present system of organization was adopted, five of the best pupil teachers were selected and placed over the lower divisions, while the four assistants took charge of the four higher. This was in the beginning, tried only as an experiment, for it was felt that there might be some risk in placing five-ninths of the school under the management of pupil-teachers. Any doubts that might have been entertained in the beginning, however, were soon set at rest; these young persons have proved themselves quite equal to the responsibility imposed on them; they work their divisions with zeal and spirit, and the experiment has been attended with complete success.

The different teachers are of course accountable for the state of their divisions to the head master, who is constantly teaching and examining the drafts, and directing the whole machinery; so that any remissness or error of judgment is sure to be at once detected and remedied.

* With one exception.

Positions.

Positions of Divisions and Drafts.

At the first lesson—half-past ten to eleven—the divisions are placed in the following way:—the four lower divisions forming two sections, or half the whole school, stand at the draft circles: viz., the first or lowest division at the three circles, *a*, *b*, *c*; the second at *d*, *e*, *f*; the third at *g*, *h*, *i*; and the fourth at *k*, *l*, *m*. The lowest draft of all stands at *a*, and the drafts ascend in regular succession to the highest at *m*. The two next divisions are in the two galleries, viz., the fifth or lower division in the left hand gallery, *x*, and the sixth in the other *y*. The remaining two divisions (the two halves of fourth class) sit in the desks, the seventh or lower division, occupying those between *n* and *o*, and the eighth those from *p* to *q*. The pupils of a division are always sent to the same gallery at their gallery lessons, to the same desks at their desk lessons, and to the same draft circles at their floor lessons. Moreover the higher of the two divisions that sit at the desks together, always occupy the left hand side, and the lower the right; and of the two divisions that go to the galleries, the higher always takes the gallery at *y*, and the lower that at *x*.

The school changes at eleven. During the next half hour (eleven to half-past eleven), the divisions occupy positions exactly corresponding with those from half-past ten to eleven; the four higher divisions standing round the room at the same twelve circles that the four lower divisions have just left, while the latter go to occupy the desks and galleries, in exactly the same way that they were occupied during the past half hour by the four higher divisions. It will not be necessary to point out the positions of the different divisions during the remaining two half hours up to play-time at half-past twelve, as they will be readily understood by an inspection of the little scheme at page 817.

So far as the movements and positions of the classes are concerned, the latter half of the day (from one to three) is an exact counterpart of the first half (from half-past ten to half-past twelve); all the divisions begin at one o'clock, in the same way as they began at half-past ten, and go through the very same movements afterwards.

Lessons.

Length of Lessons.

All the lessons during the entire day are half an hour long, with the exception of those on drawing. There is a departure from the general arrangements now described, every time that a class receives a lesson in this subject, but it is so trifling, as to interfere only very slightly with the ordinary positions and movements. The drawing lessons are all one hour in length. Besides this the subject is taught in large detached class-rooms; so that the children who are under instruction in this branch, are entirely withdrawn from the school-room for one hour. By bearing this in mind, it will be easy, from an inspection of the time table, to form an idea of the extent to which drawing interferes with the general school arrangements.

The result of the half-hourly changes is that each individual child is sitting and standing alternately during the entire day, half an hour at a time; and at each change of place there is also a change of subject. Half hour lessons are found to be sufficiently long, if both teachers and pupils work unremittingly during the whole interval, as they do here; by the time they are beginning to have enough of the subject, and to feel perhaps the first symptoms of fatigue, they are relieved by a march of a minute or two, and by a total change of place, position, and subject.

Pupil-teachers and monitors.

Pupil-teachers and Monitors.

There are in this school twelve pupil-teachers and twelve monitors. The pupil-teachers are of three classes: four in first class, who are paid each £20 a year; four in second, £16; and four in third, £12. There are also three classes of monitors at £8, £6, and £4, respectively. The pupil-teachers and monitors are not boarded or lodged in the establishment; they all live at home like monitors in ordinary schools.

The monitors are chosen from the pupils of the fifth class by competitive examination. When a vacancy occurs, the head teacher nominates a number of boys to compete, generally not more than six, selected from all the schools, who are examined by the professors, and the best answerer is appointed. None are allowed to stand who do not exhibit an aptitude for teaching and commanding.

All below an outgoing monitor, are advanced in grade in the order of seniority, and the last appointed steps into the lowest place. There may be exceptions, however; should any of them have given sufficient cause of complaint, he is deprived of his promotion, and the next below him steps beyond him; this has been acted upon, on several occasions, and it is a very effectual check on their conduct. An advance in grade does not involve an increase of salary, except in the case of a monitor who has been at the head of his class, and whom, consequently, one step of promotion places in the class next above.

The pupil-teachers are appointed by competitive examination from among the monitors of all the schools, and they are subjected to the very same rules regarding seniority of promotion. It is only the best of the monitors who are nominated to stand for pupil-teacherships; no monitor who has not given satisfaction, or who has not shown a decided turn for teaching, is allowed to compete.

Seven of the pupil-teachers are selected for special posts. The best of all is appointed to teach all the monitors and the remaining five pupil-teachers; five are at the head of divisions, and one is employed to assist the head master in clerking and other routine duties, which in this school are very heavy. The remaining seventeen pupil-teachers and monitors are distributed among the nine divisions of the school, two to each of eight, and one to the remaining division.

Pupil-teachers and monitors combine the functions of both pupils and teachers. In the latter capacity, each teaches his own draft whenever, during the day, the teacher of the division requires his services. There are other duties, also, in which they have to assist the head teachers of their respective divisions; such as correcting written exercises, arranging and distributing copy-books and pens, making up the judgment books, writing the weekly lesson tablets, &c.

The post of teacher to this class is intrusted to one of the pupil-teachers, who is selected from among those who have had charge of divisions, and who has distinguished himself for his superior scholarship and skill in teaching. All the pupil-teachers and monitors, except those in charge of divisions—seventeen in all—are placed under his instruction, and his whole time is devoted to them. There is no special time set apart for the individual monitors to receive instruction, but they come to him whenever, during the day, they are not employed in teaching, or in any other of the duties connected with their divisions. They are on an average nearly half the school time under instruction (including drawing), and the rest of their time at their respective duties.

The seven pupil-teachers who are selected for special posts, are taught in the morning between 9¼ and 10 o'clock by the assistant masters, who take the task in turn, each having a subject of his own. During the day also, while their classes are taught at the draft circles, they are allowed to study for some time, each, however, sitting near his own division to prevent irregularity, and to see that his drafts are properly attended to.

The head master keeps a constant eye on the instruction of the monitors, and examines them in the various subjects from time to time to see that they are progressing satisfactorily in their studies, and that their teacher

is discharging his duty properly. He also frequently takes the whole of the pupil-teachers and monitors together to give them some practical instruction relating to methods of teaching or their other school duties, to correct faults in conduct or method, or to lecture them on breaches of duty. From 1 to 1½ o'clock on Thursdays (when the pupils of the whole school are at a collective lesson in singing) they are all taken to one of the class-rooms and examined by one of the assistant masters on a portion of the "Handbook of School Management."

All the pupil-teachers and monitors should be in attendance every morning not later than 9¼ o'clock. There is an attendance book, in which they sign their names as they arrive, and the time of arrival; at 9¼ a line is drawn, and all whose names come after this are late. In order to ensure punctuality, the late comers are fined one penny for every five minutes after 9¼ o'clock.

Promotion.

Promotion.

There is a programme for the special use of this school (attached), in which are set forth the subjects or portions of subjects that the pupils of each division are learning, and in which they are, of course, expected to attain a respectable proficiency.

All promotions from one division to another are made by examinations, which are to some extent competitive. The teacher of the lower division, having selected from his best draft as many boys as he thinks sufficiently prepared, sends them to the teacher of the next higher division for examination. The latter examines them carefully in the prescribed subjects, dwelling especially on reading, arithmetic, and spelling; he marks down the individual answers of each candidate, and in the end he selects those who have made a sufficient number of successful answers, and rejects the others. The teacher of the lower division should, as a rule, be present, to see that the questions are not too difficult, and that in all respects his boys get fair play. Examinations for promotions take place only on Friday or Saturday.

This arrangement regarding promotions is one very effectual agency in maintaining the proficiency of the classes. No teacher will allow a boy into his own division from a lower, unless he find him satisfactorily prepared, and that for two sufficient reasons—first, he will be expected to advance all such boys through his own three drafts, and prepare them for the next higher division in a reasonable time; and secondly, he is at all times obliged to maintain the proficiency of his own three drafts, up to the standard of the programme.

There is another view of the matter. The places of all out-going pupils are supplied by others who are admitted on the first Monday of every month. But, with few exceptions, all new pupils have to be placed in second class; comparatively few are found fit for third, and scarcely one in fifty for fourth or fifth. The waste from the two highest classes therefore must be altogether supplied by promotions, and the same is in a great measure the case with third.

All the divisions are expected to be equal or nearly so. If a teacher were to neglect his duty, his own division, even without any examination from the head master, would soon show it. For while he fails to prepare a sufficient number of boys for removal from his division, the usual number are removed into it, and as a consequence the division swells beyond its natural size. Whenever this occurs, and it does occur occasionally, it becomes the business of the head master to direct the attention of the teacher to the inconvenient size of his division, and to the necessity of preparing some of his head boys for removal. This consideration alone is found to be a very severe stimulus to the teachers, and would of itself render vigilance and hard work a necessity.

The pupils are even still more under its influence. Advancement from draft to draft, and especially from one division to another, is always an object of ambition with them, and they commonly work hard to attain it; the conditions to be fulfilled which are strictly enforced, require the co-operation of the pupil, but they are nothing more than what might be expected from any boy of average ability. Such in general is their anxiety to succeed at the examination, that you may sometimes see a boy, who from any cause has failed to pass, return to his class crying bitterly at the disappointment.

One or more removals are commonly made from each of the drafts on every Saturday, and in each draft there are usually several—say four or five—expectants, twenty or twenty-five per cent. of all the pupils of the school, are therefore every week in expectation of being promoted, and of course exerting themselves more or less to fulfil the necessary conditions.

It will be seen from this how great an influence is exerted by these promotions in the school in general, in securing from the pupils regular attendance, good conduct, and attention to lessons. A pupil must literally fight his way at every step of his upward progress through the school; and the boy who has in this manner reached the highest class has received a very important training in self-exertion and perseverance.

Arrangements for Visits of Teachers in Training.

Visits of teachers in training.

The teachers in training are in two divisions, junior and senior; and the professors have made the following arrangements for their visits to the schools: senior division in schools in the forenoon (10½ to 12½) and at lectures in the afternoon (after one o'clock), junior division at lectures in the forenoon, and in schools in the afternoon (one to three o'clock). This continues for a fortnight, at the end of which they change places, the senior division going to lectures in the forenoon, and to the schools in the afternoon, and the junior division the reverse. They change in this manner fortnight about, during the whole course of training. The visiting days are Monday, Wednesday, Thursday, and Friday.

The head master distributes them to the schools in the following way. All the boys' schools naturally divided themselves into thirteen divisions, as follows:—

See Programme of No. 1 School attached.	1st Division	=	1st Division of		
	2nd do.	=	2nd do.		
	3rd do.	=	3rd do.		
	4th do.	=	4th do.		
	5th do.	=	5th do.		No. 1 School.
	6th do.	=	6th do.		
	7th do.	=	7th do.		
	8th do.	=	8th do.		
	9th do.	=	9th do.		
	10th do.	=	whole of No. 2 School.		
	11th do.	=	whole of No. 3 School.		
	12th do.	=	whole of No. 4 School.		
	13th do.	=	whole of No. 5 School.		

To correspond with these, each division of the teachers is divided into thirteen sections of about three teachers to each in the average. At the beginning of the training course, the teachers of each section attach themselves to each division of the schools (section 1 to division 1, &c.), where they remain for one week (*i.e.* the four days above mentioned); at the beginning of each succeeding week they shift a place upwards, and in

this way they go through the entire school in thirteen weeks. They then begin the same round, remaining half a week with each division, which brings them to the end of the course.

While in the schools they are occupied (1) teaching or otherwise assisting in the school business, (2) observing methods of teaching, (3) writing notes. They are employed in teaching or correcting exercises about half the time, *i.e.* one hour each day. The pupils' exercises could be better corrected by the regular staff of the school as they have a better knowledge of the children; nevertheless the teachers in training are made to assist in order to train them how to do such work, and to show them that children can and ought to bring paper exercises every day.

While they are teaching, the head master so far as his other avocations permit, goes among them, correcting what is wrong and showing what is right. One of the professors generally attends between two and three o'clock also, to hear them teach, and to ascertain how far they carry out the instructions they receive at lecture.

In the beginning of the course they are furnished with note books in which they write down their observations in the schools and classes. The head teacher directs and encourages them to give their opinions freely in all they see; to write down everything worthy of observation, whether for censure or approval; and at the end of the first round of visits, he takes their books, reads carefully through their notes, and before they leave returns each to the owner. These notes enable the head teacher to see how far they have observed the working of the schools; and assist him in forming an estimate of the different writers.

P. W. JOYCE.

Time table.

65. TIME TABLE of CENTRAL MALE MODEL (No. 1) NATIONAL SCHOOL.

GENERAL OR COMBINED ORDINARY INSTRUCTION.

From of to of

General or Combined Ordinary Instruction begins at 10½ o'clock, and closes at 3 o'clock on the following days:—Monday, Wednesday, Thursday, and Friday. Tuesday, begins at 12½, and ends at 3. Saturday, begins at 10½, and ends at 12½.

Examination of boys.

66. We examined the whole school (No. 1) in the same manner as we had done in the other model schools, on the 5th and 8th March.

The summary of the result is as follows:—

The whole number of pupils examined was 305—of this number 255 passed in reading, 243 in writing, and 186 in arithmetic.

171 were above twelve years of age—and there were 94 in Books V. and IV.

67. Detail of Examination in Boys' School, and Age of Pupils.

—	Age.									Total number examined.	Failures.					Passed both in Grammar and Geography.
	In 19th year and over.	18th.	17th.	16th.	15th.	14th.	13th.	12th.	In 11th and under.		In Reading.	Writing.	Arithmetic.	Grammar.	Geography.

Middle, . .				20					17	37	4	11	20	–	–	–
Lower, . .				15					25	40	13	8	20	–	–	–
Book II. . .				ages	not	taken.				97	23	26	30	–	–	–

There were more boys in Book II.; but those who had only recently entered the school were not examined.

68. It will be seen that the results are much the same as in other model schools; the age of the youths is however very high; there are young men of neglected education who are received and placed high in the school perhaps out of deference to their more manly proportions. We believe, too, that young men who are candidates for civil service appointments sometimes apply to be prepared for their examination; they receive attention after school hours, and are specially looked after.

69. The school is useful and well-conducted, and considering the size of the room, and frequent changes, the discipline is good. It was not possible in so large an examination conducted under pressure of time to keep a very strict watch so as to preclude copying and consultation, but Mr. Joyce took all the precaution he could, by the aid of his numerous staff, to secure a fair result.

Girls' school.

70. Girls.—Miss Byrne, a person of superior attainment and genial manner, gave us every assistance in our examination of the school.

She furnished us with the following account of it:—

The school is divided into four divisions, each consisting of about 100 pupils (on rolls), arranged in the following manner :—

First division—First Book and the first section of Second Book :	10	drafts.
Second division—Advanced Second Book :	8	,,
Third Division—Third Book :	8	,,
Fourth division—Fourth and Fifth Books :	8	,,

Each division is in charge of an assistant teacher, who has under her three special-class teachers, two pupil-teachers, and two monitors. The assistant in charge of first division, however, has three special-class teachers, three pupil-teachers, and three monitors.

Each assistant is held responsible for the progress of every child in her division. She must examine the pupils in each draft frequently, and make promotions from draft to draft, as well as into the division next above hers.

The assistant receiving such promoted pupils must reject them if they be not up in the subjects of the programme.

The standard subjects for all up to Third Book are : reading, spelling, writing, arithmetic, and needlework : grammar and geography are taught, but they are not standard subjects until the children reach Third Book. The assistant is never to be absent from her division ; but the special-class, pupil-teachers, and monitors leave at intervals during the day, and are succeeded by the teachers of the general class in training, that the latter may be afforded the practice of teaching.

The special-class, pupil-teachers, and monitors, when disengaged from teaching, receive instruction, so that they are alternately teaching and being taught.

When in charge of classes, the teachers are carefully observed and their faults noted, and at the first convenient opportunity attention is drawn to these faults.

The regular daily lessons for each child are—home lessons, a gallery lesson, reading and explanation, arithmetic, and writing. The lessons requiring most mental exertion are, as a rule, taught in the early part of the day.

During the week, the first and second divisions receive one hour's instruction in singing, one hour's in drawing, and three hours' in needlework ; the third and fourth divisions are instructed in singing for one hour, in drawing for an hour and a half, and in needlework and cutting-out for two hours and a half. The school business commences at 9.15, A.M., each day, and closes at 3 o'clock, P.M.

A. Byrne.

5th March, 1869.

71. This is the result of the Examination of the School:—

Examination of girls' school.

In Book I. there were 43 children who were examined collectively. Except 5 or 6 new girls they read, in Book I., fairly. A few of them could write "fox" in small letters; only 2 could write HORSE in large letters. In age they were mostly between 6 and 9; but one was 16.

In the other parts of the school we examined individually 261 girls, of whom 159 were above the age of 12. Of the whole number 209 passed in reading; 183 in writing; 151 in arithmetic. There were 65 above Book III.

72. DETAIL of EXAMINATION and AGE.

	Age.									Total number examined.	Failures.					Passed in Grammar and Geography.
	In 19th year and over.	18th.	17th.	16th.	15th.	14th.	13th.	12th.	In 11th and under.		In Reading.	Writing.	Arithmetic.	Grammar.	Geography.	
Book V.	1	2	1	4	7	–	3	–	–	18	1	6	9	0	8	10

Junior,				3				33		36	12	11	9			

73. The school called the Infants' School is in fact a common school, conducted independently of the boys' and girls' schools. The children enter as they please and remain as long as they like. The examination was far from good. Infants' school.

Seventy-seven children were examined individually, all of whom except 3 were above 7 years old.

Forty-six passed in reading; 29 in writing; 28 in arithmetic. Fifteen failed in all three subjects. Twenty-nine failed in two subjects out of 3; and only 12 passed in all three subjects.

All the rest of the children were in Book I. and alphabet class. This was on the 8th March, 1869, when 308 children were present; 178 boys and 130 girls.

BRIEF NOTICES of OTHER SCHOOLS EXAMINED IN DUBLIN.

DUBLIN, KING'S INNS-STREET CONVENT NATIONAL SCHOOL—SISTERS OF CHARITY.—22nd June, 1868.

74. This school was visited at different times by members of the Royal Commission. It is taught by two nuns and a large staff of assistants and monitors. Convent schools.

I examined all the girls present to-day in the most advanced room. They read the Third, Fourth (in two divisions), and Fifth Books of the Board. I heard 37 read Third; 81 Fourth; and 23 Fifth Books. Those in Fifth Book are chiefly monitresses. I consider these books generally unsuitable in subjects and monstrously hard in language for girls. In spite of this drawback the reading was good. All wrote from dictation. In the Third Book class I gave them word by word a short and easy sentence, which they had been allowed to read. This exercise was not well done. The junior division of Fourth Book class was likewise weak in spelling and writing; the upper division far more satisfactory; and the fifth class wrote from dictation on paper well. The arithmetic of the third class was worthless. I tried them only in simple addition, and the numeration of many and the work of others was faulty. In the lower fourth many failed to work a sum in the simplest multiplication (365×7) without help. The senior fourth succeeded better with easy sums in compound rules, and the fifth worked practice, though many had not acquired a good method.

	Examined.	Failed in Reading.	Writing.	Arithmetic.
Third class,	37	3	12	25
Junior Fourth,	41	5	7	7
Senior Fourth,	40	1	1	0
Fifth,	23	2	1	5

75. But the girls seemed habitually to consult each others' slates, and in desks so crowded no effort to check copying would have availed. This was the greatest defect which I observed. In other respects the discipline is admirable; and the cheerful docility of the children beyond praise. General order, condition of premises, cleanliness of children, and full attendance upon a Monday morning when my visit could not have been expected, were highly satisfactory.

DUBLIN, BAGGOT-STREET CONVENT NATIONAL SCHOOL—SISTERS OF MERCY.—23rd June, 1868.

76. My first visit to this large institution, with which I was generally pleased. Attendance excellent, and order good throughout. Three of the rooms are spacious; but two of the class-rooms, occupied by little boys, seem open to objection. Both are small; one has a tile floor, and the other a steep gallery. The play-ground insufficient. Here, as in King's Inns-street school, the marked feature of the institution consists in the amazing number of monitresses employed in teaching the classes. The attendance of these monitresses is credited to the school as so many children. A baby of a few months, held in a little girl's arms, had also been registered as a pupil.

I visited the house proposed as a training institution and found the accommodation wholly inadequate for the purpose. No ground for recreation; miserable refectory; poor lecture-room.

In the school of 238 girls examined; 81 children, *i.e.*, 34 per cent., were above third class, 29 per cent. were above 12 years of age; and the per-centages of passes in reading, writing, and arithmetic, were 83, 73, 49, respectively.

S. N. S.

77. DETAIL OF EXAMINATION OF GIRLS' SCHOOL.

	In 18th year and over.	17th.	16th.	15th.	14th.	13th.	12th.	11 and under.	Total Examined.	Failures in Reading.	Failures in Writing.	Failures in Arithmetic.

DUBLIN, GEORGE'S-HILL CONVENT NATIONAL SCHOOL—SISTERS OF PRESENTATION.—25th June, 1868.

78. Visited and examined the infants—209. No boys admitted.

Three good rooms and two class-rooms, all well filled. Nuns and monitors busily at work.

The management of the infants seemed kindly and pleasing. None were excessively young; but more than 50 are above 7. Their instruction is very limited indeed. Reading mechanical and confined to a few lessons. But few write or cipher.

Individual examination annually applied to all above 5 would soon improve prodigiously such an institution as this, where the children are numerous, the nuns willing, and the force of assistants ample.

On the 6th July 96 girls were examined, chiefly in reading; 65 were in Book II. Age from 13 years to 8 years; of these 18 failed to pass in reading.

In Book IV. 31 were examined. Ages from 16 to 12. There were only two failures in reading. In arithmetic about two-thirds of the number failed. Geography and grammar are fairly taught.

S. N. S.

GOLDEN BRIDGE CONVENT NATIONAL SCHOOL—SISTERS OF MERCY.

79. Visited on 1st September, 1868. We found in four rooms under the care of three nuns and ten paid monitresses (*a*) 104, (*b*) 16 girls, (*c*) 55, (*d*) 105 infants.

Nine girls were examined who are employed occasionally as unpaid monitresses; their ages were, 2 in 16th, 3 in 15th, 3 in 14th, and 1 in 13th year. Six passed in reading, 6 in writing, none in arithmetic, 5 in grammar, 2 in geography.

In B. IV. 10 girls were examined. Ages from 16 to 12. Six passed in reading, 4 in writing, 6 in arithmetic, none in grammar, only 1 in geography.

In B. III. 32 were examined. The failures in reading were 3, writing 13, arithmetic 29.

In B. II. 35 children were examined. The failures in reading were 9, writing 5, arithmetic 23.

The school is evidently well taught in reading, but in arithmetic it may be said to be almost at the zero point. One little Protestant child was found in this school. It seems that from the kindness of the nuns in nursing her mother during illness, her parents had shown a preference for the convent school for their child. The nun who had the chief care of the school assured us that she scrupulously observed the rules of the Board in the case of this little one.

S. N. S. & B. M C.

Schools of Christian Brothers.

Christian Brothers' schools.

80. The school in *North Richmond-street* was visited by several Royal Commissioners. The order and regularity were wonderful. The progress of the upper school was good as far as could be judged from inspection of the exercises in arithmetic, mensuration, and architectural drawing.

In discipline there was nothing to be desired. The numbers were very great, and we saw that it would be hopeless to undertake the task of examining these schools as minutely as the model schools. The same remark applies to *St. Andrew's schools under the Christian Brothers.*

81. On the 2nd of September Mr. Cowie visited this school, and examined it partially. There were in four rooms 148, 130, 164, 187 boys respectively—total 629. The examination of the 51 senior boys was good in reading and arithmetic, and all passed in writing.

The impression left by examination of these schools and others in different parts of the country is, that the boys get good hold of reading, but that from the numbers, many of the duller and more indolent boys must be suffered to fall behind. The highest class is generally very good, as we verified both in these schools and in Omagh, Londonderry, and Cork.

Kildare-place Training Institution—Church Education Society.

Kildare-place.

82. In the Society's returns to the Commission full details are furnished of this Institution, and of another at Bandon—maintained for producing teachers for the Church schools. On visiting the girls' training department we were much pleased with the cheerful aspect of the teachers and pupils, and when examined orally they showed aptitude and readiness.

We asked some of the pupils to give us their own account of the way in which they passed their time, but as they gave us nothing but a dry copy of the time-table, which will be found in the volume of miscellaneous returns, it need not be reproduced.

83. The following paper was given us by Miss White:—

Mistresses in training.

The students are admitted twice a year by a competitive examination, and usually remain three sessions to be entitled to a certificate. Entrance by competitive examination secures that they have a fair amount of knowledge in those subjects which they will afterwards have to teach. Notwithstanding this, for the first session, they are principally under instruction given by the chaplain, training master, and other teachers.

The following are the subjects taught, with the amount of time given weekly to each :—

	Hours.		Hours.
Scripture,	7	Observing a Lesson in Model School,	1
Arithmetic,	6	Map-drawing,	1
History,	2	Reading,	1
Natural History,	1	Deportment Exercises,	0½
Grammar,	3½	Domestic Economy,	1
Geography,	2	Needlework,	3½
Social Science,	1	Drawing,	2
Natural Philosophy,	1	Vocal Music,	6½
Reproducing Lessons,	8		
Principles of Education,	1	Total,	48

The methods of instruction employed are oral lessons, or catechetical lectures, which are re-produced in books provided for the purpose; private study and oral examinations. Much Scripture and poetry committed to memory; the latter with the view of increasing their vocabulary, and improving their style of writing.

The time of students of the first session is more occupied in hearing lessons and reproducing them; that of the second and third sessions in private study and preparing for examinations; teaching and preparing for teaching.

Some of the instruction is in the principles of education, illustrated by lessons given by the mistresses of the model schools, and put into practice by the students themselves during the last month of the session in what are called "Criticism lessons."

A great feature of the institution is the large amount of time given to practice in teaching under supervision. This is much increased during the third session.

What is called "The Senior class," consists of those in their second and third sessions, and generally numbers from twenty-four to twenty-eight; "the junior," from thirteen to fifteen.

The senior class is divided into four groups, each spending five weeks in the girls' school. The best (those of the third session) are sent first, while the remainder teach reading and arithmetic in the infants' and babies' schools for an hour and a half each day. The latter are in this way prepared for teaching elder children, and larger groups in the girls' school.

The head class in the girls' school is divided into two sections, and these are taught only by students in their third session.

Besides this, every student of third session is assistant for a fortnight to the mistress of infants' school, during which time she reports the lessons she hears, and gives four gallery lessons under the superintendence of the mistress.

The same student usually becomes mistress of the babies' school for the next fortnight, under the especial superintendence of assistant training mistress.

She next passes to the practising school, of which she takes the entire charge, assisted by a student in her second session for another fortnight. In giving collective instruction, she follows a programme which hangs in the school, and which is made out quarterly. The children are examined every Friday in the subjects taught, and the teacher reported upon according to the result of it.

No student is allowed to teach without superintendence (as a rule), and the work of each is tested by an examination every week of the lower divisions, and every fortnight of the higher.

Every student teaching in the schools has time allowed her every evening to prepare her lessons for the next day. "Sketches" of the lessons are made out, and shown first to the training mistress, afterwards to the lady (visitor) or teacher who "criticises" the student while giving the lesson.

During the last fortnight of a student's stay in the institution, she gives three lessons before the ladies of the Committee. This plan has been found useful to the students, satisfactory to those upon whom the responsibility of training them to teach devolves, and encouraging to those ladies of the Committee who give so much of their time and thoughts to the institution.

84. It will be seen that much time is given to the art of teaching. The period during which the pupils stay is a reasonable one, and it may be hoped that much good is done by this institution, which is conducted with care and sound sense, and really aims at making teachers.

Masters in training.

85. The same may be said of the men's department under Mr. Wilkinson. We were much pleased with the aspect of the young men, they seemed healthy and intelligent, and were pursuing their studies with zeal and attention; the discipline seemed very good.

86. The whole is under the direction of the Rev. Dr. Leeper, whose only complaints are that the funds at his disposal are so small, and that he has great difficulty in filling up the number of young men whom he could receive into the school.

87. Mr. Wilkinson gave us this account of the system in his department.

CHURCH EDUCATION SOCIETY—TRAINING DEPARTMENT—MALE STUDENTS.

The course of training extends over two sessions of five months each.

There is an entrance examination, to ascertain if the candidates possess the prescribed amount of information, namely—

Holy Scripture, &c., viz. :—the Pentateuch, Gospels, and Acts of the Apostles; also the Catechism with Scripture Proofs, and the first six Articles.

Reading with intelligence and fluency.

History, viz. :—English history.

Writing, including writing from dictation.

Arithmetic, including Fractions, Practice, Tare and Tret.

Geography, including the principal countries of the world, particularly the British islands; also, the simplest points of mathematical geography.

English grammar, including parsing and analysis of sentences.

Geometry, viz., the First Book of Euclid.

This examination is not competitive; all candidates are admitted who possess the required amount of information, as the demand for male teachers is greater than the supply.

The course pursued in the professional training of the male students is the following, viz. :—

Lectures are delivered to the students on the Science of Education, in its various departments, viz. :—

Principles of education.
Mental and moral science.
Characteristics of children.
Practice of intellectual culture and moral training.
Principles of teaching.
Art of teaching.
Practice of teaching.
Teaching particular subjects.
School organization.
School discipline.
School arrangements.
School management.

Model lessons are given in the presence of the students, in order to exhibit to them the practice of teaching.

The students are required to draw up sketches of lessons.

Every student is required to give a number of "criticism lessons," *i.e.*, lessons given in the presence of all the students, and criticised by them and the training master.

The instruction of a class of children, in one subject, is committed to each of the students, under supervision.

The instruction of a class of children, in all subjects, is committed to each of the students, under supervision.

A section of the model school is given in charge to each student, for one month, under supervision.

Each student conducts the practising school for one month, under supervision.

The students are required to exhibit skill in mental culture and moral training.

The course of instruction of the male students is the following, viz. :—

Holy Scripture, together with the Church Catechism; the history and contents of the Book of Common Prayer, and, to some extent, Church history.

The science of education, in its principles and practice, in its various departments, as already stated.

Reading, with accuracy, distinctness, fluency, and intelligence.

Writing, including ornamental writing.

Drawing, including mechanical and ornamental designs; the drawing, shading, and colouring of diagrams; map drawing.

English grammar, including parsing, analysis of sentences, derivations of words, elements of logic, composition.

Geography, including physical, political, and mathematical geography, with popular astronomy, and use of the globes.

History.

Social science, including the principles of the British Constitution.

Arithmetic, in theory and practice; also mental arithmetic.

Book-keeping.

Geometry, viz., the first Six Books of Euclid, with deducibles.

Algebra, to the end of quadratic equations.

Mensuration, including the mensuration of planes and solids, also the measurement of heights and distances, with practical applications in surveying, navigation, &c.

Natural philosophy—the several branches, popularly treated, including heat, and the steam engine; particular regard being had to the explanation of the "Philosophy of Common Things" in nature, the useful arts, and domestic life.

Natural history—the leading facts and principles.

Music, including the principles of music; and, when practicable, skill in vocal music, and performance on the harmonium.

Employment of the time of the male students each week, not including Sunday :—

ATTENDING LECTURES.

Theology,	8 hours per week.	Social Science,	1 hour per week.
Science of Education,	4 „	Book-keeping,	1 „
Drawing,	1 „	Mathematics,	5 „
Grammar, &c.	3 „	Natural philosophy,	1 „
Geography, &c.	4 „	Natural history,	1 „
History,	1 „	Music,	2 „
			32 hours.

TEACHING.

Observing a lesson given in model school,	1 hour per week.
Teaching classes,	7 „
	8 hours.

STUDY.

Private study 23 hours per week.

Total number of hours per week devoted to business, viz. :

Attending lectures,	32 hours per week.
Teaching,	8 „
Study,	23 „
	63 hours.

23rd April, 1869.

INCORPORATED SOCIETY'S TRAINING INSTITUTION AT SANTRY.

Santry.

88. Having heard from the Secretary of the Incorporated Society of the success which attended the efforts made at Santry, their chief school, to train young men as science teachers, we visited that establishment, wishing to make ourselves acquainted with the method pursued there.

89. The young men who have passed five years in the district schools of the society, compete for twelve scholarships at Santry. These scholars are prepared for the object mentioned above. They stop at Santry one year only. Dr. Engledow, the head master, teaches them himself. At the end of the time such is the demand for this class of teachers in private schools and small grammar schools *in England*, that they have no difficulty in procuring situations. No attempt is made to train in the technical sense, *i.e.*, to instruct in the art of teaching. Dr. Engledow confines himself to instruction in the several sciences on the list of the science examinations held by the Department of Science and Art; and his success is attested by the results published by that department.

THE ROYAL HIBERNIAN MILITARY SCHOOL.

90. The Royal Hibernian Military school, situated within the boundaries of the Phœnix Park, Dublin, for the orphan sons of soldiers, was visited by the Earl of Powis, Rev. B. M. Cowie, and Mr. Dunne, on the 25th February, 1869.*

91. This school is maintained now by a Government allowance, and the officers are appointed by Her Majesty's Government. Full accounts of the school and the way in which the boys are disposed of are given in the reports of the Council of Military Education on Army schools. The present officers are thus described—

President.—His Excellency the Lord Lieutenant.
Vice-President.—The General Officer Commanding the Forces in Ireland.
Commandant.—Lieutenant-Colonel H. B. J. Wynyard.
Secretary, Adjutant, and Acting-Treasurer.—Lieutenant-Colonel Thomas B. Speedy.
Quarter Master.—J. Lewis.
Surgeon.—Deputy Inspector General R. Templeton, M.D., H.P.
Chaplain.—Rev. W. A. Neville, M.A.†
Masters.—Messrs. J. H. Gibbons, William T. Young, Pierce C. Hoskins, Thomas Stritch.

* Mr. Stokes did not visit this Institution, and has had no part in the preparation of this Report about it.

† Application having been made to the Colonel Commandant for the names of the Roman Catholic and Presbyterian Chaplains in order to complete the list of the "Establishment" given above, the following answer was received from Colonel Wynyard :—

"Royal Hibernian Military School, 23rd June, 1870.

"I beg to say that at the time of Lord Powis's visit on 25th February, 1869, the name of the 'officiating Roman Catholic clergyman' here was 'the Rev. John Leonard,' and the same gentleman officiates here still.

"The Rev. J. M. Hamilton, Presbyterian minister, has, since November, 1868, attended here to give religious instruction and hold Divine Service for the boys of his persuasion.

"Neither of these clergymen have ever been borne on this establishment as '*Chaplains.*'

"Yours faithfully,

"H. WYNYARD"

92. We intended to examine the boys in their literary qualifications only, and the following is the result:—

The school is divided into four divisions:

14·64	per cent.	of the whole number of boys	are in the First or highest division.
17·61	„	„	„ Second division
36·22	„	„	„ Third „
31·51	„	„	„ Fourth „

The per-centage of boys reading each lesson book is returned as follows:—

28	boys, forming	6·94	per cent. of the school, are in	B. I.
44	„	10·91	„ „	B. II.
135	„	33·49	„ „	Sequel to B. II.
66	„	16·37	„ „	B. III.
125	„	32·25	„ „	B. IV. and Supplement.

93. First Division.—This division is subdivided into four classes, containing 12, 9, 21, and 17 boys respectively.

First Class (11 present).—These boys read Supplement to Fourth Book of Lessons. Three were above 14, and the rest above 13 years of age. They all passed creditably in *Reading*.

They were examined in *Dictation*, a fair piece of prose out of the reading book being given out and they all passed; their handwriting and spelling both being very creditable.

In *Arithmetic*, they were presented as able to do simple and compound rules, simple and compound proportion, vulgar and decimal fractions, practice, simple interest, discount, and extraction of square and cube roots.

The following sums were given to them:—

1. Find $3\frac{1}{2}$ per cent. for 15 months on £347 19*s.* 2*d.*
2. If 23A. 2R. 1P. can be had for a rent of £56, what should be the size of a farm whose rent is £70?
3. If a weight of 6 tons 12 cwt. can be carried 50 miles for 24*s.*, what will it cost to carry 12 tons a distance of 160 miles?

The boys were to do two sums out of these three. Six of them did their two sums right and the five others did only one sum right. Very little time had been given; so this was accepted as a creditable result.

In *Algebra* they were said to be prepared to solve equations of one unknown quantity. I gave them to divide—

$$x^3 - y^3 \text{ by } x - y.$$

And this equation—

$$\tfrac{1}{3}(x-4) + \frac{7-x}{8} - \tfrac{3}{7}(4x-2) = 10.$$

The larger portion did the sum in division, but they could not get the right result in the equation.

In *Mensuration*, their knowledge extended only to the arithmetical rules. I gave them some areas of circles to find from the radii, and to calculate the area of an equilateral triangle from the given side.

These questions they answered quickly and correctly.

In *Mechanics*, the exercises were of the same kind, the arithmetical computation from assumed formulæ.

They solved correctly the following questions in mensuration and mechanics (on their slates):—

1. If the side of an equilateral triangle be 24 yards, what is the diameter of a circle having the same area?
2. The handle of a compound screw is 2 feet long; the thickness of the threads of the larger screw $\frac{1}{6}$ of an inch; that of the smaller one, $\frac{1}{8}$ of an inch. If a power of 20 lbs. be applied, what will be the pressure?

A few questions were given in geography of Ireland and of Europe, which some of them answered readily.

In English history and English grammar, there was not sufficient time to hear them.

94. The *Second Class* (9 present)—8 were thirteen years of age; 1 was twelve years of age.

Reading.—5 passed well; 3 did fairly; 1 failed.

Writing from Dictation.—All passed but one.

Three sums were given:—

1. 4,174 articles at 13*s.* 9*d.* each.
2. 3 cwt. 1 qr. 14 lbs. at £1 3*s.* 8*d.* per cwt.
3. Multiply ·007 by 7, and divide by ·049.

Eight boys did all three sums quite right, and one boy did only two right.

The boys answered very fairly in geography.

95. *Third Class* (20 boys present)—10 aged thirteen years; 6 aged twelve years; 4 aged eleven years.

Reading.—14 boys read well; 5 read fairly; 1 badly.

Dictation.—19 boys passed; 1 failed.

In *Arithmetic*, we gave them the following sums:—

1. 18 yards 1 qr. 3 nls. × 57.
2. 16 cwt. 2 qrs. 13 lbs. ÷ 9.
3. Multiply $\frac{3}{8}$ of $\frac{24}{49}$ by $\frac{7}{36}$.
4. Divide $\frac{68}{125}$ by $\frac{29}{35}$.

17 boys answered all the four sums correctly; 2 boys answered three correctly; 1 boy answered only one sum correctly.

96. *Fourth Class* (12 boys present)—5 aged thirteen years; 3 aged twelve years; 4 aged eleven years.

Reading.—4 read well; 4 read fairly; and the other 4 badly.
Dictation.—8 did well; 4 only fairly well.
Arithmetic.—We gave them the following sums:—

1. Multiply £343 17*s.* 4*d.* by 29.
2. Divide £60 by 37.
3. If a dozon boys can be fed for a week for £4 4*s.*, how much is that per head per day?

9 boys did all the sums correctly; 2 did only two sums correctly.
On the whole, the discipline and attainments of the boys in this division we thought very creditable to the school.

97. Second Division—subdivided into two classes—a senior (66) and junior subdivision (23).
A draft of senior *subdivision* was taken—every third boy. This gave 22 boys reading B. III.
7 boys were thirteen years old; 11 were twelve years old; 4 were eleven years old.
15 boys passed creditably in *Reading;* 5 read fairly; 2 did not pass.
The following sums were given to them:—

1. Multiply 17 yds. 3 qrs. 3 nls. by 37.
2. Reduce 41,462 farthings to £ *s.* *d.*
3. Divide £30 by 19.

16 did all three sums correctly; 5 did two sums correctly; and 1 did only one sum.
In writing from dictation they did fairly.

98. *Second Subdivision* (23).—8 boys were drafted out at random, 3 of whom were thirteen years old; 1 was twelve years old; 3 were eleven years old; and 1 was ten years old.
4 *read* well; 3 read fairly; 1 badly.
Dictation was given to all the 23 boys.
15 wrote correctly; 7 had one mistake; and 1 had two mistakes.
Arithmetic.—Four sums were given.
18 boys did the first sum; 20 did the second and third sums; and 9 did the fourth.
The juniors had not long been taken into the second division of the school. On the whole, this division did very fairly.

99. Third Division.—This division includes 146 boys, and is subdivided into five classes, as follows:—

First Class,	40	Boys on Register, present.
Second „	26	„ „
Third „	26	„ „
Fourth „	29	„ „
Fifth „	25	„ „
Total,	146	„ „

The following, we were informed, is the actual course of instruction for those several classes:—

Arithmetic.—First Class.—Simple division, short and long; reduction of money.
„ Second „ Simple division, short and long; easy exercises in reduction of money.
„ Third „ Simple short division, and easy exercises in simple long division.
„ Fourth „ Simple short division, and easy exercises in simple long division.
„ Fifth „ Simple short division.
Reading.—First Class.—Third Book.
„ Second „ Third Book to page 140.
„ Third „ Sequel No. 2.
„ Fourth „ } Sequel No. 2 to page 94.
„ Fifth „ }
English Grammar.—First, Second, and Third Classes.—Parts of speech fairly.
Fourth and Fifth „ Parts of speech elementary.
Writing.—(Each class) small and large hands.
Writing from dictation. „ Words and easy passages from Reading Lessons.
Geography.—Elementary knowledge of the British Islands, and principal foreign possessions.
English History.—From the Norman conquest to the death of John.

For the purpose of examination, drafts of the classes were taken with the following results:—

100. *First Class.*—A draft of fifteen boys was taken; five of them were 13 years old, six were 12 years old, two were 11 years old, and two were 10 years old. They all passed creditably, in *reading;* a piece of average difficulty, out of the Third Book, was selected for *writing* from dictation. Eleven wrote it without a single mistake, two made 1 mistake, one made 2 mistakes, and one made 4 mistakes. For the examination in *arithmetic,* two sums were given, one in long division and one in reduction. All of them did the reduction sum without an error, and only three failed in the long division sum.
Second Class.—Not examined.

101. *Third class.*—A draft of eleven boys was taken. One of them was thirteen years old, three were twelve years old, six were eleven years old, and one was ten years old. Eight passed in *reading,* and three failed. As they seldom write from dictation, and are usually exercised in copying easy passages, written upon the black board, the writing from dictation, even a short and easy passage, out of the beginning of Sequel No. 2, presented exceptional difficulties to them. One made one mistake, three made three mistakes, one made five mistakes, two made six mistakes, and the remaining four a greater number. In *arithmetic,* ten did a sum in short division, and one failed; six did an easy sum in long division, and five failed.

102. *Fourth class.*—A draft of fifteen boys was taken. One had just completed his twelfth year, one was eleven years old, eight were ten years old, three were nine years old, and two were eight years old. The passage given to them to read was one of the earliest lessons in the Sequel No. 2. The *reading*, with the exception of two or three boys, one of whom was the youngest in the class, could scarcely be termed fair. The *dictation* exercise was, of course, very simple, and did not much exceed a dozen words. Four made one mistake, one made two mistakes, one made four mistakes, two made five mistakes, one made six mistakes, two made nine mistakes, one made eleven mistakes, and three could not attempt it. It is to be remarked that, in addition to the other difficulties above referred to, most of them were not accustomed to write small hand. In *arithmetic* they had a sum in multiplication and one in short division. Four did both sums, seven did one, and four failed in both.

103. Fourth Division.—This division includes 127 boys, and is subdivided into five classes, as follows:—

First class,	55 boys on the register.	Present.
Second do.,	27 do. do.	do.
Third do.,	17 do. do.	do.
Fourth do.,	20 do. do.	do.
Fifth do.,	8 do. do.	do.
Total,	127 boys on the register.	Present.

The following, we were informed, is the actual course of instruction of those classes:—

Arithmetic.—First class.—Notation and numeration, to nine places of figures. multiplication table to 12 times, and simple addition, subtraction, and multiplication.
„ Second „ Notation and numeration, to six places of figures, multiplication table to 6 times, and simple addition and subtraction.
„ Third „ Notation and numeration, to five places of figures and simple addition.
„ Fourth „ Notation and numeration, to three places of figures and easy questions in addition.
„ Fifth „ Can write down the digits and add small numbers mentally.

Reading.—First Class.—To page 82, Sequel No. 1.
„ Second „ „ 74, Second Book of Lessons.
„ Third „ „ 35, Second Book.
„ Fourth „ The Third Section in the Tablet-lessons.
„ Fifth „ The first two sections in the Tablets.

Writing.—First class.—Round-hand on paper, and Vere Foster's Copy-books No. 1.
„ Second „ Write round-hand on slates.
„ The other classes write easy words and letters on slates.

Spelling.—The first and second classes write on slates the most difficult words of the lessons read by them. The other classes spell the difficult words orally.

Geography.—The first class are taught the outlines of the Maps of the World and Ireland. The other classes learn the outlines of the World.

A draft of twenty-one boys was taken out of the first or most advanced class of the division. Four of them were in their thirteenth year, nine were eleven years old, five were ten years old, two were nine years old, and one was seven years old. An average extract out of the early portion of Sequel I. to Second Book was given to them to read. Eighteen passed in *reading*, and three failed. A short and easy sentence out of one of the early lessons of the Sequel was given as the exercise in *writing* from *dictation*. Three wrote without a mistake, six made only one mistake, one made two mistakes, four made three mistakes, one made four, and two made five mistakes, and four failed. In arithmetic they had a sum in simple addition, sixteen passed. four failed, and one did not attempt it.

Second Class.—In a draft of seven for *reading*, six passed and one failed. In *writing*, six passed and one failed. In numeration, five passed and two failed.

Third Class.—The reading was not good; twelve out of seventeen could copy a word which was written on the black-board; eleven out of fifteen did an addition sum correctly.

Fourth Class.—Reading from a card only, not very well; ten could write their names out of seventeen; and in numeration, eight out of seventeen could pass fairly.

104. The arrangements made for the religious instruction of the boys are set out in the following return, communicated by Lieutenant-Colonel Speedy:—

Royal Hibernian Military School.

Return showing the Number of Episcopalian, Roman Catholic, and Presbyterian Boys in the School on the 26th February, 1869, and the arrangements actually in practice with respect to the Religious Instruction of the Boys of the above School.

Religion of Boys.	No. of Boys.	Remarks.
Episcopalian,	228	Religious instruction on Wednesdays from 11½ o'clock, A.M., to 12¾ o'clock, P.M., under the Chaplain of the Established Church, the officiating Roman Catholic clergyman, and a Presbyterian Minister, respectively; and Divine Service on the Sabbath, and on days when the respective Pastors require the boys for it.
Roman Catholic,	141	
Presbyterian,	29	
Admitted, but not joined,	12	
Establishment,	410	

T. B. Speedy, Lieut.-Col.
For Commandant R.H.M.S.

105. We were much pleased with the general order and efficiency of the school. The instruction in music is an important part of the system, as boys are readily taken into the regimental bands when found duly qualified; others are taught to work at trades, as shoemakers, tailors, and carpenters. The arrangements for this purpose seemed to be well organized, and the establishment does great credit to Colonel Wynyard and his staff.

REPORT

ON

AGRICULTURAL SCHOOLS,

BY

JAMES A. DEASE, Esq.,

AND

WILLIAM K. SULLIVAN, Esq., Ph.D.,

ROYAL COMMISSIONERS OF INQUIRY, PRIMARY EDUCATION, IRELAND.

1870.

ANALYSIS OF REPORT ON AGRICULTURAL SCHOOLS.

Reasons for undertaking the inquiry, paragraph 1.
Number and situation of schools inspected, 1, 2.
Circulars of inquiry used, 3, 4.
Scope of inquiry, 5, 6.
Collateral information, 7.
Number and classification of schools under the Board of Education, 8–12.
Schools visited not under the management of the National Board, 13.
Origin of agricultural schools, 14–17.
Devon Commissioners report in favour of agricultural schools, 18.
Similar view advocated by Royal Agricultural Society of Ireland, by Lord Monteagle, and by Mr. Jonathan Pim, 19–21.
Templemoyle School, 22, 23.
Number of schools in 1854, 24.
Objections against system on grounds of expense, 25.
The "Sullivan Return," 1859, proves injudicious expenditure, 25–31.
Farm buildings,too expensive, 31–32.
Some of the steadings are useful as examples, 33, 34.
Necessity for proving that farms "pay," 35.
Failure in this respect of Board's model farms, 35, 36.
Rents of Board's farms often very high, 60 per cent. over "Griffith's Valuation," 37.
Not creditable to Irish landlords, 37.
Failure of Ulster Farm at Belfast; it should be abandoned, 37–39.
Differences of opinion as to necessity of model farms paying, 40, 41
Improvement in profits of some of Board's farms and school farms, 42–44.
Oldcastle School Farm worked at a profit to the trust, 45.
House feeding, 46–48.
Farm accounts, 48–50.
Boarders educated in agricultural model schools, 51–53.
Complaints rare of teachers neglecting their schools for their farms, 54.
Expenditure on agricultural department may have been excessive, still questionable whether it would be an economy to give it up. Statement of Resident Commissioner on subject, 54, 55.
Agricultural instruction might be extended to ordinary schools at a small cost, 56.
Evidence that a large number of schools might be taken into connexion, and the status of the teachers raised thereby, 56, 57.
Agriculture to count as a pass in a system of payment by results, 57.
Teachers' views on the subject, 58.
Motives of landlords encouraging model farms suspected, 59–62.
Complaints by teachers, 63, 64.
Insufficiency of inspection; suggested improvement, 65.
Accuracy of Constabulary Returns, and aid given to Commissioners, 66, 67.
Detailed Report of the schools visited, 68–70.

Albert or Glasnevin Agricultural Training Institution, Dublin.

Training Institution, Glasnevin; teachers in training sent there in 1838; place made free in 1844; entry by competitive examination in 1860, 71–73.
School farm established; exhibition of farm produce; lectures, 74, 75.
Buildings, steam-engines, 76–90.
The farm; three separate takes, 91–96.
The school or spade-labour farm, 97–102.
The intermediate farm, 103–109.
The large farm, 110–121.
Farm accounts, 122–124.
Literary instruction, 125–139.
Intern or resident pupils; classification of free pupils; of candidates at competitive examinations, 128–132.
Paying pupils; extern pupils; course of instruction, 133–139.
Scientific instruction, 140–147.
Agricultural instruction, 148–151.
Agricultural experiments, paragraphs 152–155.
Conduct of pupils satisfactory, 156–157.
Roman Catholic pupils should be sent to the Mater Misericordiæ Hospital, 158.

Provincial Agricultural Schools.

Kilkenny.

Situation, 159.
School buildings, &c., 160.
Literary and agricultural instruction, 161–164.
The farm, offices, implements, live stock, and cultivation, 165–178.

Munster Model Farm, Cork.

Situation, residences and school buildings, literary and agricultural instruction, 179–181.
The farm, offices, implements, live stock, cultivation, and rate of agricultural labour, 182–197.

Limerick Agricultural School.

Situation of school, 198.
School buildings; literary instruction, 199–207.
The farm, offices, implements, live stock, and cultivation, 208–218.

Ulster Agricultural School, Belfast.

Situation, residences, and school buildings, 219–220.
Literary and agricultural instruction, 221, 222.
The farm, offices, implements, live stock, cultivation, and rate of wages, 223–225.

District Agricultural Schools.

Athy, 236–253.
Bailieborough, 254–269.
Ballymoney, 270–284.
Bath, 285–296.
Derrycastle, 297–311.
Dunlewey, 312–326.
Dunmanway, 327–339.
Gormanstown, 340–354.
Templedouglas, 355–372.
Tervoe, 373–389.

Ordinary Agricultural Schools.

Balleeghan, 390–408.
Ballinvalley, 409–421.
Convoy, 422, 423.
Dirreendarragh, 424–435.
Drung, 436–447.
Gushedy, 448–454.
Kilcogy, 455–464.
Lack, 465–468.
Sneem, 469–477.

First Class Agricultural Schools under Local Management.

Ballynakill, 478–496.
Ballycarry, 497–509.
Clonkeenkerrill, 510–521.
Dromiskin, 522–528.
Glengarra, 529–540.
Larne, 541–548.
Lough Ashe, 549–569.
Rahan, 570–580.
Sallybank, 581–596.

School Gardens.

Glasnevin, 597–616.
Other school gardens, 617, 618.

Farms not in connexion with the Board of National Education.

Oldcastle Endowed School, 619–631.
Benedictine Farm at Leopardstown, co. Dublin, 632–643.
Recapitulation, 644–666.
Emigration, 667–669.
Rarity of agricultural leases has an unfavourable effect on the spread of agricultural education, 670, 671.

REPORT

C

ON

AGRICULTURAL SCHOOLS,

BY

JAMES A. DEASE, Esq., AND WILLIAM K. SULLIVAN, Esq., Ph.D.

My Lords and Gentlemen,

1. Acting on the wish expressed by our colleagues, the Royal Commissioners appointed to inquire into Primary Education in Ireland, we have visited and inspected, exclusive of the Albert Institution, thirty-two of the hundred and twenty-nine school farms that are in connexion with the Board of National Education, as well as three other schools where agriculture has been taught under the management of private parties. The time at our disposal being necessarily too short to allow us to inspect all the schools of the class on which we have been requested to report to the Commission, we selected for inspection those schools that, from their varied positions and circumstances, we thought most likely to give us a just idea of the general working of the system of agricultural instruction in progress throughout the schools of Ireland. The farms we visited are situated in twenty counties. Of these, fifteen are in Ulster, eight in Leinster, ten in Munster, and two in Connaught. The quality of the land included in these several farms varies through almost every gradation of natural fertility, from the rich clay loam of Glasnevin, or the fertile pastures of Limerick, to the peaty mountain of Dunlewey in the wildest part of Donegal. The accidental advantages or inconveniences that arise from their respective positions—such as the price of labour, the access to markets, or the comparative civilization of the surrounding districts are almost as varied as their geographical location or their natural fertility. Some, like Athy, are situated in the centre of rich and well cultivated districts, where the local markets are good and where ample railway accommodation brings the school farm into cheap and easy communication with the chief markets of England as well as of Ireland. Others, like Lough Ashe in Tyrone, are isolated in position, having many miles of rough hilly roads lying between them and the nearest railway or market town, while their soil is poor and cold, and their climate damp and comparatively sunless.

Number and situation of the schools inspected.

2. These thirty-five school farms which we have selected for inspection may therefore, we think, be safely taken as having afforded a sufficiently accurate general idea of the advantages that have been or are being conferred on the youth of Ireland by the entire of that class of schools of which they form but a part.

3. In addition to the personal inspection of the schools and farms enumerated, we have, by communicating with persons of local influence, tried to find out the public opinion on some of the most important points included in our inquiry. Where we were unable to obtain the advantage of a personal interview we sent copies of a circular, in which the following queries were inserted:—

Circulars of inquiry issued.

"1. Whether the farmers in the neighbourhood appreciate the value of agricultural teaching, and are disposed to take advantage of it.

2. Whether the instruction given in the —— school and farm is sound and practical.

3. Whether the farmers have given their sons the benefits of that agricultural instruction, and profited themselves by the example given by the management of the school farm.

4. Whether the literary teaching of the school is considered to be successful, and has not been interfered with by being combined with agricultural instruction.

5. Whether it would be desirable to teach the elements of agriculture in all rural National schools, and to add, where practicable, a farm of a few acres to each."

4. The circulars were sent to about two hundred persons, and from many of these we have received replies, some conveying very full and valuable information, as well on the actual points included in our queries as on other branches of the education question, and incidentally on the relations between landlord and tenant in various parts of Ireland. As the information is derived from persons of intelligence and good social standing, amongst whom are included some of the leading landowners, magistrates, and merchants, as well as the chiefs of the clergy of all religious denominations connected with the neighbourhood of each school we inspected, it is justly entitled to much weight as an index to public opinion on the department of agricultural education in Ireland. We have, therefore, tried, in forming our judgment and in framing our report, to give due consideration to the opinions expressed and the suggestions offered by those gentlemen, to whose politeness as well as

public spirit we are indebted for the valuable assistance they have afforded us in replying to our circular.

Scope of inquiry.

5. Before giving the special report of each school which we inspected, it may be desirable to state succinctly the heads under which we tried to classify the information we received, and the points into which those heads were subdivided.

1. Description of school; whether vested or not. Manager. Post town; distance of school from it. Distance of farm from school.

2. Schools and School Premises:—Number of schools and dimensions of each. Number of cubic feet to each pupil in average attendance. Separate class-room. State of repair of school buildings and premises. Floor. Fittings and furniture, Wall appointments. Requisites and apparatus. Playground. Urinals. Character of dormitories. Refectory, and lavatory of boarders; how lighted.

3. Character of the school as to—organization; discipline; order and cleanliness; regularity of attendance; school accounts.

4. Is there accommodation for the literary teacher—for agriculturist; condition of same.

5. Teaching Staff:—Names; class and division; date of training; age; religious denomination; date of appointment and previous occupation of principals; assistants; monitors and agriculturists.

6. Literary Instruction:—Average number on books for last twelve months; average attendance for ditto; present on occasion of visit; religious denominations, and ages of children present. The respective numbers of those learning the following subjects—reading lessons, grammar, geography, arithmetic, writing on paper and from dictation.

7. Result of examination in above subjects of those of the agricultural class present during visit. Character of instruction in extra branches; general character of literary teaching.

8. Agricultural Instruction:—Number and ages of those receiving agricultural instruction in school only; ditto in school and on farm; number of each on roll; number present; number and religious denomination of agricultural boarders; distinguishing free from paying pupils; amount of fees received; and of vacancies at date of visit.

Time devoted to agricultural instruction in school; ditto on farm. Instruction by whom given. Books used; adequacy of supply. Proficiency of pupils in theory and in practice of agriculture. Relation of literary to agricultural teaching; whether either interferes with the efficiency of the other. Management, instruction, cleanliness, and order of boarders. Permanency of the effects of the teaching. Classes of which boarders are composed. Occupations of parents of the agricultural day pupils, and of boarders.

9. Farm:—Date of establishment; extent; allocation, soil and climate; landlord; tenure; rent; Griffith's valuation; last assessment of poor rate and county cess; value of farm if in the market; comparison of rent paid to that of contiguous similar farms. If great disproportion—why? Capital sunk—in school buildings; in farm buildings and permanent improvements. Who supplied the capital? Proportion of capital invested for which a fair interest would be returned in increased value of the farm and premises. Sub-letting.

10. Profit and loss account; balance sheets of last three or four years (in several instances we have gone further back—in some to the first establishment of the farm); correctness of accounts as between capital and revenue; as between teaching and agriculture; legitimacy of credits and of charges.

11. Farm Offices:—Buildings comprised; convenience; adequacy of accommodation; suitability for common tenants; for imitation by landlords; state of repair; system of maintenance.

Farm Implements:—Description; condition; supply; suitability.

12. Cultivation:—Character of agriculture in the district; crops on the farm, and area under each; rotation adopted; its suitability to the soil, climate, and character of the district; if strictly adhered to; stolen crops; mode of general cultivation; defects, if any; management of manures; use of artificial ditto. Flax; its cultivation; provision for its subsequent preparation.

Live Stock:—Enumeration; value; breed; condition; cleanliness; mode of feeding; state of byres, &c.; dairy, &c.

6. A special object of our inquiry being to ascertain whether the teaching of agriculture in ordinary schools interferes with the efficiency of the literary teaching, wherever circumstances allowed it, we made, as laid down in the foregoing programme, a detailed examination of the pupils receiving agricultural instruction. In those schools (too few, we regret to say, in number) where practical instruction on the farm—as distinguished from theoretical instruction in the school—has been habitually given by the agriculturist, we tested the pupils' knowledge of the everyday farm work, and their capability of applying to practice the theories they had been taught in the schools.

Collateral information.

7. There being a very intimate relation between the direct object of our inquiry and some of the debated points relating to the general condition of agriculture throughout Ireland we availed ourselves of the favourable opportunity afforded by the extent of our tour through so varied districts of country to gain such reliable information on those collateral subjects as might prove to be of service in the framing of our report. Of this nature was the question of labourers' wages, which, in the discussion raised by Lord Dufferin, some three years ago, created so much interest and called forth such strangely-contradictory statements of opinion on a question of pure fact. Of this nature, also, were the local statistics of emigration—such as the social status of the emigrants from the respective districts, their foreign destination, and the causes or motives that were influencing them in leaving Ireland. Such, likewise, was the subject of the relations subsisting between landlords and their tenants in the various districts we visited; whether the lettings were, generally, by lease or from year to year; whether the rents were often considered disproportioned to the value of the land; whether evictions were frequent; whether the farm buildings or dwelling-houses that might be in course of erection, or that had been recently erected, were more often put up at the cost of the owner or of the occupier, or (as we very frequently found to be the case) by means of a joint contribution from

each; whether drainage, when executed, was the work of the landlord or of the tenant; and whether, in the too frequent instances where wet land remains undrained, the causes of its being so were justly attributable to ignorance, carelessness, or insecurity. Whilst we were in those parts of Ulster where the tenant-right custom is strictly recognised, as well as in the other districts throughout Ireland (by no means rarely to be met with) where the same custom, in a modified form, is to be frequently found influencing the relations of landlords and such of their tenants whose circumstances may oblige them to give up their holdings, we made many inquiries and received valuable information as to the working of that custom and the public feeling in its regard. In the cases of several of the very teachers, whose school farms formed the prime object of our inquiry, we found the germs of the differences and the difficulties that may, and do, arise between landlords and tenants in Ireland on the question of compensation for improvements. Indeed the statements of their views on questions of principle, as well as of detail, made to us by several school-teachers on this much-debated subject, were not without a special interest. Sprung, in most cases, from the class of small farmers—usually men of natural intelligence; from their calling as literary teachers better educated and more thoughtful than most of their peers; brought, from their peculiar position as agricultural instructors and tenants at will, into personal contact with some of the difficulties of what is known in Ireland as the land question, the teachers of agricultural national schools may be taken as unusually clear exponents on this interesting, if difficult, question of the views of that class from which they have, in so many instances, been taken. Further on in our report we may revert to some of these points in so far as they bear on the special object of our inquiry.

8. Exclusive of the Albert Institution, at Glasnevin, the agricultural schools connected with the Board of National Education are in number 129, and are divided into three classes.

Number and classification of agricultural schools under Board of Education.

I. The first class agricultural schools, under the exclusive management of the Commissioners of National Education, these being again subdivided into provincial and district schools.

II. First class agricultural schools, under local management.

III. Ordinary agricultural schools and school gardens.

9. Of the first class agricultural schools there are twenty, and of these we visited fourteen, viz., Athy, in Kildare; Derrycastle, in Tipperary; Dunmanway, in Cork; Kilkenny; Mungret, near Limerick; Munster, near Cork; Temple Douglas, in Donegal; Tervoe, near Limerick; Ulster, near Belfast; Bailieborough, in Cavan; Bath, in Monaghan; Ballymoney, in Antrim; and Gormanstown, in Tipperary; and Dunlewey, in Donegal.

10. Of the second class there are eighteen, and of these we visited nine, viz., Larne, in Antrim; Ballycarry, in the same county; Lough Ashe, in Tyrone; Sallybank, in Clare; Glengarra, in Waterford; Rahan, in King's County; Dromiskin, in Louth; Ballynakill and Clonkeenkerril, in Galway.

11. Of the third class there are ninety-one, exclusive of school gardens, and of these we visited nine, viz., Balleeghan and Convoy, in Donegal; Drung, in Cavan; Lack, in Fermanagh; Gushedy, in the same county; Ballinvalley, in Westmeath; Kilcogy, in Cavan; and Derreendarragh and Sneem, in Kerry. We also made an attempt to visit the school farm of this class, which is placed on the Island of Arranmore, some four miles off the western coast of Donegal; but after a somewhat perilous effort to reach the island in an open boat during a gale of wind, we were reluctantly obliged to relinquish our intention.

12. Of the school gardens there are six; but as, with the exception of the one at Glasnevin, none of the schools to which these gardens are attached lay near the line of our route, and as we thought that the limited time at our disposal would be better employed in visiting the more important classes of agricultural schools, we accordingly confined our inspection to the one just mentioned. It may not be out of place here to remark that at Convoy, near Raphoe, in Donegal, which was included in the list of third class, or ordinary agricultural schools, and also is enumerated amongst the nine of that class which we inspected, we found that in consequence of a late change of teachers, and from local causes outside the superintendence of the agricultural Inspectors of the Board of National Education, with the exception of a small garden, all the land that had for several years been attached to the teacher's residence had been otherwise disposed of, and that there was at the time of our visit only about a rood of ground to serve as an example of agricultural management.*

Visits to agricultural schools not under the management of the Commissioners of National Education.

13. Besides the agricultural schools under the superintendence of the Board of National Education, we visited two other schools under local trustees, to which land is attached, and in which agriculture is or has been taught. These schools were Farragh, in Westmeath, and Oldcastle, in Meath. The former is under the Incorporated Society, and for many years was conducted as an agricultural school. We found, however, at the time of our visit, in the month of July, that agricultural instruction is no longer given there, and that the land which had formerly been worked as a model farm is now held from the trustees by the literary teacher as tenant, and is being farmed by him at his private risk. The reason assigned for the discontinuance of agricultural instruction at Farragh was the want of interest in that department shown by those for whose benefit that instruction had been intended. We have also had it in evidence from an officer of the Incorporated Society that the establishment by the Board of National Education of a "class of agricultural schools superior to those of the Incorporated Society," tended to render those institutions useless. Oldcastle endowed schools are under the management of a Board of trustees, five in number, acting under the English Court of Chancery. These trustees are the Chief Secretary to the Lord Lieutenant of Ireland (*ex-officio*), the Protestant and Roman Catholic clergymen of the parish of Oldcastle, and two neighbouring landed proprietors, one a Protestant (and owner of the school site), the other a Roman Catholic. The agricultural department was not a portion of the original scheme, but has been added within the last ten years. It has been on the whole a very successful and a not unprofitable experiment. In a later part of this report we will furnish some fuller details of the agricultural department of Oldcastle

* This school has been struck off the list of agricultural schools since the period of our visit. It is not included in the list of ninety-one schools above referred to.

school. Having casually received information during the course of our inquiries that Leopardstown farm, near Stillorgan, where some years ago the Royal Agricultural Society attempted to establish an agricultural school, had lately come into the hands of a Roman Catholic religious order who may probably revive the educational character of the establishment, we thought it desirable to visit the farm and inspect the works in progress. To this farm also we will make a further reference in the course of our report.

Origin of the Agricultural Schools:

14. Before entering into the general question of how far the undertaking of the Board of National Education to teach agriculture has been successful, and whether or not the State has had value for the large amount spent from first to last on the model farms, it may be well to advert to the circumstances under which this duty was undertaken, and to recall to mind the state of Ireland at that period. The first mention we find of model agricultural schools in connexion with the Board of Education is in the Fourth Report of the Commissioners for the year ended 31st March, 1837, dated 12th October of that year. In that Report we find the following paragraphs sketching out a whole scheme, not merely of agricultural instruction, but of industrial education generally, in connexion with the District Model Schools, which the Commissioners in the same Report say they were taking measures to establish:—

scheme of agricultural and industrial education first given in Report of Commissioners for 1837;

"14. We intend that our normal establishment, which we hope will be completed in January next, shall consist of two departments—one for elementary, the other for scientific instruction; and that the latter shall teach, in particular, those branches of science which have a practical application to husbandry and handicraft. We also purpose having a School for Industry in the immediate neighbourhood of Dublin, with work-rooms, and a farm of from forty to fifty acres annexed to it; and that those who attend it shall be practised, at stated times, in different descriptions of manual work, and in the general business of agriculture.

"15. Our object is not to teach trades, but to facilitate a perfect learning of them, by explaining the principles upon which they depend, and habituating young persons to expertness in the use of their hands.

"16. Considering, too, the very backward state of agriculture in Ireland, and that it forms the only source of employment for a vast portion of the labouring poor, we think it particularly desirable that a better knowledge of it should be promoted; and that the schools under us should tend, as far as practicable, to bring forward an intelligent class of farm labourers and servants.

"23. We intend that each model school shall consist of two departments—one for elementary teaching, the other for scientific, and for instruction in manual occupations. We, therefore, intend that there shall be a work-room annexed to each, and also a portion of land which those children whose parents may so direct shall be taught to cultivate.

"24. We further propose, when establishing each model school, to make such an arrangement, if practicable, as may enable us afterwards to connect it with a model farm of about forty acres, should we be authorized by a future grant from Parliament so to do.

"25. The expense of providing the necessary buildings, implements of husbandry, stock and crops for the model farms, would probably amount to about £600 each, so that the whole expenditure for providing these most desirable establishments throughout Ireland, would come only to about £15,000. No future grants would be required for the purpose of maintaining them. Our plan would be to let each farm to the head master of the model school, at a rent proportioned to the value of the land and the outlay upon it, to bind him to a proper course of management, and to take security for having it rendered up to us when demanded, duly stocked and cropped.

"28. It is our intention gradually to divide the National schools, in general, into two classes; the one to consist of primary the other of secondary schools. The primary schools to afford elementary instruction; the secondary, scientific, and instruction also in manual occupations. A portion of land for garden husbandry, to be an indispensable adjunct to each secondary school, unless situated in a city or town. Instruction, however, in manual occupations to be encouraged in the primary schools also; and a female department, under a female superintendent, to be annexed to each. The females to be taught work suited to their sex, in addition to reading, writing, and arithmetic."

first steps taken to carry out this scheme;

15. The Commissioners had already, however, taken some steps to carry out, at least in part, such a scheme, for they had taken on lease for a term of eighty-four years a plot of ground at Glasnevin containing 17A. 0R. 2P., in September, 1836. This was the germ of the present extensive agricultural training institution. In March, 1838, they took a house in the village of Glasnevin as a residence for the teachers attending the Training School at Marlborough-street. Attached to this house, which is still used for the same purpose, is a plot of ground, which, with the site occupied by the house, contains 3A. 1R. 31P. Upon part of this land it was proposed to build a school-house for boys and girls and to annex to it the greater part of the land as a school garden. In the amended rules included in their Report for 1838 the Commissioners, anticipating that this proposed Model Industrial School would be imitated in other places, lay down, as an indispensable condition for obtaining aid towards a School of Industry, that "a certain quantity of land shall be provided for garden culture," if it should be a country or rural school.

these steps direct public attention to the subject.

16. The establishment of the Glasnevin Model Farm, and the scheme of agricultural and industrial instruction proposed in the Commissioners' Report for 1837, appear to have attracted considerable public attention at the time.

17. Mr. Sharman Crawford, a well known authority on such matters, writing in 1839, strongly urged the importance of extending the system that had been set on foot at Glasnevin. "The principles of agriculture," said Mr. Crawford, "should be a leading feature of instruction in every school supported by the State; and model farms should, as far as possible, be connected with schools, in order to show the practical operation of the science; * * * I have understood that it was the intention of the National Board of Education to arrange a system of this kind; and I trust that sufficient means will be supplied to them in the public grants for this most useful purpose."*

Devon Commission reported in favour of the

18. The Devon Commission reported in favour of engrafting agricultural on literary education, founding that recommendation on the fact that "there was no difference of opinion amongst the witnesses as to the advantages to be derived from an extensive establishment of agricultural schools throughout

* "Defence of the Small Farmers of Ireland," p. 111.

Ireland." In 1845 the Commissioners of National Education seem to have begun acting on the advice volunteered from these influential quarters, as we find that in that year there were five model and seven ordinary agricultural schools under their management, or receiving grants in aid of local efforts. In 1846, amongst the transactions of the then newly established Royal Agricultural Society of Ireland, there are to be found a series of papers advocating the more general diffusion of agricultural knowledge, by the means of model *farms* and *schools*. The subject, however, was not vigorously taken up by the Board of National Education until a somewhat later period. In 1847 Lord Monteagle, in a letter addressed to the Duke of Leinster, most strongly urged the importance of establishing a system of agricultural instruction wider and more thorough than had as yet been attempted, and appended a series of "Suggestions for the Establishment and Government of Agricultural Schools."

establishment of agricultural schools.

A similar view advocated by the Royal Agricultural Society of Ireland, 1846.

Lord Monteagle urges the necessity of their being established.

19. In his letter to the Duke of Leinster, Lord Monteagle stated his object to be, "to urge the expediency of doing a little more in the way of agriculture than had as yet been attempted in Marlborough-street." He added, "The addition to National schools of a little four-acre farm, as at Larne, might be easily managed in many places; and, in my mind, would be productive of incalculable benefits. And the addition to your stock of books of some elementary treatises on husbandry would surely be no difficult task." Further on he expresses his hope that the Board may be enabled "to attach a little experimental farm to each district model school," and "to add to the present system of inspection a special Agricultural Inspector." In the suggestions forwarded along with his letter to the Duke, the following passage occurs:—"I allude to the system of agricultural instruction. It is wholly unnecessary to dwell on the importance of this branch, but I may be allowed to observe, in passing, that what before the blight of the potato crop was a matter of undeniable usefulness, is now, by this casualty, made a matter of indispensable necessity. We are called upon in some districts, *under the penalty of famine*, to teach our people the modes of cultivating better crops; and even in the less afflicted districts, if property is to be continued as such, by yielding any surplus produce, this requires more skill and knowledge than the Irish peasant as yet possesses."

20. A very striking confirmation of these views appeared soon after in "The Condition and Prosperity of Ireland," by Mr. Jonathan Pim, the present member for the city of Dublin, a work which attracted much notice at the time, and which has been often quoted since as an authority on the vexed subject of which it treats.

Same opinion stated by Mr. Jonathan Pim, M.P.

21. After giving some details of the sad state of the peasantry consequent on the loss of the potato crop in 1846–47, Mr. Pim asks—

"Can nothing then be done? Are our peasantry to be starved down to the level of our present resources, and then again to plant potatoes and live by con-acre, ... or are we to seize the present opportunity for improvement? . . . . This is the time for improvement. . . . . Education must be more extensively diffused; not merely by the knowledge of letters, but by . . . . that *industrial* instruction which will make every man more skilful in his particular branch of business. *Especially do our farmers need instruction.* . . . . . The Education Commission might fill its station most usefully by establishing numerous agricultural schools."

22. The success, moreover, which had for many years attended the experiment of agricultural training which had been tried at "The Templemoyle Agricultural Seminary," in the county of Londonderry, was frequently held out as an inducement to the Commissioners of National Education to follow up the system that had been set on foot in that flourishing institution.*

Templemoyle School.

* The following extract from a statement made about 1859 by the Resident Commissioner in reference to the Agricultural Department of the Board, gives an interesting sketch of the history of Templemoyle, and a statement of the causes which led to its being eventually placed in connexion with the National system of education. Mr. Macdonnell writes:—

"Any person anxious to ascertain whether the agricultural branch of the Irish National System ought to be preserved or abandoned, should study the history of 'The Templemoyle Agricultural Seminary,' established in the county of Londonderry.

"From that history he will find, 1st. That the demand for agricultural education arose thirty years ago, amongst the most sober-minded and practical portion of the gentlemen of Ireland, who had been taught by experience that improved police, improved literary education, excellent farming societies, the gradual increase of capital, &c., &c., though all useful and indispensable elements of agricultural prosperity, would not suffice, unless such an agricultural education, as has been furnished by Templemoyle, were superadded to them, and made the very root of the agricultural improvement of the country.

"2ndly. That this reasoning was completely borne out by the result; and that a vast amount of good has been effected by this institution, which has sent forth fully one thousand well-trained agriculturists.

"3rdly. That, though the great majority of the supporters of Templemoyle were high Protestants and Conservatives, they became convinced, after twenty-five years' experience, that its usefulness could never be fully developed, unless it were placed (as it lately has been with the best results), in connexion with the National System of Education.

"Now, if there was any part of Ireland in which such agricultural education as is supplied by Templemoyle would be unnecessary, or in which such an institution as Templemoyle could have been successfully sustained by mere local funds and public spirit, it was the very district in which the Templemoyle Seminary was placed. There was a large resident gentry, many extensive proprietors, very many country gentlemen of moderate fortunes and great intelligence, and, above all, a shrewd and thriving tenantry, who could feel the necessity of becoming acquainted with improved methods of husbandry, and who had the means of enabling their sons to pay for the agricultural education afforded at a good model agricultural school. It is admitted on all hands, that the managing committee conducted the institution with the greatest attention, judgment, and economy. Their chairman, Sir R. Ferguson, devoted as much time and thought to the institution, during twenty-five years, as if it were his own property, and as if his own reputation and income depended entirely upon its success. Yet, notwithstanding all these favourable circumstances, the committee found that, for the purpose of carrying on the institution with advantage, it was absolutely necessary to avail themselves of the pecuniary assistance, and educational machinery of the National Board. From the time when they adopted this course, a new life has been added to the establishment. Its usefulness has been nearly doubled. To quote the words of their Report for 1858:—

"'In its present position, Templemoyle possesses all the advantages of a Model school, vested in the Commissioners, with the benefits of a Proprietary school, enjoying the influence and assistance of the gentry of the country; and it is hoped that it will bear comparison with any agricultural school in the kingdom, and offer equal advantages to its pupils.'

Board of Education did not initiate the system.

23. It will be seen, therefore, that the Board of Education did not take the initiative in undertaking to engraft agricultural on the literary education which they had been commissioned to provide for Ireland. It was not until strong and continuous pressure from highly influential quarters had been brought to bear on them that they at all warmly took up the subject of agricultural instruction. This, however, they were at length persuaded to do, and in their 16th Report (1849), the Commissioners made reference to the establishment of agricultural model schools. Anyone reading the following extract from that Report by the light of our present experience cannot fail to observe with surprise how far below the actual expense into which the Board allowed itself to be drawn were the preliminary estimates as to the cost of farm buildings :—

Original estimate of cost of Farm Buildings, &c.

"Having made inquiry as to the description of farm buildings suitable for farms varying in extent from eight to thirty acres, and uniting the essential requisites of economy with sufficient accommodation, we obtained

"So important is it that the case of Templemoyle should be thoroughly understood, that we shall quote at large the language of the committee, when explaining to the public the grounds upon which they resolved upon placing the institution under the National Board of Education :—

"'For nearly twenty years Templemoyle continued to be the only agricultural school in Ireland; and up to May, 1850, had received and educated 802 pupils, from forty-two different counties, embracing England, Scotland, and Ireland; showing not only its great utility, but the high public estimation in which it has, ever since its commencement, been held —the number of pupils at any one time varying from 50 to 70, or the school being generally full.

"'The original capital subscribed by the shareholders having been almost all expended in the necessary building and farming stock, the institution, for the first quarter of a century, continued to be self-supporting.

"'This flourishing condition continued up to the period of the potato failure in Ireland, shortly previous to which time, from the increased number of pupils, and the numerous applications for admission, the Committee were obliged to enlarge the building, in order to provide necessary accommodation; they also, at the same time, added an hospital, and a residence for the head farmer, which improvements absorbed all their available capital.

"'The effects of the famine years, and the large emigration that followed, began to tell rather seriously upon the prosperity of the school. At the same time, the increased price of provisions rendered it impossible to maintain and educate boarders at the low price of £12 to non-subscribers, and £10 to subscribers. The Committee were, therefore, not anxious to fill up vacancies as they occurred; and at the end of 1854, even with a diminished number of pupils, the establishment was found to have suffered a severe pecuniary loss.'

"Other and more weighty influences were also at work, destined in due time materially to affect such an institution. The National Board of Education had been for some time perfecting the plans of the Government for diffusing through Ireland industrial and particularly agricultural schools; and these carried on under a plan of almost perfect supervision, aided by Government funds, displayed much greater efficiency than could possibly be expected from the management of a committee of country gentlemen, however patriotic and well intentioned. Many of the Government schools being also nearer to the homes of those requiring instruction, and at the same time offering the attraction of lower terms, and greater rewards for merit, naturally drew away many young men who would otherwise have been pupils at Templemoyle.

"The Committee, therefore, considering that this school was founded, not with any selfish or exclusive design, but entirely for the benefit of the country, thought it wiser, instead of remaining an independent, and what might almost be deemed an opposition establishment, to place themselves at once in connexion with the National Board of Education, and give the pupils of Templemoyle an opportunity of participating in the fostering care of a paternal Government.

"A communication was therefore opened with the Commissioners of National Education during the last year; and the kind and liberal feeling displayed by them in at once receiving this school into connexion with the Board, and endowing it with funds to enable it to hold out the same advantages to its pupils as other Government schools, giving it the able supervision of the literary and agricultural Inspectors of the Board, and yet leaving its sole management, as previously, in its committee of proprietors, cannot be too highly appreciated by the public.

"The committee now turn, with feelings of great satisfaction, and perhaps a little honest pride, from a retrospect of the services conferred on society in past times by this solitary and unaided institution, to hail the day when the principle of moral and industrial training, on which it has become so universally acknowledged and adapted, and to rejoice in the more fully developed and extended utility to be expected from the school, as forming part of a great National system.

"It will, so long as it stands, bear witness that, at a period when there was no Government aid to assist and encourage those who sought to benefit their country by establishing industrial schools, the landed gentry of the north of Ireland established, out of their own private funds, and for above a quarter of a century, maintained this, the first agricultural school of their country.

"The gentlemen of Ulster were somewhat before the Legislature in their perception of the requirements of the age; but the time having now arrived when their labours are acknowledged and appreciated by the State, their being connected with, aided by, and aiding in the National education of the country, is alike honourable to themselves, and to the Commissioners conducting it.

"Some of the shareholders of Templemoyle did, it is true, object to connexion with the National Board; they did so, indeed, from purely conscientious motives, and generously offered again to subscribe if sufficient funds could be raised to enable it to resume its character of self-maintaining independence. The majority, however, decided upon assuming the present position, because the very fact of a further subscription being necessary, gave the negative to its capability of self-support, under unforeseen circumstances. They judged, also, that as part of a great system, the school would have its advantages to the public materially and permanently augmented. That they were not deceived in their opinion, the improvement and increased efficiency of the school, even during the last few months, abundantly testify. The present committee can, therefore, with confidence, leave it to the public, who are the gainers by the change, to judge of and appreciate their motives. Indeed it is hoped that many, who at first were opposed to connexion with the National Board of Education, having witnessed the resulting good effects already apparent, will be reconciled to the measure."

In 1866, Templemoyle school was closed. Mr. Baldwin, in his report for that year speaking of Templemoyle says :—

"'I regret to say that Templemoyle, the largest of these schools, and one of the most useful agricultural institutions ever established in these countries, became inoperative towards the close of the year.

"'Notwithstanding the liberal annual grant of £320 a year made by the Commissioners towards the payment of salaries and the maintenance of pupils, the local committee found themselves so embarrassed by a debt of about £1,000, which had accumulated in former years, that they resolved on selling stock and crops, paying off the debt, and closing the establishment. They publicly advertised the sale, as well as their intention of closing the school, without having given any previous intimation to the Commissioners.

"'The farm and farm buildings then came into the hands of the landlords, who are the Grocers' Company, which I am credibly informed owns about 12,000 acres in the north of Ireland.

"'During the present year I was directed to visit Templemoyle, with a view of reporting on the feasibility of re-establishing it, either under the exclusive management of the Commissioners, or by giving (as in the case of Loughash) adequate encouragement to a competent man to carry it on as a private speculation.

"'The agent of the Grocers' Company informed me the only terms on which any application of the kind could be entertained would be to pay the Company, in addition to the rent of the land, six per cent. on the money originally sunk in the buildings. I submitted it was quite enough for the Commissioners (in the event of their taking the place) or for a competent agriculturist who, under their auspices, would undertake to carry on the agricultural school, to pay the same rent as any incoming tenant.'"

various plans and specifications, which we submitted to the inspection of several persons qualified to judge of such matters. We have ascertained that the erection of farm buildings, with a literary school for 100 children, and a residence for the teacher, agriculturist, and pupil teachers, will cost from £800 to £1,000, according to the size of the farm. In this sum we do not include the cost of furniture, farm implements, and stock. Assuming the expense to be on an average at least £900, the largest sum that could be obtained from the applicant locality would be the half of that sum, £450. As the farm, as well as the building, will henceforth be vested in us, we shall become thereby responsible in each case for the annual repairs, for the furniture, the rent and taxes, the expense of maintaining the resident pupils, and for the salaries of the teachers during the continuance of the lease. The question which we had to decide upon was, whether, under these circumstances, we ought to undertake the direct management of these schools, or leave it, including as it does the appointment of teachers, the selection of apprentice pupils, and the general arrangement of all the details of school management, to the applicants themselves, as has hitherto been the case. We have resolved, after the fullest consideration, to undertake the management ourselves. Hitherto the original outlay on agricultural schools was comparatively small, and the land was not vested in our corporation. If the school did not succeed the loss to the public was inconsiderable. We accordingly felt that we were not incurring too great a risk, and that we saved ourselves from much expense and trouble, in leaving the management of the school to the public spirit, and private interests, of the persons locally connected with it. But now the sum that must be contributed by the Board is large, and all the future cost of maintaining the buildings and carrying on the whole establishment must devolve upon us. In consequence, too, of the farm being vested in our Board, the local parties, if the management were confided to them, might at any time, after suffering all things to fall into disorder, cast upon us the whole expense and responsibility of repairing the mischief. Furthermore, the school having become, from the expense incurred, and the extent of accommodation supplied, of so important a character, a mere general veto possessed by us on the appointment of a teacher would not be sufficient. It becomes necessary not only to guard against the appointment of an incompetent master, but to appoint the best that can be selected. So with regard to the choice of the apprentice pupils to be boarded in the school, if the nomination were left to the local manager, he might indeed choose fit persons, but would, perhaps, select them from his own estate exclusively, and thus entirely deprive the school district at large from partaking fairly of the benefit intended for it. Should the proprietors wish such schools to be established on their estates, and to have the direction of them, they must undertake the chief expense in erecting and carrying them on. The State will have done all that can be fairly expected from it, by placing at considerable cost and risk, in various parts of the country, the best examples it could furnish to the gentry, of the mode in which agricultural and literary instruction may be effectually combined in a country circumstanced like Ireland."

Original estimate of cost of Buildings, &c.

24. From this time the work progressed with rapidity. In 1854, the Commissioners had under their own exclusive management 14 model agricultural schools in full operation, 3 in partial operation, and 2 building, or altogether 19; under the management of local patrons 15 in operation and 1 building:—or a total of 35 of both classes of model agricultural schools, and 47 of ordinary agricultural schools. In 1858 the model schools had increased to 42, of which 1 was closed.

Number of Agricultural Schools in 1854.

25. About this date the system met with a serious check. Not a few complaints had, from time to time, been made of the extravagant expenditure connected with the agricultural department of the Board of National Education, and it was said that the benefits derived from the system were far from being commensurate with its cost. On the 1st March, 1859, on the motion of Mr. Sullivan, M.P., a return was ordered by the House of Commons of the—

Objections raised against system on the ground of its expense.

"Name, &c., of all model farms and agricultural schools connected with the Commissioners; date of connexion; extent of land for agricultural purposes under each; name of landlord; nature and terms of the tenure; purchase money, if any; annual rent; Griffith's valuation of each farm; total amount expended up to the 31st day of December, 1857, upon each farm and school for agricultural purposes exclusively, with the amount received from farm produce, boarders' fees, &c., in each of the schools managed by the Commissioners themselves; net total of the amount expended on agriculture out of the public grants made to the Commissioners, from the introduction of agricultural instruction to the 31st day of December, 1857; valuation of all the property held by the Commissioners in connexion with agriculture, classified under heads, such as capitalized interest in land, value of buildings, machinery, implements, live stock, crops, &c., and distinguishing the valuation of the Central Model Farm, or Albert Institution, Glasnevin, on the 31st of December, 1857."

The "Sullivan Return," 1859.

26. The return asked for was also to give the number of pupils on the roll of each agricultural school, of resident agricultural boarders, &c., with various details as to each. Also the names, duties, salaries, religious persuasion, and other particulars of all the officers in the service of the Commissioners, or employed by them in connexion with the agricultural department.

The information supplied by them very incomplete,

27. The returns made on this order by the Commissioners of Education, are not by any means as satisfactory to any one desiring to learn accurately the then condition of the agricultural department as they might have been made. No direct blame, however, can attach to the Commissioners on this head, inasmuch as the returns are given as they were asked for. It was unfortunate, however, that those calling for information did not frame the queries somewhat differently.

28. The column headed "Total amount expended upon each farm and school for agricultural purposes exclusively," should have been subdivided into minor headings, distinguishing the amounts sunk in buildings and permanent improvements from the sums paid in salaries, and those that had been expended year by year in the ordinary working of the various farms. As the account stands there is the rather startling sum of £146,000, representing the Commissioners' gross expenditure on the agricultural department, with no information as to how or when the money was spent on each of the twenty schools then in operation. On the other side of the account the information is almost equally unsatisfactory. The three subdivisions of the "Total" column for receipts, are:—firstly—"Farm Produce," £22,860 15*s.* 7*d.*; secondly—"Boarders' Fees," *Nil*; and, thirdly—"&c." (rather a vague heading for so large an amount!) £13,360 3*s.* 4*d.* Total, £36,220 18*s.* 11*d.* The most evident deduction from these figures is, that at the close of the year 1857, the receipts, from all sources of the twenty school farms under the direct control of the Commissioners, had fallen short of the total expenditure, connected with the same, by about £110,000.

29. The sum given by the Commissioners in their return as the "net total of the amount expended

on agriculture out of the public grants made to the Commissioners, from the introduction of agricultural instruction, to the 31st day of December, 1857," was £126,345 10*s.* 11*d.*

30. This sum is about £16,000 in excess of the deficit of £110,000, shown above; and we suppose that the difference is to be accounted for by the "note" appended to the return, which states that—

"This sum (£126,345 10*s.* 11*d.*) includes the net total expenditure from the year 1837–38 to the 31st December, 1857, under the heads—Building, furnishing, and repairing of all the model agricultural schools under the management of the Commissioners; the maintenance of the resident agricultural pupils; salaries of agricultural teachers; expenses connected with the working of the farms; payments to industrial classes; gratuities to workhouse agricultural teachers; other total disbursements to model and ordinary agricultural schools under local management, as well as cost of inspection."

but sufficient to prove the injudicious expenditure in the agricultural department to that date.

31. Wanting as these returns were in the fulness of information that, if not technically asked for by the member of Parliament who moved for their production, was certainly desired by a large section of the public, they were nevertheless sufficient to prove that the dissatisfaction expressed with the mode in which the Commissioners had managed their agricultural department, was not wholly unreasonable. The expense at which many of the model farm steadings had been built, and the general aspect of the establishments, were calculated to produce evil results in more than one direction. While they alarmed the economist who had to pay for their erection, they discouraged the farmers whom they were intended to instruct. Of the 608,564 farm holdings into which, at the date of the last Census, Ireland was divided, 309,480, or more than half, were of less than fifteen acres in extent. At the date of which we are now treating, the excess of the smaller class of farms was probably even greater than in 1861. Now, it was farmers of the class holding these smaller portions of land for whom, in a special manner, the system of agricultural instruction was intended. Deep cultivation for roots and house feeding for cattle were the primary lessons to be taught, and "Belgian farming" was the model held up for imitation. It was, therefore, eminently a small farmers' system. Now, it is sufficiently notorious that, judged by an English or a Belgian standard, the small farmers of Ireland are deficient in accumulated capital. We say "accumulated" to protect our statement from the popular criticism that his strength, thrift, and industry should be counted as part of the small farmer's capital. Doubtless they should be, but not to the exclusion of his cow, pigs, and poultry, his spade and pick, dairy crocks and churn, and of so much ready money at the least as will suffice to keep himself and family, and pay a half year's rent before his first crop becomes available. Want of capital then being notoriously one of the Irish farmer's weak points, it was not judicious when introducing to his notice an improved system of agriculture, against which (if merely because it was a novelty) he was sure to be prejudiced, to present it under conditions that were to him absolutely impossible of attainment. To dilate on the economic benefit of house-feeding the three or four cows of a ten acre model farm in a byre built of cut stone which had evidently cost nearly as much as the fee-simple of the farm it incumbered, was palpably absurd. Might there not be danger of the system thus exemplified sometimes coming to be looked on as partaking of that absurdity?

The farm buildings too expensive.

Agricultural schools chiefly intended for instruction of small farmers.

This object defeated by the expensive system adopted.

32. If the landlord or agent, finding fault with a tenant for keeping his poor cow on a winter's day, starving out in the cold on an imaginary pasture, pointed to the neighbouring model farm as an example, and asked why the tenant did not keep his cows comfortably in the cow-house like Mr. So-and-so, the agriculturist, he would, most probably, be met, as we once were, with the reply:—"Cow-house, indeed—bedad it's *parlours* he has them in! Where would the likes of me be looking for *grandeur* like them?" Bearing in mind the social condition of that class of persons for whom agricultural instruction and example were mainly intended, it would seem that much more practical good might have been done and at a far lower cost by a less pretentious system. In a few places that we visited during our tour of inspection we met with model farm steadings erected in a less expensive manner, and yet with adequate accommodation, where the buildings, though much in advance of those on the farms adjoining, were yet of a character by no means impossible of attainment by tenants holding from twenty to forty acres of land. Of such a class (though the land round each differs widely from the other in productiveness and value), may be said to be the buildings of Tervoe and Derrycastle Model Farms, under the direct management of the Board of Education. Amongst the first class model agricultural schools under local management, the same remarks may be in part applied to Rahan, in King's county, and Sallybank, in Clare; while of the third class, or ordinary agricultural schools, we met with a good practical working example of an inexpensively built, and yet commodious and well kept small farmer's establishment at Ballinvally, in Westmeath, on the property of the Right Hon. W. F. Tighe. We also found a favourable specimen at Oldcastle Endowed School Model Farm, to which reference was made by Mr. Baldwin in the course of his evidence before the Commission, and which, though unconnected in any way with the Board of National Education, has the benefit, through the courtesy of that body, of the supervision and inspection of the Superintendent of their Agricultural Department.

Some of the steadings, however, are useful as examples.

33. It is not of course to be expected in the larger and more imposing establishments—such as Glasnevin, Cork, and Belfast—where provision is made for the accommodation of large classes of agricultural boarders, and to which a certain air of being show places cannot fail to be attached—that the buildings should be necessarily erected on as plain a scale as economy might suggest to an estate owner who had merely profit in view. Some margin might fairly be allowed in such cases for moderate ornamentation, as it is allowed to railway companies, and other trust-holding bodies in the erection of their various termini, stations, hospitals, and similar public buildings. But in the model farms in strictly rural districts—where the chief object in view was to encourage improved agriculture in the neighbourhood by instructing the rising generation, and by affording examples to all of what should be avoided, as well as of what should be done, the expenditure of the public money in needless ornamentation, or in providing an extent of accommodation greater than the size of the farm could

ever require, was worse than wasteful—it was positively injurious. Indeed of all the model farms we met with in the course of our tour, we did not find any doing more real good than Lough Ashe, in Tyrone, where the buildings although sufficient for their purpose, are of a very plain and homely character. Nowhere did we see more practical good being done—we found there the largest number of boarders—and nearly the best instructed of any that we met, both in the theory and practice of agricultural science. We found as great, if not greater proofs, than in any other model farm we visited of continuous good work done, and doing, in reclamation of barren land, in clean and productive cropping, and last, not least, in a long series of highly satisfactory balance sheets. When this establishment was founded in 1834, one-half the present farm was a wild mountain side, and the other a snipe marsh. The work of reclamation has gone on little by little, and the accumulating profits have been re-invested in improvement. At the date of our visit the boarding class was filled. Sixteen is the largest number that the establishment can accommodate, and we found sixteen there. A reference to the report of the Commissioners of National Education for the year 1855, will show Lough Ashe holding a similarly high position at that time as an agricultural boarding school. The total number of "paying" (as distinguished from "free") agricultural boarders in 1855, in the twenty model agricultural schools under the exclusive management of the Commissioners was thirty-one, while at Lough Ashe alone there were thirteen "paying" boarders.

Lough Ashe, a most favourable specimen.

34. In a very interesting report by the owner of the Lough Ashe estate, Lieutenant-Colonel J. Pitt Kennedy, on the condition of the model farm in 1864, it is stated that up to that date 171 pupils had passed through the agricultural class, and in reply to our inquiries on the spot, we were told that the great majority of these had not only gone on well as to respectability of character, but had turned to a profitable account the agricultural instruction they had received at Lough Ashe. The comparatively greater success of this cheaply worked and self-supporting establishment, than of the costly model farms on which the money of the State has been so freely laid out, goes far to prove that a lavish expenditure in starting a model farm is by no means necessary. Indeed if we refer to the letter of Lord Monteagle, from which we have already quoted, we shall find that his views were much less ambitious than those subsequently adopted and acted on by the Commissioners of National Education. Speaking of Larne Agricultural school, which may be called the seed from which the entire system has grown up, his lordship said—"I have seldom seen so much good so simply and so effectively done, or at so small an expense. It is on these grounds that I think it a model capable of being imitated in other parts of Ireland. The entire cost, including the building of three large schools, one for males, one for females, and one for infants, a farm-house and offices, and fifty guineas paid for tenant-right, did not amount to £1,000; and the subscription for its annual support was under £50. The quantity of land which was found quite sufficient for the whole system of instruction was but four acres, Irish; and for this a rent of five guineas an acre was paid.* On this little spot I saw three cows kept in excellent order (in a house), and two calves reared. The land was all in one fence, but worked in a five-course shift." In the course of the "suggestions" accompanying his letter Lord Monteagle observed, "Another great impediment to the progress of agricultural teaching will be found in the exaggerated estimate formed of the outlay required for such an establishment. This has been proved to be a mistake by the experiment so successfully tried at Larne; four acres of land, buildings of the greatest simplicity and cheapness, farm-houses, out-offices for feeding cows, rearing calves and pigs, a small dairy, are all that are required." In conclusion his lordship says, "Let not my proposition be rejected on the ground of expense. In the first place I doubt whether that expense would be as great as many apprehend; but even if it were we should compare the expense with the gain." Taking then into consideration the original idea out of which may be said to have grown the present system of agricultural education in Ireland, reviewing the cost of its establishment and working, and finally comparing these with the results that have been attained, we cannot avoid coming to the conclusion that there has been an injudicious expenditure of the funds applicable to this branch of popular education.

Expensive buildings a departure from the original scheme as sketched by Lord Monteagle.

35. We now come to another and a most material subject in connexion with the model farms under charge of the Commissioners of National Education, *i.e.*, the example they have afforded and are now affording to the pupils and to the public of the profits of scientific farming. As there clearly could be no more useless expenditure of the public funds than to teach Irish farmers to lose money, so a very important point in model, as in all other farming, should be to take care that your operations end in gain and not in loss. But in model farming it is not enough to make a substantial and honest profit; it is necessary also to prove clearly, not only to the pupils but to the public, that such a profit has been really made. In both these points the model farming of the Board of National Education has been very defective. It was too often the case that year after year their farms were worked at a heavy loss. Indeed at one time a model farm balance sheet showing a gain on the year seems to have been a rarity. The return of 1859, from which we have already quoted, seems to give fuller information on this point than any other document published by the Board up to that date, and we have therefore, by an examination of the figures therein, endeavoured to arrive at some idea of the yearly profit or loss of the first twenty years' working of the Board's model farms. As we have already observed, the form in which these returns were asked for and furnished is not sufficiently detailed, and there must therefore be a certain amount of guess-work in striking a balance between receipts and expenses, such as should be legitimately debited or credited in a farmer's balance sheet. Under the head of "Total amount received from, &c., &c.," we find a column showing the gross receipts from farm produce for each of the twenty or twenty-one schools† in the list, the sum of which amounts in round numbers to £22,860. But on the other side of the account (from the column giving total expenditure for agricultural purposes not being subdivided) we have no means of knowing what

Necessity for proving that Model farms "pay."

*Four acres Irish, at five guineas an acre, represent six acres, one rood, and thirty-six perches statute measurement, at £2 12*s.* 5*d.*

† Glasnevin National Industrial School appears in the return separately from the Albert Model Agricultural School Farm and Garden, and thus makes the whole number of establishments twenty-one.

proportion of the total sum of £146,000 was expended on those items that should appear on the credit side of a farmer's yearly balance sheet. There is, however, a column in the return stating the year in which each school was taken into connexion, and it may be assumed that the rents were regularly paid from that time, and that they therefore form a portion of the total expenditure. By multiplying, therefore, the annual rent of each school farm by the number of years it had been in connexion in 1857, and by adding together their sums, we have ascertained that the total amount of rent due, and we presume paid, by the Commissioners during those twenty years was in round numbers £20,860. This sum was of course the first charge, so to speak, on the "farm produce," the total of which during these same twenty years is stated in the return to have been £22,860. Thus there would seem to be left only £2,000 (the excess of the total farm receipts over the rent paid) to meet the annual outlay on twenty-one farms for an average of seven years. Manifestly this would be but a drop of water in the ocean of needful farm expenditure on an aggregate area of more than a thousand acres. The returns or accounts of that period to which we have been able to gain access do not give us data for forming anything like a reliable opinion as to what the probable farm outgoings, exclusive of rent, must have been during the years named; but we find in the last report of the present Agricultural Inspector a statement that may enable us to draw a fair inference on the subject. In Mr. Baldwin's report for 1866 are published the balance sheets for that year of four of the Board's model farms, whose aggregate acreage is about 337 acres, in which the outgoings for the year, exclusive of rent, amounted to nearly £2,360, or more than £6 7*s.* 6*d.* an acre. As each of these modern balance sheets shows a respectable profit, while those of the former period to which we refer were clearly losing concerns, it will probably be well within the mark to take £6 per acre as a basis for calculation, and doing so we find no less a sum than £42,000, representing the probable outgoing, in addition to rent, during the period named in the return. In other words, the account would stand thus in round numbers :—

Failure in this respect of the Model farms of the Board of Education.

Total amount expended on the twenty-one model farms of the Board up to December 31, 1857, under such heads as labour, purchase of cattle, implements, manure, seeds, &c.,		£42,000
Total amount paid in rent during same period,		20,860
		£62,860
Total amount received for farm produce during same period,	£22,860	
*Total (probable) value of live and dead stock in all farms in 1857,	7,000	
		29,860
Loss,		£33,860

36. It will, of course, be understood that this loss is exclusive of all the money sunk in buildings, &c., and also that the salaries of agriculturists, and the interest on floating capital invested in the stock, &c., of these twenty farms, have not been taken into the calculation.

Rents of the Board's farms often very high.

37. In justice, however, to the officers of the Board, on whom has devolved the responsibility of working the various farms, and of trying to make them examples of profitable as well as of scientific cultivation, it must be observed that in several instances the rents for which the Commissioners of National Education have made themselves responsible are extremely high. Indeed the aggregate rental of the thousand and seven statute acres included in the farms under the direct control of the Board amounts to £1,950, about £1 18*s.* 7*d.* for the statute acre, or more than £3 2*s.* 6*d.* for the Irish acre—a rate which is probably double the average of that at which the land of Ireland is generally let. But as the labours of our Commission have proved, to any of us who may before have doubted it, that "averages" are frequently fallacious guides, we have compared separately the rents of each model farm with Griffith's valuation of its "land" (as distinguished from its "buildings"), and we find that that for which the Commissioners pay £1,950 is valued at only £1,206, so that the aggregate rents exceed the aggregate valuation by sixty per cent. But as a few of these farms are let a little below their value, and several at what would be generally thought a fair rent, it follows that there must be some whose rents are *excessive;* and such on examination we found to be the case. In certain instances, and notably at Athy farm, held from the Duke of Leinster, and at Tervoe, held from the Right Honorable W. Monsell, M.P., the rents were moderate, and there had evidently been a disposition on the part of the proprietors to aid the Commissioners in establishing the system of agricultural education, even at a certain pecuniary sacrifice. In too many instances, however (and for the reputation of Irish landlords, as promoters of agricultural advancement, we mention it with regret), we found the rents of the model farms not only much higher than the valuation, but higher also than the rents of the adjoining farms. At Kilkenny we found the rent to be £146—the valuation being only £78—while in the cases of Kyle Park, Farrahy, and Glandore,—three of the six first-class model farms which we were unable to visit—the returns show that their aggregate rent exceeds £90, the corresponding valuation being less than £35! But altogether, the worst case we met with was that of the Ulster Model Farm, which contains 108 statute acres. The rate of valuation of the two adjoining farms is £1 6*s.* 6*d.* an acre; the valuation of the model farm itself is £133 10*s.*, while the rent charged to the Commissioners is £284 11*s.* 4*d.*, or £2 12*s.* 6*d.* per acre!† It may be urged that the proximity of this farm to the city of Belfast gives what, agriculturally speaking, we should call a fictitious value to the land; but we cannot think it otherwise than injudicious to have chosen for a model farm a site so unsuited by nature as well as by accidental local circumstances for giving a fair chance to the system of scientific agriculture intended to be there exemplified. The result has been such as might reasonably have been anticipated, where an exorbitant agricultural rent is paid for a farm, the natural adhesiveness of the soil of which makes it unusually difficult and expensive to work, and

Sixty per cent. above "Griffith's Valuation;"

A fact not to the credit of Irish landlords.

Failure of the "Ulster Farm."

* In the return lately furnished to the Commission, the total value of live and dead stock on March 31, 1868, is given as £7,892 17*s.* 7*d.*

† Equal to £4 5*s.* per Irish acre.

increases the probability of such an utter failure of the root crop as we found there at the date of our visit. The balance sheets of this farm for the last four years show a gross loss on the mere working of the farm of more than £980. At the time we made our inspection there were only two boarders at the farm, the number of places being ten, while from its situation—three miles distant from the Belfast Literary Model schools—it is useless as a means of agricultural instruction for the day scholars of that institution.

38. The cost of the Ulster Model Farm, from its first commencement to the date of the late return furnished to the Royal Commissioners, is there stated to have been £15,152, while the benefit to the State conferred by it has been very small.

Should be abandoned.

39. It is our decided opinion that the agricultural department of this institution should be forthwith abandoned; and there is little doubt that from the yearly extension of Belfast in the direction of the farm, and the rapid increase in the value of building sites in that neighbourhood, the Commissioners of Education could repay themselves a considerable portion of the money sunk from first to last in this unfortunate speculation.*

Differences of opinion on the question of the necessity of Model farms "paying."

40. It seems, then, to be evident that if paying its way, not to speak of realizing profits, be a necessary requirement from a model farm claiming to have fulfilled all the ends of its establishment, the model farms of the Commissioners of National Education had, in so far, been a failure at the time we speak of. We are aware that our opinion as to the necessity of model farms being paying concerns, differs from what has been maintained by some of the agricultural officers of the Board of Education. In his report to the Commissioners in 1857—the date at which the subject of the extravagance of the agricultural department was being freely ventilated—Mr. Donaghy, at that time one of the Agricultural Sub-Inspectors, expressed himself as follows:—"Some seem to consider a *pecuniary* profit as the *only* test of the efficient working of such establishments. In conjunction with, I should think, the intelligent part of the community, I am of a different opinion. Whilst I admit that a pecuniary result is very desirable, and expect that in all cases it will be soon realized, yet I must say that I estimate the amount of sound agricultural knowledge diffused by them as much more valuable to the country, and more in accordance with the objects in view in their institution." Clearly a pecuniary profit is not the *only* test of the efficient working of a model farm; but, even at the risk of being classed with the unintelligent part of the community, we must adhere to our belief that when we introduce to the notice of the public—particularly of the agricultural portion of it, which is notoriously averse to change—any system of farming as an example for imitation, the very first thing we should prove to them is, that it is a system calculated to gain the main end every farmer has in view—viz., to make money. That example is better than precept may be a trite proverb, but it is a very true one, and rarely more true than in the case of the Irish small farmer. Show him a luxuriant crop of Swedes, and his first remark will be—"But they're terrible costly to grow." Show him a well finished beast—"God bless her!" he will exclaim, "she's a great beauty, but she must have gone through a power of turnips and hay!" Convince him, however, that money may be made by "costly" turnips, and he will begin to grow them; or that the profit on the cow exceeded the cost of the Swedes and hay she consumed, and he will probably begin to think of making a careful little venture in the same direction. "To see" with him "is to believe," while merely "to hear" is, most likely, to "disbelieve." If, therefore, you fail to make him *see* you fail to instruct him.

Opinion of the present Superintendent of the Agricultural Department on this point.

41. We are glad to find however, that the opinion on the question of profits expressed by Mr. Donaghy, in 1857, is not endorsed by the present Superintendent of the Agricultural Department. In the first report (March '65) addressed by that gentleman to the Commissioners of Education after his promotion to his present office, Mr. Baldwin writes—"So far my attention has been principally directed to the best and most profitable mode of working the Glasnevin, Cork, Limerick, Belfast, Kilkenny, and Athy establishments. These farms have hitherto entailed heavy losses; and after careful consideration, I have come to the conclusion that the department could not be worked as creditably and successfully, as the Commissioners are anxious it should be until the balance-sheets of those farms showed more favourable results. I hold the opinion myself, that no farm has any pretensions to the rank of model, unless the balance is on the right side."

Progressing improvement in the profits of the Board's farms.

42. That Mr. Baldwin still holds the same opinion is clear from the following statement in his report, dated July 15, 1867. "In the next place it must be confessed that, from one cause or another, some of these model farms have not gained the respect and confidence of either landlords or tenant farmers. In many cases the farms did not pay, and the consequence of this was they were pointed at as utter failures. This objection cannot in justice or fairness, be urged any longer. Several of the farms are now skilfully managed, and show satisfactory balance-sheets, and they will be improving every year. It has been already stated in these reports, and the statement may be repeated here, that the Commissioners should not retain in their service any agriculturist who fails to show a profit on the farm under his management. For, while it is true these farms were not established to make profit, yet it is preposterous to pretend to instruct farmers by a style of farming which does not pay." The rule here proposed of dismissing any agriculturist of a model farm who failed to show a *bona fide* balance on the right side of his account, is one that if strictly acted on would not fail to produce the desired result. We know how unfortunately frequent the complaints have been, not in Ireland alone, but in various other places where it has been tried, of the difficulty that has been met with of making model farms pay. The instances are notorious where the best intentions and the most energetic exertions have failed to achieve this to our mind, indispensable result. But where instances of success are to be found, it is clear that failure is not inevitable. Now we carefully examined the

Profits of first class Agricultural School farms under local management.

* It seems well worthy of consideration whether the buildings and land at the Ulster Model Farm might not still be made of service to the State by being turned into a reformatory or industrial school. The establishment could be applied to either purpose without any great expense in building or alteration, and might save a needless expenditure of more public money elsewhere. If it were thought undesirable to carry on any of the other larger district model farms, they might perhaps be utilized in a similar manner.

balance-sheets of eight of the nine* first class model agricultural schools under local management which we visited—in which cases the teachers are farming under the supervision of the Agricultural Inspectors of the Board of Education, but for their own private advantage, and we did not find a single instance where a respectable profit was not being made. It may be added that with scarcely an exception the teachers were paying as rent, fully what the land was worth, indeed in one or two instances were paying even a *high* rent, considering how much of the present value of their farms had been created by the occupier's unaided improvements. The aggregate area of these eight farms was less than 190 acres. The rent was £163; the valuation £116; the total floating capital was £1,420, about £7 an acre, and the average annual profit, as shown by the balance sheets of the last three or four years, was more than £379, or nearly £2 an acre yearly. There were about 170† pupils on the rolls of the agricultural classes of these schools.

43. Nearly the same may be said of those among the "ordinary" agricultural schools which we saw. We visited eight of this class, besides Convoy which was inoperative, walking over the land and examining the accounts, and in every instance found a profit had been made. The united area of these eight little farms was 66A. 2R. 15P. statute; their rent was £50 2*s.* 4*d.*; the total floating capital invested in them was £384 (less than £6 an acre) ;‡ their total average annual profit for the last three or four years had been £154 2*s.* 8*d.*, more than £2 6*s.* an acre, and the total number of pupils on the rolls of the agricultural classes was 223.

Profits of "ordinary" Agricultural School farms.

44. It should be borne in mind that most of these schools are situated in backward districts, and that the land in the farms attached is frequently very poor, being in several instances, only now in process of reclamation from the waste.§

Oldcastle Endowed Schools.

45. In the case of the Oldcastle Endowed Schools, which we have already mentioned as being managed by local trustees, and unconnected with the Board of National Education, the agricultural department has been scarcely nine years in operation, but in the item of "profit," this farm also has been an example that success is not unattainable. Its area is rather less than 18 statute acres; the rent paid is £32 (calculated at a guinea the statute acre, and £13 a year to cover the interest at 6½ *per cent.* on £200 sunk in farm offices). In the autumn of 1859, the agriculturist (who, it is very important to observe, is also assistant literary teacher), started with a capital of £142, advanced by the trustees. In two of the years that have passed since then, the balance-sheets showed a small loss, but on the close of the last year's account—March 31st, 1868—there was a net gain to credit of the trustees (after making up the losses of the two deficient years), of £199 2*s.* 6*d.* It is fair to the agriculturist, and also encouraging to those interested in model farming, to state that the two years in which a deficit occurred, were in the earlier period of the operations, and that the balance sheets of 1865, '66, '67, '68, show an aggregate net profit of £147 1*s.* 5*d.* nearly £37, or £2 a statute acre *per annum.* The accounts of the Oldcastle School Farm—elaborate copies of which were courteously placed at our disposal by the agriculturist, with the sanction of the trustees—possessed several points of interest in connexion with the direct object of our inquiry, and also with the great social question of small tillage farms *versus* large grazing ones, with which it is so intimately mixed up. To two of these we think it desirable to draw the attention of the Commission. The labour has all been paid for in cash at Oldcastle, with the exception of a sum of £30, at which the labour of the boarder class was valued during the two years that such a class existed in the establishment. During the nine years that the model farm has been in operation, this labour bill has amounted to more than £507. Had a small farmer, therefore, been working this farm (which, be it remembered, is only 11 Irish acres in extent), on his own account for this period, doing himself, and with the help of his family, all the work for which the trustees have been paying labourers 7*s.* and 8*s.* a week, he would have received for his time, risk, and the interest on capital invested, a gross sum exceeding £700. Deducting from this £288, for nine years' rent, at £32 a year, (which it is important to recollect, includes the full interest on the money sunk in sufficient farm offices for a house feeding system), his net earnings would have amounted to £422, while his farm would have been yearly increasing in fertility.

Has been worked at a considerable profit to the trust.

46. The other point in the accounts of this farm, to which we think it useful to draw attention, is that there have never been less than *seven*, and that during the past two years there have been *nine*, cows kept on the produce of these 11 Irish acres.‖ No meal, cake, or other artificial food was purchased during the last year, and the only food not grown on the farm that seems to have been used was £4 worth of hay. Under these circumstances, it need hardly be observed, that the house-feeding system is here strictly adhered to, as, under permanent grass, these 11 acres would do little more than maintain three cows summer and winter. Apart from the important consideration that this system must increase the fertility of the land by doubling the manure heap, it is found as well to be very profitable for the dairy. The gross receipts from dairy produce at Oldcastle on the last eight years, besides rearing a good many calves, has been £848 13*s.* 7*d.* The butter made having been disposed of at the current market prices, and the highest charge ever made for new milk sold being 2*d.* per quart. It may be interesting before leaving this branch of the subject, to give a return of the "cropping" of this farm in 1868, by which it will be seen that there are other sources of profit besides the dairy, although that is the one that is chiefly relied upon.

House-feeding system for dairy cows strictly adhered to.

* The only one we did not examine was Dromiskin, where in consequence of a disagreement between the patron and the teacher, the agricultural department was inoperative at the date of our visit.

† At Larne the vacation was going on at the date of our visit, so we were unable to learn the exact number on the roll of the agricultural class.

‡ This was exclusive of the sums paid for tenant-right in certain cases.

§ Apart from the subject of the profits of model farming, these statistics are not without interest in their bearing on the social question so important to Ireland, of the consolidation of small farms into larger ones. Taking the foregoing examples for what they are worth, they would go to prove that the profits of farming in Ireland (when land is tilled as it should be) are in an inverse ratio to the size of the farms. It would, perhaps, be out of place to follow this collateral subject to any length in this Report; but we venture to recommend its consideration to those who seem to believe that a further great consolidation of her 300,000 small farms is indispensably necessary to Ireland's future prosperity. See note to Paragraph 124—*infra*, page 862.

‖ On visiting this farm again, since these pages went to press, we found that there were twelve cows in stock, and the agriculturist calculated on being able to keep them through the summer without any extra purchased feeding stuffs.

OLDCASTLE MODEL FARM—CROPS—1868.

	Statute. A.	R.	P.		
Turnips,	1	2	35		
Mangold,	1	1	18	4	2 0
Cabbages,	0	0	32		
Potatoes,	1	0	35		
Oats,	4	3	30		
Grasses,	8	2	0		
Total,	17	3	30		

47. The results at Oldcastle have been on the whole very satisfactory, both as to profits realized and as to the progress of the pupils in the study of scientific agriculture; but we believe that the trustees are by no means of opinion that the limits of possible profit have as yet been reached, so that though they may "be thankful" they do not mean to "rest."*

House-feeding the key-stone of the "Belgian system."

48. We regard house-feeding and the judicious cultivation of soiling and stolen crops as the main-stays of the small farm or Belgian system, and in this we share the universal opinion of all accepted authorities on the subject. It is for this reason that we have insisted, at perhaps undue length, on the results achieved at Oldcastle, inasmuch as, with the exception of it and the five-acre farm at Glasnevin, where strikingly similar results have been attained, we did not find the house-feeding system carried out in any of the model farms we visited so fully as we had hoped to have done, or as we believed would be desirable. The collecting and economizing of manure are points in which the Irish small farmer (and, indeed, too many of the larger ones also) are still very backward; and as no application of the saying that "much will make more" is more appropriate than to the manure pit, this is an item that should be strongly insisted on by precept and example in every model farm and school in Ireland—more especially in the smaller farms in backward districts. At Tervoe we were glad to find arrangements being made for working a small portion of the land as a "Belgian farm," the stock and the accounts to be, as at Glasnevin, distinct from those of the rest of the farm. There seems to be every prospect of the experiment working satisfactorily. There is one more point in connexion with the subject of farm accounts to which we would draw attention—viz., the necessity of teaching the pupils the importance of such accounts, and of making them take part in keeping those of the model farm where they may be in training. Excepting at Glasnevin, we found this too much neglected in almost every agricultural school we visited, whether of the first or second class. In some there was no special instruction at all being given in farm account keeping, and in most cases even the boarders seemed to know little of the financial condition of the farm they were employed on.† We are aware there are some persons who will tell one that farm book-keeping by an ordinary farmer is loss of time, that "the proof of the pudding is in the eating," and that all a man who lives exclusively by his farm wants to know is, whether he has more stock on his land, or more money in his purse at the end of the year, than he had at the beginning. Indeed, we remember meeting an instance where a very intelligent gentleman, of the old school, carried his aversion to farm accounts still further—not alone maintaining that they were "useless," but that they were positively "injurious." Speaking of a farm on which, some years before, he had had a scientific steward, and where "high" farming had been carried on rather too expensively, he said, "We used to keep very accurate accounts at that time, and there was a dead loss every year; so at last we gave up keeping accounts altogether, *and the farm has paid first-rate ever since!*" We cannot, however, accept these views as being correct; and as the general absence of any regular system of keeping farm accounts amongst Irish farmers is a matter of notoriety, it seems to us doubly important, in educating these men's sons, to insist on the utility of such accounts in guiding an intelligent farmer's operations. A farmer who keeps no accounts may doubtless have made money during the year and may say that he has gained his end without the trouble of any book-keeping. But the next year may find him with a less profit—possibly with a deficit. He tries to recall the transactions of the past season, but it is wonderful how soon the accurate recollection of rates of sales, and of sums received or spent, fades away when there are no notes wherewith to refresh the memory. Now, three minutes' work each evening, or a quarter of an hour once a week, would have saved all this trouble and anxiety. It would have provided data at the end of the year, or during any portion of it, when the information might be wanting, for finding out the weak and the strong places in his expenditure; and would have helped to create or foster an orderly and methodical spirit that would be of no disservice to many an Irish farmer. For like reasons we think it very injudicious not to retain at each of the model farms detailed copies of all the farm accounts of each year. The mode of procedure seems hitherto to have been to send up each year's account, with vouchers, &c., to the Office of the Agricultural Department in Dublin; and once sent up they are never returned. This may be quite right and necessary as regards the central office, but surely certified copies should be kept on the spot for the information of the agriculturist, of the pupils, and last not least, of the public. In the table which we have drawn up, and which appears in the appendix, showing the condition of the first-class agricultural model schools which we visited, it may be observed that the balance-sheet for 1867 of the Munster Farm is not forthcoming. For this, as well as for most of the accounts of the larger farms, we were referred by the

Too much neglected in Ireland.

Farm accounts.

Their usefulness doubted by some.

An instance where they were thought even *injurious*.

Their real use to the Irish farmer.

Partial neglect on this point in some of the Board's model farms.

* In the appendix will be found a letter from one of the trustees of Oldcastle Endowed Schools, published in the *Irish Farmers' Gazette* in 1866, in which the actual profits obtained on this farm are compared with the best profits that could be expected from a like area of similar land in grass.

† Mr. Baldwin, to whom, when we were inspecting the Albert Model Farm, we made this observation, is of opinion that special instruction in keeping farm accounts should be reserved for the close of each pupil's period of training. This is the plan adopted at Glasnevin, and, as he states, with success. We still think, however, that more attention might be advantageously given to this branch of agricultural education in the district agricultural schools than is at present bestowed upon it.

local agriculturists to the Central Office in Dublin. In reference to this missing balance-sheet we received the following memorandum:—

"Munster Model Farm.—Balance Sheet for the Twelve Months ended 31/3/67.

"Education Office, 5th January, 1869.

"The Farm Account-book for this year was unfortunately lost in its transmission to the Office by Fishbourne's people.

"The balance-sheet for this year cannot, therefore, be made out."

Certified copies of farm accounts should be retained at each school.

49. If merely to prevent the possibility of such an occurrence taking place again, we think that copies of its own accounts should be retained at each agricultural school. They would be a most useful guide to the agriculturist (especially in case of any change of officials), and they would form, as it were, a financial history of each school farm, such as, in our opinion, the local and general public are entitled to have access to in any such establishment supported by State grants.

50. In estimating the amount of benefit that the country has derived from the expenditure by the Commissioners of National Education on their agricultural department, we have to regard the question from two different points of view. We must distinguish the agricultural education given to the classes of boarders, who have from the first attended the various model farm establishments, from the instruction diffused by means of the ordinary agricultural schools, and we must also distinguish the amounts of the total expenditure for agricultural purposes which should be respectively debited to each of these classes of schools.

Number of boarders that have been educated in the Agricultural Model schools.

51. In the return furnished to the present Royal Commission by the Board of National Education, the number of agricultural students in training during the past year is stated to have been 79, while the same return gives 985 as the total that have passed through their various establishments since the foundation of the system.

52. At the Albert Institution at Glasnevin—by far the most important of the agricultural boarding establishments—there was a steady increase in the number of boarders up to 1856, in which year there were 91, the accommodation being limited to 100 places. Since then, chiefly in consequence of a rather hastily enforced retrenchment in the estimates for that department, there has been a considerable falling off. The actual number of intern pupils at Glasnevin, according to the late return, is 63.*

About sixty pupils per annum have passed through these schools since their establishment.

53. In the same return it is stated that—outside Glasnevin—there were during the past year in the other establishments under the immediate control of the Commissioners 43 boarders. In the fourteen school farms of this class which we visited, we found altogether 38 intern agricultural pupils, and at the Munster Farm, near Cork, there were also 2 externs, of rather a higher social class than the ordinary pupils, attending the lectures and taking advantage of the general agricultural instruction. We observed, however, that according to the lists of former pupils, there had been in several of these schools a short time before our visit, a considerably greater number of boarders than we happened to find at the date of our inspection. Taking a rough average of the length of time that the various model agricultural schools have been in operation—it can hardly be put at more than sixteen years—and this would give about 60 pupils per annum passing through these schools since their establishment.† Although a good many of these young men have either emigrated or taken to other pursuits in life, the great majority, as will be seen by the returns furnished to the Royal Commission, have devoted themselves to agriculture—either farming for themselves or their parents—or acting as stewards or estate bailiffs to the landed proprietors of the country.‡ We found amongst the present

* At one time the admission to the Albert Institution was more a matter of favour than at present. The system of competitive examination is now in operation, and, on the whole, works well. Its weak point seems to be that, although it may secure the literary proficiency of the successful candidates, it does not furnish any guarantee that the agricultural education given at so much cost by the State may not be wasted on persons who do not intend to become farmers. A suggestion made to the Commissioners of National Education by Mr. Baldwin, in his report of March, 1865, appears to us well adapted to check this possible abuse. He recommends "that a number of marks should be given for the candidates' adaptation to agricultural pursuits at the first examination; and for this purpose each candidate should procure a statement from a patron or manager of a National school, or some respectable person giving such of his antecedents as would throw light on the subject; and the Inspector should fully state his views of the candidate's fitness."

† In the report of the Commissioners of National Education for 1867, a classified summary is given of the 919 pupils who have passed through Glasnevin from May, 1838, to the close of 1867, from which it appears that 604 are now engaged directly or indirectly in agriculture.

‡ The following extract from a report by the Resident Commissioner on the Agricultural Department of the National system of Education is of interest, as bearing on this point:—

"The complaint that the Commissioners have employed Glasnevin chiefly as a place for educating stewards for the rich is very unreasonable. It will be seen from the list of persons trained there, that a very small proportion of them become stewards. But even if every one of them should become stewards, so much the better would it be for the poor themselves. It would be for the sake of the poor, who would obtain those lucrative situations, that the Commissioners would give them such an education as would enable them to rise in life; not for the sake of the rich who would thus employ them as stewards. In no way could a young agriculturist, educated by the Commissioners, benefit the country and himself so much as by becoming the steward of a great landlord. Compare the good he would do by becoming steward to a nobleman, with a demesne of 500 acres, and an estate of £10,000, with the good he could do to himself or his country by tilling a farm of ten acres of his own! This objection is just about as reasonable as if you were to blame the Board for teaching the poor to write and count, on the ground that they were merely furnishing rich shopkeepers and merchants with persons to act as their storekeepers and to keep their ledgers."

managers of the Commissioners' model farms, several men whose whole education—including their Glasnevin training—had been received in schools under the management of the Board of National Education, men who bore the highest character amongst their neighbours, and whose good manner, intelligence, and knowledge of the theory and practice of their profession, could not fail to create a favourable impression on anyone coming in contact with them. We also met other instances where the late pupils of the agricultural model schools were going on very successfully as farmers, working on their own account, and were doing much good in their respective districts, by furnishing a practical example of farming at once scientific and profitable. Not a few of the agricultural pupils of Glasnevin have become teachers of ordinary National schools—a sphere of action where the information they acquired at the model farm would be likely to be more useful to the country than in perhaps any other profession they could have adopted. In five of the nine "ordinary" agricultural schools that we inspected, we found teachers who were ex-pupils of Glasnevin, and they were all very favourable specimens of their class.

Former Glasnevin pupils now teaching with credit in "ordinary" Agricultural schools.

54. Some of these men who had begun with nothing, we found very well to do for their position in life, living in comfortable houses, and with a floating capital (including sums paid for the tenant-right of their small holdings) of between £200 and £300. In only one instance did we hear any complaint of the school business, having been neglected for the sake of the farm, and here the teacher had been dismissed. So far, therefore, as the influence of Glasnevin and the other agricultural training establishments on the future of their pupils as propagandists of agricultural knowledge, there is no question, in our minds, that the State has derived considerable direct and indirect advantage from the system introduced and carried out by the Commissioners of National Education in their agricultural model schools. But whether it has had *full value* in the education of 985 boarders for the total cost of that branch of the agricultural department since its first establishment, is another question. We have already stated as our opinion that the expenditure on the structures of the various model farms was unnecessarily great, and further that the unprofitable manner in which for many years the model farms were worked, made the agricultural department a much heavier expense to the State than it need have been. Were we proposing to start the system *de novo*, with a fore-knowledge that its results would be such as have been actually attained, and that the cost must of necessity be as great as it has been, we might hesitate before advising that the experiment of large model farms should be tried. But as the case actually presents itself to us, we must be guided by different considerations. We find in existence in the hands of the Commissioners of Education a great amount of value in the shape of farmsteads and improvements of the soil, purchased or erected with the public money. We believe that valuable as these may be, they have, if looked at as a mere mercantile concern, been bought too dearly, and that if for sale in the public market they would not realize anything like what they have cost. If therefore the farms could be so worked for the future as to be made self-supporting, it would not of necessity seem to be desirable even on the grounds of economy, that they should be given up.* Now with the exception of the Ulster Model Farm, concerning the proper destination of which we have already expressed our decided opinion, we do not think there is one of the Board's larger model farms which we inspected but may, as things are now going on, for the future be made to pay its own way. Even if the covenants in their leases enabled the Commissioners to give up their farms, and abandon the whole scheme of agricultural instruction as connected with the system of State-aided education, it would (merely on the grounds of economy) be a step of very dubious policy to do so.† The mischief, so far as expense goes, has already been done, and we assume that its greatest enemies will admit that if conducted at no pecuniary loss to the State, the system of agricultural education can, at any rate, do no harm. For ourselves we need hardly say that we would go much beyond such merely negative approval.‡

Complaints very rare of teachers neglecting their schools for their farms.

Although the expenditure on the agricultural department may have been excessive

it is questionable whether to give them up now would be an economy.

55. Since writing the above we have had an opportunity of seeing a statement headed, "Some remarks on the agricultural education supplied by the Commissioners of National Education in Ireland," written, we believe by the Resident Commissioner, and printed for private circulation about the year 1858 or 1859, in which we find that some of the foregoing observations have been partially anticipated. It will be borne in mind that this "statement" was made about the time to which we have already alluded, when there was considerable public outcry against the agricultural department of the Board of Education. As some of the Commissioners may not have had an opportunity of seeing this very able statement, we extract its closing paragraph, which bears on the particular question we are now discussing :—

Statement of the Resident Commissioner on this subject.

"Nearly £50,000 have been expended upon the buildings and repairs of the several agricultural model schools and farm offices. Were you to insist upon the Board suddenly abandoning their agricultural schools, almost the whole of this expenditure would be rendered useless. The great mass of the buildings could not be applied to any other purpose, even of an agricultural nature. They would fetch nothing in the market, or

* It would be quite possible, even if not on all grounds desirable, to have the literary and agricultural departments managed by the same person, in several of the smaller farms under the direct management of the Commissioners—such as Derrycastle, Gormanstown, Tervoe. At Oldcastle Endowed School this is done; the second literary teacher (first of first class of the N.B.) is also agriculturist, and neither department is found to suffer from the combination of duties in one person. There would obviously be a considerable saving in such an arrangement. In schools of this class it seems to us undesirable to attempt keeping up an establishment for boarders. We would certainly not recommend the retention of a boarding class in any of the existing agricultural model farms except Glasnevin, Mungret, and Cork, and perhaps Kilkenny, Athy, or Bailieboro'. The destination of many of the agricultural schools must depend in great measure on the determination of Parliament in reference to the general question of the model schools. The uncertainty that hangs about the future of these establishments is an element of difficulty in the way of those desirous of promoting agricultural instruction amongst the school teachers of Ireland.

† See note, page 845.

‡ Since our report went to press we have had an opportunity of seeing the balance sheets of the seventeen model farms under the management of the Board for March 31, 1869, which fully bears out the opinion we have expressed above. Excepting Ulster, where, as we anticipated, there has been a deficit of £207 11*s.* 6*d.*, there are only two of the farms, Derrycastle and Glandore (where there has been a joint loss of £16 3*s.* 10*d.*), that have not made a handsome profit. The total gain for 1868 on those fourteen farms has been £1,685 16*s.* 3*d.* The net gain has been £1,462 0*s.* 11*d.*, after deducting the losses incurred in the three above-named farms.

next to nothing. You would abandon an important experiment, which was undertaken on the demand of the public, which, in the opinion of very many persons, has been eminently successful; and you would do so when the experiment is still merely in progress and incomplete. To abandon the experiment at the present moment would be alike unfair towards it, towards the teachers and Inspectors engaged in carrying it on, and towards the 3,000 pupils who are attending the various agricultural schools throughout Ireland. If, indeed, the expense of the present agricultural schools were excessive there might be some reasonable ground for abandoning the experiment as being very costly and as having failed to command the universal approbation of the public. But when you consider that the chief expense, the purchase, as it were, of the *agricultural plant*, has been already incurred, and that the actual expense of now carrying on all the agricultural schools throughout Ireland is somewhat less than £8,000 a year, it would be unreasonable and unjust to withdraw this portion of the Parliamentary grant, and to extinguish suddenly the system of agricultural education."

The system of agricultural instruction might be advantageously extended amongst ordinary National schools.

56. We should be very sorry indeed to see the combination of agricultural with literary teaching abandoned in Ireland. Indeed we are convinced that its further extension would be of very great use; but the extension we chiefly desire would be one in the lower grade of agricultural schools. Hitherto the great bulk of the grant for agricultural purposes has been spent on the higher class of school farms—on what may be called to some extent the show places of the system—while very little in comparison has gone to the "ordinary" agricultural schools or school gardens. In these schools agricultural has been blended with literary instruction in a modest unpretending fashion, and yet in a way eminently calculated to sow the seeds of sound agricultural principles in a soil where it is much needed, and which will amply repay the trifling cost of cultivation. These schools cost the State very little. We are told that an addition of £5 a year to the teachers' salary, and about 10*s.* a year to cover the cost of the agricultural books required, is all that an "ordinary" school need cost the State. Mr. Baldwin, in his report of 1865, tells the Commissioners that in that year "1,500 boys, chiefly the sons of tenant farmers and labourers, received agricultural instruction in these schools, which gives about 4*s.* 9*d.* as the cost per boy per annum." It is a fact worthy of reflection that, according to this calculation, twelve months' instruction in the rudiments of scientific agriculture could have been given to nearly 4,000 school-boys for the amount of money that was lost in the mere working of the Ulster Model Farm during the four years immediately preceding the date of our visit. One of the queries we circulated for the purpose of eliciting public opinion upon this point was, "whether it would be desirable to teach the elements of agriculture in all National schools, and to add, where practicable, a farm of a few acres to each." The great majority of those who sent us replies were favourable to the idea embodied in our question. It is evident, however, that as things now are in Ireland there would be a great difficulty in adding even very small portions of land to the existing National schools, from the fact of so few, comparatively, of the patrons being landowners. It is to be hoped, however, that there might be not a few cases where the owner of land adjoining an existing National school could be induced, on public grounds and on proper representation of the circumstances, to aid a patron, who, although not a landowner, might be disposed to encourage agricultural education, by granting or letting an available acre or two for the purpose. But doubtless there are still more cases where, from various causes, we have reason to fear that such grants would not be voluntarily made.* The head of the agricultural department stated in his evidence before the Commission that, in his opinion, there are about 500 existing National schools, the circumstances of whose position would make it easy to have practical instruction in agriculture engrafted on the literary education given in them at present. This opinion was subsequently corroborated by the Resident Commissioner in the course of his closing examination. These schools, if fairly scattered over the face of the country, would, when added to those already in existence, give an average of some twenty agricultural schools to each county in Ireland, the extra cost of the maintenance of which would be less than £4,000 a year. The advantages would be in many ways considerable, not alone to the pupils but to the teachers, and, in backward districts, to the neighbours in the way of example. The social position of some 500 school teachers would be materially improved, not only by the increase of their incomes from the addition to their salaries and from the profits of their little farms, but by having provided for them what, as a rule, their class are now so sadly in want of, a *home*, and some healthful and innocent occupation and interest for those hours in each day not necessarily devoted to the business of the school or to study.†

And at a very trifling cost to the State.

Replies to queries as to the desirability of further extension of agricultural instruction in National School.

Evidence that five hundred agricultural schools might be added.

Social status of the teacher would be improved thereby.

* Should the Royal Commissioners think it desirable to recommend Parliament to facilitate the acquisition by purchase of approved sites in districts where schools are required, and sites cannot at present be procured, it might be worth their consideration whether it would be desirable to extend such power to the acquisition in similar cases of sufficient land for a residence and school-garden for the teacher.

† It may be interesting to see an agricultural school-teacher's views on this subject, as put forward in a paper "read by David O'Dowd, Doo Castle, Buninadden, Ballymote, Mayo, at the late congress of National teachers held in Dublin," and published in the *Irish Farmer's Gazette* of March 13, 1869. After dwelling on the various general advantages of small school farms, Mr. O'Dowd instances his own farm of two statute acres, and says—"But I consider this small amount of remuneration (£5 a year), though a matter of no slight consideration to a class of public servants whose entire income averages a little over £30 per annum, as the least of the many advantages which I derived from the connexion of my school with the agricultural department. My increased income from my little farm, in consequence of the superior manner in which it has been improved and manured, in order to meet the views and requirements of the Board's Agricultural Inspector (who, I must say, never suggested any improvements that I did not subsequently find it to my own interest and advantage to have effected), has been, on an average, double the amount of the special salary allowed by the Board for this department. This addition to my income has consequently placed me in much more independent circumstances, and has enabled me to maintain a much higher social position amongst my neighbours than I could ever hope to attain as a mere literary teacher. Besides, however strong may be the prejudice of the uneducated classes of this country against anything like innovation in industrial arrangements, they are shrewd and quick enough to recognize superior intelligence and success in industrial operations whenever they may come under their observation, and to entertain a proportionate respect for the person possessing and displaying those qualities, especially when he evinces a proper degree of sympathy with them, and an earnest desire to place them in a position to emulate his own successful example, as far as advice and instruction can tend to accomplish so desirable a result. Again, I am enabled as an industrial teacher to be more useful to my pupils in imparting to them the information best calculated to ensure them success in after life, and this, too, without in the slightest degree interfering with their progress in the purely literary elements of instruction; as I make the agricultural lessons even more effective in developing their thinking and reasoning powers, and in advancing their general intelligence, than the ordinary lessons taught from the class books in non-agricultural schools."

57. But even where it might be found to be impossible or undesirable to attach land to a school, it seems extremely useful to introduce theoretical instruction in agriculture, as a portion of the regular school course.* Apart from the benefit of the actual information conveyed, the fact of calling the attention of young boys to the various causes of those common actions of nature, which, going on every day under their eyes, are yet probably unnoticed or unthought of by most of them, must have a useful effect in awakening their intelligence and sharpening their powers of observation. Even without land of his own to point to as a model, any intelligent school-teacher could find plenty of examples in the neighbourhood of his school to serve as texts for a lecture on what to copy and what to avoid. We found a good instance of such a course having been pursued for several years by a very intelligent first-class teacher in a rural school in Kildare. Those who knew the neighbourhood assured us that the education of the district had benefitted materially by the system, while the relaxation and change caused by the occasional half hour's walk over some adjacent farm had made the agricultural instruction very popular with the pupils. Indeed the only fault-finders seem to have been a few farmers of agriculturally conservative tendencies, who were heard to complain that "their chaps were getting so knowledgeable at school, that, what with "notions" and improvements, they got no peace at home now, at all!" Should the Commission see fit to report in favour of a general or a modified system of payment by results we are decidedly of opinion that agriculture should be made one of the pass subjects in rural schools.

Agricultural instruction could be given even where no land is attached to the school.

Agriculture should count as a Pass subject in any system of payment by results.

58. We stated in an earlier part of this report that we found in the cases of some of the teacher-tenants of agricultural schools the germs of the difficulties out of which has arisen what has come to be known as the Irish land question. In discussing this subject with the teachers, both in its particular application to their own cases and in its more general bearing, we found that they expressed themselves with a freedom and intelligence that were very creditable to them and very agreeable to us. The special branch of the question that most frequently came under discussion was that of compensation for a tenant's improvements unexhausted at the conclusion of his tenancy. We found the teachers generally well versed in all the theories common amongst the popular writers on this question, and particularly in that which, whilst giving to the tenant absolute ownership of the full value, he may have created by his own industry, excludes any length of enjoyment thereof from the calculation of the amount of his claim to compensation. We found, however, that they were, nevertheless, quite willing, when it came to a question of practice, to admit that a *preliminary agreement*, as to compensation in case of dismissal, even if it were based on a liberal scale of repayments, varying according to the nature of the improvement, and the length of its enjoyment, would have been esteemed a great boon, and would have met the practical justice of their several cases. It seems evident that such an agreement would be for the benefit of both the contracting parties; and yet, in very rare instances, did we find any regular contract entered into between the owner of the land and the school teacher, who is, of necessity, in most cases, a tenant at will. The same looseness that has, too generally, pervaded the dealings between the owners and the occupiers of the soil in Ireland, is, unfortunately, to be found in the cases of most agricultural schools, and is daily creating or extending a lurking spirit of discontent that a small amount of forethought and business-like arrangement might have averted. For several reasons the position of an agricultural school teacher is most important as an example of the want of security for compensation to an improving tenant. In the first place the land given for school farms is very frequently in a wild state when entered on by the teacher, and requires, comparatively with its extent, much labour and expense to bring it into cultivation. Hence, in such cases, a just and real claim for compensation is most likely to arise, should the teacher be suddenly removed. Again, the unquestioned liability of school teachers to instant dismissal prevents the introduction of such security as is provided by a lease, while it makes it impossible that in their cases the claim for compensation for improvements created during a tenancy can become obscured by the introduction of any claim to perpetuity of tenure. Their case is exactly that with which the Legislature has so often, and hitherto, so unsuccessfully, tried to deal in its wider application to that system of yearly tenancy which is, unfortunately, so general in Ireland. It would seem clear to any practical man that there could be no real difficulty in pre-arranging a scheme on a sliding scale of compensation for various classes of improvements that would secure to the teacher-tenant, in case of removal, full remuneration for any outlay that had really increased the value of his holding, without infringing, in any way, on the just rights of the landlord. In case of any necessity for arbitration arising between the parties the needful machinery is already in existence, as a skilled and impartial judgment might fairly be expected from the agricultural Inspectors of the Board of Education. Bearing in mind how important it would be that one of the best educated, and frequently, the most intelligent men in a rural community, the men to whose charge is committed the education of the rising generation, should be imbued with sound and just views, and should feel himself bound, as well as his landlord, to an equitable course of action in their mutual dealings with respect to land; it would seem a legitimate and desirable exercise of authority on the part of the Board of Education to aid in bringing about such a result. If the Board were to encourage the establishment of ordinary agricultural schools, and were, at the same time, to make it a preliminary condition for giving a grant that a detailed agreement, as to compensation for the various classes of land improvement, must be signed by the owner and the teacher-tenant, both agreeing to accept the Board's agricultural Inspector as an arbitrator in case of dispute, it would not only preserve harmony in that particular case, but might furnish to the neighbourhood the model of a fair and practical agreement, and a wholesome proof that a tenant's right is not, necessarily, a landlord's wrong.

Teachers' view on the subject.

Desirability of a preliminary written agreement as to compensation for unexhausted improvements.

Mode of arbitration.

59. We found in not a few places, both from casual conversations, and from the replies to our circulated queries, some of which will be found in the special reports of the schools visited, a vague but most unfortunate feeling of distrust as to the real object of the State, and even more so of the

Motives of landlords' encouraging model farms suspected.

* This has, we find, been lately done by the Commissioners of National Education, and a very useful and compendious agricultural manual, written by Mr. Baldwin, is now in general use in all boys' schools, the third and fourth classes reading it as part of the school course.

motives of local parties, in promoting the establishment of agricultural schools. One of our reverend correspondents, referring to this subject, used the following words:—"It would be desirable to teach the elements of agriculture in all rural schools on the condition that the tenant would be secured in the enjoyment of his improvements, and that the landlord could not step in and raise his rent because of the increased value of his farm. . . . Without this necessary guarantee for the tenant, model farms will ever be delusions." It was frequently represented to us that this feeling of insecurity made the farmers indifferent to agricultural progress. We also more than once heard it plainly said or covertly hinted that the landlords who promoted the establishment of agricultural schools were chiefly actuated by an unworthy desire to show what might be made out of the land by proper cultivation, merely in order to justify that most unpopular of acts—the raising of rents. To judge by his report to the Board of Education for 1866, the Superintendent of the Agricultural Department seems to have met with instances of similar distrust, in reference to which he makes the following very sensible remarks:—

"If these school farms," he says, "fully realized the objects for which they were founded, they would, like every agent of human progress, promote the interests alike of tenants and landlords; but they would necessarily benefit the tenants first. The primary object of these institutions is to enlighten and uplift the tenant-farmers, and thus to promote the prosperity, peace, and happiness of the nation; and the tenant-farmer who declines to send his son to be trained in one of them, because he thinks that in years to come his landlord would derive some advantage from it, must, to be consistent, oppose every general measure of progress."

In many cases certainly unjustly.

60. Whilst sorrowfully recognising in the Irish tenants' too common insecurity of tenure an ample justification for half-heartedness in undertaking any farm improvements of a character either involving much cost or requiring a considerable length of time to be reproductive, we cannot but agree with Mr. Baldwin in his estimate of the wisdom of those who purposely remain poor lest another man might ultimately gain by their becoming richer. Justice, moreover, compels us to state, without invidiously specifying names, that the owners of several estates on which school farms are to be found are not only notorious as being just and even indulgent landlords, but have, by giving leases, proved how inapplicable to their cases would be any remarks such as those to which we have referred. The great misfortune is that the unfrequency of tenures for fixed periods should furnish even plausible grounds for attributing agricultural apathy and ignorance to the existence of such suspicions.

A hard case.

61. There is another point which has been brought under our notice, in the case of an ordinary agricultural school in Munster, to which we think it desirable to direct attention. The following extract from a correspondence between the teacher, his landlord, and the Secretary of the Board of Works, will fully explain the circumstances of the case in question:—

"There being about five statute acres of waste mountain land requiring to be reclaimed in connexion with this model farm, also two acres to be drained, but the necessary improvement of which is out of my power with my limited capital, it occurred to me that advantage could be taken of the provisions of the Land Improvement (Ireland) Act in order to effect this very desirable work. With this view I brought the subject a second time under the notice of my landlord, who expressed his willingness to guarantee the repayment of the loan that might be necessary by the usual annual instalments. Under these circumstances I wrote to the Secretary of the Board of Works (E. Hornsby, esq.,) and received the following reply:—

"Land Improvement—11,546/68. "Office of Public Works, Dublin,
"23rd July, 1868.

"Sir,—With reference to your letter of the 9th instant, I am directed to inform you that the land in question would not be sufficient security for the smallest loan which could be made—£100. As regards your suggestion that your landlord would consent to a loan, he might make the application, but additional land should be included in the memorial.

"I am, Sir, your obedient servant,
"E. Hornsby, Secretary."

"I sent the foregoing letter to my landlord, to which he has replied in the following lines:—

"Sir,—What you propose could not be carried out. The Board of Works will only pay the money as it is laid out, and would not grant the loan at all until their Inspectors reported in its favour. You must, therefore, give up the idea."

"So you see that my landlord has declined to apply for the loan required. About £50 would be sufficient to carry on the work effectually. If, by your kindly interposition, the Board of Education would guarantee to the Board of Works the repayment of the required loan by the usual annual instalments, the amount to be deducted from my salary annually until the principal and interest would be repaid—the work might be yet accomplished."

62. In this case we find a teacher-tenant, with intelligence to value, and enterprise to undertake the reclamation of a piece of waste land; but without the capital requisite for the undertaking. The tenant being willing to charge himself during his tenancy with the annual repayments of the principal and interest, the landlord (although unwilling himself to advance the money) very sensibly consents to guarantee the repayment to the Board of Works, by accepting the legal charge on his estate. The only difficulty arises from what we believe to be a bye-law of the Board of Works, which refuses to lend any less sum than £100 for the purpose of land improvement. It would seem that a relaxation of this rule at any rate in the cases of agricultural schools might very reasonably be asked for, on proper security for the ultimate repayment of the loan being given either by the proprietor himself, by the Board of Education in the case of vested schools, or by the patron-lessee of the non-vested school farm. The teacher's salary in all cases would be a counter security to the guarantor, while the supervision of the Local Engineer of the Board of Works, and of the Agricultural Inspector of the Commissioners of Education, would secure the judicious and proper expenditure of the money advanced. At Derreendarragh, in Kerry, where there is a vested school under the patronage of the

Proposed mode of meeting similar difficulties.

parish priest of Kenmare, we found that a neighbouring proprietor had let a few acres of mountain land to the patron for the purpose of establishing an agricultural school, and the teacher, an intelligent, and seemingly industrious man, was full of schemes for bringing this waste plot into cultivation with the least possible delay. But his means did not enable him to set about making the fences and drains that were an indispensable preliminary to any systematic cultivation of the soil, and there seemed to be reason to fear that the good which might have been done by giving an example of systematic reclamation, even though on a small scale, in a very wild and backward district, was destined to be needlessly delayed.

Complaints by teachers.

63. In a few cases we found that teachers of long established agricultural schools who, although originally trained at Glasnevin, had been many years out of the way of seeing what we may call the novelties of agricultural science, complained of the disadvantages they were under in competing with more lately educated agriculturists, and expressed their regret at having no opportunities of improving themselves. It might be worthy of consideration in cases considered especially deserving of encouragement, and where the desire to improve himself was evinced by the school teacher, whether a small gratuity in the shape of a free journey to the Albert Model Farm and back, would not act as a stimulus to agricultural teachers of ten or twelve years standing, and be well repaid in the future improvement of their schools. If these "passes" were given at the time that the exhibition of model farm produce was in progress at Glasnevin, much interest would be added to the visit, and an opportunity afforded to the various teachers present of interchanging experience and ideas with mutual advantage.

64. We also heard complaints made by teachers that they are expected each year to send up roots, &c., to the Glasnevin Exhibition at their own expense, thus losing the value of the articles forwarded for exhibition, but not returned, as well as the cost of their transmission.

Insufficiency of agricultural Inspection.

65. Even with the present limited number of agricultural schools the inspection seems to us insufficient. Mr. Brogan, the travelling Agricultural Inspector, is expected to pay three visits to each of the 109 agricultural schools during the course of the year—a task that is manifestly an impossibility. Were the number of the ordinary agricultural schools to become much greater than at present, an increase in the staff of Agricultural Inspectors would be essential. It seemed to us, and we find our opinion confirmed in Mr. Baldwin's last report, published since these pages went to press, that the agriculturists of the district model agricultural schools, whose time can be by no means fully occupied with their present duties, might easily assist as local Agricultural Inspectors of the ordinary agricultural schools within a certain distance of their respective stations. The managers of the four or five chief model farms have working stewards under them at present, who could carry on the business of the farm during the occasional absence on special inspection duty of the agriculturist. On the question of expense, Mr. Baldwin says, "The adoption of this suggestion would, at first, appear to involve a heavy outlay; but I am prepared to show the Commissioners that arrangements could be made for carrying out the suggestion, with little, if any, additional expense." On this point also our opinion quite coincides with that expressed by the Superintendent of the Agricultural Department.

Suggested improvement.

Accuracy of Constabulary returns of June 25, 1868.

66. With the view of forming an opinion for ourselves on the accuracy of the returns furnished by the Constabulary to the Royal Commission of all pupils in school attendance on the 25th of June, 1868, we made it a point to inquire in almost every National school we passed—which, in the course of our lengthened tour, amounted to some hundreds—whether the enumeration had been made strictly in accordance with the rules laid down. In every instance we were pleased to find that it had been accurately taken.

Aid given by Constabulary to Royal Commissioners.

67. We gladly take this opportunity of stating that, in every district we visited where we had any occasion to seek assistance or information from the Royal Constabulary, we found them invariably obliging and intelligent. They seemed disposed to carry out most satisfactorily the instructions which they told us had been issued to them from the head office of their force—"to give the Royal Commissioners every aid in their power."

Detailed report of the schools visited.

68. We now propose to report in detail on the state of each of the agricultural schools that we visited, placing them in the same order as they appear in the Annual Reports of the Commissioners of National Education. Glasnevin takes the first place and is succeeded by the Provincial and District Model Farms under the direct management of the Board; to these succeed the first-class farms under local management; then the ordinary agricultural schools; then the school-garden at Glasnevin; and finally we add Reports on the Oldcastle Endowed School Farm and the Benedictines' Farm at Leopardstown.

69. At the end of the Special Reports will be found a short repetition of the conclusions we have arrived at, and the recommendations or suggestions on agricultural education which we think it desirable to make to our colleagues. We have added references to those various paragraphs of our Report in which each particular subject is treated at greater length.

70. At the end will be found a few observations on those collateral subjects to which we referred in the opening of our Report.

The Albert or Glasnevin Agricultural Training Institution.

Agricultural Training Institution, Glasnevin;

71. The Albert or Glasnevin Agricultural Training Institution is situated about one mile to the north of the village of Glasnevin, which lies a short distance outside the municipal boundary of the city of Dublin. Towards the end of 1836 the Commissioners leased a small farm of about 17 statute acres of land here for the purpose of teaching the practice of agriculture to those attending the normal establishment which was then being organized for training teachers. This place appears to have been selected because of its proximity to the boarding-house established for the teachers in training in the village of Glasnevin. In the fifth Report of the Commissioners for 1838 we are told that the teachers residing at that boarding-house "will receive instruction at home, particularly in agriculture, upon each evening; and they will attend on Saturdays at a farm which is conducted under the directions of the Commissioners, and where they will see theory reduced to practice."

teachers in training sent there in 1838;

First mention of pupils being trained there in 1839;

In the sixth Report, or that for 1839, the Commissioners report that "our model farm, which is connected with our normal establishments, is at present only in its infancy, but it is well conducted, and we have no doubt that the teachers under training, as well as the agricultural pupils, of whom there are at present 12, derive much benefit from the instruction they receive, and the judicious system of farming which they see practised there." This is the first mention we find of pupils, and we learn from it that the first plan of the Commissioners had been enlarged. In the year 1840 the buildings now used for the intermediate and "spade labour" farms were erected, and are referred to in the Report for that year. For the first time an epitome of the instruction given to the agricultural pupils and masters in training by Mr. Skilling, who was then the head of the department, was published as an Appendix to the Report just mentioned. Up to the year 1844 the number of places for boarders was twelve; these were filled up by nomination from different parts of the country, and the persons so nominated, or their patrons, paid £10 a year towards their board. In that year, however, the Commissioners determined to make those places free and tenable for two years, and to give them as rewards of merit to youths, who were to be selected from such agricultural schools as should happen to be in connexion with the Board. A want of competent teachers for the newly established schools having been felt, a few of the teachers attending the training school were selected to form a special class, and receive practical instruction in working a farm during one year. In 1846 this special class was increased to 12.

pupils paid at first;

places made free in 1844;

formation of a special class.

72. In 1847 Mr. Skilling, having resigned the office of agriculturist at Glasnevin, Mr. Donaghy, who had been master of the Agricultural Model School at Larne, was appointed to succeed him. In addition to the 12 free pupils, and the special class of 12 teachers, the Board permitted Mr. Donaghy to receive into his house a limited number of pupils of a higher class, who were to pay him a moderate sum per annum for board, lodging, and instruction, the Commissioners providing the necessary accommodation. When the farm was first established the agriculturist was a mere agent for conducting the operations of the Board, and keeping an account of receipts and disbursements, the Commissioners paying the rent and taxes of the farm. After some time the farm was let to the agriculturist, who worked it on his own account, the Board paying him, however, a salary for instructing in agriculture the five resident pupils, the special class of teachers, and all the teachers in training. On the appointment of Mr. Donaghy the Commissioners reverted to their original plan of management. They also determined to appoint some one to superintend the growing department of agriculture, and to double the number of free boarders, and of the special class of teachers in training, so as to raise the number of the whole to 48, and to appoint a first-class teacher to give them literary instruction in the morning and evening. In 1848 the late Thomas Kirkpatrick, M.D., who had been one of the founders, and for a considerable time one of the most active members of the Committee of the Larne Agricultural Model School, was appointed Agricultural Inspector, an office created in pursuance of the resolution of the Board of the previous year. The farm at Glasnevin was also enlarged to about 128 statute acres; and plans for new farm buildings and residences for the officers, and for 100 pupils, to which number the Commissioners proposed to increase the agricultural class, were prepared. These buildings, which were estimated to cost £5,615, were not all quite completed in the beginning of 1853, but the Commissioners in their report for that year announced that "all the essential works have been completed," and that 75 agricultural pupils were lodged in them. The name of the establishment was changed to that of the "Albert National Agricultural Training Institution," and arrangements were made for the delivery of regular courses of lectures, in each of the two sessions into which the school-year was divided, on agricultural chemistry and geology, animal physiology and pathology, and botany. All the buildings were completed at the end of 1853, and the new institution was opened on the 20th February, 1854. In that year also the farm was enlarged to its present extent by the addition of the land attached to the house on the Drumcondra road, now known as the Albert Lodge.

Agriculturist allowed to take boarders.

Farm at first worked for Commissioners; afterwards let to agriculturist;

Old plan re-established in 1847.

Appointment of Dr. Kirkpatrick as Agricultural Inspector.

Erection of new buildings.

Name of Institution changed. Courses of lectures established. Farm enlarged to present size.

73. In the year 1860 the old objectionable system of nominating to free places was given up, on the suggestion of the Right Hon. E. Cardwell, then Secretary for Ireland, and it was arranged that all candidates for admission into the Glasnevin Institution, and for free places at the country agricultural schools, should submit to competitive examination. In 1861 an important change was made in the course of instruction at Glasnevin. In consequence of the pupils selected by competitive examination being much better instructed in ordinary school work than those admitted under the old system, it was thought desirable to give more time than formerly to agriculture. The lecturer on agriculture was also directed to give two lectures weekly at Marlborough-street; and all the teachers in training were ordered to attend each Saturday at Glasnevin during the period of training. A small example-farm was also established at the suggestion of Mr. L. Waldron, one of the Commissioners of Education, who takes great interest in the agricultural department, and was placed under the management of the lecturer.

Competitive examination for places established.

"School Farm" established.

74. In 1862 Mr. Waldron recommended that an annual exhibition of farm produce from the different agricultural schools in Ireland should be held at Glasnevin, and that a grant of £10 should be made to provide prizes for the most varied and best collections exhibited. The first exhibition of this kind took place on the 10th of December of that year. In the same year a discussion took place in the House of Commons upon the Glasnevin Institution, in the course of which it was suggested that the time had arrived when the institution should be put an end to. The Government pledged itself that the estimate for the following year would be revised. In fulfilment of this promise, Sir Robert Peel, in a letter to the Secretaries of the Board of National Education, dated 4th December, 1862, expressed a hope that under the circumstances the Commissioners would be "prepared to recommend a sensible reduction in the amount to be asked for from Parliament for the model farm at Glasnevin, in the estimates for the ensuing financial year." The reduction was made, and the lectures on science were discontinued in 1863. They were, however, re-established in 1865.

Annual exhibitions of farm produce.

Debate in Parliament on the Institution.

The Government promise retrenchment.

Lectures on Science discontinued. Re-establishment of paying class.

75. In the year 1867 an important suggestion was made by Mr. Waldron, which has been acted upon, namely, that a class of paying pupils should be re-established at Glasnevin, the members of which

should be placed upon the same footing as the free class in every respect, except in the payment of an annual premium.

76. *Buildings.*—There are on the farm, besides a gate lodge, three distinct blocks of buildings:— Buildings.

1. The New Buildings, consisting of the residence of the Superintendent, apartments for the matron and agricultural steward, dormitories, refectory, lavatory, class-room, and school-room for the boarders, a laundry for the general use of the boarding establishments of the teachers in training, small gas-works, farm offices, green house, vinery, peach house, and orchard house.

2. The old farm house and offices. The former is occupied by the literary teacher and his family. The offices are also divided, the principal part being used for the "intermediate" farm, and a small part for the spade-labour farm.

3. Albert Lodge and farm offices. The Lodge is now occupied by the agriculturist, Mr. Smith; the offices are used in connexion with the large farm.

77. There is also a good house and a plot of land on the road-side near the farm, but not connected with it, and occupied at the time of our inspection by Mr. Edward Carroll, who had charge of the horticultural department.

78. The new buildings are very ugly, ill contrived, and far too expensively built. The apartments of the Superintendent are good; but the manner in which they are connected with the remainder of the buildings render them very uncomfortable, and indeed until some recent changes, they were almost uninhabitable. The dormitories of the boarders are very defective; in the first place, they are not divided into distinct chambers, and in the case of the upper one the ceiling is too low. It seems strange that the dormitory accommodation of the central institution, to which the best pupils from the other schools are eventually drafted, with the view of giving them a complete technical education, should be inferior to that afforded to them while in the district agricultural schools. Yet it is so. In all the provincial, and in the principal district schools we saw, the dormitories were divided by partitions. It is unnecessary to point out the many objections to the arrangement at Glasnevin, but there is one to which we must refer. At Glasnevin Institution more, perhaps, than at any other of the agricultural boarding establishments, there is a considerable intermixture of Catholics and Protestants, and care should have been taken to allow to each the privacy necessary to perform whatever religious devotions he may desire at night and in the morning. Character of new buildings: dormitories defective;

79. The refectory is a fine room, but appears to have been designed for more than double the present number of boarders; it is also very inconveniently situated as regards the kitchen—indeed the architect does not seem to have thought that there was any necessary connexion between the two places. refectory;

80. The school-room is, without exception, the most ill-contrived room for the purposes of such an institution we ever saw. At first it consisted of one room 85 feet long, and 19½ broad, and 12 high, having at one end a good sized apartment, originally intended to be used as a class-room. Under these rooms are the lavatory, an archway, the farm-office, and stables, now used as loose boxes for a bull, &c. Like the refectory, the school-room was designed for a very much larger number of youths than now attend there. Mr. Baldwin has had it divided by a partition into two rooms; the larger is 54¾ feet long, and forms the school-room and study-hall; the smaller forms a good-sized ante-room 30 feet long, and was to have been fitted up with cases so as to form a museum. The work was sanctioned, it appears, by the Commissioners about two years ago, but the Board of Works has not yet executed it. school-room;

81. The room, intended as a class-room, and which is 21 feet long by 19½ feet wide, was partially fitted up with cases to hold chemical and physical apparatus, and serve as a kind of laboratory, but owing to the want of proper drawers, &c., for holding maps and diagrams, it is largely used as a kind of lumber-room for the latter, and also as a drawing-room by those pupils engaged in preparing farm maps from surveys. We have no doubt that the money spent upon the inconvenient cases intended for physical apparatus would have been fully enough to have provided all the fittings required—certainly the amount of wood in them would be amply sufficient. Making shelves 1½ inches thick, and capable of sustaining half a ton weight, to hold objects weighing about 10 lbs., appears to us not to be a good mode of teaching the economy of materials or the principles of mechanics. It seems to be a general rule in Ireland that the persons most concerned, and who, from position, ought to know best what is required to be done, are never consulted about fittings, alterations, or other similar matters connected with public buildings. Hence a great deal of the public money is wasted, and the arrangements are seldom convenient. A ludicrous instance of this occurred when the large cow-sheds were being erected. Somebody, not however connected with the agricultural department, wishing to introduce a novelty in the arrangements for feeding cattle, ordered a number of feeding troughs hollowed out in two compartments each from a single block of granite. One compartment was to hold chopped hay, sliced roots, &c., and the other, bran, Indian corn, oil-cake, &c. They were brought a distance of more than twenty miles, and cost, we were told, about £7 each; but, unluckily, the artist knew nothing of house-feeding, and made his troughs not only too small for the feed, but too small for the nose of the cow. Seven or eight of them appear to have been delivered before the blunder was discovered. laboratory. Ludicrous instance of waste of public money.

82. The school-room is wholly unsuited for giving lectures illustrated by experiments or diagrams. Several years ago it was proposed to build a small lecture-room; plans and estimates were prepared, and the money voted by Parliament, but the Board, yielding to the opposition in and out of Parliament against the whole scheme of agricultural instruction, allowed the grant to lapse. There are fair grounds for supposing that a good deal of the loss sustained from the working of the agricultural department, and much of the ill success of the latter in an educational point of view, was primarily due to the indecision of Parliament and of the National Board. The persons intrusted with the carrying out of the work, not having faith in the permanence of an institution subject to perpetual attacks, lost one of the most effective spurs to exertion. School-room unsuited for lectures.

83. There are good stables at one side of a square building in the court-yard, the other side is occupied by implement sheds and a fire engine. Over the whole is a large airy loft where seeds are dried, &c. This building ought to be converted, as was suggested by Mr. Baldwin, into an agricultural Building in centre of inner yard;

might be made into a museum and implement house.

museum; the lower portion might contain all the implements, for which at present there is no suitable place, and which are consequently exposed to injury and cannot be kept in proper order; and the upper portion might be the museum proper. We shall have something to say on the character of such a museum further on. If this were done, and the stables under the school removed, the whole of the inner yard would then be devoted to educational and administrative uses, and the farm offices proper confined to the outer yards.

Cow-house.

84. The present large cow house is absurdly expensive in its plan and execution, and is at the same time very defective. In the first place it is a great mistake to have so large a number of cattle under one roof, as it creates a needless difficulty in treating them differently when necessary, and is positively dangerous in case contagious disease should happen to break out. In the second place, the mode of discharging liquid manure behind the cows by means of sunken covered sewers is most objectionable. No matter how carefully looked after, putrefaction takes place in them, and fœtid air is given off. This was the case at the time of our visit although the weather was cold. Chloride of lime was used freely; but this substance, though very useful when used occasionally to deodorize a place, is injurious to the liquid manure when allowed to mix with it in any quantity. These covered sewers should be closed up, and open drains made to convey the liquid manure to the manure pit. A part of these sheds might be advantageously converted into stables in place of those now in the interior yard.

Piggeries.

85. There is ample accommodation for the breeding and rearing of pigs; and the arrangement of the piggeries is satisfactory.

Poultry yard and houses.

86. Within the last few years a rather extensive enclosed fowl yard and fowl houses have been erected according to sketches furnished by Mr. Baily, the well-known poulterer of Mount-street, London. They appear to have been chiefly designed for the breeding of different varieties; there seemed to have been no special arrangements for fattening. This department is under the management of the matron, Mrs. MacDonnell. The varieties bred were numerous enough,—Spanish, Bramah-Pootra, Dorking, Creve-cœur, and Houdan fowl, Aylesbury and Rouen ducks, Toulouse geese, &c.; but the whole arrangement is more suitable for some wealthy amateur, than for a farm where profit was to be made. Some use might, however, be made of this fowl department for experimental purposes. The breeding, rearing, and fattening of fowl are matters requiring great skill and undivided attention, and consequently cannot be expected to thrive, or afford the useful lesson they might be made to do when left to amateur hands not specially conversant with the matter.

Steam engine.

87. There is a large fixed steam engine, which is used for threshing, chopping straw, &c.; the boiler supplies steam for cooking food for the cattle, pigs, &c. The steaming vessels now in use, and which have been substituted for others on an inconvenient and more expensive system, are simple and conveniently

Liquid manure pumps.

enough arranged in a shed close to the cow house. Connected with the steam engine is a set of pumps for distributing, by means of a net-work of pipes and hose, the liquid manure over the artificial grass. This expensive and absurd contrivance was introduced at Glasnevin at a time when the enthusiasm for so-called scientific agriculture had reached such a height, that the real object of farming was wholly lost sight of by many of its visionary promoters, who appear not to have realized the idea that the

Laundry.

application of science to husbandry should always be guided by common sense. This system of distribution is no longer, we are glad to learn, in use at Glasnevin. For some time past this engine and boiler have been also used for giving power and steam to a laundry which has been set up for washing the linen of the several boarding-houses of the teachers in training. If steam cultivation were adopted on the farm the fixed engine might be dispensed with, and any agricultural work now done by it could be done by

Locomotive v. fixed engines.

the locomotive engines. Fixed engines should never be erected on a farm unless where continuous work can be supplied to them. A locomotive engine, which can be used for ploughing, harrowing, threshing, winnowing, pumping, lifting, &c., is more economical. If it were thought desirable to show the application of steam-power to the distribution of liquid manure, it could be best and most economically done by a locomotive engine. The substitution of locomotive for fixed power would

Suggestion to remove laundry.

also lead to the removal of the laundry, which ought never to have been established at such a place. Whether our suggestion as to steam-power be carried out or not, the laundry ought to be removed, and the room gained used for other purposes for which it is much required.

Old farm buildings.

88. The old offices at the "intermediate" farm, which, until 1855, accommodated the whole of the then farm, are sensible and inexpensive, and so far as we could learn from Mr. Boyle, at the time of our visit in charge of that farm, are found quite sufficient for present wants. Sixteen cows are accommodated in the cow-house, a space of four feet being allowed for each cow. This building is estimated to have cost only about £100.

Albert Lodge farm offices.

89. The offices at Albert Lodge were on the land when it was taken by the Commissioners of National Education. They are simple and cheaply, though substantially built, and are being utilized in a very sensible and practical way for the partial housing of cattle in summer.

Total cost of buildings.

90. The whole of the buildings erected by the Commissioners of Education from first to last are estimated, in the return furnished to the Royal Commissioners, to have cost £35,363 15*s.* 10*d.*, or more than six times the amount of the original estimate. The greater part of this sum has been expended for educational purposes, but unfortunately there exist no data, either in the office of the Commissioners of National Education, or in the office of Public Works, for estimating the proportions of this large sum to be credited to farm offices, and to educational buildings, respectively. It is very much to be regretted that the accounts were not kept strictly separate from the beginning.

The farm:

91. *The Farm* consists of three parcels of land, held for different terms, and at different rates per acre. The first parcel contains 17A. 0R. 2P., held on a lease for a term of 84 years, from the 29th September, 1836. This was the first model farm of the Board, and upon it were erected the house

tenure;

and offices now used for the intermediate and spade labour farm. The third parcel consists of 34A. 3R. 2P., held on lease for a term of 31 years, from the 29th September, 1852. The second consists of 127A. 0R. 20P., held on lease for 999 years, from the 25th March, 1849, or, in all, 178A. 3R. 24P., at an annual rent, exclusive of the interest on a fine of £300 paid for one of the parcels, of £723 0*s.* 5*d.*, or an average of £4 0*s.* 9¾*d.* the statute acre. Griffith's valuation for the land without the buildings is £369 15*s.*, or an average of £2 1*s.* 4*d.* the acre.

92. The 178A. 3R. 22P. are appropriated as follows:— Sub-divisions of land.

	A.	R.	P.
Buildings, pleasure-grounds, flower, fruit, and kitchen gardens,	10	0	22
Market garden,*	6	2	0
Spade labour or Belgian farm,	5	2	37
Intermediate or medium-sized farm,	22	3	7
Large farm,	133	2	33

93. The pleasure grounds and gardens were at the date of our visit under the management of the late Mr. Edward Carroll, a man of varied experience in every department of agriculture and horticulture, and well known as a writer in several agricultural periodicals. Mr. Carroll also lectured on general horticulture, and gave practical instruction to pupils in the gardens. Mr. Edward Carroll.

94. The kitchen garden contains about two acres Irish, and the fruit garden one acre. The pleasure ground and the avenue leading from the high road to the principal establishment serve to show the cultivation of flowers and ornamental shrubs. The fruit garden is well stocked with good fruit trees; but all the trees are not yet fully grown; the situation is exposed, and some steps should be taken to provide shelter on the eastern side. A small orchard house, and a range of glass, comprising a small green-house, a vinery, and a peach-house, are connected with these gardens. The pupils take considerable interest in the garden department, which is undoubtedly not the least useful one of the whole institution. Considering the class of boys who come to the farm, and that the course of education which extends over two years, may therefore be looked upon as a more or less complete course of technical instruction, horticulture should necessarily form part of the instruction given. In fact, it is in the flower, fruit, and kitchen gardens that plant-life can be best studied, and that the lessons of science can be most effectively illustrated, and their practical bearing proved. Gardening, too, shows more decisively than any other branch of agriculture the value of deep tillage, of manure, of skill in the selection of seeds, and, above all, of constant care and attention, and the injury of neglect, and of allowing weeds to spring up. We have found that instruction in gardening, and the practice of it by agricultural pupils, awakened their intelligence in a remarkable degree, at the same time that it gave them a taste for order and neatness. For two other reasons, also, it is desirable to combine horticultural instruction with ordinary agricultural training. One is that in many of the places open to the poorer classes of the pupils the duties of gardener are often combined with those of land steward, and unless they receive some instruction in garden management, they could not fill situations of that class. The second is, perhaps, one of the strongest reasons of all:—Ireland is very backward in the cultivation of fruits and culinary vegetables,—far more so now than in the last century, or even in the first quarter of the present century. In the south of Ireland there was at that time an orchard and kitchen-garden attached to the greater number of the middle-sized and large farms, and cabbages, peas, and onions were largely used by the rural population. Now, an orchard attached to an ordinary farm-house is rarely seen; and kitchen gardening, where there is a garden at all, never rises above the cultivation of a few cabbages. The want of skill in vegetable-culture among the Irish small farmers and labourers is indeed one of the most noticeable points of difference between them and the corresponding classes in England, Belgium, France, and other countries. It will hardly be credited that several inland towns are actually, or at all events were a very short time since, supplied with vegetables,—even cabbages and white stone turnips from Dublin. It seems to us, therefore, very important that instruction should be given in gardening not only in Glasnevin, but in every agricultural school in the country. Kitchen, fruit, and flower gardens. Importance of instruction in horticulture. Great want of skill in growing and using vegetables in Ireland.

95. What we have just said applies even more strongly to the value on such an educational farm of a market garden for the cultivation of the usual vegetables sold in the markets of Dublin. The one at Glasnevin contained only 6A. 2R., and was too small to keep a horse constantly at work carrying vegetables to town, and bringing back manure, and to pay for the superintendence which an educational garden would necessarily require. It was also too small to show the importance of market gardening as a skilled trade, which might be advantageously followed by young men having some capital in the neighbourhood of a large town. We would accordingly recommend that a market garden of 20 statute acres be established at Glasnevin. Such a farm might be reasonably expected to produce a profit of at least £10 an acre over and above all charges, if worked with skill and care. This profit would help to reduce the rent upon the Belgian, intermediate and large farms, and place them, so to speak, upon a fairer ground of competition with similar farms in districts more remote from a city or large town. It is in this way alone that the Glasnevin farm could take advantage of its position near Dublin to increase its acreable profit, and serve at the same time as an educational farm. Value of a market garden; recommendation to establish one of 20 acres;

96. In discussing this subject with Mr. Baldwin, who had long entertained a similar opinion as to the value of a large market garden, he suggested that it should be formed out of the fields lying to the west of the principal buildings, and between them and the road. This land forms part of the large farm; if taken from it, it would still leave enough of land to serve as an example of large tillage farming. The present market garden might be added to the intermediate farm, so as to increase it somewhat in size. part of farm best suited for this purpose.

97. *The School or Spade-Labour Farm.*—This farm consisting of 5A. 2R. 37P., was established for the purpose of showing the profit that may be realized by working a small piece of land on a four-course rotation, and strictly house-feeding the cattle as in Belgium. A portion of the old offices have been set apart for the use of this farm; the manure from the cattle, and in fact everything connected with the farm, being kept strictly separate. The following table shows the character of the cropping, and the extent under each crop in the years 1868 and in 1869:— "School Farm.

* Now added to the large farm.

Cropping in 1868 and 1869;

	1868. A. R. P.	1869. A. R. P.
Grain crops—oats,	1 1 37	2 3 19
Green crops, Mangels,	1 0 0	0 2 0
Turnips,	0 1 29	0 0 39
Potatoes,	1 0 31	0 1 0
Cabbages,	—	0 1 0
Artificial grass,	1 1 37	1 1 37
Total,	5 2 14	6 0 35

character of crops;

98. The corn of 1868 had all been cut and removed before our first visit, but it appears to have been a good crop, judging by the produce and prices received; the oat crop of 1869 looked very well also when we saw it. The mangels and turnips of 1869 promise to be a fair crop. Nothing could exceed the luxuriance of the rye-grass. This crop indeed was one of the best examples afforded by the whole farm; no young fellow could see it without observing the field for improvement in the growth of artificial grasses which exists on Irish farms.

implements in use.

99. The principal implements used on this farm, and the cost of each, were as follows:—

	Cost. £ s. d.
1 Turnip-cutter,	0 15 0
1 Hand-cart,	2 10 0
1 Wheel-barrow,	1 0 0
1 Weighing machine,	3 10 0
Miscellaneous implements, including spades, forks, hoes, and dairy utensils,	3 2 6
	10 17 6

Cattle.

100. The cattle kept during the year represented 3 milch cows, and for part of the year the equivalent of 4, in cows, heifers, and calves. We shall give a detailed list of all the animals on the farm in a table of the live stock of the three farms, when we come to describe the large farm.

Profit and loss account;

101. The value of this little farm as an example of the profit that may be realized by the careful tillage of a small quantity of land, and the house-feeding of cattle—that is where a small capital is employed to work efficiently a proportionate quantity of land—will be best seen by the following table containing the balance sheets for the years 1866–7, 1867–8, and 1868–9:—*

Dr.	1866–7. £ s. d.	1867–8. £ s. d.	1868–9. £ s. d.
To Amount of Valuation at the commencement of the year,	95 6 10	107 3 8	77 15 11

£	258 12 8	243 12 5½	172 13 7

high profit of 1866–7 not realizable in the country generally.

102. So great a profit as that of 1866–7, when the farm was managed by Mr. Baldwin himself, could not, of course, be realized except in the neighbourhood of a large city, where there is a ready market for the sale of dairy produce at high prices. In districts remote from a large city, the receipts for dairy produce would be about one-third less. On the other hand, the rent would be very much less, and a small farmer and his family would themselves do the work which is paid for at Glasnevin, and might increase the profit by poultry, which cannot be kept here. On the whole this farm is one of the best things at Glasnevin.

"The Intermediate Farm;"

103. *The Intermediate Farm.*—This farm consisting of 22A. 3R. 7P., was established for the purpose of showing how a farm of moderate extent, and representing the most extensive class of farms in Ireland, should be worked by means of simple contrivances, without a greater amount of capital than might be expected among farmers of that class. We have already spoken of the farm offices.

rotation followed;

The rotation adopted on the farm is the Northumberland five-course shift, namely:—

First year, green crops manured.
Second year, grain with grass seeds.
Third year, grass first year.
Fourth year, grass second year.
Fifth year, lea oats.

cropping in 1868 and 1869.

104. The following table shows the character of the crops and the extent under each in the years 1868 and 1869:—

	1868. A. R. P.	1869. A. R. P.
Grain crops—oats,	9 0 5	9 1 23
Green crops, Mangels,	4 2 23	3 1 20
Turnips,	0 1 0	1 0 9
Potatoes,	0 1 0	—
Artificial grass,	8 2 1	8 3 25
Total,	22 2 29	22 2 28

* These balance sheets are for the year ended 31st March in each case, at which period the inventory and valuation is made.

105. The mangels in 1868 were a very good crop, and seemed sound. They were of a fair size, no effort being made to produce the large roots of inferior quality which are so injudiciously fostered at many of our agricultural shows; and the exhibition of which, while it affords an example of *unscientific* agriculture, has done very great mischief, by holding up to the small farmer a goal, which even if it was a right one, which it is not, he could not hope to attain. This, there can be no doubt, is one of the causes why the small farmers have held aloof from agricultural shows, and learned more and more to distrust agricultural improvement as recommended to them by agricultural societies and model farms. The observation made with respect to the oat crop of 1868 on the small farm applies equally to that grown on this farm. The crop of 1869 gave a good return of excellent grain, though the straw was here, as almost everywhere else, somewhat light. The turnip and mangel crops of 1869 promise to be very good, and the grass seeds laid down with the oats were excellent. Character of the crops grown in 1868 and 1869.

106. The following table contains a list of the implements used in the cultivation of the farm and their cost:— Implements used.

	Cost. £	s.	d.
1 Glasnevin combined plough,*	4	10	0
1 Iron harrow,	3	10	0
1 Metal Roller,	6	10	0
1 Farm-cart,	10	0	0
1 Hand-cart,	3	0	0
1 Wheel-barrow,	1	0	0
1 Set of harness,	6	10	0
1 Steaming apparatus,	5	10	0
1 Chaff cutter,	3	17	6
1 Turnip slicer,	4	10	0
Miscellaneous implements, including spades, forks, hoes, dairy utensils, &c.,	13	6	1
	62	3	7

107. One horse only is kept. When a second one is required he is hired from the large farm, and his hire is charged in the same way as if he were hired from a neighbour, as is very generally done on this class of farms through the country. Horse-labour.

108. The live stock kept on this farm will be found in the table of live stock already referred to. Live stock.

109. The following table, which gives the balance sheets for the years 1866–7, 1867–8, and 1868–9, will show the value of the stock, the profit and the general character of the annual expenditure, and receipts of the farm:— Profit and loss account.

110. *The Large Farm.*—This farm consisting of 133A. 2R. 38P., was established for the purpose of showing how a large farm should be worked, taking advantage of all the most improved methods of modern husbandry, and the best implements and machinery. It is divided into three parts, one part containing about 20 acres, lying on the western side of the farm between the principal buildings and the high-road, is worked according to a special four-course rotation, namely:— "The Large Farm;"

First year, root crops.
Second „ potatoes.
Third year, Italian rye-grass, sown in autumn after the potatoes.
Fourth „ Lea oats.

rotations followed on it;

111. This is the plot of ground which we have suggested should be cultivated as a large market garden.

112. The second part consisting of about twenty-five statute acres is in permanent pasture; and the third consisting of the remainder is worked according to the common four-course rotation. The following table shows the crops grown in the years 1868 and 1869, and the extent of land under each.

* Convertible into a grubber, broad share, double mould-board plough, &c. This implement originated in a suggestion made by Mr. Waldron to Mr. Baldwin, who put himself in communication with several leading makers of agricultural implements, who endeavoured to realize the idea. The one found most suitable was brought out by Mr. Samuelson, M.P. for Banbury.

† Including that of small farm, as charged on opposite side.

cropping in 1868 and 1869.

Kind of Crops.		1868. A.	R.	P.	1869. A.	R.	P.
I. Green Crops,	Turnips,	9	2	22	5	1	30
	Mangels,	8	2	23	9	2	22
	Potatoes,	5	1	3	10	2	5
	Sugar beet,		—		5	1	3
II. Grain Crops,	Oats,	31	2	7	18	1	6
	Wheat,	16	0	8	13	3	14
	Barley,	5	1	25	9	3	22
III. Grass,	Artificial grass,	28	3	30	23	3	10
	Permanent pasture,	17	3	26	24	0	12
IV. Stolen Crops,	Vetches,	3	0	0	2	0	0
	Rape,	1	2	0	8	3	30
	Flax,	1	0	0	1	0	0

Character of the crops in those years;

113. The crop of mangels grown in 1868 was very good, the size of the roots affording a fair example of what a farmer ought to aim at in growing root crops namely, the largest acreable produce of *real food:* big roots give quantity but not quality, small roots quality but not gross weight. The swedes were indifferent. Those in use when we first visited were the last of the crop, and from the worst part of the field, and we were told that they were much worse than those which had been previously used. What we saw were certainly much inferior to many crops we saw on district model farms. We found an excellent stolen crop of rape for the use of the cows in spring. Italian clover had been sown also but it had failed, as had also a small experimental crop of white mustard, sown on the 8th September. The winter vetch crop was promising well. The corn had all been sold before our visit, but the observation already made with regard to the oats grown on the other two farms applies to oats and barley grown on this farm; the wheat, however, though heavy in the straw, did not prove as good as was expected. Kohl Rabbi had been tried with partial success. The turnip and mangel crops of 1869 promise to be good; but are not on the whole equal to those on the intermediate farm. The sugar-beet, which was grown for the purpose of affording the means of making an experiment in the production of beet-sugar, should the necessary facilities offer, promises to be a splendid crop of well-grown, uniform, moderate-sized roots, just like those grown in the north of France and Germany. If no use be made of them for making sugar, they will be found of great value for feeding cattle.

Implements used on this farm.

114. We give in the following table a list of the principal implements used in working this farm, and the cost of them, in order to afford an opportunity of judging of the amount of the working capital engaged in this object:—

Table.

Name of Implement.	Cost of Implement. £	s.	d.	Observations.
1 fixed Steam engine, used for Farm and Laundry in common.	120	0	0	For threshing, chopping straw, pumping liquid manure, slicing roots. The waste steam is used for cooking food for stock.
1 Threshing machine, 4-horse,	60	0	0	—
1 Chaff cutter,	10	10	0	Used also for chopping straw.
1 Bentall's Pulper,	8	10	0	Pulping roots for steamed mixtures.
1 Biddle's Root slicer,	8	0	0	Slicing roots for stock.
1 Steaming apparatus, including vats, &c.,	10	10	0	Boiler of steam engine used for cooking food.
1 Oil-cake breaker,	3	10	0	
1 Reaping machine,	25	0	0	Combined reaper and mower.
1 Hay tedder,	15	0	0	—
1 Horse rake,	10	10	0	—
1 Corn drill (Garrett's),	22	10	0	—
1 Turnip sowing machine,	6	10	0	—
1 Croskill's clod crusher,	18	0	0	—
1 Grubber (Clay's),	7	10	0	—
1 Drill grubber,	4	10	0	—
1 Metal roller,	6	10	0	—
1 Wheel plough,	6	10	0	—
2 Common ploughs, cost £4 each,	8	0	0	—
1 Double-mould board plough,	4	10	0	—
1 Sub-soil plough,	4	10	0	—
2 Iron harrows (Howard's), cost £3 10s. each,	7	0	0	—
1 Grass seed harrow,	1	10	0	—
1 Saddle harrow,	1	10	0	—
1 Drill harrow,	1	15	0	—
4 Farm carts, cost £10 each,	40	0	0	—
1 Market cart,	13	10	0	—
4 sets Harness (plough and cart),	30	0	0	—
Miscellaneous implements, including spades, forks, hoes, corn sacks, weighing machine, dairy utensils, &c., &c., &c.,	40	0	0	—
Total,	£495	15	0	

115. These implements appear to us not to exceed the requirements of a farm of this size used for educational purposes. Taking into account the latter object, we think that steam cultivation might be advantageously exemplified at Glasnevin. The land is of a quality well fitted for such cultivation, being free from rocks and boulders, while the size of its fields and the character of the central farm roads would afford facilities for the necessary operations. There are now several steam cultivators in Ireland, one of which could be occasionally hired for the purpose of letting the pupils learn their use by taking part in working them.* the farm suited for steam cultivation;

116. We were glad to observe that a flax-scutching machine had been lately erected in the farmyard, and a fair sample of flax grown on the large farm in the year 1867 was being scutched about the time of our first visit. We consider this to have been a sensible and useful addition to the machinery of the farm. scutching machine;

117. In the following table will be found a list of the live stock upon this farm, and for convenience of comparison we have placed side by side with it lists of those on the other farms. list of the live stock of the three farms;

AVERAGE NUMBER of each kind of LIVE STOCK kept on each of the THREE FARMS.

			Large Farm.	Intermediate Farm.	Small Farm.
I. HORSES,	Farm horses,		4	1	–
	Horses for delivering milk,		2	–	–
II. BLACK CATTLE,	Calves,		8	3	1
	Year-olds,	Heifers,	6	3	1
		Bulls,	2	–	–
	Two-year-olds,	Heifers,	6	3	1
		Bulls,	–	–	–
	Milch cows,		30	6	2
III. SWINE,	Sucking pigs,		20	8	8
	Stores and porkers,		15	4	2
	Brood sows,		4	1	1
	Boars,		3	–	–

118. The want of sheep on the farm is, in our opinion, a great deficiency. It might not, perhaps, be desirable to have a breeding flock at Glasnevin, but a few fattening sheep should be kept each year, and experiments made on the comparative merits of grass-feeding, house-feeding, and folding on the drained clay—the latter being a system too much neglected by Irish farmers.† want of sheep now supplied.

119. It was, we believe, at one time suggested to add to the farm some forty-five acres lying between its eastern boundary and the Santry road, so as to round off the farm. As the farm seems now to be in a fair way of making a good yearly profit, this addition which, while it would certainly make the farm more useful, would enable the great defect of the absence of sheep to be remedied, might be made if a favourable opportunity offered. If model farming at Glasnevin is for the future to be attended with a *gain*, as it is likely to be, and not with a *loss* in money, the taxpayers will have no right to complain if they are not called on, as heretofore, to make up needless deficits. Additional land might be taken.

120. The large manure pit is very tidy, and no waste of manure takes place, but its construction is not economical. It would have been much better to have sunk it somewhat below the surface, so as to save labour in throwing up the dung. The manure heap at the offices of Albert Lodge is very well and very simply arranged. It is one of the most useful, practical examples in a small way that an Irish farmer finds at Glasnevin. The manure pits at the small and intermediate farms are good examples, but the one at Albert Lodge was undoubtedly the best of all. Manure heaps.

121. We noticed at our first visit a very bad and untidy boundary fence at the part of the farm contiguous to the Albert Lodge offices, which could not be repaired without the co-operation of the occupier of the adjacent land. We found, however, when we visited the place on a subsequent occasion that the fence had been made good, the ditch filled up, and the new ground laid down in grass, and the farm road to the Albert Lodge offices fully opened up and made passable for carts. Untidy fence; since repaired.

122. *Farm Accounts.*—The system of farm book-keeping seems very compendious, and though much more detailed than would be necessary in the establishment of any gentleman or farmer working the same extent of land, is not perhaps more so than is desirable and necessary in such an institution as Glasnevin. A special class of six are employed in keeping these accounts, and all the pupils passing through Glasnevin are specially instructed in the duties of this department before completing their course. The dairy books kept, though somewhat troublesome for general use, are very interesting; and the general attention bestowed upon them must doubtless be of great use to the pupils in teaching them the value of accuracy, even in the seemingly trifling matter of a cow's daily or weekly yield of milk, which experience proves to be an almost unfailing index of latent disease, and in many cases certainly even of the nature of the coming sickness. Farm Accounts.

123. With the view of showing the value of the stock, the amount of floating capital employed in working the farm, the nature and amount of the principal expenses and receipts, and the profit and loss account, we give in the following table the balance sheets of the last three years:— Profit and loss account.

* Fowler's Steam Cultivator which we found at work on Leopardstown farm, is hired out at a reasonable rate to farmers in the neighbourhood of Dublin; but it is worth consideration whether Howard's round-about system might not answer the fields of Ireland better.

† A small flying flock has been kept; and Mr. Baldwin tells us that he purposes always keeping one in future now that he has got the eastern part of the farm into order. For instance, this season he will buy at Ballinasloe a small flock, and sell as the lambs and ewes become fat in 1870.

Credit due to Mr. Baldwin for placing the agricultural department on a sound basis.

124. These balance sheets, showing a successive and considerable increase of profit for each of the last three years, especially when compared with former years, when the annual loss was often as great as the present profit, prove that the farm is now well and economically managed. Mr. Baldwin undoubtedly deserves great credit for the success which has attended his efforts to place the agricultural department on a sound basis; and nowhere are the results of his labours better seen than at Glasnevin. In considering the profit realized at Glasnevin, we should not forget that, worked as an educational farm, it cannot take advantage of its position near Dublin. If the farm were to be worked merely for profit, it might be found more profitable to sell the hay and straw, for which there is an excellent market in Dublin, and bring back dung from the city, than to use it all for feeding.‖

Literary Instruction; different classes of pupils.

125. *Literary Instruction.*—Four classes of pupils receive instruction at the Albert Institution at present.

1. Resident or intern pupils who are admitted by competitive examination and are boarded and educated at the public expense, less whatever may be the value of their free labour.

2. Resident or intern pupils who are admitted without competitive examination and pay an annual sum of £20 for their board and education, in addition to the value of their free labour.

3. Non-resident or "extern" pupils who pay a fee of £2 annually, and board and lodge at their own expense either in the village of Glasnevin or in the city of Dublin.

4. The teachers who attend the Central Training Establishment of the Board and who receive instruction in agriculture at the farm every Saturday.

126. The first, second, and third classes receive instruction in common; the fourth class is instructed separately.

Objection to competitive system that the persons selected are not always fit to be farmers; those selected should intend to become farmers.

127. Up to the year 1860, as we have already stated, all the intern pupils of the first class were nominated without examination, and it sometimes happened that those nominated could scarcely write their names, and were otherwise very deficient in the most necessary parts of school business. Under the present system such a case cannot of course occur; but it is open to the objection, which applies equally to competitive examination for all offices requiring other qualifications besides mere school-knowledge, that the persons selected may not be physically fitted for agricultural work, or may not have that taste for it which would ensure their making agriculture the occupation of their lives. Several of the pupils whom we saw did not seem likely to adopt farming as a profession, and we have no doubt that their parents allowed them to become intern pupils because it offered a means of giving them a good literary education free of all expense, while the farm work they would have to perform, though it may not prove of much practical use to them in after life, would give them habits of industry, and accustom them to work with their hands as well as their heads. This is no doubt a gain to the country, but it is not precisely the object the State had in view in establishing the free places at Glasnevin, and at the district agricultural schools. The public could not expect that every one who obtains a free place at an agricultural school should be bound to make farming his future occupation. Even those who pay largely for their professional education do not always stick to their professions, nevertheless, care should be taken, as far as can be done, that those selected for free places should have some qualifications for agriculture as well as book-knowledge. This subject has engaged the attention of Mr. Baldwin, and in his report to the Commissioners for 1864, he very properly says

* From 1st April, 1866, to 30th April, 1867. † For twelve months ended 30th April, 1868.
‡ For twelve months ended 30th April, 1869. § Including threshing machine not in last year's valuation.
‖ In connexion with the subject already alluded to in the note to paragraph 44, it may be not unworthy of observation here that in the three farms at Glasnevin a similar result has been arrived at as in the cases of the District and Ordinary Model Agricultural Schools, the profits being in an inverse ratio to the area of the farms. On the five-acre farm the average annual net profit of the three years quoted above is in round numbers £47, the rent being £22 14*s.* 2*d.* On the twenty-two acre farm the average profit was £72, the rent being £91 1*s.* 3*d.* On the large farm of 133 acres, the rent of which is £555 13*s.* 10*d.*, the average profit was only £404. The Belgian farm, therefore, although the labour bill was acreably more than on either of the larger farms, produced a net profit more than equal to two rents, while the average profits of the "medium" and "large" farms were respectively 79 and 73 per cent. of their rents.

that: "It is more conducive to the public good that no pupil should be admitted to those schools who shall not have made up his mind to follow farming. It is opposed to all economic principles to afford special instruction and training to a man at the expense of the State, who is not likely to use the knowledge so acquired for his own advantage or that of the public afterwards." It is right to repeat here what we have already said, that more than half of all the pupils who have been at Glasnevin Model Farm as intern pupils are now engaged directly or indirectly in agriculture, as appears from the register kept at Glasnevin.

Intern or resident pupils.

128. The total number of intern pupils of both classes at present in the Glasnevin Institution is 70, of whom 68 are from different parts of Ireland, and 2 from England. Of these 44 are Roman Catholics, 19 members of the Irish Episcopal Church, and 7 Presbyterians. The first-class, or intern free pupils, numbers 58, of whom 39 are Roman Catholics, 13 members of the Episcopal Church, and 6 Presbyterians of the Synod of Ulster. The following table shows the proportion of these free pupils contributed by each county of Ireland, and their religious denominations:—

Classification of free pupils.

131. A student of the Established Church, from Archbishop Tennison's school in London, also obtained a free place.

schools whence they came.

132. Of the Irish students, 5 came from Model Agricultural schools; 1 from an ordinary agricultural school; 1 from a Model school (literary); 4 from Parochial or Church Education Society's schools; 1 from a middle class school; and 19 from ordinary National schools.

Paying pupils.

133. The second class of intern pupils admitted without examination, and who pay a sum of twenty pounds yearly for their board, was established in April, 1869, and the success so far has fully justified

the wisdom of establishing it, although the existence of such a class is as yet scarcely known to the persons likely to send their sons to Glasnevin.

134. The Board of Education limited the number of places for paying intern pupils to 10. The application for these places having exceeded the number established, 11 of the candidates were ultimately admitted, and there are applications from 6 other candidates. Of the 11 admitted, 10 are Irish, and 1 from London; 5 are Roman Catholics, 5 of the Established Church, and 1 Unitarian. The following table shows the religious denominations of the pupils, and the counties whence they come:—

135. Mr. Baldwin states that these pupils are attentive to their studies, and are very desirous to make the most of their time at the farm.

Pupils come from every part of the country. Extern pupils.

136. It will be seen from the foregoing tables, that the Glasnevin Institution draws its free and paying classes from almost every part of the country, and has many claims to be considered a National institution.

137. The class of externs has never been large, generally not more than two attending. This may in part at least be attributed to the want of accommodation for such pupils on the farm, or even in the village of Glasnevin. It is too much to expect a young man to walk daily out and back, winter and summer, two or three miles, and work besides the whole day on the farm. While he loses the opportunity of attending to the evening work of the farm, he has no leisure for reading. This class might perhaps be largely increased if the literary teacher and the agriculturist were encouraged to take boarders, by having part of their respective houses suitably arranged for the purpose.

Course of literary instruction;

138. The literary instruction is under Mr. D. P. Downing, a first class teacher, who also acts as assistant superintendent as regards the internal discipline of the pupils and government of the establishment. The course of instruction embraces the usual subjects taught in the better class of English schools: writing, reading, English grammar, composition, political geography, the elements of physical geography, book-keeping, the elements of political economy, arithmetic, plane geometry (six books of Euclid), plane trigonometry, the mensuration of surfaces and solids, algebra as far as quadratic equations, elementary mechanics, and the steam engine.

character as ascertained by examination.

139. The majority, indeed we might say all, of the pupils write a fair legible hand. Spelling, as shown in their notes and writing from dictation, was very satisfactory indeed—quite equal to that of boys educated in good middle class schools. The answering in arithmetic showed that the subject is well taught; but it would be well if they had a little more practice in commercial calculations so as to habituate them to work more rapidly. The boys of the junior class know the first book of Euclid, those of the senior class two or three books, and some even the whole of the six books. Very few of either class could do any, even simple corollaries. The subject seems to be taught in a very mechanical way in the National schools. About one-fourth of the boys of the upper class could solve simple equations and were moderately well acquainted with the fundamental rules of elementary algebra. Mr. Downing told us that he found it very difficult to teach algebra, the boys had not sufficient time, and those who had not a natural taste for it did not care to learn it, as they did not see any practical use for it. Those who knew some algebra knew also the elements of Plane Trigonometry, and a good many were able to use trigonometrical rules for the solution of problems. The answering in mensuration was good; nearly all the more advanced pupils are quite competent to make calculations of earthwork, and masonry, &c., and to perform the operations required in calculating areas, &c., from a field-book, when they do practical land surveying. Most of the questions in practical mechanics were satisfactorily answered. The boys of the senior class were all fairly acquainted with the principles of book-keeping. The special-class who had had experience in keeping the farm accounts seemed to understand very well the keeping such books as are required in farming and the management of land generally.*

Scientific instruction.

140. *Scientific Instruction.*—Applied science is the knowledge of the facts and laws of physical science applied to explain practical operations of all kinds. In order to learn a branch of applied science we should begin by learning the fundamental principles of those branches of science upon which it is based. As the facts and laws of science which are most useful in explaining operations, and most fruitful in practical result, are, as a rule, the most abstruse and difficult, true practical science implies in truth, a knowledge of the highest kind of science, and not what too many think, a dry collection of facts and descriptions of processes. Agriculture is an applied science in which the laws of heat, light, chemistry, animal and vegetable physiology or biology, in its widest sense, and mineralogy and geology, are used to explain the origin, nature, and composition of the soil, the character and action of manures, and plant and animal life. A

* The questions given at the oral and written examinations held by us will be found in the Appendix to this Report.

knowledge of mechanics is likewise necessary to explain the action and economical application of power in all farming operations. These sciences are taught in two ways: by lectures, illustrated by diagrams, specimens and experiments, catechetical instruction and reading; and by educating the eye by the exhibition of examples of the objects described or referred to in lectures or books on the subjects.

141. Very few of the boys who go to Glasnevin appear to have, or indeed can have, accurate notions, or notions at all, on physical science, because it is not taught in the schools whence they come; and, where books are provided by the Board for the purpose, they are so defective and so antiquated that it would be much better for the scholars not to read them at all, as they have afterwards to unlearn, with much difficulty, what they may have acquired from those books. As no provision has been made in the Training Institution of the Board for giving any instruction in the sciences bearing on agriculture, the masters cannot be expected to teach what they have not had an opportunity of learning. Of the sciences above mentioned, the only ones upon which lectures are given at Glasnevin are chemistry, botany, and geology. No lectures, except what are incidentally included in chemistry, are given on any portion of experimental physics, including the whole subject of climate, or in animal physiology. The literary teacher gives some instruction in mechanics, and occasionally some catechetical instruction in the subjects of the lectures on chemistry, botany, and geology. The three things the farmer has to deal with are—the soil, the nature and functions of which are rendered intelligible to him by physics, chemistry, and geology; plants,—the life of which he learns to understand through chemistry and botany; and animals,—a knowledge of whose life he acquires through chemistry and animal physiology. We cannot understand why the whole subject of animal physiology, including under that term likewise the pathology, or diseases of animals, should be left out of the scientific course at Glasnevin. This is the more remarkable in a country in which cattle and sheep form so large a part of the national wealth, and where for so many years the tendency has been to extend the grazing and diminish the tillage.

Pupils unacquainted with science when they come;

sciences taught at Glasnevin;

animal physiology not taught;

142. If scientific instruction is to be at all given, additional courses on elementary physics—mechanics, heat and light—especially in reference to meteorology—and on animal physiology and veterinary art, should be established.* Encouragement should also be given to the literary teacher, or to some one else, to give catechetical instruction on the subjects lectured upon.

physics and biology should be taught;

143. The chemical apparatus is sufficient to enable the simpler fundamental experiments of the science to be performed, but might be increased with advantage. The room, however, as we have said before, is wholly unfitted for lecturing on physical science or chemistry. There is no proper lecture-table, no place to hang diagrams, no suitable black-board, the desks are all on one plane, so that only those on the first two or three forms can see the experiments. There is also some physical apparatus; but the greater part of it is broken, a matter of little consequence however, as it was never of any value. Like nearly all the apparatus we have seen at the model schools, it was made to sell and not to use. There are few diagrams, which is accounted for by the absence of any means of using them. During the period from 1863 to 1865, when the lectures on science were suspended, and the health of Dr. Kirkpatrick was declining, no care was paid to the apparatus or the collections of rocks and minerals, and to this circumstance is to be attributed the broken condition of some of the apparatus.

no suitable lecture-room;

Physical apparatus of no use.

144. There is the nucleus of a collection of minerals and rocks. At one time they had been fully arranged and temporarily labelled with much labour, preparatory to having a catalogue for the use of the students printed; but when, for reasons of economy, the lectures were discontinued, the minerals got tossed about, the labels were collected into a heap, and the cases used for holding various articles which were placed on the top of the specimens. One of the objects which Mr. Baldwin had in recommending the division of the large school-room by a partition was to provide a place for a suitable range of cases in which to form a proper collection of rocks, minerals and soils. To the great injury of the pupils, however, this necessary work has not been executed, although sanctioned two years ago.

Mineral collection formerly arranged now not of much use;

cases not yet constructed for them;

145. On the completion of the new buildings an attempt was made to establish an agricultural museum. Specimens of cereal and other grasses, seeds, &c., and a few models of farm-offices, corn and hay stacks were arranged at the end of the refectory, which, however, was generally kept locked, except at meal time, in order to keep the room clean. The collection did not grow. An agricultural museum ought to have formed one of the first cares of the Commissioners when the institution was established. Since the revival of the agricultural department from the state into which it had fallen before 1863, and the partial disorganization of the Glasnevin Institution, consequent upon the retrenchment made in its grant by the Government in that year, Mr. Baldwin, the present Superintendent, has had too much up-hill work to be able to devote much time to this subject; nor could he, indeed, have attempted it in the absence of any suitable place to establish it in. Now, however, that the farm promises not only not to be a burden to the State, but to realize a good annual profit, there seems no reason why this work should not be carried out at once, if the institution is to be maintained as a training school.

attempt to form an agricultural museum;

one should be established, to consist of—

146. Such an agricultural museum might consist of five parts:—

I. A Geological Collection, consisting of—

a geological collection,

1. Classified collection of the minerals forming rocks; of rocks, especially those of Ireland.
2. A classified collection of soils and subsoils.
3. Mineral materials used as manures.
4. Clays, &c., used in making bricks, tiles, &c.
5. Fuels—*e.g.*, coal, turf, &c.
6. Substances used as building materials, &c.
7. A collection of the commercial ores of the common metals.

* Since this Report was written, we have learned that the Commissioners of National Education have decided on establishing lectures on the diseases of farm animals.

a vegetable collection,

II. A Vegetable Collection, consisting of—
1. Specimens illustrative of the proximate components of plants—sugar, gums, fecula, &c.
2. Specimens illustrative of the structure of plants.
3. Specimens illustrative of the classification of plants, with especial reference to agricultural plants.
4. Illustrations of seeds, woods, fibres, &c.
5. Vegetable manures.
6. Vegetable products used in manufactures—*e.g.*, flax fibre, &c.

an animal collection,

III. An Animal Collection, consisting of—
1. Proximate constituents of animals.
2. Specimens illustrative of the structure of animals.
3. Specimens illustrative of the classification of animals, with especial reference to farm animals.
4. A collection of preparations illustrative of the diseases of farm animals.
5. Animal materials used for manufacturing purposes, viz.—Wool, hair, skins, and their immediate products.

a collection of machines and tools,

IV. Collection of Machinery, consisting of—
1. Models of the mechanical powers; elementary parts of machines, especially with reference to agricultural implements.
2. A collection of weights and measures, and of geodesical instruments for actual surveying and levelling.
3. Models of the essential parts of motors—fixed and movable engines, windmills, watermills, &c.
4. Ploughs and other machines used in working the soil.
5. Machines for reaping, mowing, threshing, and slicing, &c.
6. Machines and contrivances for conveying and using water for agricultural purposes.
7. Machines employed in manufactures directly connected with agriculture.
8. Illustrations of quarrying, &c.

V. Museum of models of buildings, fences, drains, &c.

importance of such objects;

147. The importance cannot be overrated of having such a series of objects continually under the eyes of young men from every part of the country, specially selected for their superior ability, and whose daily avocations in after-life may bring them into contact with the localities of every kind of mineral raw materials, and every source of industry in the country This would be what may be called the public's share in the benefit; but as a mere means of instruction there can be no question that to the country lads who had an opportunity of studying in such a museum, where they could see all the objects of which they would hear in lectures or read in books, scientific agriculture would be a reality. Without the objects themselves being constantly before the eyes of such students, science must always consist of empty forms attached to no definite ideas. Such a museum need not be very expensive nor on too large a scale—it is not the most extensive collections that are the best schools for the student. As we have said before, the central building in the inner yard might be made to contain such a museum, and the lower floor might be used as an implement house. There the implements might be properly preserved, while, at the same time, they would serve as a sort of permanent exhibition of implements and machines, which could be examined by agricultural teachers from the country. Makers of new machines, too, might be invited to send for exhibition, at a certain period every year, any new or improved machines they may have recently produced. In this way the implement collection might, to a certain extent, be made to show the progress of improvement by placing the new implements beside the old ones.

where it might be put.

Agricultural Instruction:

148. *Agricultural Instruction.*—The lecturer on agriculture delivers a lecture every morning between 7 and 8 o'clock to the whole of the intern and extern pupils. From 3 to 4 o'clock P.M. he gives catechetical instruction to one-half of the class, while the other half work on the farm. Thus each pupil hears six lectures a week on the principles and practice of husbandry, and receives catechetical instruction on three days on the subject-matter of the morning lectures. The pupils also receive a lecture on horticulture at 8 o'clock A.M., when the lectures on chemistry and botany, which are delivered at that hour, are not being delivered. Thus independent of the ordinary school instruction the pupils hear two lectures every morning upon agriculture, horticulture, or on one of the branches of science upon which regular courses of lectures are given. All the pupils work on the farm from 9.30 A.M. to 2 P.M., and one-half from 3 o'clock P.M. to 6 o'clock P.M., every other day in summer, and until dusk in winter, and after that attend the live stock, and do whatever other work may be required about the farm-yard.

special class;

149. Mr. Baldwin has, with the sanction of the Commissioners, formed a special class selected from the best pupils, who act as farm stewards, and who are thus enabled to get the benefit of a longer course of training—sometimes extending to four years. The young men who pass through the special class having had some experience in superintending work, keeping accounts, and otherwise acting on their own responsibility, become qualified to act as stewards, or to manage farms of their own on leaving the establishment. This class affords an opportunity of training a superior class of young men to act as agriculturists on the Board's own farms.

proficiency of upper class;

150. The upper forms of the class possessed an extensive and sound knowledge of the general principles of theoretical and practical agriculture. Their answering on the nature and classification of soils, manures, and plant-life was very good. The more advanced pupils had same knowledge of land surveying, and were able to construct maps of the farm from their own surveys. Some of the maps which we saw were very neatly executed. They could also make the levelling required for farm roads and main drains; and could estimate tolerably well earth-work, and stone and brick work.

and of the middle and lower.

151. The middle and lower forms seemed to have fairly profited by the time spent at the institution. On the whole we think the instruction of the pupils both in ordinary school-work and in theoretical and practical agriculture is satisfactory.

152. *Agricultural Experiments.*—An educational farm is not necessarily an experimental one. Very few scientific experiments require to be conducted on a farm of one hundred or more acres. Indeed most agricultural experiments which have been conducted on such a scale are, and in the present condition of science must be, worthless. We, therefore, entirely coincide in the opinion expressed by Mr. Baldwin in his evidence before the Commission, that a farm expected to pay should not be made an experimental farm. It is, however, very desirable in educational institutions like Glasnevin to show the pupils the conditions under which experiments should be conducted, and the methods of investigation followed in the study of scientific agriculture. It is also very desirable that there should be somewhere in Ireland a place where those experiments could be made, and new or doubtful practical results accurately tested; and especially experiments instituted to ascertain how far results obtained in England and other countries might be specially affected by the climate of Ireland. Agricultural experiments;

153. It is, we believe, intended by the Commissioners, influenced in some measure by the practical experience and knowledge of Mr. Waldron, to set apart a few acres at Glasnevin as an experimental field. We discussed this fact at some length with Mr. Baldwin, who quite concurred, as we did, in the wisdom of Mr. Waldron's suggestion. It seemed to us that one of the two fields adjoining the road leading from the large farm to the intermediate farm offices would, for many reasons, be the best adapted for this purpose. That on the east side of the road would, we think, be the more suitable of the two; inasmuch as the giving up that on the west side of the road to the purposes of an experimental farm would interfere with the course of husbandry which has been laid down for the intermediate farm. This intermediate farm is, in our mind, one of the most useful things in Glasnevin, as an example to that class of farmers who are the most numerous in Ireland. The field we speak of contains about three acres, which would be quite enough in extent for carrying out each year any experiments as to manures, seeds, modes of culture, or other matters, that it might be thought necessary to try there. experimental plot to be set apart;

154. As the most important conditions to be taken into account in all experiments on plant life are climatial ones, a complete system of meteorological registration should be instituted, and for that purpose a proper set of instruments should be procured, and erected on the plot itself. small meteorological observatory should be erected on it;

155. It would be desirable that the rent of this plot should be deducted from the rent of the whole farm in the general balance sheet, and that all expenses attending the experimental ground should be accounted for separately. rent of plot to be deducted from farm rent.

156. We were gratified to learn that the conduct of the pupils as to sobriety, outward morality, industry, and subordination has been almost invariably satisfactory. Conduct of pupils satisfactory;

157. All necessary facilities for attending to their religious duties are furnished to the pupils; and the clergy of the various denominations have access to those pupils who may be members of their respective congregations. Here, however, as elsewhere, there has not been of late years as effectual a superintendence of the religious instruction of the pupils, who, with the exception of a few externs, are all boarders, as would be desirable in such an establishment. no effective religious superintendence;

158. Those pupils who become seriously ill have hitherto been sent to Sir Patrick Dun's Hospital. It is desirable that the Roman Catholic pupils requiring hospital treatment should be sent, if they should so wish it, to the Mater Misericordiæ Hospital, which is not far from Glasnevin, and where the Catholic atmosphere of the place would be likely to be useful and pleasing to them. pupils should be sent to Mater Misericordiæ Hospital.

PROVINCIAL AGRICULTURAL SCHOOLS.

1. Kilkenny.

159. *Situation.*—The Kilkenny Agricultural school and farm are situated about one and a quarter miles to the south of the city and (except that residence is provided for the male teaching staff, including the pupil teachers), is unconnected with the model school established in the town. The farm is attached to the school and farm buildings. The establishment has been in operation since 1854. Kilkenny Provincial Agricultural School and Farm; situation;

160. *School Buildings, &c.*—The residences and school buildings, as distinguished from the farm buildings, are very well built, and cost £6,036. They contain accommodation for the principal and assistant literary teacher of the city model school, for the agriculturist and steward, eleven agricultural boarders, and six pupil teachers. There is one school-room, 32 feet by 24 feet, and 13 feet high, but there is no separate class-room; such a room is not, however, necessary, as there is no day school, and the school-room is properly speaking only a study hall for the pupil teachers and boarders. The fittings and furniture, wall appointments and requisites, of the school were very good. The dormitory and refectory were clean, and the kitchen and offices well kept. The lavatory of the boarders had no water in consequence of the well having run dry. The establishment was lighted with paraffin oil. Gas could not be used unless made on the premises, which would be too expensive. The urinals and privies were good, and the latter were provided with boxes on rollers which was a good arrangement. school buildings;

161. *Literary and Agricultural Instruction.*—There being no day pupils, the class consisted of pupil teachers and boarders. Four of the pupil teachers attend the theoretical instruction in agriculture, but do not take part in the practical; they get a field-lecture, however, from the steward every Saturday along with the other pupils. They were not at the farm when we visited, and we had not an opportunity therefore of ascertaining whether they derived any benefit from the instruction. There were eight boarders when we visited—five paying pupils at £8 per annum, three belonging to the Episcopal Church, one Presbyterian, and one Protestant Dissenter; and three free pupils, of whom two were Roman Catholics and one a member of the Episcopal Church, Of the eight paying and free pupils, seven were above the age of sixteen, and one under that age. Six were the sons of farmers, one of a land steward, and one of a policeman. agricultural class.

Proficiency in ordinary school work; agricultural instruction;

162. The pupils who had been under instruction a sufficient length of time answered very well in the theory and practice of agriculture, and their general knowledge (arithmetic, geometry, book-keeping, spelling, and dictation) was very creditable. From 8.30 A.M. to 9.30 A.M. is devoted to agricultural instruction in the school by the agriculturist, and one hour every week to a field-lecture by the steward. From 10 to 6 o'clock P.M. the pupils are occupied on the farm, with the exception of one hour for dinner, from 2 to 3 P.M. The agricultural class is not inspected by the Board's literary Inspectors which is a very great disadvantage, especially as the Agricultural Inspector cannot possibly make an effective examination even once in the year. We have heard a complaint that the Agricultural Inspector does not classify the pupils according to their time at the school, but reports on the average answering. This complaint is no doubt just, but it would require much more time to be given to inspection if they were divided into several classes.

no means of teaching physical science;

163. There seemed to be no means of affording elementary instruction in those physical sciences upon which the theory of agriculture is based. This is certainly a great defect in a provincial school.

no special religious instruction.

164. No special religious instruction is given by any of the teachers, nor did it appear that anyone felt it to be his duty to do so. The agricultural pupils (we did not see the pupil teachers) appeared, to have been well taken care of, and looked orderly. They were reported to be well conducted, and we heard good accounts of those who had left.

The farm.

165. *The Farm* consists of 79A. 0R. 34P. statute measure, of which 4A. 0R. 34P. are occupied by the buildings, 1A. by a garden, leaving 74A. for the farming operations. The land lies flat and consists of a calcareous strong clay. It is held on lease for 999 years, at the yearly rent of £146 11*s.*, or at the rate of £1 19*s.* 1*d.* per acre;* Griffith's valuation for the land without the buildings being £78 5*s.*, or not quite £1 per acre. An adjoining farm is valued exactly at that rate. The average rent of land in the neighbourhood is from £1 10*s.* to £1 15*s.* per Irish acre, or 18*s.* 6*d.* to £1 1*s.* $7\frac{1}{4}$*d.* per statute acre. The buildings erected upon the land would scarcely, if at all, influence the letting value of the farm, as the rent is fully the value of the land in its present state, and rather above that of the neighbourhood.

Farm offices.

166. *Farm Offices.*—These buildings, erected at a cost of £3,060 7*s.* 6*d.*, are capable of affording accommodation to twenty-six milch cows, twelve stores, thirty sheep, in eight compartments, and thirty to forty pigs, and four horses. They are fully adequate for the farm, and suitable for the purpose, but more expensive than would suit a tenant farmer. At the period of our visit the outside woodwork required painting very much; the yard gate had been off its hinges for the preceding eight months. The Board of Works had been frequently applied to, but in vain. New cow-sheds had been got up, but could not be used for want of chains, which could only be procured through the Board of Works.

Implements, &c.

167. *Farm Implements.*—The supply of implements was adequate, except that there was no thrashing machine, a want which ought to be supplied. The implements seem to be kept in proper condition.

Live stock;

168. *Live Stock.*—At the period of our visit the live stock on the farm consisted of: 3 horses, 11 milch cows, 1 dry cow, 2 bulls, one a yearling, 9 year-old heifers, and 10 calves; 17 ewes, 1 ram, and 26 lambs; 23 store pigs, 2 sows, and 2 boars. No poultry was kept. This was a considerable increase over the preceding year, when the live stock consisted only of 4 milch cows, 1 three-year old bull, 14 pigs, and 3 horses. The sheep are therefore a new feature on the farm, and one which should never be absent where the soil and local circumstances are at all suitable for them. The

well-bred bulls should be kept at the larger farms;

cattle kept were a short horn cross, and seemed very fair animals. The agriculturists under the Board are not allowed to expend much money on highly bred bulls. Within certain limitations this is no doubt quite right; but in no way could a model farm, particularly in remote places, be more serviceable than by bringing into a locality superior breeding animals suitable for the district, and letting the farmers have the use of them at moderate, but remunerative, fees. It would be one of the most effective ways of bringing farmers in contact with the model farms. The bulls were pure short horn, and the full-grown one was, we were told, let out to farmers at 5*s.*, but as he proved not fruitful early in the year the farmers did not make much use of him afterwards. The sheep were three-quarter bred, but the ram was a good pure bred Leicester. The land seemed well fitted for sheep, and we were told that they had thriven very well and given more lambs than the average in the spring of 1868, before our visit.

house feeding;

169. House feeding is only carried out in winter. The young stock on the farm were reared chiefly on skim-milk and oil cake, and were then allowed a run on grass during the summer and winter. In October they were fed on white turnips and hay; in November and December on Swedes, hay, and crushed grain; and from January, during the spring months, on mangels, hay, and crushed grain, with

feeding formulæ;

a run on grass during the whole time. In the byres and stables we found a label suspended stating the times of feeding, and the quantity and kind of food used at each feed. This system, which Mr. Baldwin has introduced into all the school-farms under the Board, is to be recommended not only for its purely educational use, but because it habituates the agriculturist to the use of weights and measures in his operations, and shows him how he is to determine the cost of a beast he has fattened, or the cost of his dairy produce. In many of the model farms we did not find, however, any means of weighing the feeds, which could only have been done by guess. The agriculturist at Kilkenny, Mr.

agriculturist does not think dairy cows paid in 1867.

M'Candless, appears to have paid particular attention to his feeding formulæ, and to have calculated the cost of production of his dairy produce with considerable accuracy, so far as the quantity of food required to produce it was concerned. He came to the conclusion that his dairy cows did not pay in 1867, but he was scarcely in a position to determine the point in that year, for it was during this period he was increasing the whole live stock of the farm at irregular intervals. He has, however, pursued the right way of doing the thing, and we recommend similar close calculations on the other large farms.

Cultivation;

170. *Cultivation.*—The district about Kilkenny is chiefly in tillage, which on the whole appears to

* The tenant pays no rates.

be well done. Part of the model farm has been laid down in permanent pasture, and the remainder cultivated on the Northumberland five-course rotation, which is adapted to the circumstances of the farm, and was being well conducted. A good "stolen" crop of rape and winter vetches was put in on 17½ acres in August, and promised very well. The following table gives the several crops and the proportion of land under each at the season of our visit:— rotation;

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	Artificial Grass.	A.	R.	P.	Permanent Grass.	A.	R.	P.
Turnips,	2	2	0	Oats,	9	1	20	Hay,	24	2	0		21	2	0
Mangel Wurzel,	6	0	0	Barley,	8	0	0								
Potatoes,	1	0	20	Wheat,	1	0	0								
Total,	9	2	20		18	1	20		24	2	0		21	2	0

171. The Swedish turnips sown in March looked excellent, although the year was so very dry that the water failed in the pump-well. The drills for the mangels were opened by the double-mould plough, followed by the drill grubber; The crop looked fair. character of root crops;

172. No flax is grown on the farm or in the district. Considering that a large sum is annually spent by the State in attempts to induce farmers to grow flax, it seems strange that no flax should be grown upon the farms supported by the State, where the best system of cultivation could be shown, and the attention of young persons directed to it. no flax grown.

173. The manure heap was well managed, and no signs of waste were visible. One ton of guano, 18 cwt. of nitrate of soda, 10 cwt. of bones, and 1 ton of salt were purchased for the season's crops. The selection appeared judicious, both in respect of soil and the circumstances of the farm. Manures.

174. A kitchen garden of one acre, combining also the cultivation of flowers and bush-fruit, &c., was laid out in 1867 with considerable skill and taste, and promised well. A small seed-sample plot was set apart in this garden for the growth of a named collection of grasses and clovers, &c., and promises if looked after to become a source of much instruction. This garden appeared to us to be a good type of kitchen garden for Irish farmers, and we hope that it will be kept up in such a way as really to serve as a model. Kitchen garden.

175. Several very useful improvements were being made by Mr. M'Candless, such as levelling old fences, planting thorn and privet hedges, laying out new roads, picking and removing old roads. Some new gates were well and economically hung on iron fence strainers, and a well designed and executed watering place at the confluence of the drainage in the permanent pasture had been made just before our visit. The farm on the whole was beginning to look tidy, and in good working order. Improvements made during the year.

176. The following is the balance sheet for the year ending 31st March, 1868 :— Profit and loss account.

Dr.	£	s.	d.
To Amount of Valuation made at the commencement of the year, including proportion of unexhausted improvements and artificial manures,	596	0	2
„ Free Labour of pupils,	40	0	0
„ Sundries, including £187 8s. 7d. paid for labour,	693	8	2
„ One year's rent, poor-rate, and county cess,	146	11	0
„ Profit,	138	16	6
	£1,614	15	10

Contra—Cr.	£	s.	d.	£	s.	d.
Cash received for farm produce, &c.,				467	1	7½
Valuation at close of year,				1,001	6	2
Debts due for farm produce,				17	18	6
Amount expended in permanent improvements :—						
Labour on draining, fencing, roads, garden, &c.,	59	1	6			
Materials for do.,	23	10	2			
Horse labour for do., at 2s. 6d. a day,	19	13	9			
				102	5	5
Expenses charged on opposite side but not chargeable to farm :—						
Labour on ornamental grounds, and for establishment,	14	8	8			
Shrubs, gravel, &c., for garden,	6	4	6			
Accounts paid for boarding department,	5	10	11½			
				26	4	1½
				£1,614	15	10

177. The balance sheet of the previous year showed a profit of £59 5s. 3d.; but as Mr. Baldwin discovered a serious defalcation in the accounts of the agriculturist who then managed the farm, the amount of profit cannot be depended upon. Accounts for 1867 not to be depended on;

178. If we add the value of the free labour of the pupils, the actual gain to the public was £178 16s. 6d. true gain to the public.

2. Munster Model Farm, Cork.

179. *Situation.*—The Munster Model Farm is situated on the banks of the river Lee, about three miles to the west of the City of Cork. It is unconnected with the model school in the city, except that residence is provided there, as in other farms, for the head and assistant male teacher, and male pupil-teachers. The farm was first put into operation in March, 1853, and the arrangements for pupils fully made in 1859. Munster Model Farm. Situation;

180. *Residences and School Buildings.*—The buildings intended for the residences of literary teachers, agriculturist, boarders, and pupil-teachers, are solidly and handsomely built, and are estimated to have cost £8,689. There is accommodation for 30 boarders and pupil-teachers. There is no day school in connexion with the farm, and there is, therefore, only one school or class room, 42 feet by 27 feet, and 12 feet high. The whole of the buildings were in a very good state of repair. The dormitories, refectory, and lavatory of boarders are excellent, and were clean and in order. The urinals were also in a fair condition. The residences of the officers were in excellent order. The head literary teacher of the Cork Model School caters for the boarders, and is allowed £20 per head for them. school buildings, &c

181. *Literary and Agricultural Instruction.*—At the date of our visit there were twenty-one boarders on the roll, and two extern students, who followed the course of theoretical and practical instruction, but did not board or reside on the farm. Twelve of the boarders only were present, the others having either gone home, been sent to the central establishment at Glasnevin, or got employment. Of those present, six were Catholics, five belonged to the Episcopal Church, and one was a Literary instruction

somewhat backward;

Presbyterian. Their ages varied from fourteen to twenty, and they were principally the sons of farmers or land-stewards. Only one of the externs was present and came in for examination. We had not time to examine at length in the ordinary school subjects, but so far as we were able to judge, there was much room for improvement. This is to be attributed chiefly to the want of a resident literary teacher. After the death of the late one a very strange arrangement was made to supply his place. Each of the assistant-teachers of the Cork Model School went out in turn to the farm, where he was obliged to sleep, and was boarded while there. One of the three had a wooden leg, and one, if not all, were married men, who were thus obliged to be absent from their families. This absurd arrangement was adopted, it appears, for the sake of economy, the character of which may be judged by the fact that the car-hire to and from the farm cost 18*s.* a week! The arrangement must have been proportionately injurious to the model school. The proficiency of the pupils also suffers from want of adequate literary inspection. Such of the pupils as had been six months and upwards in the institution were very well acquainted with the fundamental principles of the theory and practice of agriculture. The answering in both branches was very creditable. The agricultural instruction in the school is given each day from 8 to 9 A.M., and to pupil-teachers on two days of the week from 6½ to 7 A.M. The boarders work on the farm from ten to six, with the exception of one hour for dinner. A field lecture of one hour is also given to the pupil-teachers on Saturday evening. The agricultural instruction is given to all the classes by the agriculturist, Mr. O'Brien. We noticed a defect here, which is not, however, peculiar to this school, namely, that no register of former pupils is kept.*

this is due to a curious arrangement with the model school.

Agricultural instruction.

The farm:

182. *The Farm.*—The farm contains 126A. 3R. 17P., statute measure. It is a light sandy loam, resting on limestone, which occasionally crops up. The farm is generally flat, but a small part inclined at a high angle to the north and north-west. It is held by lease from the Duke of Devonshire for ninety-nine years from the 1st of January, 1853, at the yearly rent of £220, or £1 14*s.* per statute acre. Griffith's valuation for the land, without the buildings, is £190, or at the rate of 29*s.* 11¼*d.* per acre. The land of the adjoining townland of Inchigaggin is valued at 27*s.* 7*d.* per acre. The rent is about the same as that of adjoining land of the same value. From the very expensive character of the buildings the farm has not acquired an increased value at all proportionate to their cost if to be let to an ordinary tenant-farmer. Among the stringent covenants of the lease of this farm there is the extraordinary one, that the Commissioners or their representatives "shall have no claim whatsoever against the said Duke, his heirs or assigns, in respect of any outlay upon buildings, or improvements, or any other matter or thing whatsoever, notwithstanding any rule of law or equity, *or the provisions of any Act of Parliament* to the contrary."†

distribution of land;

183. The land is distributed as follows:—

		A.	R.	P.
Under buildings and ornamental ground, Kitchen garden,	about	4	0	0
Permanent grass and waste,	„	61	3	17
Under rotation,	„	61	0	0
Total,		126	3	17

no kitchen garden until 1867.

Until 1867 there was no kitchen garden! It is to be regretted that this most important instrument of agricultural training has been hitherto so much neglected on the Board's farms.

Unoccupied house on the land.

184. There is a good house on the farm lands unoccupied, which might be advantageously let for at least £25 or £30 a year. It could be used, perhaps, for affording accommodation to extern paying pupils, who have to walk into town every day, and might thus assist in increasing that class of students.

Farm offices.

185. *Farm offices.*—The farm offices are extensive and complete. They are exactly similar to those attached to the Ulster Model Farm at Belfast, and cost £4,998 6*s.* 2*d.* They afford accommodation for 32 cows, 5 horses, 200 sheep, and 20 to 30 pigs, exclusive of young stock. The general plan is good, but far too expensive, even as permanent buildings, for a public institution, and beyond the requirements of the Farm in every way. The premises were in good repair on the whole, but there were several defects which might be remedied. In the first place the water supply is bad; the liquid manure cannot be applied directly to the manure heap; there are no rick-stands, nor is there a steaming apparatus.

Implements, &c.

186. *Farm implements.*—There was a sufficient supply of farm implements for the purposes of the farm; they were of a good class, and appeared to be kept with proper care, though many of them are old and much worn. There was no mowing-machine, and a straw shaker was much required.

Live stock.

187. *Live stock.*—At the date of our visit (30th September, 1868), the live stock consisted of 3 horses and 1 ass, 2 bulls under two years old, 18 milch cows, 1 cow in calf, 6 yearling heifers, and 3 calves; 1 ram, 46 ewes, and 11 lambs; 2 boars, 2 sows, and 2 store pigs. The cattle, a good cross of short horn, seemed a useful class of animals, and were in good milking condition; the sheep were fair. House-feeding is only partially carried on in winter. The dairy is well attended to, and in good order. Poultry are also kept. When we visited there were 30 hens and 10 ducks. This department is not much attended to at any of the model farms; the circumstances of the management, especially the divided authority, is not favourable to its successful development.

Cultivation.

188. *Cultivation.*—The agriculture in the surrounding district is on the whole good; all the farmers grow turnips and mangels, and improved implements are coming more and more into use. Up to within the last two years the cultivation of this farm appears to have been bad. We learn from the reports of the Board's Agricultural Inspector that during the first years of its operation no systematic course of cropping was adopted. Then the following seven-course rotation, which was wholly unsuited to the soil, was partially carried out:—

Rotation previously followed.

First year, mangel wurzel.
Second „ wheat followed by stolen crops, to be off in time for Swedes.
Third „ turnips.
Fourth year, barley and grass seeds.
Fifth „ grass, first year,
Sixth „ „ second „
Seventh „ oats.

* We have since learned that the literary teacher keeps such a register.

† See Appendix, p. 937.

To work this manure was required for the turnips, mangels, and stolen crop; and as a sufficient quantity could not be produced on the farm, the land was impoverished by an undue application of artificial manures. The agriculturist also drilled his root crops on the flat, which in a moist climate like Cork is a great mistake. The land, too, was allowed to get into a very dirty state, and became infested with black scutch; very little was done to improve the appearance of the farm. At the time of our visit the present agriculturist was engaged in levelling broken ground and quarries, work which ought to have been done years ago. A four-course of 12 acres and a five-course of 35 acres were being established. The low parts of the land, which are cool and grassy in summer, are to be kept as summer pasture for the dairy, and the dry upland, where the soil is thin, reserved for sheep. These new arrangements are very judicious, and promise to make the farm a successful and instructive one.

land impoverished under this rotation; rotations now used;

189. The following table shows the crops grown, and the area under each at our visit:— crops in 1868.

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	Artificial Grass.	A.	R.	P.	Permanent Grass.	A.	R.	P.
Turnips,	10	0	0	Wheat,	4	0	22		7	0	0	Pasture,	59	2	26
Mangel Wurzel,	4	2	0	Oats,	12	0	0					Meadow,	6	0	0
Potatoes,	3	2	9	Barley,	18	0	0								
Carrots,	0	2	0	Flax,	1	2	0								
Total,	18	2	9		35	2	22		7	0	0		65	2	26

190. The Swedes and mangels were good crops; the latter were, however, somewhat thin. There were, also, some very good soft turnips in use at the time. The land is very well adapted for brewers' and distillers' barley, and we were told the crop had sold well; the wheat was also good. The whole of the grain crops on this farm are mown with scythes. One of the finest samples of flax we saw was grown on the farm; the straw was 4 feet 10 inches long, and if well retted in good water, and properly handled, would have been far above the best average flax grown in the north of Ireland. This fact is a complete answer to the absurd statement that the south of Ireland is too warm for flax! When there is question of growing flax the Irish climate is too like Bourdeaux, and consequently too hot! When there is question of growing sugar, it is too like Scotland, and too cold! The steep was not good; a proper one should be prepared in time. quality of crops;

191. Stolen crops, winter vetches, and crimson clover, are grown with success; sometimes rye, to be cut in April for cattle. Some crimson clover, sown on the 15th of September, appeared to be doing well, the soil and climate both appearing to suit it. stolen crops;

192. The manure heap is in a covered shed, and consequently easily kept from waste; 1 ton of guano and 10 cwt. of superphosphate, were also used with the crops above mentioned. manure heap;

193. *Rate of agricultural labour.*—The yardman gets 8*s.* a week and a house; of the labourers on the farm two get 9*s.*, and three get 8*s.*; this is within two or three miles of the city. At ten miles distance the same class of labour can be had at 6*s.* a week. The dairy-maid gets 2*s.* 6*d.* a week and her board. rate of wages;

194. The following are the balance sheets for 1865--6, and 1867--8:— profit and loss;

Dr.	1865–6. £	s.	d.	1867–8. £	s.	d.	Contra—Cr.	1865–6. £	s.	d.	1867–8. £	s.	d.
To Amount of Valuation, 31st of March,	1,085	7	10	1,141	16	9	By Cash received for farm produce sold,	711	17	8½	818	19	8
„ Value of free labour of pupils,	42	0	0	36	0	0	„ Proportion of labour included on debtor side chargeable to literary establishment (*e.g.* ornamental grounds, &c.),	10	13	9	12	0	0
„ Cash paid for labour,	96	14	6	122	9	8							
„ Wages of dairymaid,	—			14	0	0							
„ Cash paid for sundries,	410	5	5	269	3	4	„ Amount of permanent improvements effected during the year, and included on debtor side,	—			29	1	1
„ Cash paid for one year's rent, poor-rate, and county cess,	234	10	6	220	0	0							
„ Profit,	185	13	11½	139	13	4	„ Overcharge in valuation of crops, 31st March, 1865,	13	14	0	—		
							Valuation made on the 31st of March, being the end of the financial year,	1,318	11	9	1,083	2	4
£	2,054	17	2½	1,943	3	1	£	2,054	17	2½	1,943	3	1

195. The higher valuation on this farm, on the 31st March, 1866, than on the 31st March, 1865, is accounted for partly by the purchase of a large number of sheep in the Autumn of 1865, and partly by the fact that a larger quantity of farm crops was on hands, and young stock unsold on the 31st March, 1866. higher valuation in 1866 explained;

196. Mr. Baldwin has credited in this balance sheet the sum of £13 14*s.*, on account of overcharge in the valuation of mangels on hand in 1865. They had been always estimated as worth 20*s.* a ton, which is far above their value for feeding in the district, hence he allows for the overcharge at the end of this year. credit for overcharge in valuation of mangels;

197. The accounts for 1866–7 having been lost, as we have already mentioned, we cannot give the balance sheet for that year. If we add the value of the labour of the pupils, the real sum to the credit of the public in 1865–6 was £227 18*s.* 11½*d.*; and for 1867–8, £175 13*s.* 4*d.* accounts of 1866–7 lost.

3. Limerick.

198. The Limerick Agricultural school is at Mungret, about a mile and a half south-west of the city of Limerick. It is unconnected with the model school in that city; residence for the pupil-teachers is however provided there; and there is in the building a day school for the boys of the locality, conducted as an ordinary National school. The buildings are upon the farm land; and the establishment has been in operation since the year 1854. Limerick Provincial Model Farm.

School buildings.

199. *School Buildings, &c.*—The residences and school buildings, as distinguished from the farm offices proper, are handsome and well built. They are estimated to have cost, up to the date of their being put into operation, £7,554. They contain accommodation for the agriculturist, the literary teacher of the boys' school, a steward, twenty-six boarders and pupil teachers. Besides a well-built school-room, capable of accommodating 100 boys, there is a class-room for the use of the boarders and pupil-teachers of the city model school who reside here.

200. The school buildings were in good repair with the exception of the flooring of the spare dormitory over the day school, which had sagged greatly, and appeared to us to be in a dangerous condition. Placing dormitories over crowded school-rooms is a very objectionable arrangement, and especially so where it might have been avoided as here, where there was no necessity for economizing space.

201. The fittings and furniture, wall appointments, and school requisites of the day school and class-room were very good. The playground was in good order; the urinals, &c., clean, and the dormitories, refectory, and lavatory of boarders were in good repair, provided with necessary furniture, and on the whole clean. The parts occupied by the resident officers were good and in proper order.

Attendance of pupils;

202. *Literary and Agricultural Instruction.*—The day school had 75 on the roll in the first quarter of 1868, and an average attendance of 55·9; and in the second quarter, 83 on the roll, and an average attendance of 56·5. At the date of our visit, 6th of October, 1868, the number on the roll was 77, classified as follows:—

First class,		26	Total, 77.
Second class,	1st division,	19	
	2nd division,	7	
Third class,		19	
Fourth class,		6	

agricultural class;

203. All the boys of the third and fourth classes, 25 in number, are taught agriculture each school day from 9½ A.M. to 10 A.M., and occasionally from 12 to 12½ P.M.—the former being before the commencement of school business, and the latter the time for recreation. On the day of our visit 18 boys of this class, 13 of whom were in Third Book, and 5 in Fourth Book, were present. We examined them in reading, grammar, arithmetic, and writing from dictation, as well as in agriculture. The whole of them were fairly prepared in notation and numeration, and could work sums in Division of Money; 10 passed satisfactorily in Proportion and Practice; 10 were able to write a sentence from the Agricultural Class Book with tolerable accuracy, the spelling being very fair; and 8 were able to write accurately and with ease a long and difficult sentence. The whole class could fairly understand the new Agricultural Class Book, and appeared to have picked up some useful information, especially about the atmosphere, soils, and manures. These boys were all sent for literary instruction, but we heard that their parents attached importance to the agricultural instruction. All the boys who answered well in agriculture, were those who answered best in every other subject; and so far from interfering with their other studies, the reading of the Agricultural Class Book appeared to have awakened their intelligence especially as to the meaning of words. The agricultural instruction is given to the day school class by the agriculturist. The literary teacher, who has to instruct the boarders and pupil-teachers, has no assistant, and we believe but one paid monitor.

proficiency in literary subjects and in agriculture.

Boarders;

204. At the period of our visit there were only 8 boarders, 4 free, and 4 who paid £8 per annum. Half of each class of boarders were Catholics, and the other half belonged to the Episcopal Church. There were thus 18 vacancies. The number in the preceding years was much more considerable, for instance in 1867 as many as 33 had spent some time in the establishment. We learned, however, that some were about to enter. On inquiring why farmers were not more inclined to send their sons to agricultural schools, we were told (and one of our informants was a large and successful farmer who had been himself educated at an agricultural school), that among other causes, one of the most important was that too much of their time was occupied at mere brute work, which they could learn as well at home and with more profit to themselves. The objection is certainly well founded to some extent; it would hardly be worth a farmer's while to pay for his son's instruction in the skilled operation of picking stones, a work which we saw young men engaged at on another farm. They also complained that while set to do this kind of work, which they are never called upon to do in after-life, and which the most illiterate children could do after five minutes teaching, they were rarely afforded an opportunity of learning to plough, or to perform other skilled operations, because a skilled ploughman was kept on each farm, who did all the work, so as to make things look smart.

one reason why the boarding classes are not larger;

no industrial class,

205. There was no industrial class in connexion with the day school, as no boys could be got at less than double the rate of wages allowed at present.

time of instruction.

206. The boarders received instruction in theoretical agriculture every school day from 8 to 9.30 A.M., and worked on the farm in summer from 10 A.M. to 6 P.M., with the exception of one hour for dinner. Only a minority of them were farmers' sons, the others were of various classes. Their answering both in literature and agriculture was indifferent, some of them had been, however, only a short time in the school. The agriculturist in this school has the management of the boarders. Elsewhere that duty belongs to the literary teacher. The cost of boarding amounted to £1 12*s.* 8*d.* a month for each boarder. There was no provision whatever for the religious instruction of the boarders. The agriculturist did not, however, complain of their conduct, except that he said a loss had been incurred by the implements being broken by them. It did not appear to have been wilfully done, and was evidently the result of clumsiness.

Majority of boarders not farmers' sons.

Cost of boarding.

No religious instruction.

Conduct.

207. The male pupil teachers of the Limerick model school, to the number of about 8, board at the farm, and receive instruction in agriculture twice a week, namely, on Mondays and Wednesdays, at from 7 A.M. to 7.30 A.M.; and on Saturdays they receive a field lecture, and sometimes assist in doing some light farm work.

208. *The Farm* consists of 71A. 1R. 39P. statute measure, of which about 3 acres are occupied by the buildings, leaving 67 acres for farming operations. The land is generally flat, and a small part inclined to the west. The flat portion has a stiff clay soil resting on a clay subsoil, and originally part of it was occupied by a small lake. The high ground has a lighter soil resting on limestone which in parts comes near the surface. The farm is held on a lease of sixty-one years from the 29th September, 1853, from the trustees of the Limerick Agricultural school, at an annual rent of £70 15*s.* 4*d.*, or £1 per acre. Griffith's valuation for the land alone is £73, the valuation in 1854 having made it almost the same as the rent, admitting it is said, that it was below the real value; but an adjoining farm of land of the same character is valued at the same amount, namely, £1 0*s.* 6*d.* per acre, so that the rent could not have been the basis of the valuation. The rent is below what an ordinary tenant would pay, which would certainly be £1 10*s.* the statute acre. The farm was, however, purchased by a local committee for the purpose of founding an agricultural school, and the property was invested in trustees, who let it to the Board of Education when they found that body had established a general system of agricultural education. The rent received is applied towards the support of free boarders in the school, so that it may be considered to be endowed to that extent, or rather to the extent of the full rent which an ordinary tenant would pay for it. A good deal has been done to improve the farm since 1859, and especially within the last few years, but the buildings being got up for a special purpose would not materially increase the letting value of the farm if let to a farmer. The farm: extent, rent, &c.

209. *Farm Offices.*—It was originally intended to purchase or rent an adjoining piece of ground in order to double the size of the farm; the buildings were accordingly erected in what would have been the centre if the additional land had been purchased, but this not having been done, the farm buildings are inconveniently situated at one end of the actual farm. The farm buildings, independent of the residences and school buildings, cost £3,267 0*s.* 7*d.*, and contain accommodation for twenty cows and a corresponding number of other farm animals. They are very good buildings, more than amply sufficient for the present extent of the farm, but not precisely models for the imitation of farmers. Buildings erected for public purposes ought no doubt be more solidly and durably built than private farm-houses; but substantial buildings better suited for the purposes might have been erected at half the expense. Farm offices.

210. The drainage arrangements were very defective, and at the time of our visit a great part of the flooring of the large cattle-shed was broken up to enable the closed sewers to be cleaned out. The stench created by this operation was so offensive, as to impregnate the air of the whole establishment. Underground sewers in cattle-sheds are a great mistake, and one that we found too generally repeated in the buildings of the Board's model farms. drainage of cattle-sheds bad;

211. The buildings were in fair state of repair, with the exception of the piggeries, the flagging of which was in a very bad state. state of repair:

212. There are some labourers' cottages on the farm which are not shown on the map of the farm published by the Commissioners of Education. cottages.

213. *Farm Implements.*—There was an adequate supply of ordinary farm implements, also a Crosskill, Golding's corn sower, Ashby's rake, but no mowing or reaping machines. The large farms of this class ought to be permanent exhibitions of improved implements. Where expensive implements could not be purchased for each farm, they might be sent for a time to be seen and tested. There is much room for improvement in the ordinary implements in use on the model farms—only the most improved digging forks, &c., should be used. At all events, the common spade or "loy" should be banished from school farms. Implements.

214. *Live Stock.*—At the date of our visit the live stock consisted of a yearling bull, 13 three-quarter bred short-horn milch cows, 1 dry cow, 2 yearling heifers, 4 calves, 1 ram, 5 ewes, 6 wethers, 12 hoggets, and 4 lambs; 2 horses and 1 ass; 1 boar, 3 brood sows, and 5 sucking pigs. The stock was lower than at other periods, the herd of dairy cows being sometimes 16, and the breeding ewes having been at one period as many as 23. There were no store pigs when we visited, but a good number are usually kept. The animals were in fair condition, with byres in fair order; but the piggeries, as we before stated, were out of repair. Except in winter there was no house feeding. A fair share of mangels are grown, and form, with some of the softer turnips—*e.g.*, Aberdeens or Greystone—with some straw and flaxseed in the morning feed and straw in the night feed, the principal food of the milch cows. Live stock; cattle not wholly housefed.

215. *Cultivation.*—The agriculture of this district is very good, and is daily improving. It is, however, more a dairy than a tillage country, nearly three-fourths of the land being in grass. The farm is now divided into two: one of thirteen acres, which is to be managed on the Belgian four-course rotation system; and the remainder of the land forms a medium-sized farm of about 54 acres, the tillage portion of which is to be worked on the East Lothian six-course rotation. This arrangement, which is admirably adapted for the circumstances of the farm, and will be highly instructive, was only being established last year. The following table shows the crops and area under each at the time of our visit:— Cultivation

crops in 1868.

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	Artificial Grass.	A.	R.	P.	Permanent Grass.	A.	R.	P.
Turnips,*	6	1	0	Oats,	10	0	0		8	2	17		19	2	0
Mangel Wurzel,	5	0	0	Wheat,	7	0	0								
Potatoes,	3	1	0	Barley,	2	2	0								
Carrots,	0	1	0	Flax,	0	2	0								
Cabbage,	0	1	0												
Total,	15	0	0		20	0	0		8	2	17		19	2	0

* Swedes, Aberdeens, and white.

Quality of crops. In all, 63A. 0R. 17P. A little flax is grown in both rotations (about a rood in each): in the four-course it came in after lea oats, and was put in with grass and clover-seed for laying down. We noticed that wherever this was done the grass looked much better than when laid down with grain. The flax had been pulled before our visit. There appeared to have been no appliances on the farm for showing its preparation. The Swedes and other turnips and the mangels looked well, and, notwithstanding the unusual dryness of the season, promised to yield fair crops.

Manure heap. 216. The manure-heap seemed to be fairly attended to, and some artificial manures—consisting of Peruvian guano, superphosphate, and nitrate of soda—were also used.

Profit and loss; 217. The following are the balance-sheets for the years 1865-6, 1866-7, and 1867-8:—

Dr.	1865–6. £ s. d.	1866–7. £ s. d.	1867–8. £ s. d.

	£ 1,429 5 6	1,325 13 4	1,301 13 9½

* The farm at Tervoe was placed for some time under the management of the agriculturist at Limerick, merely to economize the salary of an agriculturist. In 1866–7 an agriculturist was again appointed.

gain to public. 218. If we add the value of the free labour of the pupils to the balance, the actual sums to the credit of the public, for each of the years included in the above balance sheet, was as follows:—

	£ s. d.
1865–6,	258 4 2
1866–7,	163 1 3
1867–8,	172 16 2½
Total,	594 1 7½

Ulster Model Farm.

4. Ulster Agricultural School.

219. *Situation.*—The Ulster Agricultural school is situated about three miles south-west of Belfast, on the Lisburn-road. There are residences on it for the principal and assistant teacher, and pupil teachers of the male model school in Belfast; but it is otherwise unconnected with that institution. It was established in 1854.

Residences, &c. 220. *Residences and School Buildings.*—The buildings appropriated for the residences of teachers and boarders are of considerable extent, there being no less than thirty-two places, ten of which we were told were for agricultural boarders, and twenty-two for pupil teachers.† There is no day school held at the farm, and only one school or class room for the pupil teachers and boarders was provided. The dormitories, refectory, and lavatory are very good, except that the dormitories, in which each boarder or pupil teacher has, as in the schools of Kilkenny, Cork, and Limerick, a separate chamber, are not provided with roof ventilation, which seemed to us to be much

School fittings. required. The fittings, furniture, &c., were good, in repair, and clean. The school-room fittings, wall appointments, and requisites, were good and sufficient. There were some physical apparatus, and geological specimens,—the former not of much use, the latter, as in nearly all the model schools, of no value whatever, and more calculated to mislead than to give useful information. This is, however, not the fault of the teachers who have been provided with articles originally of little value, and who have not received any instruction in their use at the training establishment. The total cost of the buildings intended for residences and school purposes, exclusive of farm buildings, was £8,952.

Boarders: 221. *Literary and Agricultural Instruction.*—There were only two agricultural pupils at the time of our visit, one paying £8 a year, and the other free, both members of the Episcopal Church, and sons of farmers, and curiously enough neither of them from Ulster—one being from the county of Galway, and the other from the south of Ireland. There were therefore five places for paying

time of instruction; boarders, and three for free, vacant. Agricultural instruction is given in the school from 8.30 A.M. to 9.30 A.M.; literary instruction is given during the six working days from 6.30 A.M. to 7.30 A.M., and in the evening from 6.30 to 9 o'clock. The pupils work on the farm from 10 A.M. to 6 P.M., with the exception of one hour for dinner. The instruction in agriculture is given by the agriculturist; the

proficiency. literary instruction is given to the boarders and pupil teachers by the model school teachers. One of the boarders answered very fairly both in the theory and practice of agriculture, and seemed fairly prepared in writing, dictation, and spelling, arithmetic, and a little geometry; the other was a

Pupil teachers. dull boy, from whom much could not be expected. There were thirteen pupil teachers residing at the farm at the period of our visit, six of whom were under seventeen, three under eighteen, and four under nineteen. Four were Roman Catholics, three Protestants, and six Presbyterians. They received daily instruction in agriculture for half an hour, and field instruction every Saturday for

Matron. one hour. The domestic arrangements for boarders were under the superintendence of the wife of the principal teacher, who is paid a salary as matron; the boarders seemed well taken care

† In Mr. Baldwin's Report for 1867 the places are thus assigned: twenty for pupil teachers, and twelve for boarders. The places may no doubt be used to a still greater extent for boarders if they offered.

of. No religious instruction appears to have ever been given to boarders or pupil teachers by clergymen of any denomination. They appeared, however, to be well behaved, and no complaints were made about them. No religious instruction; conduct.

222. But little interest seems to be taken in the school in the locality. In answer to our queries, Mr. Thomas M'Clure, M.P. for Belfast, says:— No interest taken in school.

1. "I believe the farmers, generally, know nothing about it [the value of agricultural teaching]. For my own part, though aware of the existence of the model school and farm, I did not know on what terms the instruction given could be available to tenant farmers and their sons." Opinion of Mr. M'Clure, M.P.,

2. "I never had an opportunity of ascertaining whether the instruction given there is sound and practical. The model school for primary education in Belfast has periodical examinations to which the public are invited, but the model school for agriculture has no such public examination that I have heard of."

3. In answer to the question as to whether the farmers have given their sons the benefits of the agricultural instruction, and profited themselves by the example given by the management of the school farm, he says, "I am afraid they have not." He thinks it would be desirable to teach the elements of agriculture in all rural National schools, and to add to all good large schools a small farm where practicable. He further adds, that it would be important to interest land-owners and farmers in the working and success of these agricultural schools, and to invite their co-operation.

Mr. William Bottomley, a magistrate of the neighbourhood, says:—

"I believe the farmers of the neighbourhood do not appreciate the value of agricultural teaching, nor do they take any advantage of it. They have not profited by the example of the school, nor have their sons been sent for instruction there." He doubts the advantage of having small farms attached to schools, or model farms apparently of any kind. and of Mr. W. Bottomley, J.P.

223. *The Farm.*—The farm consists of 108A. 1R. 25P. statute measure of level land, about 30 feet above sea level. It consists of a stiff red brick clay, too tenacious even to make good bricks without a mixture of sand. At the period of our visit, after a long drought it had cracked into polygonal blocks, affording a most beautiful example of the regularity of the planes of fracture in contracting masses. Some of the cracks or joints were half an inch wide, and a stick went down eighteen inches in one. We could not break up the clods even with a spade and mallet! In the whole of Ireland we believe it would be difficult to find another spot of equal size so utterly unfit for the purposes of teaching agriculture. Add to this that the rent is £284 11*s.* 4*d.*, exclusive of £485 1*s.* 3*d.* paid for tenant right. Griffith's valuation for the land alone is £133 10*s.*, so that the rent is more than double the valuation. And yet according to recent statements the valuation is said to more nearly represent the value of the land in the north than in the south of Ireland. Two neighbouring farms are valued at £1 8*s.* 2*d.* and £1 4*s.* 8*d.* respectively. Good land in the neighbourhood and nearer to Belfast is let for £1 15*s.* per statute acre, and the best land in the whole district, in the valley of the Lagan, pays £4 the Irish acre. An ordinary tenant would not be disposed to pay more than £1 per acre for it for tillage purposes; possibly the present rent might be obtained for it for dairy purposes. If Belfast extends in the direction of this farm it might fetch a high price as building ground. It is held for the lives of Her Majesty, Prince Albert, and the Prince of Wales, from November, 1854, with a covenant for perpetual renewal. The land is thus occupied:— The farm: extent, quality, rent, &c;

	A.	R.	P.
Buildings,	2	0	6
Permanent grass,	32	3	12
Proposed garden,	0	3	38
In the rotation,	72	2	9
Total,	108	1	25

224. The whole farm with the exception of three acres has been thorough-drained with tiles. The rest of the necessary drainage could be completed for £20. nearly all drained.

225. *Farm offices.*—The farm buildings are extensive, very complete, and upon a good principle, but wholly unfit as models of farm buildings for tenant farmers. Even as buildings of a public institution, they are extravagantly expensive in execution. They are similar to those of the Munster farm at Cork, and contain accommodation for 32 cows, 200 sheep, 20 to 30 pigs, 5 horses, exclusive of ample provision for young stock, and are consequently in excess of the wants or size of the farm. According to the Board's return they cost £5,251 9*s.* 11*d.* We found them in good repair. Farm offices.

226. *Farm implements.*—There was a sufficient supply of good implements—not more than ought to be on such a farm—and they were kept in middling order. Implements.

227. *Live stock.*—At the period of our visit the live stock consisted of a half-bred short-horn bull, 11 milch cows, of a mixed breed, chiefly Ayrshire, 4 horses. No sheep, pigs, or poultry, are kept on the farm. House-feeding is only practised in winter. Live stock.

228. *Cultivation.*—The district is generally in tillage, with the exception of the valley in which the model farm is situated, which is chiefly in grass. The usual crops grown are wheat, oats, flax, green crops, and soiling, all of which are fairly cultivated. The following table shows the crops grown when we visited:— Cultivation;

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	Artificial Grass.	A.	R.	P.	Permanent Grass.	A.	R.	P.
Turnips, rape, and potatoes,	10	3	24	Wheat and oats,	20	0	0		43	0	0		32	3	12

229. A rotation was about to be adopted. The turnips, as might be expected, were a complete failure; they had been a failure likewise the two preceding years. The potatoes were also a failure. The wheat was very fine in size, weight, and colour of ear, with strong upstanding straw, but thin. The oat crop was fair. The permanent pasture looked pretty well, considering the long drought. rotation; quality of crops.

The cultivation was on the whole good; but from the description above given of the soil it seemed a hopeless work to till it. Stolen crops in most years would be an impossibility on this land. No flax was grown last season, as we were told it had always failed on the farm.

Manure heap

230. The manure heap was in a covered shed, and of course was not liable to much waste. Its economical management appeared to have been attended to. Town manure is bought in considerable quantity, and last season a little guano and superphosphate were used.

Kitchen garden.

231. At this farm, also, there has hitherto been no kitchen garden, but a piece of ground has lately been set apart for the purpose.

Profit and loss.

232. The following are the balance-sheets of this farm for the years 1864--5, 1865--6, 1866--7, and 1867--8:—

Dr.	1864–5. £ s. d.	1865–6. £ s. d.	1866–7. £ s. d.	1867–8. £ s. d.

£	1,825 14 3½	1,353 7 0	1,324 9 11½	1,494 1 2

* Exclusive of the sum of £510 11*s.* 2*d.* expended on permanent improvements, &c., for which credit was taken in the valuation of the farm in the balance sheet for 1864–5.

Summary of balance sheets.

233. The following summary of these balance-sheets will put the case of this farm in a clearer light:—

	Expenditure. £* s. d.	Receipts. £ s. d.	
1865,	644 0 2½	379 2 9½	
1866,	648 7 3	679 7 10	
1867,	663 2 7½	519 6 10	
1868,	712 6 5	634 3 0	
Total expenditure in four years,	2,667 16 6	2,212 0 5½	Total receipts in four years.
Valuation at the beginning of 1865,	1,181 14 1	656 3 3	Valuation at the close of 1867–8.
		981 6 10½	Balance being loss on four years.
Total,	£3,849 10 7	3,849 10 7	

Loss.

234. While the loss by farming during four years was £981 6*s.* 10½*d.*, the actual loss to the public exclusive of salaries, interest on capital invested, and boarders, was only £923 6*s.* 10½*d.*, as the value of the free labour of the pupils, amounting to £58, though chargeable against the farm, helped to diminish the actual cost to the public. The amount at which the free labour is valued for each of the three years, 1865, 1866, and 1867, is the same, £16; this fact shows that it must have been very roughly estimated. In calculating the loss on the four years no allowance is made for the portion of the sum said to have been expended in permanent improvements included in the valuation of 1864, which may have been unexhausted in 1868, because we had no evidence that any improvement had been effected, which should be included in a valuation of the farm.

Rate of wages.

235. *Rate of Wages.*—Four men are permanently employed on the farm; two, the chief ploughman, and the cow man receive 10*s.* shillings a week, and a free house and garden; a second or extra ploughman gets 11*s.* a week, he has no house, but sleeps at the farm, and walks home a distance of seven miles once a week; a carter gets 10*s.* 6*d.* a week, but has not a house on the farm. A jobbing man receives when employed 2*s.* a day. The dairymaid is paid £8 a year, and her board, which is estimated to cost £14 a year. Draining costs: 6*d.* per Irish perch for opening the drains, when free from stones; 1½*d.* per perch for filling in earth; and ½*d.* for laying the tiles. One and a half inch tiles cost 20*s.* per 1000. The total cost of drainage per lineal Irish perch of 21 feet is therefore 1*s.* 2*d.* When the drains are 16 feet apart, and cut 3 feet deep, the cost of drainage per statute acre would be £7 10*s.* Mowing rye grass and clover per Irish acre, which may be cut in from fifteen to sixteen hours, 7*s.* 6*d.*; mowing an average crop of meadow per Irish acre, which may be cut in about the same time, 6*s.* Cutting down oats per Irish acre, or about ten hours' work, 6*s.* Turning over manure, or filling it into carts, 1*d.* per cubic yard, at which a man can earn 2*s.* 6*d.* a day.

DISTRICT AGRICULTURAL SCHOOLS.

Athy District Agricultural School.

Athy District Agricultural School.

236. *Situation.*—The District Agricultural School of Athy, in the county of Kildare, is situated not far from the railway station, and about a quarter of a mile from the town. The Model School is connected with the residences and farm buildings, and is built upon part of the land. The school was established in the year 1849.

School-house and teachers' residence.

237. *School Buildings and Residences.*—Besides the model schools proper, consisting of three school-rooms for boys, girls, and infants, there are apartments provided in the buildings for the literary teachers, agriculturist, working steward, and four paying boarders. These buildings are estimated to have cost about £4,656. This sum has, however, been obtained by approximately dividing the total cost of the building for all purposes. We have not been able to ascertain how much of this sum was ex-

pended upon the schools, and how much upon the residences of the agriculturist, agricultural boarders, and the persons to manage them. The district Inspector has an office there also,* so that the school buildings as distinguished from the farm offices, serve the several purposes of: 1, National schools; 2, residences for literary teachers, agriculturist, &c.; 3, residences for boarders; and 4, central office for district Inspector.

238. The whole of the premises were in very good repair, and lighted with gas, at a yearly cost of £15. The fittings and furniture are excellent, and the wall appointments very good. A small room attached to the boys' school contained some physical and chemical apparatus, which though not in very good order, seemed to have been sometimes used, a circumstance which deserves notice on account of its rarity.

239. *Literary and Agricultural Instruction.*—The boarding class was full, and the agriculturist had had two applications for places during the year, which from want of accommodation he was obliged to refuse. The boarders are sons of farmers, generally holding about 50 acres of land. In the Model School there was a class of 8 boys receiving instruction in agriculture; 7 of them were sons of farmers, and 1 the son of a druggist in the town. The pupil teachers also received instructions in theoretical agriculture. The school instruction in agriculture is given on five days of the week by the agriculturist, from 12 o'clock to 12.30 P.M.—which is the time allotted to play. As the attendance of the school class is voluntary, and requires the sacrifice of play, it is evident that the members of the class take an interest in the subject, and value the instruction. On Saturday this class, and the pupil teachers, receive a field lecture from 10 o'clock to 1.30 P.M. As our visit took place on a Saturday, we had not an opportunity of examining the school class. Only 2 of the boarders were present. Both possessed a fair knowledge of the theory and practice of agriculture, such as they could acquire from the Agricultural Class Book, Murphy's Agriculture, and Johnston's Catechism, the text books used. The Agricultural Class Book is, however, gradually becoming the sole text book—the others being used apparently because having hitherto been the text books, copies of them were in the school. The boarders were also well instructed in reading, writing, dictation, arithmetic, and some geometry and mensuration. One of them was able to calculate the earthwork of drains and embankments. These boys were quite well able to understand farm accounts, but they were not afforded an opportunity of seeing how they were kept. Here (as in the other farms) the account books are transmitted to Dublin, and duplicates are not kept.

Boarders.

Agricultural class.

Pupil teachers.

Proficiency of boarders;

not taught farm accounts.

240. No special religious instruction appears to have been given to the boarders, who were all members of the Episcopal Church, as indeed were the majority of those attending the model school, although the district is eminently a Roman Catholic one. Of the 168 children on the roll for the week ending 26th September, 1868, 94 were of the Episcopal Church, 32 Presbyterians, 19 Protestant Dissenters, and 23 Roman Catholics, or, of the latter, only 13·69 per cent.

No religious instruction.

241. In answer to our first query, whether the farmers in the neighbourhood appreciate the value of agricultural teaching, and are disposed to take advantage of it—

Opinions of neighbours:

Marquis of Kildare;

Rev. H. F. M'Donald;

Rev. A. Quinn.

The Marquis of Kildare says: they do, but are divided in opinion as to the value of the model farm as an example. The Rev. H. F. M'Donald, Rector of Athy, says that "they undoubtedly do" appreciate the value of agricultural teaching, "and have to a certain extent taken advantage of it. There is a very high class of farming now, and for some years past in this neighbourhood, which must be attributed, I consider, in some measure to this fact." The Rev. A. Quinn, the parish priest, in answer to the same query says: "The farmers of the neighbourhood of Athy so fully appreciate the value of agricultural knowledge, that they have been uniformly greatly superior in practical husbandry to all and each of the masters of the Model Farm of Athy, not only at first, but for a considerable time after the appointment of these several masters. The site of the Model School, with a considerable portion of the Model Farm, was tilled by a farmer, a lady, much better, that is to say, much more profitably, and her present farm adjoining the model one, is still much better, that is much more profitably managed, than the Model Farm. And the farmers of the neighbourhood are so well disposed to take advantage of agricultural teaching, that when they find a true principle frustrated in its application through want of practical knowledge in the professor, they are quite ready through superior practical skill to modify the application of the principle, so as to make it pay, and thus enable the professor to fully establish his theory where his practice would have led to failure." The Marquis of Kildare believes the instruction "to be excellent;" the Rev. Mr. M'Donald, "eminently sound and practical," and the present agricultural instructor, Mr. George Ross, to be "specially qualified to impart instruction, which he does conscientiously to the pupils of the school, and most willingly to any who seek information from him," as he himself has done "frequently, and always with advantage." The Rev. Dr. Quinn says: "The teaching at the Athy Model Farm is reputed sound in principle, and has become according as the teacher acquired a practical knowledge of farming, far more practical than it was some few years ago."

In answer to our query as to whether the farmers have given their sons the benefit of the agricultural instruction afforded, and profited themselves by the example given by the management of the farm, the Marquis of Kildare says: "They watch closely the example given, but I doubt whether they have sent their sons to the model farm, except those who went for the literary teaching." The Rev. Mr. M'Donald writes: "The farmers' sons have not benefitted to the extent that they undoubtedly should, were the practical agricultural instruction considered a necessary part of their school business; but I have observed that they are not expected to attend to the agricultural instruction except during the recreation hour, and young people are not disposed generally to go to work when play is optional. I should recommend agricultural instruction, as a stated and necessary part of each day's study." The Rev. Dr. Quinn is of opinion that the farmers of the neighbourhood "have given their sons the benefit of all the mistakes, as well as of all the marked improvement in the working of the model system, and have themselves profited by any new thing of value introduced at the Model Farm, particularly by the new machinery, which the unlimited resources of the farm command freely." All agree that agricultural instruction does not, or ought not to interfere with the literary instruction of the school. The Marquis of Kildare thinks that it would be "desirable to teach the elements of agriculture in all National schools, but not to add any farm to them." Rev. Mr. M'Donald is also of opinion that the elements of agriculture should be

* This is carrying out in part a proposition of the National Board, which is mentioned in their Fourth Report for the year ended 30th March, 1837. "19. We intend that the Superintendent [now Inspector] shall reside at the model school."

taught in all National schools, but he is of opinion that "the addition of a small farm would tend to give practical effect to the theoretical instruction." Rev. Dr. Quinn having apparently before his mind the agricultural system as it was formerly conducted in the larger model farms, is of opinion that: "A system at once so costly, so fruitless, so pretentious, ought to be abolished, not extended."

The farm; quality, extent,

242. *The Farm* consists of 64 acres 20 perches, statute measure, of which two acres are occupied by buildings, ornamental grounds, and gardens, leaving 62 acres for farm operations. The land lies flat and consists of a clayey friable loam, resting on the usual "drift" gravel which covers this part of the country, and which is mainly derived from the denudation of limestone rocks. The farm is made up of three parcels of land, each held by a separate lease and for a different term of years, from the Duke of Leinster, as follows:—

A.	R.	P.						
8	0	16	are held on a lease of	99	years,	from	25th March,	1849.
11	2	15	„	„	31	„	„	„
44	1	29	„	„	14	„	„	1855
Total, 64	0	20						

lease of part expired.

243. The lease of the third and principal part expired on the 25th of March last, so that the greater part of the farm is now held from year to year.

Rent.

244. The annual rent paid is £78, but the proprietor is entitled to demand a further sum of £24 3*s.* 9*d.* The true rent is therefore £102 3*s.* 9*d.*, or £1 11*s.* 10½*d.* the statute acre, of which the landlord contributes £24 3*s.* 9*d.* to the institution. Griffith's valuation of the land, without the buildings, is £88 10*s.*, or £1 7*s.* 7*d.* the statute acre. Three neighbouring farms are valued at £1 14*s.* 6*d.*, £1 9*s.* 6*d.*, and £1 the statute acre, respectively. The actual rent for which the farm is liable is, however, about the fair value of the land, irrespective of the buildings, which were all erected by the Commissioners, and the part of which, strictly belonging to the farm, would no doubt, notwithstanding their expensive character, add somewhat to the letting value of the farm.

Farm offices.

245. *Farm Offices.*—The farm buildings which comprise the usual offices were erected at an approximate cost of £1,200. They are far too expensive, and would accommodate a much larger farm. Considering that somewhat more than two-thirds of the land was held upon a fourteen years' lease, now expired, the outlay may be described as extravagant, and affords anything but an example to be followed by tenant farmers. They are also in some respects defective; the fattening house for cattle, for example, is too large and too cold; and it is accordingly proposed to use it as a root store. At the period of our visit the buildings were in very good repair.

Implements.

246. *Farm Implements.*—The supply of implements was suitable and not in excess of the requirements of the farm. They were in excellent order.

Live stock.

247. *Live Stock.*—We found the following live stock on the farm: 2 horses, 5 calves, 8 milch cows (2 in calf), 1 boar, 1 brood sow, and a litter of 9 pigs, 18 hens, and 40 ducks. No sheep are kept upon the farm which is a disadvantage to the pupils who have no opportunity of becoming acquainted with that very important animal. The cattle kept were of ordinary breeds with a cross of short horn, and were good servicable animals. House feeding was practiced to some extent; during the warm summer months the cattle were left out all night; in winter during a couple of hours each day.

Cultivation.

248. *Cultivation.*—The district about Athy is chiefly in tillage, and the land very well cultivated. Improved implements are in general use, and the farmers seem well acquainted with modern husbandry. A four-course rotation is strictly followed out upon eighteen acres of the model farm; and a six-course is being established on twenty-eight acres; about fourteen acres being laid down in permanent pasture, exclusive of a paddock of about three quarters of an acre. This arrangement seems well suited to the soil and the character of the district. The cultivation was very good, and showed attention and skill. The following table gives the several crops and the proportion of land under each at the period of our visit—

Crops in 1868.

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	Artificial Grass.	A.	R.	P.	Permanent Grass.	A.	R.	P.
Turnips,	6	1	12	Oats,	10	3	12		9	0	0		14	0	0
Mangel Wurzel,	4	1	38	Barley,	11	2	34					Paddock,	0	3	0
Carrots,	1	0	0												
Potatoes,	1	2	19												
Total,	13	1	29		22	0	6		9	0	0		14	3	0

249. This accounts for 59 acres 1 rood and 25 perches, and leaves 4 acres 1 rood and 25 perches for buildings, roads, ornamental grounds, garden, &c.

Quality of crops.

250. The crops looked very well, the turnips being especially good for the season. The mangels also were a fair crop; the soil being light and easily worked, is well suited for growing medium sized well shaped roots, which is the kind the farmer ought to endeavour to raise. Stolen crops of vetches followed by rape and turnips were grown on the four-course plot.

No flax grown.

251. No flax was grown on the farm, and none seems to be grown in the district. It would be very desirable that some flax should be grown on all the large farms of the Board, and provision made for instructing the pupils and the people of the district in its preparation. We would also recommend the establishment of a moderate sized kitchen garden, which under the intelligent management of the agriculturist, Mr. Ross, would be sure to add to the value of the farm as a centre of practical instruction.

Kitchen garden recommended.

Condition of farm.

252. On the whole the farm at Athy may be regarded, even in the advanced district in which it

is situated as a model one, nor does it lack the first quality of good farming—a favourable balance-sheet, as will be seen by the following balance-sheets for the years 1865-6, 1866-7, and 1867-8 :—* Profit and loss.

Dr.	1865–6. £ s. d.	1866–7. £ s. d.	1867–8. £ s. d.	Contra—Cr.	1865–6. £ s. d.	1866–7. £ s. d.	1867–8. £ s. d.

253. *Rate of Wages.*—The ploughman gets 10*s.* a week and a cottage; an ordinary farm labourer 7*s.* 6*d.* a week and a cottage. Rate of wages.

Bailieboro' District Agricultural School.

Bailieboro' District Agricultural School.

254. *Situation.*—The Bailieboro' Model Farm is situated about a quarter of a mile to the south-east of the town of that name in the county of Cavan. It is unconnected with the District Model Schools which are in another part of the town, except that residence is provided at the farm for the principal teacher, and for the pupil-teachers. The farm was first put into operation in 1847.

255. *Residences and School Buildings.*—As in all the other establishments of this class the buildings used as residences are well built. They are estimated to have cost £2,084. There is accommodation for the principal teacher of the Model School, the agriculturist, five pupil-teachers, and four boarders. There is no school held in the buildings on the farm, so that with the exception of a class-room or study-hall for the boarders and pupil-teachers, the whole of the buildings exclusive of the farm offices are intended for residence, and were at the date of our visit in good repair and in a very creditable state as to order and cleanliness. Buildings for educational purposes.

256. *Literary and Agricultural Instruction.*—Two of the places for boarders are free, and the other two paying; but at the date of our visit none of either class was filled up. On the other hand we found an excellent example of the practical working of agricultural teaching as a branch of ordinary school work. The average attendance at the model school for the quarter preceding our visit was 77·9. We found present on Monday, July 27th, the date of our visit, 60, of whom 36 belonged to the junior classes, reading the Third and lower books; and 24 to the senior class, reading Fourth and Fifth Books. The agricultural class comprised chiefly the senior class, and numbered according to the rolls 36, of whom, as has been just stated, 24 were present. Of these 24, 11 were Presbyterians, 9 Catholics, and 4 members of the Episcopal Church; 3 were twelve years of age, 7 thirteen years, 5 fourteen years, 5 fifteen years, and 4 above fifteen years. Again, 15 were sons of farmers, 5 of shopkeepers, 1 of a policeman, 2 of artisans, and 1 of a private person owning some land. All were well able to read the Third and higher books, so as to understand them, and were quite competent to understand the Agricultural Class Book, which can only be thoroughly mastered by those who have advanced beyond the Third Book, and reached their twelfth year at least. They were all fairly acquainted with the elements of English Grammar, and the great majority of them were able to parse syntactically. They were all fairly acquainted with the general features of the Map of the World; 13 could write from dictation with ease and correctness, and the remainder with tolerable accuracy. The sums given in subtraction and division of money and in practice were so worked by all as to show their acquaintance with the rules, and the answers were correctly found by 15. In geometry and mensuration the answering was on the whole fair, and most of those who were advanced in those subjects had some knowledge of land-surveying. They appear also to have had some lessons on the elementary portions of physical science, especially mechanics and heat. Several boys belonging to the junior class joined the agricultural class, and proved their interest in the subject by purchasing the agricultural text books. No boarders. Agricultural class; proficiency of class in ordinary school work;

257. Agricultural instruction was given by the agriculturist, on four days of the week for half an hour, from 3 o'clock to 3.30, P.M. There was no fixed time for giving practical instruction on the farm; and we found that it was only rarely given. The pupil-teachers received instruction of both kinds along with the scholars. The answering of the class generally in the theory of agriculture was very fair, and a few possessed a creditable knowledge of the more important principles. We examined them on the farm in practical agriculture, and found that some had a moderate knowledge of the general operations and work of a farm, and the use of theory in improving them. As the members of this class attended school chiefly for literary instruction, we had an opportunity of judging how far agricultural instruction would be likely to interfere with ordinary school work. But here, as everywhere else, those who answered best in the one subject were also those who answered best in the other. Moreover we found that many dull boys who read the lesson books mechanically, and without thoroughly understanding them, read intelligently the Agricultural Class Books. agricultural instruction.

258. The following is a summary of the answers we received to our queries sent to the neighbouring clergymen and gentry :— Opinions of neighbours:

Rev. Frederick Fitzpatrick, Rector of Lurgan, Virginia, and formerly of Bailieboro', did not consider that the farmers of the neighbourhood sufficiently appreciated the value of agricultural teaching, or gave their Rev. F. Fitzpatrick;

* In comparing the profits realized by Mr. Ross at Athy with those shown by the managers of other model farms, it is only fair to take into consideration the fact that £24 3*s.* 9*d.* (rent due to, but not claimed by the landlord), should be annually deducted from the sum shown in the balance-sheet as profit. Even with this deduction, however, Mr. Ross has cleared over rent, and all other expenses (save salary of agriculturist) £226, in the last three years.

sons the benefit of such teaching as the neighbourhood afforded. He is of opinion that the small farmers of the north-west and east require a thorough reformation. Many tenants are poor, but those who have money do not spend it. The object seems to be to get a crop from the land with the smallest outlay possible. There are, however, many exceptions. He does not think it would be desirable to introduce agricultural teaching into all the rural National schools, or to add small farms of land to them. But he thinks a good large district school to which the sons of small farmers had access on cheap terms, would, under judicious and skilful management, be productive of excellent results.

Very Rev. F. O'Reilly;

Very Rev. Francis O'Reilly, P.P., V.G., thinks that some at least of the farmers do appreciate the value of agricultural teaching, but are not generally disposed to take advantage of it, probably on account of the relations between landlord and tenant. He believes the instruction given at the Model Farm School to be sound and practical. Every boy attending the model school may, and he believes does, attend the agricultural instructions, but he does not think the farmers have profited themselves much by the example given by the management of the school farm. It would be desirable he thinks to teach the elements of agriculture in all rural National schools on the condition that *the tenant would be secured in the enjoyment of his improvements, and that the landlord could not step in and raise his rent because of the increased value of his farm, this being the creation of the tenant's own skill, capital, and industry.* Without this necessary guarantee for the tenant, model farms will ever be delusions, and in many instances a useless expenditure of the public money.

Thomas Chambers, esq.

Thomas Chambers, Esq., a gentleman of considerable experience, thinks the farmers in the district appreciate the value of agricultural teaching, and where they are clearly shown that profit can be derived from it, will take advantage of it. The instruction given in the school is sound. The working of the farm for some time was not in his opinion on a good principle, having been let by the Commissioners of Education to a tenant who allowed it to get out of order. The farming of the neighbourhood is greatly improved since the establishment of the Model Farm. Part of this improvement is due to the teaching in the school, and part to the general progress going on over the country. From the general working of the farm from the commencement of its operations until lately, he cannot say that its advantages has been of such a character as would justify the expenditure connected therewith. It has been worked much better lately, and he hopes it will have the effect it was originally intended to produce. He does not believe that the literary teaching has been interfered with by the agricultural; and believes it would be useful to have the elements of agriculture taught in the rural schools, but that the addition of land would divert the attention of the teacher and inspector more or less from their present duties, which might have an injurious effect.

The Farm: extent, tenure, &c.

259. *The Farm* consists of 48A. 2R. 0P. statute measure; the soil is formed of the local *debris* of silurian slates and grits overlying blue clay. Situated on a rising ground, it exhibits every variety of position and aspect—a part being so steep that the manure has to be carried up in panniers on the backs of asses, which considerably increases the cost of tillage. Its total extent is 48A. 0R. 15P., and comprises three several parcels, one of 8A. 1R. 27P., held on lease for the lives of the Queen, Prince Albert, Prince of Wales, and other lives, renewable for ever, from 1st of November, 1847, and upon which the buildings have been erected; the second of 8A. 1R. 28P., held on a lease of fourteen years from the first of November, 1849; and the third of 31A. 1R. 0P., also held on a lease of fourteen years from the 1st of November, 1854. The leases of the second and third parts have expired, the one in 1863 and the other in 1868, so that the greater part of the land is now held from year to year. The landlord is the Right Hon. Sir John Young, Bart.; and the annual rent is £69 10*s.* The valuation of the land, exclusive of the buildings, is £41 5*s.* Three neighbouring farms are valued at 16*s.* and 19*s.* the statute acre respectively. Similar land in the immediate neighbourhood, if not within the limits of townpark, lets from £1 5*s.* to £1 10*s.* the Irish acre—if townpark, at about £3. The farm may almost be considered as the latter, and the agriculturist thinks the land worth £2 per acre. Although the buildings are good, yet they would not add much to the letting value of the land, being quite in excess of the requirements of the farm.

260. The land is distributed as follows:—

	A.	R.	P.
Under buildings, walks, &c. . . .	2	2	26
Tillage land, ...	27	3	23
Permanent grass, ...	17	2	6
Total, . . .	48	0	15

Kitchen garden.

There had until lately been no kitchen garden, but there is now one in progress of construction.

Farm offices.

261. *Farm Offices.*—The farm offices are approximately estimated in the returns furnished to the Royal Commission by the Commissioners of National Education to have cost £998 15*s.*, but must have cost much more. They are good buildings, but out of all proportion to the size of the farm, being quite sufficient for a farm of three times the extent. The extravagance of these buildings is further increased by the fact of the land, with the exception of little more than eight acres, being held originally upon so short a lease, and now merely from year to year.

Implements.

262. *Farm Implements.*—The farm implements seemed suitable and adequate to the size and character of the farm, and to have been kept in good working order. In a model farm, however, a little extra care would be desirable. This observation does not, however, apply more to this farm than to nearly all the others.

Live stock.

263. *Live Stock.*—At the date of our visit the live stock consisted of 2 horses, 5 calves, 5 milch cows (3 in calf) of cross-breeds—Ayrshire and Durham. House feeding was only partially carried out as in most of the farms. There were no sheep, pigs, or poultry. No attempt appears to have ever been made at any of the farms under or in connexion with the National Board to give instruction to girls in the rearing and management of poultry. If the instruction of boys in agriculture be a legitimate function of the Commissioners, there seems no valid reason why its advantages should not be extended to the girls. There are, of course, some difficulties in the way of checking the cost of feeding fowl but they are not insuperable.

Cultivation.

264. *Cultivation.*—The husbandry of the district is chiefly tillage, which is worked upon a kind of

five-course rotation very irregularly carried out. The model farm had been until quite recently very unsuccessfully managed. Owing to this circumstance the Commissioners of Education let the farm to the agriculturist when the opposition to the whole agricultural department, owing to ill-success, was at its height. Under this tenancy, which was necessarily one from year to year, the land suffered very much, and has not indeed yet recovered. The management is now much better and the farm pays. The rotation adopted is a four-course one, which seems suitable to the soil and climate of the farm, and is fully carried out. The cultivation was carried on fairly enough, except the flax, which was a poor crop, and very dirty. In the present state of the land we consider this crop quite unsuitable to the farm.* Flax is precisely the crop which ought never be attempted on an educational farm, except where every care is taken to make it successful. Although some flax is grown in the district, and that so far as we had an opportunity of judging its preparation is not fully understood, there was no provision whatever made at the model farm for teaching the preparation of the fibre. The turnips were very fair; the mangels indifferent, owing in part to bad seed. The potatoes were good, and the oats fair. There were no other grain crops. A stolen crop of 1A. 2R. 9P. of winter vetches was likewise grown.

hitherto badly managed;

rotation and quality of crops.

265. The manure heap was fairly managed, but was untidy. Artificial manures, superphosphate and guano, had been used with the root crops.

Manure heap.

266. Considering the wretched condition of this farm when the present agriculturist, Mr. M'Cabe, was appointed, we think it is doing, on the whole, well. He seems to be going the right way towards putting it in a proper and paying condition. During the past two years fair profit has been realized, as the following balance sheet shows:—

Farm promises well.

Profit and loss.

Dr.	£	s.	d.	Contra—Cr.	£	s.	d.
To Amount of Valuation made at the beginning of the year, including proportion of unexhausted improvements and artificial manures,	170	11	11	By Cash received during the twelve months,	291	12	6
„ Value of free labour of pupils,	8	0	0	„ Amount of valuation made on the 6th of April, 1868,	297	4	5
„ Cash paid for labour,	69	9	1	„ Outstanding debts for dairy produce,	2	6	0
„ Cash paid for sundries,	244	18	2	„ Expenses on capital accounts for permanent improvements to be written off by annual instalments:—	£	s.	d.
„ One year's rent, poor rate, and county cess,	69	10	0	Manual labour,	7	16	6
„ Balance, being profit,	43	14	3	Farm horse,	5	15	6
					13	12	0
				„ Expenses included in sundries on the other side, but not chargeable to farm,	6	8	6
	£611	3	5		£611	3	5

267. If we add the value of free labour of pupils to the true profit from the farming, as shown by the balance sheet, the real profit to the public was £56 14*s.* 3*d.*

268. The extent of the improvement which has taken place in the management of this farm will be best seen by comparing the above balance sheet with the following table, showing the losses in the years 1855, 1856, 1857, and 1858:—

Contrast of present and former management.

Balances being Losses.	£	s.	d.		£	s.	d.
1854–5,	61	3	3	Valuation on the 31st March, 1854,	290	16	8
1855–6,	123	15	9				
1856–7,	141	1	5				
1857–8,	66	0	11	Valuation in March, 1858,	450	6	3
Total loss in four years,	£392	1	4	Increase in valuation,	£159	8	7

269. If the full estimated worth of the increased valuation at the end of the year 1857–8, especially of the portion representing permanent improvements, could have been realized during subsequent years, the increased value of the farm and stock might be set off against part of the above loss; but this could only have been done by good farming and judicious management. Instead of this, however, the losses continued year after year; and the valuation on the 31st March, 1867, was less than it had been on the 31st March, 1854. The probability is that the valuations made some years ago were too high and intended to cover the continued annual deficits.

Ballymoney District Agricultural School.

Ballymoney District Agricultural School.

270. *Situation.*—The Ballymoney model school, which is entirely separate from the farm and farm offices, is situated quite close to the town of that name in the county of Antrim, and the farm is about 200 yards from the school. The farm was used for instruction in 1852.

271. This farm has been let for the last five years to the agriculturist, who works it on his own account, but is paid a small salary as agricultural instructor. Steps had, however, been taken to put an end to this arrangement.

Farm let to agriculturist.

272. *Residences and School Buildings.*—Accommodation is provided at the farm for the agriculturist and four boarders. No residence is provided for the principal teacher, but the assistant teacher lived at the farm when we visited it. The school buildings are good, consisting of three good rooms, one for boys, one for girls, and one for infants, besides a separate class-room, containing some physical apparatus, &c. There was also a good playground, where the boys could play ball. The urinals, &c., were clean and in good order. The buildings were in good repair. The dormitory for the boarders at the farm consisted of a room containing four beds in good order, but unused for several months. Excepting the physical apparatus, which was of the usual character to be found in model schools, and which, moreover, was in such a state as to be practically useless, the school furniture, fittings, wall appointments, and school requisites were very good.

Buildings for educational purposes.

273. *Literary and Agricultural Instruction.*—The boys' day school had an average attendance of 66 for the preceding year, of whom 61 were present when we visited, thus classified:—7 were in the Second Book; 28 in the Third Book; 16 in the Fourth, and 10 in the Fifth Book. Thirteen were learning geometry, 23 mensuration, and 18 algebra. Drawing was taught to all, and physical science

Attendance at boys' school.

* This observation applies with even more force to very many of the farms in the neighbourhood. It is, unfortunately, too often the case that a farmer who is in difficulties "gambles" in flax-growing—tempted by the large immediate receipts, and forgetful of the evil day that must come at last for him who "always takes out and never puts in."

Agricultural class; to the fourth and fifth classes. The agricultural class had 33 on the roll (the total on roll of the third fourth, and fifth classes being 86), but only 9 were present. We confined our examination to this class. All those present (nine) were able to read the agricultural text-book and explain the words very well; 4 were able to parse syntactically fairly. The answering in the geopraphy of Europe and Ireland was very indifferent; they seemed to have no correct notions at all upon the subject of maps. They answered better in the map of Europe than in that of Ireland, *in fact they knew nothing at all of any part of Ireland outside of Ulster;* 2 were able to work well sums in multiplication and division of money, and in simple proportion and practice; 3 moderately well, and 4 very indifferently. All could write very well; 7 could write a long sentence, from the beginning of the fourth class book, with tolerable accuracy, the spelling being on the whole good, but the punctuation indifferent; 2 were able to do so without a mistake.

literary proficiency.

Agricultural instruction. 274. The agricultural instruction in the school is given by the agriculturist, who receives a free house and £30. No practical instruction is given on the farm, and there are no boarders; two of the places being free and two paying. The agricultural text-book had not been yet received, and the text-books in use were Johnston's Catechism and some others on the Board's list, of which there was a sufficient supply. Only one of the nine boys in the class present when we visited was the son of a farmer, the others were chiefly sons of artizans who were, however, directed by their parents to attend the class. The answering of the class in theoretical agriculture was very indifferent, and of the practice they knew nothing. There was no fear that the combination of literary and agricultural instruction would interfere with the efficiency of either at this school, as no opportunity was afforded for making the experiment. There was one peculiarity of this "agricultural" school which deserves special notice, namely, that the pupils of the agricultural class when they became monitors ceased to receive agricultural instruction!

The farm; quality of land, extent, &c. 275. *The Farm* contains 23A. 2R. 2P. statute measure of medium more or less clayey land, resting on basalt, having a general N.W. aspect. Part of the land worked according to a three years' rotation is flat; the remainder, worked according to a four year course, is inclined. The land consists of two parcels, one, upon which the buildings are erected consisting, of 2A. 1R. 2P. is held on a lease of sixty-one years, from the 1st of November, 1852, from the Earl of Antrim; the second of 21A. 1R. on a lease for thirty-one years from the same date, and from the same landlord. The annual rent of the two parcels is £52 18*s.* or about £2 5*s.* the statute acre. The farm pays, in addition to county cess and half the poor-rate, a town-rate of £1 15*s.* 4½*d.*. Griffith's valuation, for the land, exclusive of the buildings, is £41 10*s.** The land is town park and let at town park rent, which is not higher than that of land similarly situated. At a distance of about two or three miles from the town it would not be worth more than half the present rent.

Farm offices. 276. *Farm Offices.*—The farm offices afford accommodation for six cows, besides two loose boxes for calves or stall-feeding; there is a fair piggery and a two-horse stable, a good barn which would, however, be suitable for a larger farm. The buildings are on the whole very good and would be very suitable for ordinary tenants on a much larger farm; for a farm of this size they are too expensive. In the returns obtained from the National Board the schools and residences are approximately estimated

Former expenditure on this farm. to have cost £956, and the farm buildings £469 5*s.* 9*d.* According to a return to an order of the House of Commons, No. 167, 1859, the sum expended for agricultural purposes exclusively during the five years ending 1857, is given at £2,914 6*s.* 3*d.* If we deduct from this sum the cost of the buildings just stated, and the receipts from farm produce and other sources, included in the return under "&c.," amounting to £920 11*s.* 6*d.*, the sum paid in five years for management, implements, stock, and loss was £1,524 9*s.*, or more than £300 a year!

Implements. 277. *Farm Implements.*—The farm implements were very good and quite suitable, and not more than sufficient for the requirements of such a farm. They seemed in fair repair, but were left lying about in a very slovenly way.

Live stock. 278. *Live Stock.*—At the period of our visit the live stock consisted of 1 horse, 2 calves, 4 milch cows, of a mixed Ayrshire breed, and 2 store pigs. The cows are house-fed in winter, and partially so in summer. We found them out on the pasture, herded by a small boy of 8 years of age, *who had never been at school!*

Cultivation; rotation; quality of crops; 279. *Cultivation.*—The land about Ballymoney is chiefly in tillage. It is worked according to an irregular five course rotation, and appeared to be fairly tilled. The flat part of the model farm was worked upon a three course rotation (flax being substituted for oats in the present rotation). The upland was worked upon a four course rotation; no stolen crops are grown. The turnips, which were sown with a machine, were a complete failure; part of the turnip ground was left unworked. The grass was good for the season. The flax, which had been pulled before our visit, was stated to have been good, *but was sold in the green state!* Last year also the agriculturist sold an acre of flax on foot, for which he got £10. The potatoes were good. A part of the flat lands appeared to require drainage, although we were told by the agriculturist that it had been drained.

part of hay sold. 280. The agriculturist sold part of his hay (the produce of one Cunningham acre) off the farm. The reason he gave for not carrying out house-feeding more fully is the high price of labour. The fences were generally in good order, but there were some untidy gaps, intended as passes, filled with bushes. We were told that a very few farmers visit the farm and ask questions, a circumstance which the agriculturist, Mr. Young, attributes to the agriculture of the district being more advanced than in most other parts of Ireland.

No valuation made for two years; 281. No valuation was made for two years after the agriculturist became a rent-paying tenant; the one taken in 1867 was made by a neighbouring farmer and the agriculturist himself. For the three years previous to that no balance sheet was struck. Mr. Baldwin had called the agriculturist's attention to this neglect. The farm accounts seem accurate enough, but not having been kept in the usual book, it was difficult to analyze them, so as to see at a glance the condition of things. The

profit and loss. profits for the years ending March 31st, 1865, 1866, and 1867, appear to have been only £15 17*s.* 11*d.*,

* The valuation has, we believe, been recently revised and raised to £47.

and for 1867-8, £21 11*s.*, or for four years, £37 8*s.* 11*d.* There is evidently great room for improvement in the working of this farm, which, in its present condition, is far from being a model farm.

282. The manure heap was fairly attended to; and artificial manures, to the extent of 5 cwt. of guano, had been used during the year. Manure heap.

283. The following is a summary of the answers we have received to our queries:— Opinions of neighbours;

Rev. Andrew Todd, Finvoy, Ballymoney, believes some of the farmers appreciate the value of agricultural teaching, and are disposed to take advantage of it; but they have not to any considerable extent given their sons the benefit of the education at the agricultural school. He is of opinion that it would be most desirable to teach the elements of agriculture in all rural National schools, and to add a small farm to each. Rev. A. Todd, P.M.

Rev. John Brown, D.D., says the farmers about him have had no connexion with the school. He is of opinion that it would be desirable to have small farms attached to many schools, chiefly as a source of income to the teachers who are very badly paid. The farmers read books on agriculture, understand the cultivation of flax, how to raise green crops, potatoes, &c. What they want is security of tenure, and that advantage shall not be taken of their improvements to raise the rents as is sometimes done on improving tenants. Rev. J. Brown, P.M.

Rev. Robert Park, A.M., Presbyterian Minister, says: "The farmers in the neighbourhood of Ballymoney are more practical than reading men; they have, however, made themselves pretty well acquainted with the principles of agriculture, and particularly the young men are endeavouring to carry them out with advantage. Rev. R. Park, P.M.

"Judging from the examination of a class in the model school, I would conclude that the teaching, so far as it goes, in the model agricultural farm is sound and practical, but I have never had a high opinion of this mode of giving instruction for the advantage of our general farming class.

"There have been, and still are a few lads who attend the class at the model farm; but so far as I am able to judge this has been of little really useful application to ordinary agricultural pursuits.

"I do not think agricultural teaching has interfered with the literary teaching of the Ballymoney Model School.

"I can see no possible objection to the elements of agriculture being taught in rural National schools; but I question much the advantage of a farm being connected with them. Divided attention to matters *inside* and *out* at the same time, or near to the same time, would not in my mind be useful.

"Whether owing to the National Board or not, agriculture in this neighbourhood has much improved during late years."

T. L. Hutchinson, esq., J.P., Leslie Hill, Ballymoney, says: "The farmers in this neighbourhood take advantage of agricultural teaching at the model farm, and I believe fully appreciate its value. T. L. Hutchinson, esq., J.P.

"The instructions given in the Ballymoney Model Farm and school, is, as far as I hear, both sound and practical. The farmer's sons in this neighbourhood attend the school regularly.

"The literary teaching of the school is, I hear, considered successful, and is not I think interfered with by being combined with agriculture.

"I think it would be desirable to teach the elements in all rural National schools, but I do not think the salary given by the National Board sufficient to remunerate a person qualified for that purpose."

284. *Rate of Wages.*—A man and 2 horses earn at ploughing 8*s.* a day; a man and 1 horse, carting manure, &c., 4*s.* a day; mowing meadows, per Irish acre, 5*s.* to 6*s.* Casual labourers close to the town of Ballymoney, get from 1*s.* 6*d.* to 1*s.* 8*d.* a day; labourers in constant employment get 7*s.* a week. As an illustration of the condition of the labouring classes, we may mention that of the 61 boys present in the model school when we visited it, 14 were bare-footed. Rate of wages.

Bath District Agricultural School.

Bath District Agricultural School.

285. *Situation.*—The Bath Model School and farm are situated about one mile and a half from the village of Broomfield, near Castleblayney, in the county of Monaghan. They were established in the year 1853; but the school has not been in operation since 1865.

286. *Residence and School Buildings.*—There is only one school-room which is of good proportions; it is now disused, and the furniture and fittings are accordingly not attended to. Besides a residence for the teacher there is a good dormitory for six boarders, but no special room for refectory. Buildings.

287. *Literary and Agricultural Instruction.*—Up to the year 1865 the day school was well attended; in that year, however, for some reason, and contrary to the advice of the then District Inspector, the day school was closed, and the place converted into a boarding establishment, which utterly failed, so that now there is no instruction of any kind given there. Besides a Church Education Society's school, distant about two miles, there are four National schools within distances of ½, 1¼, 1½, and 3 miles respectively. This circumstance may perhaps account for the closing of the Bath school, but it does not justify it, for if any of the schools ought to be closed it should be Broomfield school, distant half a mile, which is certainly not as well situated for public convenience as the Bath school; moreover it never had a large attendance, and has now so small a one that it scarcely fulfils the conditions as to number in average attendance required by the National Board; while Bath, upon which the Board expended £616 for school and residences, and £555 1*s.* 10*d.* for farm offices, independent of £200 for thorough drainage, and other sums for improvements, implements, &c., had, before being closed, a very good average attendance. The small farmers are anxious that the school should be re-opened, and that agriculture should be taught in the school, and a requisition signed by 200 neighbours has been got up with that object. It is said that there are upwards of 100 children in the proper school area of this school. Day school closed, ought not to have been, small farmers anxious to have it opened,

288. *The Farm.*—Consists of 42 acres 2 roods of elevated hilly land, having a moderately stiff wet clay soil, and is leased from the Marquess of Bath, for a term of thirty-one years, from the 1st May 1853, at an annual rent of £29 15*s.* Griffith's valuation for the land exclusive of the buildings is £30 5*s.* It has been all thorough drained, at an estimated cost of £200. If it were proposed to let it at such an increased rent as would pay interest on a fair proportion of the capital invested, the present rent should be nearly doubled, and this increased rent would be quite beyond its true letting value. The farm: extent, rent, &c.

289. *Farm Offices.*—The farm offices afford accommodation for 12 cows, 3 horses. There are 4 Farm offices.

compartments for pigs, and a dairy. There is no barn; a room on first floor over the cow-houses originally intended for a school-room, is now, however, used as a barn; the ceiling of the lower sheds is consequently broken and falling down. The whole of the buildings, with this exception, were in fair repair.

Implements. 290. *Farm Implements.*—The implements seem adequate, except the light wooden roller which can be of little use upon such stiff clay land.

Live stock. 291. *Live Stock.*—The live stock consisted of: 1 horse, 2 one-year old heifers, and 3 one-year old bullocks, and 5 two-year heifers, and 1 boar, but no sows, nor (as we were informed) are there any in the neighbourhood. The cattle were good half-bred short-horns. There seems to be no summer house-feeding. All the cows were out at grass, and the byres unused when we visited. We found a boy of eleven years of age herding the cattle on the grass, which was in the same "division" as the green crops, and without a fence between them; he was scarcely able to read, having been only one year at the Broomfield school; and does not go to any school now.

Cultivation; crops in 1868; 292. *Cultivation.*—The district about Bath is chiefly in tillage, and a good deal of flax is grown. The following table shows the nature of the crops and the area under each:—

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	Artificial Grass.	A.	R.	P.	Permanent Grass.	A.	R.	P.
Turnips,	4	3	4	Oats,	9	0	39		11	3	5		9	1	15
Potatoes,	0	1	20	Flax,	4	2	0								
Total,	5	0	24		13	2	39		11	3	5		9	1	15

quality of crops. The turnips were a fair crop, better than the generality of what we saw in the district. The rotation followed is a six-course which is now strictly followed. The flax is rippled and the seed used in part for sowing the next year's crop, and in part as food for cattle. There was no provision on the farm for teaching the preparation of flax. Some difficulty and loss had been met with from not being able to steep in a neighbouring stream in consequence of the provisions of the Fishery Act. But when so much is grown a proper steep could be prepared, and the steep-water, instead of being wasted as is usually done, should be utilized as manure.

Manures. 293. The manure is well managed; a good deal is also purchased; 16 cwts. of Golding's manure was used with the green crops.

Agriculture of district backward. 294. The agriculture of this district is backward, for which causes are assigned into which it is not our province to inquire. It is however a district where it seems to us an agricultural school might, if well conducted, be of benefit. The Rev. James M'Cully, B.A., the Presbyterian minister of the locality, in answer to our queries, says—The farmers "do not appreciate the value of agricultural teaching, and are, for the most part, satisfied with the kind of farming their fathers have practised before them." He adds, that "it might be desirable to impart some elementary lessons in agriculture in National schools, but I question the wisdom of adding land. I fear such a course would greatly interfere with the literary department of the school."

Opinion of R. J. M'Cully, B.A., P.M., on agricultural instruction.

Farm badly managed formerly; 295. Previous to the farm being put into the hands of the present agriculturist, Mr. Byrne, it was wretchedly managed, and seems a good deal worn out. The following passage from the report of the Agricultural Superintendent of the Board, Mr. Baldwin, taken in connexion with what we have already stated of the history of the place, explains how this occurred—

probable cause of this. "The farming was most unsuccessful in 1867, and for this reason. It is a rule of the Board that 'agricultural schools of every class must have a literary department annexed to them, conducted on the principle of National schools' (vide Rules, Part III., Sec. III). Regard being had to this rule, the Commissioners became desirous of selling their interest in the farm and buildings. Several offers having been made, they did not appear willing to go to any expense in stocking or working the land; the persons put in charge of it, feeling uncertain of their position, took comparatively little interest in the farm, and one of them acted very badly, and had to be summarily dismissed. Unforeseen difficulties arose in effecting a sale, but when in June, 1867, Lord Bath's agent applied to know the terms on which the Commissioners would sell their interest in the place, and when the Commissioners offered to dispose of it for about one-half the sum they spent on the buildings and on the reclamation of the land, it was fully believed that the whole establishment would be taken off their hands. After a very long delay the Commissioners have had to take steps to continue to work the farm on their own account."

Rate of wages 296. It was stated to us that the wages of ordinary farm-labourers in this district, when constantly employed, is from 6*s.* to 7*s.* a week.

Derrycastle Agricultural School and Farm.

Derrycastle District Agricultural School and Farm. 297. *Situation.*—Derrycastle school and farm are situated on the high land to the east of Lough Derg, and about three miles to the north-east of Killaloe, and in the county of Tipperary. The school buildings, residence, and farm offices form a connected set of buildings on the farm. The farm was established in the year 1850.

Buildings. 298. *School Buildings, &c.*—There is but one school-room without a class-room; it is, however, a good room. The school is attended by boys and girls. There is accommodation in the house for the literary teacher, the agriculturist, and three resident scholars—two paying and one free, but the literary teacher lives with the boarders. The parts occupied by them were in very fair order. The urinals, &c., of the school were also in very proper condition. The school furniture, fittings, wall appointments, and requisites seemed adequate, and in fair order. The school and house, as distinguished from the farm offices, are approximately estimated to have cost £718.

299. *Literary and Agricultural Instruction.*—We found fifty-seven boys on the roll, of whom three belonged to the Episcopal Church; thirty-six were present. These were thus classified :— Attendance of pupils.

	On Roll.	Present.
First Class . . .	22	17
Second „ . . .	17	12
Third „ . . .	18	7
Total . .	57	36

300. There was no fourth class in the school. The agricultural class consisted of the whole of the third class; those present had been only a short time in the class; the more advanced boys, we were told, were absent at work. Here, as everywhere else, we found the children kept at home upon the slightest pretexts. On inquiring of one intelligent boy why he had been absent from school for thirty-one days in a quarter, he said he was kept at home to assist in making hay. We inquired how much land his father held, and learned that he had only twelve acres! Another brother a couple of years younger, and also very intelligent, gave the same excuse. But the only reason they could give why a third brother, about seven years old, did not go to school was that he felt lonesome without his brothers! Agricultural class. Slight causes which keep children away from schools.

301. Agricultural instruction is given in school from 2 o'clock P.M. to 2.30 each school day. Practical instruction is sometimes given for half an hour in the week on the farm. The boarder attended in school from 10 o'clock A.M. to 12·30 P.M.; and on the farm from 12.30 to 3 o'clock; and again from 3·30 to 6 o'clock. There was a good supply of the new Agricultural Class-book, which had been furnished as free stock. Of the seven boys of the agricultural class present, five were sons of farmers, one of a garden labourer, and one, who was a free scholar, of a land steward. We were unable to judge of the character of the agricultural teaching as all the members of the class present had only recently been promoted to the third class, and could scarcely be expected to understand the special terms of the Agricultural Class-book. They had, however, acquired some useful general notions of the principles of agriculture. Taking into account the great irregularity of attendance, they were fairly forward in the literary work of their class. There had been, a short time before, another free boarder (no paying ones) also the son of a land steward. Agricultural instruction.

302. *The Farm* consists of 18A. 1R. 22P. of medium clay land resting on clay-slate which comes to the surface in some places. It lies at a considerable elevation, and slopes to the south-east. It is held from James Spaight, esq., on a lease for the lives of Her Majesty the Queen, Prince Albert, and the Prince of Wales; or for 31 years from the 1st April, 1849, at the annual rent of £13 15*s.* 9*d.*, or 15*s.* the statute acre. Griffith's valuation for the land exclusive of the buildings is £8, or 8*s.* 5*d.* the statute acre. Two adjoining farms are valued at 6*s.* 5*d.* and 7*s.* 8*d.* the statute acre, respectively. An ordinary tenant would pay about the same rent for the farm, although a great part of it is described as having been a swamp originally, and has been reclaimed under the Commissioners of Education. The farm.

303. *Farm Offices.*—The dairy is somewhat too small for summer use; and the barn is accordingly now used as a summer dairy; otherwise, the buildings are very sensible, sufficiently commodious, and not more than what a small farmer ought to have. Farm offices.

304. *Farm Implements.*—The implements were simple, useful, sufficient, and kept in fair order. Implements.

305. *Live Stock.*—We found the following live stock on the farm :—1 horse, 3 calves, 3 milch cows, 1 ram, 9 ewes, 2 hoggs., 15 lambs, 1 boar, 1 brood sow and 4 sucking pigs, 9 barn fowl, and 6 ducks. All the animals were of a suitable class, in good condition, and seemed well managed. House feeding, as in nearly all the other farms, was confined almost altogether to winter.

306. *Cultivation.*—The agriculture of the district is not very advanced. It is mixed tillage and grass; the laying down of the land being defective, and very little artificial grass sown. The school farm was distributed as follows :— Cultivation:

Green Crops.	A. R. P.	Grain Crops.	A. R. P.	Artificial Grass.	A. R. P.	Permanent Grass.	A. R. P.
Turnips, . . .	1 1 0	Oats, . . .	4 1 0		2 0 20		9 3 28
Mangels, . . .	0 1 0						
Cabbages, . .	0 0 20						
Potatoes, . . .	0 2 0						
Total, . .	2 0 20		4 1 0		2 0 20		9 3 28

The cultivation is conducted on a four-course rotation which is well and strictly carried out. Stolen crops or flax are not cultivated. rotation,

307. The manure heap seemed to have been fairly attended to. Artificial manure, to the extent of 4 cwts. of turnip manure (guano and superphosphate) had been used on the green crops. manure.

308. There was no vegetable garden, which, in such a district, would be a most desirable example. It should, of course, be small, as there is no market in the immediate neighbourhood. No kitchen garden;

309. The accounts seem correct, and are well kept. Some things which are not fairly chargeable against the farm are deducted at the close of the year. There was no charge for coal used for farm purposes. The item was no doubt small, but as an example, every item, however trivial, should be included in the charges or credits, as the case may be. accounts;

310. This farm has been unfortunate in its agriculturist for the years 1867 and 1868. He had previously failed to make the farm at Dunmanway pay. His predecessor at Derrycastle, Mr. O'Brien, now at Cork, realized a profit of £39 14*s.* 9½*d.*, according to the balance-sheet of 1865-6, while his successor at Dunmanway made that farm pay the first year he managed it. This shows how much of the success of the agricultural department depends upon management and superintendance. Farm not well managed in 1867 & 1868.

Profit and loss.

311. The following are the balance-sheets for the years 1865-6, 1866-7, and 1867-8:—

Dr.	1865-6. £ s. d.	1866-7. £ s. d.	1867-8. £ s. d.	Contra—Cr.	1865-6. £ s. d.	1866-7. £ s. d.	1867-8. £ s. d.

Dunlewy District Agricultural School and Farm.

Dunlewy District Agricultural School.

312. *Situation.*—Dunlewy District Agricultural School is situated in a very wild uncultivated part of the county of Donegal, about one mile distant from the post office of the same name. The farm surrounds the school-house and farm buildings, and was brought into operation in January, 1865.

Buildings.

313. *School Buildings, &c.*—There is but one school-room 20 feet long by 18 feet wide, and 10 feet 6 inches high; but there is a good gallery 17 feet long, 9 feet wide, and of the same height as the school-room. They were both in good order; the furniture and fittings, wall appointments, and school requisites were good, and seemed to have been adequate for the wants of the school. The urinals, &c., were also good and sufficiently well kept. There is accommodation for the literary teacher, who is also the agriculturist; the portion occupied by him and his family was in fair condition. There is no provision for boarders.

Attendance of Pupils.

314. *Literary and Agricultural Instruction.*—The school having been dismissed a short time before our arrival, we had no opportunity of ascertaining the character of the teaching. We took the following statistics from the school accounts, which seemed to be regularly kept. The total number on rolls was 70 boys and 50 girls, or 120 in all. The average number on the books for the last twelve months was 44 boys and 29 girls, or in all 73. The average attendance for the last twelve months had been 14·7 boys, 8·1 girls, or in all 22·8. On the day of our visit there were 16 boys and 4 girls, or in all 20 present. Of these, 6 boys and 2 girls were seven years old or under; 2 boys eight years, 3 boys and 2 girls nine years. The remaining 5 boys were of the following ages, 2 of eleven years, 1 of twelve, 1 of thirteen, and one above fifteen years. The number of names then on the register, that is who had made even one attendance within the quarter, was 48, or 40 per cent. of the number for the whole year. The average attendance was only 19 per cent. of the roll number. These numbers show the very great irregularity of attendance on the one hand, and the worthlessness of the roll numbers on the other. It is clear that the real school population is not more than 65 or 70, and that the total number on the rolls includes at least 40 duplicates. This was not the only case where we had an opportunity of judging of the fallacious character of the roll numbers of National schools. They have first deceived the Commissioners, and then Parliament, and the public, as to the real numbers of children attending the National schools, at the same time that they have made the attendance of those who do go to school appear much smaller than it really is.

315. The following table shows the classification of all those on the register, and of such of them as had been present on the 6th of August, the day of our visit—

	On Roll.			Present.		
	Boys.	Girls.	Total.	Boys.	Girls.	Total.
First Class,	17	8	25	8	2	10
Second „	12	9	21	7	2	9
Third „	2	0	2	1	0	1
Total,	31	17	48	16	4	20

Agricultural class.

316. Such a school population as that present on the day of our visit could afford no material for an agricultural class; nor would it have been much better if all those on the roll were present. The master, however, told us that some of his best boys were not then at school, and only attended in winter. The agricultural class during the summer consisted of 14, all sons of small farmers, of whom 8 were present on the 6th of August, so that the agricultural instruction appears to have been given to all the boys in the second and third classes. That some of the second class took an interest in agriculture, and could really make more or less use of the agricultural text was proved by the important fact that 9 of them had purchased the book. Agricultural instruction was given in the school on every school day, except Saturday, from 2 o'clock P.M. to 2.30. Practical instruction was given to the whole class on the same days during the half hour allotted to recreation, from 12 o'clock to 12.30 P.M.

Hopeless to expect the majority of pupils in such a school to learn to read the usual school books.

317. In a school of this kind it seems to us almost hopeless to expect that the great mass of the children can ever learn to read to such an extent as to be able to make practical use of the knowledge and continue to retain it, through reading books made up of "elegant extracts" from distinguished writers, a good deal of which they cannot understand. A series of reading books appealing to the *kind* and *degree* of intelligence developed in country boys, removed away from the influence of towns, and giving them instruction in agriculture, natural objects, and phenomena would, beyond doubt, enable them to read in a much shorter time.

The farm.

318. *The Farm* consists of about 8 Irish acres of land held on a lease for sixty years, from the 25th of December 1849, from Mrs. Russell, of Dunlewy, at the yearly rent of £4. or 10s. the Irish acre. The farmers in the neighbourhood hold very small farms, the rent paid for them being generally £3, though there are some who pay as much as £10. As the right to a certain extent of mountain pasture is annexed to each holding it is not possible to determine accurately the exact rent per acre. Griffith's

valuation for the land without the buildings is 5*s.* the statute acre, so that the rent is about one-fifth higher than the valuation. The land consists of light peaty soil, with a clayey subsoil resting on mica-slate, and quartz. The whole of the school buildings and residences cost £370 1*s.* 7*d.* No return has been given of the separate cost of the farm buildings. The land is let by the Commissioners of Education to the teacher for the same rent they pay themselves, and he has also effected the whole of whatever permanent improvements have been made. The teacher thinks he could not get for his tenant right more than £20, owing to the limited class who could become tenants.*

319. No survey having been made we are not able to state how much is under buildings, or how much under tillage.

Farm offices.

320. *Farm Offices and Implements.*—The farm offices comprise cow-houses, stable, barn, piggeries, and dairy. The cow-houses are ill-planned; indeed the whole of the offices are badly laid out, and there is much waste of space; they are also in excess of the wants of so small a farm. To show the injudicious character of the buildings, we need only mention that the straw-house door opens inwards; and that the children's privy is inside the farm yard. The buildings were in fair repair. The farm implements were merely the ordinary ones of small farmers.

Implements.

Live stock.

321. *Live Stock.*—The entire live stock consisted of 2 calves, 3 milch cows (2 in calf), and 3 geese. There were no sheep, pigs or poultry. The cows were of the common breed of mountain cattle, and were only partly house-fed in winter, being grazed in fine weather.

Cultivation:

322. *Cultivation.*—The agriculture of the entire district is very poor, consisting in the cultivation, after a very rude fashion, of oats and potatoes; a large portion consists of mountain pasture. In 1865 the whole of the land forming the farm was unreclaimed; in that year the present agriculturist, Mr. Bryan Sweeny, began its reclamation, which is progressing fairly. Preparation were being made for bringing a plot of land in front of the school into cultivation, but it must be first enclosed, which, we were told, the Commissioners have undertaken to do.

rotation;

323. A four course rotation has been adopted, but it has not as yet been fully established. The following table shows the nature of the crops, and the area under each at the time of our visit:—

crops of 1868

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.
Turnips, . .	0	1	33	Oats, .	1	0	0
Cabbage, . .	0	2	5				
Potatoes, . .	0	0	2				
	1	0	0				

no artificial grass;

324. There was no artificial grass; the permanent grass and bog was about 11 acres. Cabbage is sometimes raised as a stolen crop.

quality of crops.

325. The crops, upon which no artificial manures had been used, were a little above the average of the district.

Profit and loss.

326. The agriculturist has furnished us with balance sheets for three years, in none of which has he included the rent. We give that for 1867 as an example. We have, however, added the rent, but not the county cess (which is put down in 1865 at 4*s.* 4*d.*) or the poor rate, which is not included in any of the accounts furnished.

Dr.	£	*s.*	*d.*	Contra—Cr.	£	*s.*	*d.*
To Amount of Valuation at the beginning of the year,*	25	10	0	Cash received for grain,	3	19	6

„ Rent,	4	0	0				
	£51	13	2		£51	13	2

* This valuation does not include anything for unexhausted improvements. Three head of poultry only are included in the inventory at the end of the year, but nothing is entered as profit derived from poultry.

This school farm might be made to do much good in the wild country in which it is situated.

Dunmanway District Agricultural School.

Dunmanway District Agricultural School.

327. *Situation.*—The schools, residences, and farm offices form a connected block of buildings upon part of the land, which is situated so close to the town that it may be considered to be in it. The schools have been in operation since 1848.

Buildings.

328. *School Buildings, &c.*—The school buildings comprise, including class rooms, 3 rooms for boys, 3 for girls, and an infant school. The residences were built to accommodate the principal teacher, the agriculturist, and 2 boarders. A portion of the teacher's house has been lately appropriated to an office for the District Inspector, the master being otherwise accommodated. The agriculturist had only one room, in which he appears to have slept, taken his meals, and studied. The school buildings and residences are estimated to have cost £4,489, and were in good repair. The residences were, on the whole, clean, but might have been kept somewhat more tidy. The urinals, &c., were in good order, except in the agricultural department, where they were dirty. The fittings, furniture, wall appointments, and school requisites of all the schools were ample, and in good order.

Literary instruction.

329. *Literary and Agricultural Instruction.*—The scholars attend the model schools chiefly for literary instruction, but we found that several had been directed by their parents to attend the agricultural class. We did not think it necessary to examine into the literary teaching, except so far as it was directly connected with the agricultural, or into the school accounts, as that duty had

* Here, as elsewhere, we found that the smaller the holding, the higher in proportion to the acreage is generally the market price of the tenant-right.

Agricultural class: attendance of pupils; pupil teachers attended; industrial class; boarders; answering of pupils;

been undertaken by two of our colleagues, who have specially reported on the subject. Agricultural instruction is given in the school by the agriculturist on five days in the week from 9½ to 10 o'clock, A.M. The roll of this class comprised 42 boys from the second class and upwards, chiefly the sons of farmers, but a few also of artizans and shopkeepers, of whom 39, including the resident scholar, were present on the occasion of our visit. Of these, 18 belonged to the fourth class, 10 to first division of third, and 10 to the second division of third. The pupil-teachers also attend this class. Practical instruction is sometimes given on the farm on Saturdays. There was an industrial class of 12, who formed part of the general class, and all of whom were present. There was only 1 boarder, who paid £8 a year; the free place was not filled up. All the boys in the fourth class had a fair knowledge of the general principles of agriculture; the answering was especially good on the nature of soils, on the production and action of manures. The two divisions of the second class understood very well the meaning of most of the terms in the Agricultural Class-book. The latter circumstance shows the importance of teaching reading by means of lessons connected with the daily life of the children, and which they can learn to thoroughly understand. This class was, on the whole, a satisfactory one, and showed how much real information on the subject of agriculture could be given in school.*

answering of boarder's.

330. The agricultural boarder had not been very far advanced in ordinary school work before he was admitted; he appeared anxious, however, to improve himself. This one example did not afford us any means of judging how this department had been managed. The only pupil in the preceding year (1867) took first place, however, at entrance at the Central Agricultural School at Glasnevin.

The farm.

331. *The Farm* consists of two parcels of land, one of 5A., upon which the buildings are erected, held by lease from John Hamilton Bryan, Esq., J.P., for a term of 999 years, from the 27th April, 1847; and the other of 11A. 2R. 10P., held from the same gentleman, for a term of 900 years from the 29th September, 1848—the annual rent of both being £46 8*s.* 2*d.*, or at the rate of £2 16*s.* the statute acre. Griffith's valuation for the land, without the buildings, is £22, or £1 6*s.* 6¾*d.* the statute acre. The adjoining land, in the possession of the landlord himself, is valued at £1 the statute acre. The land, which is flat, is a very poor, gravelly soil, consisting of local *debris* of grits and slates, resting on slate rocks, and would be worth to an ordinary tenant not more than 18*s.* the acre. It will be thus seen that the rent is very much greater than that of the land generally in the district, but we have been unable to find out any satisfactory explanation of the cause. The buildings, ornamental ground, &c., occupy 4A. 2R. 20P., the kitchen garden 3R., and the farm proper, 11A. 1R. It is only this amount of land which is charged in the balance-sheet of the farm, with a rent of £30, or at the rate of about £2 13*s.* the acre. The quantities just given under buildings, &c., kitchen garden, and farm, make ten perches more than the quantity stated in the Board's returns.

Farm offices.

332. *Farm Offices.*—The farm offices comprised a byre for six cows, stabling for three horses, a piggery, barn, and straw house, and with the exception of the piggery—which was most inconveniently placed, and in a bad aspect—were pretty convenient. They are approximately estimated to have cost £859 9*s.* 4*d.*, or more than £76 an acre! It is needless to say that they would accommodate a much larger farm.

Live stock.

333. *Live Stock.*—There were on the farm at the date of our visit: 1 horse, 3 milch cows, 6 ewes. The cows were half-bred common cows, the sheep had a cross of the mountain sheep in them. The cattle were house-fed in winter, but pastured in summer,† as enough of manure can be got without summer house-feeding. No pigs or poultry were kept.

Implements.

334. *Farm Implements.*—The farm implements were good and sufficient, and well kept.

Cultivation;

335. *Cultivation.*—The district about Dunmanway is chiefly in tillage, which is, on the whole, fairly good. The model farm is now being cultivated on a four-course rotation, with some permanent grass. The following table shows the crops and area under each at the date of our visit:—

crops of 1868;

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	Artificial Grass.	A.	R.	P.	Permanent Grass.	A.	R.	P.
Turnips,	1	0	14	Oats,	2	1	20		2	1	14		2	1	6
Mangels,	0	2	0	Barley,	1	1	0						2	0	0
Carrots,	0	2	0												
Potatoes,	0	1	0												
Total,	2	1	14		3	2	20		2	1	14		4	1	6

quality of crops;

336. The green crops were good; the barley was excellent; the artificial grass was poor. We found the cows pasturing on the new seeds, for the purpose, as the agriculturist said, of thickening the clover. The cultivation on the whole was good, though we found the headlands of the green crop fields not cultivated as they should be on a model farm; and that the agriculturist had been obliged to purchase some hay. The latter circumstance is no doubt to be attributed to the poorness of the land, and to the fact that the rotation is not yet fully established.

no flax now grown.

337. No flax has been grown lately on the farm. The agriculturist said he tried it, and that it failed. The land is certainly at present unfit for it, but when brought into condition after a year or two years, there seems no reason why it should not succeed. Some parts of the land may perhaps be too stoney for it.

Kitchen garden.

338. There was a good kitchen garden which the agriculturist seemed anxious to fully develop. The manure heap is well attended to; and good use seemed to be made of bog-mould as an absorbent. Artificial manures were used with the green crop—one cwt. of phospho-guano to the acre for the turnips, and five cwt. of common salt to the acre for the mangels. The following

* We were sorry to find that here, as also in some other places, the agriculturist and literary teacher did not seem to work well together. Their domestic relations did not conduce to harmony, and must injuriously affect the combination of literary and agricultural instruction. This state of things arises from the provisional, and, to some extent, anomalous position of the whole agricultural department.

† At the period of our visit they were also getting mangel leaves.

table, containing the balance sheets for the years 1865-6, 1866-7, and 1867-8, will show the financial condition of the farm. Profit and loss.

339. We noticed that the fuel used for farm purposes was taken from the general supply for schools and house, and not charged, as it should have been, against the farm.

Gormanstown Agricultural School and Farm.

Gormanstown District Agricultural School.

340. *Situation.*—The Gormanstown agricultural school and farm are about one and a half miles from Ardfinnan in the county of Tipperary. One farm is close to the school, and a second about a quarter of a mile distant. The school is unconnected with the residence and farm buildings, and is merely an ordinary National school. The farm was first established for educational purposes in the year 1851.

Buildings.

341. *School Buildings, &c.*—Besides the National school, which is a commodious building, of the same class as most of the good vested schools, there is a good house for the agriculturist, and accommodation for boarders, and a small class-room for the latter, 14 feet long, 10 feet wide, and 8 feet high. The cost of the residences, &c., is estimated approximately at £1,365, and of the farm buildings at £669 13*s.* 10*d.* We do not know whether the former sum includes the cost of the National school-house also, or the sum of £500 contributed by Mr. John Bagwell, M.P., the landlord. The dormitory, &c., for the boarders, the urinals, &c., were in fair order, as was likewise the part occupied by the agriculturist.

Agricultural class.

342. *Agricultural instruction* is given on each school day for half an hour, and on the farm occasionally by the agriculturist. The class had 40 on the roll, all sons of farmers or of persons connected with land. There were 27 present when we visited. The more advanced boys had a fair knowledge of the general principles of agriculture, and understood the mode of cropping, the use and collection of manures, and the management of cattle. The younger boys, some of whom were in Second Book, or just commencing the Third Book, although unable to understand many of the lessons in the latter, were generally able to make their way through the Agricultural Class Book, notwithstanding that it contains a great many hard words and technical terms.

Boarders.

343. There was only one boarder, the son of a farmer. He was fairly acquainted with his business, but was rather backward in his literary education; he stated, however, that he had improved since he had become a boarder. The agriculturist receives £16 a year from the Commissioners of Education for each free pupil; and from paying pupils £6, to which the Commissioners add £10.

The farm.

344. *The Farm* consists of two parcels of land, one which may be called the "Home Farm," consists of 20 statute acres, held on a lease for 99 years, from the 1st November, 1849; and the second of 27 acres 2 roods and 33 perches, held on a lease of 31 years, from the 25th March, 1854. The rent of both parcels is £49 4*s.* 2*d.*, or £1 0*s.* 7½*d.* per statute acre, which is not more than that of similar land in the neighbourhood, and which would readily be obtained from ordinary tenants. The farm at the period of our visit was let to the agriculturist at £49 1*s.* 2*d.* on a stamped agreement, binding the tenant to surrender on one months' notice; and allowing him to surrender on three months' notice. This was certainly a kind of tenancy not very well adapted to encourage model farming, and it did not accordingly surprise us to find that it was anything but a model farm.

345. The soil consists of a gravelly loam on limestone, and lying flat. It is very good land.

Farm offices

346. *Farm Offices.*—Three roods of the Home Farm are occupied by the buildings and garden. The farm offices consist of a stable, a byre for cows, a barn, a straw-house, a piggery of five divisions. They are commodious enough, but needlessly ornamented, and therefore too expensive for imitation by farmers. They were in good repair and seemed fairly managed.

347. There is a good four-roomed slated cottage on the second farm, which with a small garden occupies 33 perches of the land, leaving the total available for farming purposes 46 acres and 3 roods.

Implements

348. *Farm Implements.*—There is a good supply of implements, including an excellent threshing machine, all of which seemed in fair order.

Live stock.

349. *Live Stock.*—We found the following live stock on the farm:—2 horses (1 a brood mare), 1 filly, 1 foal, 2 calves, 12 two-year-old heifers, 2 (in calf) milch cows; 1 ram, 11 ewes, 8 lambs; 30 hens, 11 ducks, 8 turkeys, 13 geese. All the pigs had died. The cattle were a cross of short horn. House feeding was only partially carried out. The animals appeared in fair condition.

Cultivation; crops of 1868.

350. *Cultivation.*—The district was chiefly in tillage, which was rather inferior; but turnip cultivation seemed to be spreading. The rotation was a four course shift, not absolutely adhered to. The following table shows the nature of the crops, and the extent of land under each:—

	Green Crops. A. R. P.		Grain Crops. A. R. P.	Artificial Grass. A. R. P.	Permanent Grass. A. R. P.
Turnips,	2 2 0	Oats,	15 3 0	7 0 0	17 0 0
Mangels,	0 2 0	Barley,	4 2 0		
Rape,	1 2 0				
Potatoes,	5 0 0				
Total,	9 2 0		20 1 0	7 0 0	17 0 0

Quality of crops.

Manures.

351. The turnips were a fair crop, the mangels only a middling one. A stolen crop of vetches was grown upon about three quarters of an acre. No flax was grown owing, among other reasons, to the difficulty of procuring steep water. The collection and preservation of the manure seemed on the whole fairly attended to. Some artificial manures were also used with the green crops—guano, superphosphate, and blood manure, at the rate of about 10 to 12 cwts. to the Irish acre.

Profit and loss.

352. The following are the Balance-sheets for the years 1866 and 1867—

Dr.	1866. £ s. d.	1867. £ s. d.	Contra—Cr.	1866. £ s. d.	1867. £ s. d.

This farm not a model one; could not be otherwise from nature of tenure.

353. This farm was in no respect a model farm, but one merely managed and worked like any other in the neighbourhood; nor, as we have before stated, could it have been otherwise from the nature of the terms upon which it was held by the tenant. No surer means could have been adopted by the Commissioners to damage the whole course of agricultural education than to let a farm upon such conditions. We believe that the Commissioners are about to take the farm again into their hands, and to make it, as it may easily be made under proper management, and the able guidance of the present energetic superintendent of the agricultural department of the Board, of real service to the district.

Rate of wages.

354. *Rate of Wages.*—Ordinary agricultural labourers receive from 6*s.* to 7*s.* a week. We may remark as an evidence of agricultural improvement, that many of the farmers of the neighbourhood use mowing machines.

Templedouglas Agricultural School and Farm.

Templedouglas District Agricultural School.

355. *Situation.*—This school is situated about six miles to the west of Letterkenny, in the county of Donegal. The school, which is simply a better class of ordinary vested school under the direct management of the Commissioners of Education, is on the farm, which was established in 1855.

Buildings.

356. *School Buildings, &c.*—There is but one school-room for boys and girls, which is large and roomy; but there is a separate class-room attached to it. The fittings and furniture are good, the wall appointments and school requisites seemed adequate and were in fair condition. There was good and serviceable accommodation for the literary teacher and agriculturist, and for boarders. As there were no boarders the dormitories, refectory, &c., which were sufficiently good, were unoccupied. The school buildings, residence, &c., are approximately estimated in a return of the Board of Education at £1,326; and the farm buildings at £885 6*s.* 5*d.*, or together £2,211 6*s.* 5*d.* (according to a return made to the House of Commons, No. 167, 1859, the total amount spent for agricultural purposes exclusively during the first two years was £2,295 1*s.* 5*d.*), or allowing for the value of farm produce sold, and the item "&c." amounting to £507 7*s.*, the net expenditure was £1,787 14*s.* 5*d.*

Attendance of pupils.

357. *Literary and Agricultural Instruction.*—The total number of boys on the roll at the school was 103; of girls 48, or together 151. The average number on the books for the year 1867 was 74·2, of whom 50 were boys and 22·4 were girls. The average attendance of boys and girls for the same year was 26·5. The total number of names on the register at the date of our visit was 58, that is the total number of children who had attended at least once during the preceding three months. Here we have another striking illustration of the entire worthlessness of the number on the rolls. The number present at our visit was 29, of whom 19 were boys and 10 girls. Of these 15 boys and all the girls were Roman Catholics, and 4 boys were of the Episcopal Church. Nine of the girls were under seven years, and 1 was eight years of age. This fact and the disproportion between the number of boys and girls shows that parents do not like to send girls to mixed schools taught by men only. Of the 19 boys 6 were under seven years of age, 3 between seven and nine years, 6 above ten and under twelve years, and 4 from twelve to fourteen years. The 29 were thus classified as to class:—

	Boys.	Girls.	Total.	
First Book,	7	6	13	29.
Second „	11	3	14	
Third „	1	1	2	

Agricultural class:

Proficiency in ordinary school work;

The agricultural class had only 4 on the roll which included all in the Third Book; there were two or three of the second class boys added. We were presented with three boys who we were told were members of the class; of those 2 were able to read the Second Book fairly, and 1 the Third Book, 2 knew the parts of speech, 1 only could make an attempt to parse syntactically. The 3 were pretty well acquainted with the Maps of Europe and of Ireland. They could also do sums in division of money, land, &c., very fairly. One was able to make a tolerable attempt at writing a long sentence from the Agricultural Class Book; and 2 did it very well, without any faults in spelling, and with tolerably accurate punctuation. With such a great fluctuation in the attendance, and the backward condition of the children, which unfortunately is the case all over the country, very little could be expected from the agricultural class.

boys who form class.

358. Two of the boys in the agricultural class were sons of farmers, and 2 of a land steward, who is also a farmer. All the boys in the third class, or any who may be in the higher classes as a matter of course attend the agricultural class. The 2 boys in the second class whom we examined, were taught agriculture by the specific desire of their father.

359. Agricultural instruction is given in the school on every school day except Saturday, from 12 to 12.30 o'clock; no practical instruction on the farm seems to be ever given.

360. *The Farm* consists of 20 statute acres of reclaimed mountain land, held on a lease of 99 years, from the 28th January, 1854, at an annual rent of £9, or 9*s.* the statute acre; and if demanded £1 additional. The agriculturist thinks the farm would now let for £10, or 10*s.* the acre; when it was first taken by the Commissioners it was not worth more than 7*s.* 6*d.* the acre. Griffith's valuation for the land without the buildings is £6 15*s.** An adjoining farm, but better land, is valued at 8*s.* the statute acre. The rent appears on the whole rather more than that of contiguous similar farms. The buildings upon the model farm, both on account of their character, and their cost, which, inclusive of the school, was more than £100 per statute acre, would not much increase the letting value of the land, and certainly could not be expected to return in increased rent the interest upon any considerable portion of the large capital expended. The farm.

361. *Farm Offices and Implements.*—The farm offices consist of a stable for 2 horses, a byre for 6 cows, and two loose boxes, four piggeries, a barn, a boiling house, a straw-house, a fowl-house, and dairy. The proportion of the total cost of the buildings set down for these offices is £885 6*s.* 5*d.* They are a good class of buildings, and rather convenient; they would however accommodate a farm of larger extent; though they cannot be said to be actually in excess of the requirements of the present farm. Much simpler and more economical buildings would have sufficed for the place, and have been a more suitable example to landlords and tenant farmers. The buildings were not kept in proper repair, and instead of being a model of neatness, were an example of carelessness. The window cords in the school were all broken, and it had not been whitewashed for two years; the gates and piers were in a very bad state; the boiler was cracked, and had been taken down. The attention of the Board of Works had been more than once called to this state of things; but it frequently took *two years* before the repairs called for by the Inspector were executed. Farm offices, in bad repair.

362. The farm implements are suitable for the place, and so far as they go are of a proper kind; except the harrows which are old-fashioned wooden ones. There is not, however, a sufficient supply, there being for example no double mould plough. The agriculturist has made a Gray's single mould plough into a useful convertible grubber. The whole of the implements were in very fair order. Implements.

363. *Live Stock.*—We found the following live stock on the farm: 1 mare, 2 calves 1 year old heifer, 1 year old bull, 2 (in calf) milch cows; 2 ewes, 3 wethers; 10 hens, and 9 ducks. The cattle were an improved breed of mountain cattle, and were strictly house-fed in winter. Live stock.

364. *Cultivation.*—The land in the neighbourhood is cultivated upon a loose six-course rotation. A six-course shift, which is very suitable to the character of the soil, has also been adopted on the school farm—flax when grown succeeding lea oats. It has not been thoroughly established as yet; indeed until within the last year or two the farm appears to have been more or less neglected. It seems likely to go on fairly in the hands of the present agriculturist, Mr. Thomas Dwyer, who is intelligent, and seems interested in his work. The following table shows how the land was cropped when we visited:— Cultivation: rotation.

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	Artificial Grass.	A.	R.	P.	Permanent Grass.	A.	R.	P.
Turnips,	1	2	5	Oats,	4	3	25		3	1	10		6	0	0

Potatoes,	1	0	36												
Vetches,	0	1	1												
Total,	3	0	32		5	3	25		3	1	10		6	0	0

Crops of 1868.

365. The greater part of the turnips promised to yield a fair crop; and the remainder was to a great extent a failure, which the agriculturist accounted for by a portion of the subsoil from the foundation of the school having been thrown on the surface of the field now under green crops, thereby injuring for a time the fertility of the land. The other crops were rather better than the average of the immediate neighbourhood. No stolen crops are raised—the vetches were spring vetches; winter vetches had failed, we were told, when tried. The land is indeed too cold and moist for any stolen crop to be successful. Quality of crops.

366. The following are the balance-sheets for the years 1864-5, 1865-6, 1866-7, 1867-8:— Profit and loss.

Dr.	1864-5. £	s.	d.	1865-6. £	s.	d.	1866-7. £	s.	d.	1867-8. £	s.	d.

* In the copy of the valuation of schools and model farms, which was most obligingly furnished to us by Mr. J. Ball Greene, now Commissioner of Valuation, the extent of the land is stated to be 20A. 0R. 38P.

Summary of balance sheets for four years ended 31st March, 1868.

367. The results of the four years' operations may be summarized as follows:—

Year.	Expenses. £ s. d.	Receipts. £ s. d.
1865,	108 8 7½	76 17 3
1866,	48 3 11	38 19 0
1867,	44 7 10	51 5 7½
1868,	58 15 1	70 7 9
Total,	£259 15 5½	237 9 3½
Amount of valuation at the beginning of the year 1865,	242 7 3½	258 8 3 Valuation at the end of the year 1867–8.
	502 2 9	£495 17 10½
	495 17 10½	
Difference being *loss* on four years,	£6 4 10½	

Losses incurred for three years ended 31st March, 1858.

368. In the corresponding years, 1856, 1857, and 1858, the losses on this farm were:—

	£ s. d.
1856	10 17 9
1857,	29 7 10
1858,	31 7 0
Loss on three years,	71 12 7

Management improved.

369. Although there has been a loss on the four years preceding our visit, it is evident that a considerable change for the better has taken place.

No means of treating flax.

370. Here, as in all other farms under the Board, there was no provision made for teaching the retting and subsequent preparation of the flax.

Manure heap.

371. The manure heap seemed to be fairly attended to; 4 cwts. of superphosphate had also been used upon the crops we saw.

Farmers ask for information at farm.

372. The agriculturist told us that at one time the farmers about were disposed to look down on and ridicule the school farm, but that this is no longer the case. They now often come to ask questions, and to beg him to show them how to sow seeds, especially grasses, which had been only very little known in this backward district, until recently.

Tervoe Agricultural School and Farm.

Tervoe Agricultural School.

373. *Situation.*—The Tervoe Agricultural School is situated about five miles to the S.W. of Limerick, not far from the left bank of the river Shannon, quite close to Tervoe Demesne, and about one mile from the post town or village of Clarina. It was established in the year 1851.

School buildings.

374. *School Buildings, &c.*—The school is merely one of the better class of vested National schools, and does not come under the class of model schools properly so called. There is only one school-room, 36 feet long, 15 feet wide, and 15 feet high. The fittings and furniture were fair, as were also the wall appointments and school requisites. But the school buildings and premises were not in good repair; the necessary repairs ought to have been long since executed. The manner in which the whole of the buildings on this farm have been neglected is not creditable to the Board of Works.

375. There is accommodation for the literary male and female teachers, and for the agriculturist, who has two rooms. The rooms formerly allocated for 4 boarders—2 paying and 2 free—are now occupied by the literary teacher, so that no boarders can now be taken; but the agriculturist says applications for admission had been made to him. The rooms occupied as residences seemed in pretty good order, though complaints were made that a servant for the use of the teachers was not allowed here, as is usual in other similar establishments. This may perhaps account for the urinals, &c., not being clean. The kitchen was very smoky and ought to be looked to. The schools and residences are approximately estimated to have cost £705.

Attendance of pupils.

376. *Literary and Agricultural Instruction.*—The attendance at this school is more regular than at some of the others already noticed. The following table shows the average number on roll, and the average attendance in the first, second, and third quarters of the year 1868:—

	Average on roll.	Average attendance.
First quarter,	89·7	58·6
Second quarter,	102·	67·3
Third quarter,	107·8	51·7

377. The fourth quarter had just commenced when we visited, and the following was the classification of all whose names then stood on the register:—

First class,		39
Second class,	junior,	25
	senior,	12
Third class,		17
Total,		98

Agricultural class.

378. The agricultural class had 22 on the roll, that is all the boys in the third and fourth classes, of whom 9 were between the ages of nine and twelve years, 10 between twelve and sixteen, and 3 above sixteen. Only 10 were present when we visited. As was to have been expected from their age, and advanced literary instruction, they were better able to use the Agricultural Class Book, which was the only text book, than in those schools where most of the children belonged to the second class. Agricultural instruction was given daily at the recreation hour, from 12 o'clock to 12.30 P.M., and from

time to time on the farm. Those examined, and who were the sons of farmers or persons connected with land, seemed pretty well acquainted with the general principles of agriculture, and possessed a good deal of miscellaneous knowledge on the subject generally. Here, as elsewhere, it would be advisable to give some more field instruction, at least at those periods when the chief operations of farming are being carried on, and to initiate the more advanced boys into keeping farm accounts.

379. *The Farm* consists of 30 acres, 3 roods, and 21 perches statute measure, thus distributed:— The Farm.

	A.	R.	P.
Under buildings, &c.,	1	0	0
Tillage land,	23	2	21
Craggy land,	6	0	0
Total,	30	2	21*

The land is held on lease from the Right Honorable Colonel Monsell, M.P., for the lives of the Queen, Prince Albert, and the Prince of Wales, or thirty-one years from the 29th October 1850, at the annual rent of £23 12*s.* 6*d.*, which is £1 the statute acre for the tillage land, no rent being charged for the craggy part (although it is useful as pasturage), or apparently for the ground under buildings; Griffith's valuation for 29 acres, 2 roods, and 2 perches, is £22 10*s.* The soil of the tillage land is a fine clay loam resting on limestone, but the clay is in part derived from the decomposition of a breccia of limestone and basaltic tufa. The land lies more or less flat, and is of excellent quality, and worth fully 10*s.* to 12*s.* an acre more than the present rent. Good tillage land of the same class in this district lets at £2 10*s.* the Irish acre.

380. *Farm Offices and Implements.*—The farm offices are approximately estimated to have cost £740 1*s.* 10*d.* As originally planned they would on the whole have been judicious if provided for a larger farm, which they would have accommodated. But the building originally intended for a barn has been converted into a room for the day school, so that at present there is no barn, and when we visited we found all the cattle sheds filled with corn. There is also no implement-house, which is a very great deficiency in a model farm steading; nor is there any water in the farm-yard. If a part of the buildings be specially set apart for the Belgian Farm, which should be done, the buildings (now too large) would be fully utilized, and with slight alterations might be made very suitable for the purposes of the farm. Farm offices.

381. The implements are good and well selected, and notwithstanding the want of a suitable implement-house were in good condition. Implements.

382. *Live Stock.*—We found on the farm 3 one-year old heifers, 3 two-year old heifers, 1 ram, 20 ewes, 10 hoggs., and 7 lambs. The heifers were good half-bred short-horns; the ram a half-bred Lincoln, and the ewes good Ballinasloe sheep. There were no dairy cows on the farm. The stock looked very well. Live stock;

383. House-feeding is not carried out to any extent at present; but if the Belgian system is to be fully and profitably worked the Belgian farm should be provided with separate stock, and the system of house-feeding strictly carried out. house-feeding not carried out;

384. The grass part of the farm seems very suitable for sheep, and they appear, moreover, to thrive here. This circumstance might be turned to good account by breeding a few pure-bred rams and sheep every season; and great benefit might be conferred on the district where we were told rams of first quality are not easy to procure. permanent grass well suited for sheep; high-bred rams should be kept.

385. *Cultivation.*—The farming in this district, where there is tillage, is very good; a good deal of land is, however, in permanent grass. Of the 23 acres, 2 roods, and 21 perches of tillage land, 7 acres are worked as a Belgian farm, upon a four-course rotation which will be strictly adhered to. The remainder of the farm consisting of 16 acres, 2 roods, and 21 perches, exclusive of the 6 acres of craggy land, was in permanent grass. The following table shows the nature of the crops and the area under each when we visited:— Cultivation.

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	Artificial Grass.	A.	R.	P.	Permanent Grass.
Turnips,	1	0	0	Oats,	1	2	0		1	2	0	A paddock of one acre
Mangels,	0	1	0	Barley,	1	1	0					
Flax (intended to be followed by late turnips),†	0	2	0									
	1	3	0		2	3	0		1	2	0	1 0 0

Crops of 1868.

386. The Swedish turnips were very good, and the mangels very fair. The land is now being well worked, and promises to afford a model of tillage. Farm well worked;

387. The flax was a middling sample. A rood of flax in 1867 produced £5, or £20 the acre, and was laid down with grass seeds; and here too, the grass was thick and luxuriant, as we have already mentioned was the case wherever the land was laid down with flax. There was no means on the farm of showing the preparation of the fibre. flax;

388. The manure heap was carefully attended to, and a very compact heap was being collected. The supply of farm-yard manure being ample, no artificial manures were employed, except a little superphosphate which the agriculturist, Mr. Denis Ryan, prepared himself. manure heap.

* In the copy of the valuation received from the Valuation Office, the land is stated to be 29 acres, 2 roods, and 2 perches. In the return of the National Board the acreage of the tillage farm alone is given, which is obviously incorrect.

† The flax is put under green crops, and not under grain crops as it was to be followed by turnips, and might in fact be considered as a "stolen" crop.

Profit and loss.

389. The following balance-sheet for the year ending 31st March, 1868, will serve to show the margin for prospective improvements which exists at this farm, where the land is good and the rent low:—

Dr.	£	s.	d.	Contra—Cr.	£	s.	d.

ORDINARY AGRICULTURAL SCHOOLS.

Balleeghan National Agricultural School.

Balleeghan National School and Farm.

390. *Description.*—Balleeghan National Agricultural School is a non-vested school, about two miles from Manorcunningham in the co. Donegal. The teacher is Mr. William A. Campbell, who was trained in 1846, and is classified in the second division of the second class. He was appointed to the school in the end of 1848; the school was opened early in 1849. The manager is a neighbouring farmer, Mr. Robert M'Kinley, a tenant of the Marquess of Londonderry. The school is practically a private school, receiving aid from the State.

Buildings.

391. *School Buildings, &c.*—The school is a mixed one of boys and girls, taught in one boarded room 24 feet long, 16 feet wide, and nine feet high, to the eave course, but being unceiled the volume of air is larger than in a ceiled room of the same height, and the ventilation is better. For the same reason it must, however, be cooler in winter. There is no separate class-room. The school was in fair repair, the fittings and furniture were good enough, the wall appointments and school requisites appeared sufficient. There is no residence connected immediately with the school; the teacher, who is also the agriculturist, lives at less than a quarter of a mile's distance on the farm which he rents.

Attendance of pupils.

392. *Literary and Agricultural Instruction.*—There were 20 boys and 9 girls present when we visited; of these 14 were Presbyterians, 11 Roman Catholics, and 4 members of the Episcopal Church. Fifteen were under ten, and 14 ten years and between that age and fourteen years. They were classified as follows:—

	Boys.	Girls.
First Book,	10	3
Second, „	5	1
Third, „	5	4
Fourth, „	–	1
Total,	20	9

393. According to the Register there were 5 boys in the fourth class, but none were present.

394. Twenty-seven boys were on the roll of the agricultural class for instruction in the school only, and 19 for instruction in the school and on the farm. The former comprised all the boys in the Second and higher books, and were classified as to age as follows:—

	Total.	Present.
More than 9, and under 12,	12	6
More than 12, and under 16,	10	4
Above sixteen,	5	–
	27	10

Agricultural class;

395. Of those who were present 5 received some practical instruction on the farm; 14 others belonging to the same category were absent. There was also an industrial class of 8, that is a class of boys who work a certain number of hours, and are paid a small sum per hour. Only one boy of this class was present. All the boys in the agricultural class were sons of farmers, or of persons directly connected with land.

396. Agricultural instruction is given in the school on every school day, except Saturday, from 2 o'clock P.M. to 2.30; religious instruction was then given from 2.30 to 3 P.M. The Roman Catholic children go away; the Episcopal Church children remain for the reading of Scripture.* After religious instruction practical agricultural instruction is given on the farm, from 3 to 4 P.M. every school day except Saturday. The text-books in use were the old ones on the Board's list; the Agricultural Class Book had not been as yet supplied, but was expected immediately.

examination of pupils of class.

397. Of the ten members of the class present, 6 could read the Second Book fairly; 4 could read the Third Book pretty well, and make use of the Fourth Book; all had a fair knowledge of the parts of speech, but none of them could parse a sentence. They all had a pretty good general knowledge of the maps of Ireland and of Europe. Six could set down a sum of 7 places of figures; 4 could work division and subtraction of money; and 4 could write a long sentence from dictation with tolerable accuracy as to spelling. The more advanced boys of the class were away, engaged in pulling flax on their fathers' farms. The answering in theoretical agriculture was very fair, and would probably have been much better if they had had the use of the Agricultural Class Book. Those who had been

* The Priest can give religious instruction after school-hours, and sometimes does. The Curate of the Episcopal Church also visits; but Archdeacon Gould objects to National schools altogether. The proportion of children of each denomination in the school represents that of the school district.

instructed on the farm as well as in school seemed very fairly acquainted with the general principles of agricultural practice. This was especially the case with the only member of the industrial class present.

398. In answer to our queries respecting the action of this school in the locality, and the general question of agricultural instruction, the Rev. Robert M'Morris, the Presbyterian minister, informs us :— Opinion of neighbours, Rev. R. M'Morris, P.M.

"That many of the farmers of the district appreciate the value of agricultural teaching, and would gladly avail themselves of any opportunity of extending their agricultural knowledge. That he believes the instruction given in Balleighan school is sound and practical. That he could refer to several instances where the young men trained in Balleighan school have become most successful scientific farmers; and that, while he believes the literary instruction to be good, the agricultural instruction has not unduly interfered with the ordinary business of the school."

He further adds:—

"That he believes it would be desirable to teach the elements of agriculture in all rural schools, and to add, where practicable, a few acres of land to each."

399. *The Farm.*—The teacher rents two farms of 12½ statute acres each. The first which is at the school may be called the school farm, and is the only one we need describe fully. The soil is clay mingled with slaty *debris* of local rocks. The land is held from year to year from the Marquess of Londonderry at the annual rent for 12½ acres of £12 9*s.* 4*d.*; Griffith's valuation is £12.* The school-house is valued at £1 5*s.*, and the farm buildings at £4. The last poor-rate assessment was 1*s.* 2*d.* in the pound; the county cess is about £2 5*s.* a year. The rent is not larger than that of similar contiguous farms. A neighbouring farm valued at the same rate would let, without tenant-right, at £20. The teacher paid £140 for the tenant-right; he thinks he would get more than £300 for it now—he was in fact offered the latter sum. He has thorough drained the whole farm. There are no data for determining the amount of capital sunk (except the amount paid for tenant right) in the school buildings, farm buildings and permanent improvements. The farm.

400. The accounts were not sufficiently full to enable us to form a reliable opinion as to whether they are correct as between capital and revenue.

401. *Farm Offices and Implements.*—The farm offices comprise a two-horse stable, a byre for six cows, a piggery, a barn, and implement house. The buildings afford sufficient accommodation, and so far as size is concerned are suitable; but being kept in repair by the tenant, they are not quite as good as they might be. Farm offices.

402. The implements were the ordinary ones; they were in fair order, and on the whole good enough for this class of farm. Implements.

403. *Live Stock.*—The whole live stock possessed by Mr. Campbell on his two farms of 25 acres, one-half of which is to be credited to the school farm, was as follows:—2 horses, 3 calves, 2 one year old bullocks, 1 two year old heifer, 1 do. bullock, 1 three year old heifer, 4 dairy cows; 1 store pig, and 40 hens. The cattle were mixed Ayrshire and Durham. The cows are fed indoors from September to the 12th May; they are generally let out for two hours a day; but last year they were kept tied in constantly for 210 days, during which they did not once drink water, but throve well. Mr. Campbell considers it much more profitable to sell milk at 2*d.* a quart, than to make butter and sell it at 1*s.* the pound. He finds that it takes on his land 14 to 16 quarts of milk to produce one pound of butter. Live stock.

404. *Cultivation.*—The land in the neighbourhood is all in tillage; it is generally worked upon a six-course shift, but sometimes a seven-course shift is adopted. The rotation ends with flax, which follows oats. The school farm is worked upon a five-course shift, with flax and grass seeds in half of one of the divisions. This rotation is strictly adhered to. Stolen crops are not raised, as the winter vetch does not do well here; spring vetches are sometimes grown, but in this case they take the place of corn in the rotation. The crops seemed fair average ones, but not much better than those on surrounding farms. Mr. Campbell always moulds up his turnips, as he "finds that it hides the weeds," and acts as a surface drainage. Cultivation.

405. No special provision exists on the farm for teaching the preparation of flax fibre.

406. The manure heap was somewhat slovenly managed; 3 cwts. of guano were used in 1868.

407. The accounts were well kept, and the profit very good, being, in the year 1867, more than four times the rent and taxes. This profit had been, however, realized to some extent by the sale of roots and hay. The following are the balance-sheets for 1866 and 1867:— Profit and loss.

Dr.	1866. £	s.	d.	1867. £	s.	d.

408. The teacher says that his neighbours have followed his example in thorough draining their farms. They have adopted from him 3½ feet as the depth of the drains, instead of 2 feet, the depth formerly in general use, where draining was attempted at all. He also stated that the rate of wages Neighbours have adopted school-farm mode of draining.

* In the return from the Valuation Office the area valued at £12 is given as 19A. 2R. 20P.

Rate of wages. High price paid for tenant-right.

in the district has increased within the last ten years from 5*s.* a week without a house, to 7*s.* or 8*s.* with a free house. He never knew an instance of a solvent tenant voluntarily giving up his land, *even to sell his tenant-right;* but he has known the *tenant-right of a farm of* 45 *acres let at* £32 *a year without a lease, to sell for* £1,455, *or* 45·46 *times the annual rent!*

Ballinvalley National School and Farm.

Ballinvalley National School and Farm.

409. *Description.*—The school is an ordinary National school vested in trustees, the patron being the Right Hon. W. F. Tighe, and the manager Charles William Hamilton, esq., J.P. It is situated about 1½ miles to the S.E. of Castletowndelvin, in the county Westmeath. The farm is close around the school, and was established in October 1849. The present teacher, who is classed first division of first class, and was trained in 1845, was appointed to the school in September 1848.

School building.

410. *School Buildings, &c.*—The school is held in two boarded rooms, one for the boys, and the other for the girls, each 40 feet long, 16 feet wide, and 11 feet high, with a coved roof. There is a good play-ground, and suitable urinals, &c., in good order. The fittings and furniture were fair; the wall appointments and school requisites good. The patron has provided a very good house for the literary teacher, who is also the agriculturist, and a separate residence for the female teacher. During last year an addition has been made to the residence of the former, and a new piggery and outhouse have been built at the expense of the patron.

Attendance of pupils.

411. *Literary and Agricultural Instruction.*—The average number of boys on the roll for the year 1867, was 88·6, and the average attendance 49·5. The register contained the names of 83 boys, that is the number who made at least one attendance within thirteen weeks, of whom 78 were Roman Catholics, and 5 belonging to the Episcopal Church. The agricultural class receiving instruction in the school alone had 42 on the roll; those receiving instruction in the school and on the farm as an industrial class, 8, of whom 3 were between 9 and 12 years of age, and 5 more than 12 years. Six of this class on an average attended. Four of this class were sons of farmers, 1 of a National school teacher, and 3 of artisans. School instruction is given for half an hour on each of five days, from 1 o'clock P.M. to 1.30; and practical instruction on the farm on every school-day except Saturday, from 8.30 A.M. until 10 A.M., and from 8.30 until 11 o'clock on Saturdays. The books in use were the old Agricultural Class Book, which was never good, and is now obsolete, Johnston's Catechism, and Murphy's Agricultural Instructor. The new Agricultural Class Book had not been yet supplied.

Agricultural class.

412. As it was vacation time when we visited, we had no opportunity of testing either the literary or agricultural instruction given, or of determining whether the latter interfered with the former. As to the latter point the teacher stated very strongly that it did not. He also told us that the pupils get instruction in keeping farm accounts.

Opinions of neighbours; Rev. Edward Batty, clerk;

413. In answer to our queries as to the desirability of combining agricultural with literary instruction, and the effect of this school on the locality, the Rev. Edward Batty, clerk, Ballyhealy, Delvin, tells us that:—

"He fears the farmers in the neighbourhood are not very sensitive of the value of agricultural teaching, and that they prefer being guided by their own experience. That he has no reason to doubt the soundness of the teaching given in the Ballinvally school and farm, nor its practical tendency. He believes the literary teaching of the school is considered to be successful, and that it has not been interfered with by being combined with agricultural instruction. As to the question, 'Whether it would be desirable to teach the elements of agriculture in all rural agricultural schools, and to add, where practicable, a few acres of land to each,' he says:—'I should think it would in both particulars.'"

C. W. Hamilton esq.

414. Charles William Hamilton, esq., J.P., a gentleman who is intimately connected with this part of the country, who has had much experience as a practical agriculturist, and who has long directed his attention to all questions connected with scientific agriculture and agricultural education, says:—

"I see very great benefit from agricultural teaching in this school evinced in the farms of the parents. No boy who is accustomed to the rye-grass and clover, but must have such an example always before his mind when farming on his own account."

"I think the instruction given at Ballinvally school very *practical.*"

"The townland of Ballinvally was the worst on the whole estate until this school was established; it is now one of the best cultivated, and I do not remember any farm without green crops."

"I do not think that the literary instruction has been at all interfered with by the agricultural: but even if it should be, is not agricultural instruction the main object of the Irish small farmers."

"I think it would be desirable to teach the elements of agriculture in all rural National schools; and add, where practicable, a few acres of land to each. I think the object of these country schools should be to teach everything, either of cookery and domestic economy to the females, and of practical agriculture and common engineering to the male pupils."

The Farm.

415. *The Farm.*—The farm consists of 6 acres 1 rood and 35 perches, of a gravelly loam, resting on limestone drift gravel; and was distributed as follows:—

	A.	R.	P.
Tillage,	5	0	10
Permanent grass,	0	2	0
Fences,	0	2	10
Garden,	0	0	20
Buildings,	0	0	35
Total,	6	1	35

It is held from the patron by the teacher from year to year, at a rent of £4 8*s.*, or 14*s.* 1*d.* the statute acre, or £1 3*s.* the Irish acre. The county cess, at last assessment (1867), was 14*s.*; the tenant does not pay poor rate. The valuation of the land being £6, and of the buildings £1 10*s.*, or together

£7 10*s.*, the rent is thus below the valuation, and is considerably less than that of similar land on neighbouring estates—indeed considerably below its fair letting value. An ordinary tenant would pay for such land in its present improved condition £1 10*s.* to £1 15*s.* the Irish acre. The capital for building, &c., was provided by the landlord.

416. *Farm Offices and Implements.*—The farm offices which are ample, judicious, and suitable for common tenants, were in very good repair, and consisted of a cow-house, barn, piggeries, and shed. The implements were the ordinary ones of the district. Farm offices.

417. *Live Stock.*—The live stock consisted of 2 two-year-old heifers, 1 milch cow, 2 stores, and 20 head of hens and turkeys. Live stock.

418. *Cultivation.*—The rotation on the farm is a four-course, with a small plot of permanent grass; it is strictly adhered to, and seems to work very well—the second growth of grass being excellent A stolen crop of winter vetches succeeded by cabbages is regularly grown. The following table shows the nature of the crops, and the area under each when we visited:— Cultivation; crops of 1868

Green Crops.	A. R. P.	Grain Crops.	A. R. P.	Artificial Grass.	A. R. P.	Permanent Grass.	A. R. P.
Turnips,	0 2 10	Oats,	2 1 21		1 1 0		0 2 0
Potatoes,	0 2 20						
Mangels,	0 0 20						
Cabbages,	0 0 10						
	1 1 20		2 1 21		1 1 0		0 2 0

419. Flax is very seldom grown. flax.

420. Artificial manures were used for the first time this year; 1 cwt. of guano being used on the grass, and 1 cwt. of superphosphate on the turnips. Manures.

421. In order, tidiness, and thrifty management, this little farm and residence were a good example to the small farmers of the neighbourhood. The profit realized was also good, as the following balance-sheets for the years 1865, 1866, and 1867 will show. This farm a good example. Profit and loss.

Dr.	1865. £ s. d.	1866. £ s. d.	1867. £ s. d.

* Forty-two days manual labour, £3 10*s.* 6*d.*; thirty-two horse labour, £5 2*s.* 9*d.*

Convoy National Agricultural School.

422. This is an ordinary National school vested in trustees; the patron is the Rev. Mr. Beatty, Presbyterian Minister. It is situated in the village of Convoy, which is 3 miles from Raphoe, in the county of Donegal. It had an average attendance of 35 for the year 1867, composed of 13 boys and 22 girls. On the occasion of our visit there were 11 boys and 22 girls, or in all 33 present; of whom 25 were Presbyterians, 6 members of the Episcopal Church, and 2 Roman Catholics. Convoy National School.

423. The present teacher first learned that he was supposed to be an agricultural instructor by the receipt of £1 5*s.*, as a quarter's additional salary. He spoke to the manager on the subject, and was advised to get up an agricultural class, and retain the money, and he did so. Until last year this school had not been inspected for several years by the agricultural inspector; and it accordingly appears in the last year's general Report on Agricultural Schools, as having a farm of 10 statute acres attached to it, there being in fact only a small garden of 20 perches, which was very dirty, and full of thistles going to seed. As an agricultural school it is a complete sham. A former teacher had a small farm which he worked in connexion with the school; when he left, the connexion was of course terminated, but so inadequate is the agricultural inspection, that the fact appears to have become known at the central office only last year. It is unreasonable to suppose that one man could inspect all the agricultural schools in Ireland. If agricultural schools were at all worth establishing, they surely were worth the cost of proper inspection. Through mistaken economy forced, it is right to say, upon the Commissioners, the inspection has been rendered practically worthless, and a much larger amount of money lost than would have been sufficient to have provided for the amplest, and most thorough inspection of all the agricultural schools. Not only have the schools, and the system of agricultural instruction suffered, but great injustice has been done to the Inspector, and to the Superintendent of the department.* How it came to be reckoned as an agricultural school.

* We have learned that, since the date of our visit, Convoy School has been struck off the roll of ordinary agricultural schools.

Derreendarragh National Agricultural School.

Derreendarragh National School and farm.

424. *Description.*—This is an ordinary vested National school, under the management of the Very Rev. John O'Sullivan, P.P. of Kenmare. It is situated on the road from Sneem to Killarney, and about seven miles from Kenmare in the county of Kerry. The school building contains two good boarded rooms each 20 feet by 30 feet, and about 13 feet to the eave course, or about an average of 14 feet high; one for boys, and the other for girls. The fittings, furniture, wall appointments, and school requisites were very good, and in excellent condition. The building was in perfect repair, the wood-work fresh painted, and the walls whitewashed, not a loose slate on the roof, or a broken pane of glass in the windows. This school was an excellent type of building for a rural school, substantial without useless expenditure on ornamentation. It does great credit to the manager, all of whose schools we believe are equally well looked after. A very fair house for the teacher has been built on the little farm by the manager. It was on the whole in fair condition when we visited.

Character of school buildings.

Attendance of pupils.

425. As we did not reach the school until about 1 o'clock P.M. on a Saturday, we had no opportunity of testing the character of the instruction given. The following numbers will serve to show the character of the attendance: number on the register on the 3rd October, 99; number present on Friday, October 2nd, 1868, 67; average on rolls for 1867, 89·7; average attendance for the same year, 44·4; for the first quarter of 1868 40·8, second quarter 53·4, third quarter 43·6. The attendance appears therefore to have been much better and steadier than in some of the corresponding schools in the mountain districts of Donegal.

Agricultural class.

426. The agricultural class consisted of all the boys in the third and fourth classes, numbering 34 on the roll. Of these 1 was under nine years of age, 7 between the ages of nine and twelve, 20 between the ages of twelve and sixteen, and 6 above sixteen. There was no industrial class. The third and fourth classes were taught agriculture separately in this school, the former from 11.10 A.M. to 11.40 A.M., on three days in one week and two days in the next week, and the fourth class from 2.10 to 2.50 P.M., on three days in one week and two days in the following week, the two classes alternating. The teacher sometimes takes them over the farm at play-hour. The books used by the class were the new Agricultural Class Book, and Murphy's Instructor.

427. The teacher Mr. John Lavery, was appointed in February 1859, was trained in 1856, and is classed first division of second class.

The farm.

428. *The Farm* which was established in 1863 consists of 3½ statute acres, of which about 3 acres are in cultivation. The soil is gravelly and peaty, resting on white arenaceous somewhat clayey gravel. It is held from Richard Mahony, esq., of Dromore, at the annual rent of £1. The land is valued at £1 5*s.*, the buildings at £1; the poor-rate at last assessment before our visit was 5*s.* 10½*d.*, and the county cess 3*s.* 2½*d.* Unreclaimed land, such as this was when the farm was first established, appears to be worth in this district 7*s.* the acre, if we may judge by the charge for the pasturage of a cow for a year, or "one cow's grass," which would be about 5 statute acres, namely, about £1 15*s.* The teacher says the land is now worth £3 a year or three times its natural value. The teacher's house erected by the manager, cost £105; but the teacher has also spent about £10 upon it; the latter also built a cow-house, the only farm office yet erected.

Implements,

429. A plough is not used, all the tillage being effected by hand labour, so that the only implements on the farm are spades, shovels, &c.

live stock,

430. The live stock consisted of a donkey, 1 good Kerry milch cow, a store pig, and 24 hens. House-feeding is not practised.

rotation.

431. The surrounding district is bog and waste, with patches of reclaimed land here and there. Mr. Lavery follows a four-course rotation, which he appears to adhere to pretty well. The following table shows the disposition of his crops:—

Crops of 1868

	A.	R.	P.
Potatoes and turnips,	1	2	0
Oats,	1	0	0
Artificial grass,	0	2	0

Stolen crops.

432. He takes a stolen crop of rape after potatoes upon about one rood. He sometimes uses a little artificial manure,—last year about two cwts. of guano upon his turnips.

Profits of 5 years ended 1867.

433. The valuation in 1863, when the farm was established on the unreclaimed land, was £5 10*s.*; at the close of 1867 it was £22 1*s.* 6*d.* The profit for each of the intervening years being as follows:—

	£	*s.*	*d.*
1863,	4	6	7
1864,	4	11	4
1865,	16	10	9
1866,	16	1	2
1867,	13	5	4
Total for five years,	54	15	2

Profit and loss.

434. From this should be deducted £5, the amount of five years' rent at £1 a year, which is not, however, charged. The following balance sheet for the year 1867, in which we have included the rent also, will give an idea of the expenses and receipts of this little farm:—

Dr.	£	*s.*	*d.*
To Amount of Valuation at the commencement of the year,	20	15	0
„ Cash paid for labour,	7	6	0
„ Value of free labour,	1	0	0
„ Cash paid for cattle,	8	14	0
„ Cash paid for seeds, &c.,	9	4	9
„ Miscellaneous disbursements,	2	13	3
„ Rent,	1	0	0
„ Poor-rate and county cess,	0	9	1
„ Profit,	12	5	4
	£63	7	5

Contra—Cr.	£	*s.*	*d.*
By Amount received for grain,	1	1	8
„ Value of roots and potatoes, used by teacher's family,	17	16	8
„ Sale of cattle,	9	15	0
„ Sale of dairy produce,	11	12	7
„ Sale of eggs,	1	0	0
„ Valuation at the end of the year,	22	1	6
	£63	7	5

435. The whole of the little farm is a very good example of the reclamation of waste land. There is a patch of land of about 2 roods surrounding the school-house, on the opposite side of the road from the farm, that has been reclaimed from the general waste of heath and bent grass, and is now in excellent permanent grass, which shows what can be done by skill and industry even on so barren a waste. The landlord is evidently convinced of the benefit of the example of this school, for he is about to give 5 acres more rent free to the patron who purposes to drain it. This farm a good example of reclamation.

Drung National Agricultural School and Farm.

Drung National School and Farm.

436. *Description.*—The school is an ordinary non-vested one, under the management of the Parish Priest of Drung, in the county of Cavan. It is situated within half a mile of the village of Drung, not far from the post-town of Tullyvin. The school-house consists of 2 boarded rooms 20 feet by 12 feet, and only 8 feet high. One of these rooms is the boys' school, and the other the girls'. Economy in the height of a school-room is not merely an error, it is a very culpable blunder. No room in which a crowd of children are to remain several hours of the day should be less than 12 to 14 feet high. Low rooms depress the intelligence of the children, and make the poor teacher weary of his work after a couple of hours. School-house

437. The fittings and furniture were middling, as were also the wall appointments and school requisites. The building was in very indifferent repair. There was a small play-ground at the rere. The privy was in a most inconvenient situation, and in a very dirty state. in indifferent repair; out-offices dirty;

438. There was no free residence attached to the school, but the teacher had purchased the "good will" of a house and small farm in 1847 for £25.

439. It being vacation we had no opportunity of ascertaining the character of the teaching, but the following figures may serve to give an idea of the number of scholars, and the character of their attendance. The number on the roll was 67, the average number on the roll for 1867, 43·5 the average attendance for the same time was 25. Of the 67 on the roll 53 were Roman Catholics, and 14 members of the Episcopal Church. attendance of pupils.

440. The agricultural class had 21 on the roll; 18 of these were sons of farmers, and 3 of trades-people. Seven of them were between the ages of 9 and 12, and 14 between 12 and 16. Instruction was given in the school on every school-day, except Saturday, from 3.30 P.M. to 4 P.M.; and on the farm to the whole class twice a week. The books used as text-books were the old Agricultural Class Book, and Johnston's Catechism; the new Agricultural Class Book had not been ordered as yet. Agricultural class.

441. *The Farm.*—The teacher, as we have above stated, purchased the good will of a small farm and house. This farm consisted, according to the teacher, Mr. James Smith, of 11A. 1R. 25P. statute; according to the report of Mr. Baldwin, of 11A. 0R. 25P., and to the return from the Valuation Office, of 10A. 3R. 18P. The latter is perhaps the correct area. When the teacher first purchased the good will he was to have paid £10 a year rent, but finding the amount of land supposed to have been included in the holding was not in it, he got a reduction to the present rent of £7 7*s.* 6*d.* He has since purchased (1866) for £70 the good will of 8A. 0R. 30P. Irish, subject to a rent of £1 1*s.* per acre, the person from whom he purchased having, as he told us, been "broke by bad farming." We are not however concerned here with this new purchase. The valuation of the first farm is £5 5*s.* for the land, £1 5*s.* for the house, or £6 10*s.* for both. The poor rate at last assessment was 8*d.* in the pound, and the county rate for the last half year, 8*s.* The rent is about the average of the district. All the improvements on the farm have been effected by the teacher, but he cannot give an accurate account of these portions of his expenditure, as he kept no detailed accounts of them. He thinks he would now get £150 for the tenant-right, for which a few years ago he paid £25. The soil is light and gravelly, the rock coming through in some places. The farm lies very high. The farm.

442. The ordinary debit and credit accounts of the farm were neatly kept, and seemed correct as between capital and revenue; the charges and credits were legitimate; but the teacher's own work was not charged in the account. The whole work of the farm is done by a servant-boy, who is paid £7 a year and his board and lodging, estimated at £10 10*s.* At the end of 1863 the valuation of the stock, &c., was £99 9*s.*; at the end of 1867 it was £130 6*s.* The profits for each of the four years from 1864 to 1867, both included, were as follows:— Accounts well kept.

Profits for 4 years ended 31st March, 1867.

	£	s.	d.		£	s.	d.
1864, . . .	12	4	4	1866, . . .	29	19	6½
1865, . . .	32	2	5	1867, . . .	42	3	5

443. His profits make an important addition to his income, especially as the manager, with the view of increasing the attendance, made the school practically free, apparently however without much effect. The teacher attributes his comparative prosperity to having been at Glasnevin. We heard satisfactory reports in the neighbourhood of his efficiency as a literary teacher.

444. The live stock consisted of 3 calves, 3 milch cows, 3 lambs, 2 ewes, 1 store pig, and 35 hens, geese and ducks. The cows are generally fed in-doors, but in 1868 there was no second cutting of grass. Live stock.

445. The land is cultivated upon a five-course rotation, which seems adapted to the soil, climate, and character of the district. The following table shows the disposition of the crops in 1868:— Rotation.

Crops of 1868.

Green Crops.	A. R. P.	Grain Crops.	A. R. P.	Artificial Grass.	A. R. P.	Grass in fifth Year of Rotation.	A. R. P.
Potatoes, . . .	1 3 11	Oats, . . .	4 2 17		1 3 13		2 0 36
Turnips, . . .	0 1 5						
Cabbages,* . .	0 0 10						
	2 0 26		4 2 17		1 3 13		2 0 36

* He has grown cabbages and potatoes together.

Stolen crops.

446. Stolen crops of rape have been taken off the corn ground; and sometimes winter vetches. No flax is grown. Artificial manures are very seldom used.

Cultivation of farm in advance of district.

447. The cultivation on the school farm, though very far from perfection, was much in advance of that common in the district.

Gushedy National Agricultural School.

Gushedy National Agricultural School.

448. *Description.*—The school is an ordinary non-vested mixed school, situated about two and a half statute miles from Ederney, near Kesh, in the county of Fermanagh. The school-house has only one boarded room, 21 feet by 14 feet, and no class-room, and was in very middling repair. The fittings, furniture, wall appointments, and school requisites were indifferent. The teacher is Mr. Terence Monaghan, trained in 1859, and classed in the first division of second class; and the manager is his father, Mr. Bernard Monaghan, a farmer of the neighbourhood.

Attendance of pupils.

449. The average number on the rolls for 1867 was 70·5, and the average attendance for the same time 32·1. As our inspection took place at 10 o'clock, A.M., only 10 scholars were present, and none of them belonged to the agricultural class, which numbered 13 on the roll of the school-class, all of whom were sons of small farmers. Of these 3 were under 9 years of age, 5 between the ages of 9 and 12, and 5 between 12 and 16. The industrial class was in abeyance, as it was harvest time. Agricultural instruction is given in the school for 40 minutes, on three days a week, from 12·50, P.M., to 1.30. Practical instruction is very rarely given on the farm. The text books used are the new Agricultural Class Book, and Johnston's Catechism, with which all the pupils were supplied. Not having had an opportunity of examining the class, we cannot speak as to the character of their literary or agricultural knowledge.

The farm:

450. *The Farm* was commenced as a school farm on the 1st of January, 1866. It consists of 15 acres and 2 roods, statute, of a shingly clay, resting on slate rocks, and lying rather high. It is held as a tenancy-at-will by the teacher from Major Irvine, at an annual rent of £8 10*s*. The teacher paid £28, and £3 10*s*. arrears of rent, for the tenant-right, or "good-will." The land is valued at £6 10*s*. and the house at £1 5*s*. The rent is about the ordinary rate of the district. The school was built thirty years ago by local subscription, and cost about £30.

rotation;

451. The farm is to be worked according to a seven-course shift, which is to include flax. When the latter is grown it is hand-scutched at home: the following table shows the disposition of the crops in 1868:—

crops of 1868.

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	Artificial Grass.	A.	R.	P.	Permanent Grass.	A.	R.	P.
Turnips,	0	2	10	Oats,*	3	2	0		1	0	0		9	2	0
Potatoes,	1	2	0	Flax,	0	3	0								
Cabbages,	0	0	30												
Total,	2	1	0		4	1	0		1	0	0		9	2	0

Live stock.

452. The live stock consisted of 1 calf and 3 milch cows. The latter receive one or two feeds indoors in summer, and are almost exclusively house-fed in winter. The farm did not pay the outlay on it in 1867, as the following balance-sheet shows:—

Profit and loss.

Dr.	£	*s.*	*d.*	Contra—Cr.	£	*s.*	*d.*
To Amount of Valuation at the beginning of the year,	46	9	0	By Amount received for grain,	15	2	9½
„ Cash paid for labour,	25	12	0	„ Amount received for roots,	3	11	0

„ Cash paid for cattle,	12	0	0	„ Amount received for dairy produce,	17	4	9
„ Cash paid for one year's rent,	8	10	0	„ Amount received for poultry and eggs,	3	6	4½
„ Cash paid for one year's taxes,	1	17	5	„ Valuation at the end of the year,	34	12	0
				„ Balance being loss on the year,	9	7	0
	£94	11	11		£94	11	11

No accounts previous to 1866.

453. As no accounts appear to have been kept in the year 1866, we are unable to say whether the farm had been previously better managed, or whether the accounts are at all well kept.

Land too distant from school.

454. The land held by the teacher is, in our opinion, too distant from the school to justify its acceptance as a school farm.

Kilcogy National Agricultural School.

Kilcogy National Agricultural School.

455. *Description.*—The school is now an ordinary non-vested one. Originally it was vested in trustees, the funds for its erection being partly provided by the parish, and partly by the Commissioners of Education. At the close of the lease the school building lapsed to the landlord, Captain Leslie, and was closed during eighteen months. The present manager is the Rev. Thomas Monaghan, P.P., Mullahoran. The school-house is in the county of Cavan, and about 4 miles from Granard; it contains 2 boarded rooms, one over the other, the upper being used as the girls' school, and the lower as the boys' school. The rooms are 36 feet long, 16 feet wide, and 9 feet high. There are no separate class-rooms; the fittings, furniture, wall appointments, and requisites are indifferent. And there are no urinals, &c., or playground. There is not free residence for the teacher.

Attendance of pupils.

456. The teacher, Mr. Simon Reilly, was trained in 1853, and classed second division of second class. The average number on the rolls for 1867 was 98·9, the average attendance 44·3, and there were present at the time of our inspection 42, of whom 40 were Roman Catholics, and 2 members of the Episcopal Church. Nine were under 7 years of age, 17 between the ages of 7 and 10 years, 7 between ten and 12 years, and 7 between 12 and 14 years. We examined 13 in reading and grammar; of these 6 could read the Second Book fairly, and 7 the Third Book; 5 were acquainted with

* Half laid down with grass seeds

the parts of speech only, 5 could parse a sentence fairly, and 3 could answer nothing in grammar. The general character of the literary teaching was up to the ordinary standard of such schools, which unfortunately is not as high as it ought to be.

Agricultural class.

457. The agricultural class had 29 on the roll, of whom 13 were present; and of these 8 were between 9 and 12 years of age, 4 between 12 and 16, and 1, the paid monitor, above 16. With the exception of one, the son of a military pensioner, all the boys in the agricultural class were the sons of small farmers. There was not an industrial class.* Agricultural instruction is given on each school-day except Saturday, from 2.20, P.M., to 3 o'clock, P.M. The text books were the old Agricultural Class Book, and Johnston's Catechism. Each pupil had a book. No practical instruction was given on the farm. Four or five had a fair notion of the theory; the rest knew parts of the Agricultural Catechism by heart, but did not understand it. So far as the agricultural instruction went, it did not interfere with the literary instruction in any way.

The farm.

458. *The Farm,* which was established October 1st, 1867, consists of 2 acres and 1 rood, Irish, partly of moory soil and partly of gravelly upland, held from Mrs. Sheridan, a tenant of Captain Leslie, at the yearly rent of £4 10*s.*, or about £1 4*s.* 8*d.* the statute acre. The land is valued at £2 10*s.* An ordinary tenant would pay for such land from £1 8*s.* to £1 12*s.* the Irish acre. The rent may therefore be considered to be much above the average of the district, as is usual in cases of tenures under "middlemen." There are no data for ascertaining the amount of capital expended in buildings; the teacher purchased the good-will of the farm and house for £17 5*s.*

Farm offices.

459. As yet the tenant had only a barn, but was about to build a piggery and byre. His precarious position hampered him however in his improvements, as the manager might dismiss him without a day's notice. The arbitrary power left to managers to dismiss a teacher without assigning any specified reason, and sometimes from mere caprice, is a matter of serious importance in connexion with this class of schools. While on the one hand it is difficult to interfere with the managers' power, on the other, the teachers holding small farms, like this one, are just the class of tenants-at-will whose "tenant-right" ought to be specially protected. The same observation applies to those cases where a teacher is obliged to keep the school in repair, and yet may be dismissed the following morning after he has spent what may sometimes amount to a couple of pounds or more on the repairs. Of the two the latter is indeed the more oppressive, especially when we recollect that there are 1,258 National schools in Ireland kept in repair, in whole or in part, out of the scanty incomes of the teachers.

Arbitrary power of managers to dismiss teachers.

Live stock.

460. The live stock consisted of 1 milch cow, and 1 store pig.

Crops.

461. One acre was under green crops—potatoes, turnips, and cabbages; 1A. 3R. under oats; and 3R. 10P. under artificial grass. The farm was well managed, having, notwithstanding the unusually high rent, made a profit of £23 9*s.* 4½*d.* in 1867. Up to the date of our visit the balance of the receipts and expenses for 1868 showed already a profit of £18 9*s.* 6*d.*

Profit and loss.

462. With the view of more fully showing the working of this little farm we give the following balance-sheet for 1867:—

Dr.	£	*s.*	*d.*
To Amount of Valuation for the year 1867,	19	0	0
„ Free labour of teacher and family,	4	0	0
„ Cash paid for labour,	4	18	10½

„ Rent and taxes,	4	15	2
„ Profit on the year,	23	9	4½
	£68	10	6

Contra—Cr.	£	*s.*	*d.*
By Amount received for grain,	13	13	3
„ Amount received for roots, &c.,	11	13	6
„ Amount received for cattle,	16	2	6
„ Amount received for dairy produce,	4	5	0
„ Amount received for eggs, &c.,	4	11	3
„ Valuation at the end of the year,	18	5	0
	£68	10	6

Opinions of parish priest;

463. The following evidence, as to the character of the school and the subject of agricultural instruction generally, has been given by the parish priest, the Reverend Thomas Monaghan, in answer to our enquiries:—

"The farmers in the neighbourhood are fully alive to the value of teaching agriculture, and to the results of improved agriculture, as far as they understand them."

"The instruction given at Kilcogy National Agricultural School is sound and practical."

"The farmers willingly give their sons the benefits of the agricultural instruction given in the school, as is proved by the agricultural class, now numbering thirty."

"The literary teaching of the school is considered to be successful. The teaching of agriculture does not interfere or interrupt the literary department: it has its fixed hour like the other classes. The class is taught field operations at a time when there is no instruction going on in the school."

"It would be most desirable to teach the elements of agriculture in all rural National schools. A few acres of land, and, where practicable, varied in the nature of the soil, is indispensable to the practical and useful teaching of agriculture."

suggests money-prizes to boys.

464. The Rev. Mr. Monaghan also suggests, that money-prizes should be given to the advanced and smartest pupils in the agricultural class. There certainly seems no reason why the principle of the examinations in science, conducted by the Science and Art Department, should not be extended to agriculture under the National Board.

Lack National Agricultural School.

Lack National Agricultural School.

465. *Description.*—This school is an ordinary National school, with a mixed attendance, and temporarily held in the Court-house. A new school-house is being built, towards which the Commissioners of Education have contributed £170, and which is to be vested in trustees. The name of the manager is Edward Atthill, esq. The school-house is in Lack, near Kesh, in the county of Fermanagh. The teacher, Mr. George Evans, who was appointed in 1859, was trained in 1863,

* Since the date of our visit an industrial class has been formed.

Attendance of pupils.

and is classed first division of third class.* The numbers on the roll of the school for 1867 were 27 boys and 31 girls, or together 58; the average attendance 11·9 boys and 14·2 girls, or together 26·1 At our inspection only 13 were present, although it took place between 11·10, A.M., and 12 o'clock. Of these 6 were Roman Catholics, 7 members of the Episcopal Church; 5 were under seven years of age, and 8 were between seven and ten years.

Agricultural class.

466. The agricultural class had 9 on the roll, all of whom, even those living in the village, were the children of persons connected with agriculture. None of them were, however, present. Agricultural instruction is given in the school from 1.30 to 2 o'clock, P.M., on five days of the week; and on the farm occasionally at play-hour, from 12 o'clock to 12.30, P.M. The new Agricultural Class Book was in use, and also Murphy's Instructor, and Johnston's Catechism, of each of which there seemed to be an adequate supply. We had no opportunity of ascertaining the character of the knowledge—either literary or agricultural of this class.

The farm.

467. *The Farm* consists of 5A. 3R. 2P., statute measure, of which nearly one acre is waste. It is held by the teacher as a tenant-at-will from Major Irvine, at an annual rent of £6 16*s*. The land is valued at £5 10*s*., and the house at £1. The rent is a little less than townpark rents, and more than what is paid in rural districts. We had no data for determining the amount of capital sunk in the house and premises, &c.; the present tenant had paid £16 for the tenant-right.

Live stock, &c.

Teacher quarrelled with manager; farm profitable previously.

468. The live stock consisted of 1 milch cow, 1 goat, and 25 poultry. The rotation was entirely broken up, and all the land put under flax. It was evident that the teacher was discontented with his position, having had a dispute with his manager, and having become entangled in pecuniary difficulties. Previous to this the little farm had been making fair profit, and so far as we could learn, had been efficiently managed. At the commencement of 1865 the valuation was £7 18*s*. 6*d*.; at the end of 1867 it was £29 3*s*. 8*d*. The profits in the meantime being—1865, £15; 1866, £28 15*s*. 8½*d*.; 1867, £14 17*s*. 5*d*.

SneemNational Agricultural School.

Sneem National Agricultural School.

469. *Description.*—This is an ordinary vested school, built on a plot of ground close to the town of Sneem, in the county of Kerry, 1R. 27P. in extent, given by the patron, F. C. Bland, esq. The school-house cost £429 13*s*., exclusive of £26 16*s*. for enclosing, of which the patron contributed £152 3*s*. It is very well built, has two boarded rooms, 1 for boys and 1 for girls, the former is 33·6 feet long, 16·6 feet broad, and 15 feet high; that for the girls is 23 feet long, and the same width and height as the boys' room. It was in good repair, except that several panes of glass were broken; the fittings and furniture were substantial and in good order; the wall appointments and school requisites were very good. It has a play-ground and good clean urinals, &c.

Attendance of pupils.

470. The manager is the Rev. Thomas Davis, P.P. of Sneem, the teacher is Mr. Michael Golden, who was trained in 1848, and is classed second division of first class.

471. Our visit having been made early on a Saturday, we had not an opportunity of ascertaining the character of the instruction, literary or agricultural, given in the school. The following statistics will serve to give an idea of the character of attendance:—

	Average. On Roll.	Average. Attendance.	
First quarter of 1868, .	84·8	45·8	Present on Friday, October 2nd, 1868, the day previous to our visit 100.
Second „ „ .	140·6	102·5	
Third „ „ .	195·1	113·5	

472. The register contained the names of 194 children who had been at school at least one day within the preceding thirteen weeks; these were thus classified:—

First class	first division	36	65
	second „	29	
Second „	first „	34	71
	second „	37	
Third		–	42
Fourth		–	16
	Total,		194†

Agricultural class.

473. The agricultural class comprised all the boys in the third and fourth classes, numbering 58, all the sons of small farmers or of persons more or less directly connected with land. Instruction in agriculture is given in the school on all school days except Saturday, from 2 o'clock, P.M., to 2.30. The text books used are the new Class Book and Johnston's Catechism; there was a sufficient supply of both. The teacher does not believe that agricultural instruction interferes with literary work, but, on the contrary, that it seems to awaken the intelligence of the children.

The farm.

474. *The Farm*, consists of a plot of very rocky and peaty waste land, about a furlong distant from the school building. It has not been accurately surveyed, but is believed to be about 8 statute acres in extent. It is held by the teacher as a tenancy-at-will from F. C. Bland, esq., at an annual rent of £2 4*s*., or 5*s*. 6*d*. an acre. The county cess and poor rate amount together to about 8*s*. The rent is about the same as that for similar land in the neighbourhood. The teacher has built a cow-house, and effected some drainage lately; it is well done, but the outfalls are not sufficiently attended to.

Live stock. Rotation.

475. The live stock consisted of 2 milch cows, and 3 lambs. The district is very wild and unreclaimed; the school-farm is only in process of reclamation, and consequently the four course

* So many instances have been reported to the Royal Commission of National schoolmasters giving up the service of the Board to enter the Constabulary, that it may be worthy of note that Mr. Evans had for several years been a policeman before he became a school teacher.

† All Roman Catholics except two children of the Episcopal Church who had, until lately, been attending the neighbouring Church Education Society's school.

rotation adopted is not fully established. The following was the distribution of the land when we visited.

Crops of 1868.

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.
Turnips and Cabbages,	0	1	0	Oats,	0	1	0
Potatoes,	1	0	0	Permanent Grass,	6	1	20
Vetches,	0	0	20				
	1	1	20				

Improvements made.

476. There was no artificial grass as yet. A good deal of the permanent grass land was craggy and peaty, and scarcely capable of being improved. The profits for the first four years had been £23 19*s.* 4*d.*, or an average of £6 per annum. In 1867 the profit was estimated at £9 1*s.* 7*d.*, although £5 14*s.* had been paid for labour, and the gratuitous labour had been charged against the farm.

Profit and loss.

477. The balance-sheet for 1867 will show the working of the farm:—

Dr.	£	s.	d.	Contra—Cr.	£	s.	d.
To Valuation made on 7th January, 1867,	16	1	0	By Amount received for roots,	8	12	6
„ Free labour,	0	10	0	„ Amount received for pigs,	4	2	0
„ Cash paid for labour,	5	14	0	„ Amount received for dairy produce,	8	16	0
„ Cash paid for seeds, &c.,	4	10	11	„ Valuation at the end of the year,*	17	11	0
„ Cash paid for feeding stuff,	0	12	0				
„ Cash paid for rent and taxes,	2	12	0				
„ Profit on the year,	9	1	7				
	£39	1	6		£39	1	6

* The increase in the amount of the valuation was produced by drainage executed during the year.

FIRST-CLASS AGRICULTURAL SCHOOLS UNDER LOCAL MANAGEMENT.

Ballynakill National Agricultural School.

Ballynakill National Agricultural School.

478. *Description.*—This is a good class of vested National school; it is situated near Marble Hill, the seat of Sir Thomas Burke, bart., and about 11 miles from Loughrea, in the county of Galway. The school-building contains one good boarded room, 40 feet long, 20 feet broad, and 11 feet high, but no separate class-room or gallery; neither was there sufficient provision for ventilation. Indeed this is a too common want, even in otherwise very good school-rooms throughout the country. The building was in good repair, and was being whitewashed and painted when we visited. The fittings and furniture were good, and the wall appointments middling; a map of the World had been ordered and paid for six months previously, but had not been forwarded from the Education Office. The urinals, &c., were good; there was no playground, a matter of no great consequence, however, in a perfectly rural district. There is a good house close to the school, built by the teacher, with the assistance of £100 given by the landlord. It is in excellent condition.

479. The manager is Lady Burke; the teacher, Mr. John Campbell, who was educated at Glasnevin, but not trained at the Central Training School in Dublin. He is classed first of third, and has held his present situation since April, 1843. He has an untrained assistant, but also classed first of third.

480. The school being closed for repairs, we had no opportunity of ascertaining the character of the teaching. The following numbers will serve to give an idea of the size of the school, and the character of the attendance.

Attendance of pupils.

481. The total number of boys on roll for the year 1867 was 135. The average on roll, and the average attendance for the fourth quarter of 1867, and the first, second, and third quarters of 1868, were as follows:—

	Average Age.	
	On Rolls.	Attendance.
Fourth Quarter of 1867,	55·5	45
First „ 1868,	57·7	40
Second „ „	58·7	41·2
Third „ „	62·8	29·8

482. The last day on which school was held, previous to the commencement of repairs, was Wednesday, 7th October, 1868. The following table shows the classification of all the children whose names were in the register as having been at school on at least one day within the preceding 13 weeks, and the number of each class that attended on that day.

		On Roll.		Present 7th October, 1868.
First Class,	First Division,	20	24	12
	Second „	4		
Second „	First „	13	24	14
	Second „	11		
Third „		8		5
Fourth „		9		5
	Total,	65		36

483. All the children on the roll were Roman Catholics.

Agricultural class.

484. The agricultural class comprised all those in the third and fourth classes, amounting to 17, of whom about 10 usually attended. They are all the sons of small farmers or labourers. There was an industrial class of 6, 5 of whom were between the ages of 12 and 16 years, and 1 above 16 years.

Agricultural instruction is given on every day except Saturday, at the recreation hour, that is from 12 o'clock to 12.30, P.M. Practical instruction is given almost daily on the farm. The new Agricultural Class Book had just been introduced, and was henceforward to be the text-book of the class. The teacher was strongly of opinion that so far from agricultural instruction interfering with literary instruction, it helped it.

The farm.

485. *The Farm.*—The present teacher, Mr. Campbell, began in 1843 with 4½ acres, Irish, of land, 2½ acres of which were granted rent free. After three or four years he purchased the tenant-right of 8½ acres Irish, of land subject to an annual rent of £1 14*s.* the acre, for £57. In 1866 the landlord gave him about 15 statute acres additional, the previous holder of it having gone away in debt. The whole farm now comprises 31A. 0R. 37P. statute, which is charged the uniform rent of £1 4*s.* the acre. The land is valued at £19, and the buildings at £3. Mr. Campbell holds the land from Sir. T. Burke, as a tenant-at-will, and has consequently no legal security whatever for any capital he may have expended, or improvement he may have effected. The poor rate is about 6*d.* in the £1, and the county cess, on an average of four years, 1*s.* 7*d.* in the £1.

Capital sunk by tenant in improvements.

486. Mr. Campbell has not calculated how much capital has been sunk in farm buildings and permanent improvements, but thinks he has added £1 7*s.* the acre to the value. There can be no doubt that the increased value of the farm, and farm premises, would return in increased rent the interest of a fair proportion of the capital invested, especially if a lease were given.

Live stock.

487. The live stock consisted of 1 horse, 2 calves, 4 two-year-old heifers, 3 milch cows (2 in calf), 16 lambs, 5 hoggs., 11 ewes, 2 brood sows, 2 stores, 15 ducks, 8 geese, 2 turkeys, and 30 hens. The cattle were common breeds crossed with short horns. The sheep were Leicester. House feeding is but partially carried out, and that only in winter.

Rotation;

488. Twelve acres are cultivated according to a four-course shift, and 3 acres according to a three-course shift; the remainder is in permanent grass. The rotations are suitable to the soil, climate, and circumstances of the district, and the cultivation of the land is very good. The following table shows the disposition of the land under crops in both rotations:—

crops of 1868.

Green Crops.

	A.	R.	P.		A.	R.	P.

Potatoes,	3	0	0				

Teacher opposed to flax.

489. Mr. Campbell is opposed to the cultivation of flax, on the ground that it impoverishes the soil, and consequently has never cultivated any.

Manures.

490. The manure heap was well attended to; some guano and superphosphate were also used.

Profit and loss.

491. This farm has been always profitably worked. During the five years, from 1861 to 1865, both included, while the farm consisted of thirteen Irish acres, the valuation and profit for each of those years were as follows:—

	Valuation. £	*s.*	*d.*	Profits. £	*s.*	*d.*
1861,	192	17	0	71	15	2
1862,	199	7	0	58	14	11
1863,	172	5	8	49	9	6
1864,	176	18	6	60	1	8
1865,	172	1	8	65	7	8

492. After the farm was increased to its present size, in 1866, the valuation and profits increased as follows:—

	Valuation. £	*s.*	*d.*	Profits. £	*s.*	*d.*
1866,	189	9	0	101	18	1
1867,	233	7	0	90	0	2½

493. We give the balance sheet for 1867 in full, in order to give a more complete idea of the working of this farm.

Dr.	£	*s.*	*d.*	Contra—Cr.	£	*s.*	*d.*
To Amount of Valuation, January, 1867,	233	7	0	By Amount received for grain,	34	12	0½

Teacher's suggestions regarding Agricultural Class Book; could accommodate boarders. Farm well managed.

494. Mr. Campbell suggested that the teachers ought to be invited to write in competition a catechetical sequel to the Agricultural Class Book, for use in schools; and that an Agricultural Class Book suited specially for girls would be very useful.

495. Mr. Campbell could accommodate 2 boarders, but he has not had any for the last three years.

496. This farm is most creditably managed, and fulfils in many ways the idea of what a model farm ought to be.

Ballycarry National Agricultural School.

Ballycarry National Agricultural School.

497. *Description.*—This is an ordinary non-vested National school, situated about 50 yards outside the village of Ballycarry, which has a station on the railway from Belfast to Larne, distant about half a mile from the village. The school building contains two boarded rooms, one for girls and one for boys; they are 40 feet long, 20 feet wide; the boys' school 8 feet high, and the girls' perhaps

lower. They are both too low to be healthy rooms. There are not separate class-rooms. The fittings, furniture, and wall appointments were on the whole fair. The boys' privy was in fair condition, but the girls' was very much out of repair, and was not in other respects suitable; otherwise the building was in fair repair. The teacher, who is also the agriculturist, has a house on the little farm, and near the school-house. We found it in very good order.

498. The manager of the school is the Rev. William E. Mulgan, the vicar of the parish; the teacher, Mr. Robert M'Giffin, who was trained in 1862, and is classed second division of second class. He is a Presbyterian, but there is a paid monitor of the Church of England. Mr. M'Giffin was appointed in 1864.

Attendance of pupils.

499. The average number on the roll for 1867 was 54·3; the average attendance for the same period 35·7; the average on roll for the three months preceding our visit 59·8, and the average attendance 36·8. There were present when we inspected 32, all of whom were Presbyterians. Of these, 7 were under 7 years of age, 14 between the ages of 7 and 9, 6 between 9 and 12, and 5 between 12 and 14 years. They were classified according to lesson books, as follows:—

First Book, . . .	15
Second „ . . .	10
Third „ . . .	3
Fourth „ . . .	4
	32

Agricultural class.

500. The agricultural class consisted of 21 on the roll, of whom 7 were present, chiefly sons of small farmers, day labourers, and other rural villagers. Four of them were between the ages of 9 and 12 years, and 3 between 12 and 14. The scholars present comprised all those in the Third and Fourth Lesson Books. We examined them in reading, grammar, geography, arithmetic, and writing from dictation. Four had a fair knowledge of the construction of sentences, could write out from dictation a long sentence with tolerable accuracy, both as to orthography and punctuation. The whole were tolerably well able to work compound division and solve simple sums in proportion; 4 could work sums in practice fairly. One was learning geometry, and had some knowledge of the First Book of Euclid.

501. Agricultural instruction is given in the school daily from 3 P.M. to 4 P.M. The text-books are the new Agricultural Class Book, and Johnston's Catechism, and there seemed to be a sufficient supply in the school. There was also an industrial class of 8, of whom 2 were present—1 between 9 and 12 years of age, and 1 between 12 and 14 years. This class was engaged two hours daily, partly before and partly after school-hours, and the pupils in it were paid at the rate of ½*d.* per hour. Two or three of the class seemed to have acquired some information on the general principles of agriculture, but the remainder, and indeed we may say the whole class, seemed to be mere beginners at the subject.

The farm:

502. *The Farm* was established in 1850, and consists according to the teacher of 7A. 1R. 20P. statute,* of which 7A. 1R. are cultivated, and 20P. under the house and roads; the offices are on demesne lands of the landlord, at the opposite side of the road from the school and farm. The school-house is built on freehold property unconnected with the farm. The farm is held from year to year from David S. Ker, esq., at an annual rent of £10. The Poor Law valuation is £11. Land in the neighbourhood lets for from £1 10*s.* to £2 8*s.* the Irish acre, and the next land to it is valued at £1 2*s.* 2*d.*, so that the rent is not higher than that of similar land in the neighbourhood. The land consists of upland with a southern aspect, and a soil formed from decomposing basalt and drift. The whole farm had been thorough drained by the previous teacher, with no aid except the usual estate allowance. All the buildings had been erected at the expense of the landlord.

live stock;

503. The live stock consisted of one milch cow of mixed breed (Ayrshire and mountainy), and one store pig. The cow looked well fed and healthy, though the cow-house was not very clean. House feeding was only partially carried on. A second cow is kept in winter, but the teacher, farming for his own profit, thinks he makes more of selling his hay than of an increase of his dairy by soiling with summer grasses. It is needless to say that this is a very bad example in a "model" farm.

implements;

504. The implements were the ordinary ones of the district for manual use. They could not be looked upon as examples in any sense, and are evidently not regarded as such by the teacher himself.

crops;

505. The crops in the district around were plentiful, but dirty. On the school farm a fourcourse rotation was adopted which suited the soil and climate, and was pretty strictly adhered to. The farm was divided into four plots of about equal size; the green-crop plot was occupied by about three quarters of an acre of turnips, and one acre of potatoes; the grain crop was oats. The cultivation was fair, but the potatoes were planted in "lazy beds," the land being thorough-drained basaltic upland! A little flax is cultivated, but very little is done in the way of stolen crops.

manure heap.

506. The collection and preservation of manures, whatever may be the skill and economy of their application, might have been better attended to.

Valuation and profit for four years.

507. Mr. M'Giffin has held the office of teacher here for four years. His profits and the valuation of his stock, &c., for each of these years, according to his balance sheets, are as follows:—

	Valuation. £ *s.* *d.*	Profit. £ *s.* *d.*
1864, ...	1 18 0	6 12 3
1865, ...	39 15 9½	20 10 5½
1866, ...	49 5 0	13 3 5½
1867, ...	59 18 0	16 9 10

* In Mr. Baldwin's Report the extent is stated to be 7A. 2R. 20P.; but in the copy of the valuation furnished to us by Mr. Ball Greene the land valued in connexion with the school is only 4A. 2R. 20P. This must refer to a different holding or be a clerical error.

Profit and loss account for 1867.

508. The following is the full balance sheet for 1867 :—

Dr.	£	s.	d.	Contra—Cr.	£	s.	d.
To Amount of Valuation at the beginning of the year,	59	18	0	By Amount received for oats,	16	5	4
„ Free labour of pupils,	5	0	0	„ Amount received for oatmeal,	3	16	8
„ Cash paid for labour,	19	6	0	„ Amount received for hay,	28	10	0
„ Cash paid for farm seeds,	3	14	4	„ Amount received for roots,	0	8	6
„ Cash paid for manures,	3	15	7	„ Amount received for potatoes,	7	10	0
„ Cash paid for cattle,	11	12	0	„ Amount received for cattle,	21	15	1

Reaping, do.,	0	18	0	Women, do.,	0	1	0
Mowing hay, do.,	0	5	6	A man and horse, per day, 3*s.* 6*d.* to 4*s.*			

Clonkeen-kerrill National Agricultural School.

Clonkeenkerrill National Agricultural School.

510. *Description.*—This is an ordinary vested school having a mixed attendance. It is situated about three miles south of Menlough, Mountbellew, county of Galway, and about five miles north-west of the Woodlawn station of the Midland Railway. The school-house consists of a thatched two-storied house, of which the lower portion only, consisting of a single boarded room 29 feet long, 15 feet wide, and 12 feet high, is used for school purposes. The school-house is poor as to furniture, fittings, wall appointments, &c., and is kept in repair by the teacher. The privy was clean. The teacher, who had been trained in 1843, is classed first division of second class. The following table shows the character of the attendance :—

Attendance of pupils.

	Average. On Roll. 1867.			On Roll. 1868.			Attendance. 1867.			Attendance. 1868.		
	Boys.	Girls.	Total.	Boys.	Girls.	Total.	Boys.	Girls.	Total.	Boys.	Girls.	Total
First Quarter,	29	21	50	41	20	61	13	11	24	20	13	33
Second „	40	20	60	40	21	61	17	9	26	11	9	20
Third „	37	21	58	25	14	39	18	13	31	15	10	25
Fourth „	33	20	53	–	–	–	13	10	23	–	–	–

511. The following table shows the classification of the boys on the roll, and the number present on Friday, 9th October, the day before our inspection :—

	On Roll.	Present.
First Class,	8	1
Second „	10	2
Third „	6	2
	24	5

512. There was no fourth class in the school. The names of 15 girls were on the roll, of whom 5 attended, or a total attendance of 10 of both sexes. The attendance on Saturday, 3rd October, when religious instruction was given, was only 2; on Monday, 5th, 6; on Tuesday, 6th, 9; and on Wednesday, 7th, 10; Thursday was a vacant day, the teacher being at a fair. The teachers of agricultural schools are allowed one day in each quarter, with the consent of the Inspector, to attend fairs or markets.

Agricultural class.

513. The agricultural class had 10 upon the roll, which, judging from the preceding tables, would give an attendance at most of 4; but our inspection having been made on a Saturday, we had not an opportunity of practically determining what the attendance usually is, or of ascertaining the character of the knowledge, literary and agricultural, acquired. The agricultural class received agricultural instruction on each school day from 12.30 to 1 o'clock P.M. in the school, and one hour each day on the farm. The text-books were the new and old class books, of which there was an ample supply. Four of the agricultural class formed an industrial class, who worked ten hours a week on the farm. The teacher was allowed a grant for an industrial class of 8, but cannot get the number filled up.

Cause of small attendance.

514. The very small attendance at this school is to be attributed in a great measure to the sparse population of the district, and the poverty and carelessness of the parents, who, ignorant themselves, cannot see the importance of sending their children regularly to school. Of the children who do not attend school, or do so in such an irregular way as to get no practical benefit from it, very few are kept away to earn wages, the majority are allowed to idle on one pretext or another. There are two schools within three miles of this one, and two within four miles; the radius of the school area is therefore from about one and a half to two miles, and the greatest distance to be walked by any child attending the school is three miles.

The farm;

515. *The Farm*, which was established in 1854,* consists of 26A. 2R. statute measure. About six or seven acres consist of a gravelly soil resting on limestone, the remainder is peaty. It is held as a tenancy-at-will from Major M. W. O'Reilly, M.P. The offices are poor, not much better than the ordinary class of thatched buildings of other small farmers of the district.

live stock;

516. The live stock consisted of 2 horses; 2 calves, 1 year old heifer, 1 year old bullock, 2 milch cows; 20 ewes, 15 wethers; 1 store pig; and 40 hens.

* The school was opened in 1843.

517. The cultivation is conducted according to a four-course rotation, which is strictly adhered to. No stolen crops or flax are raised. The following table shows the disposition of the crops at the period of our inspection:— cultivated.

Green Crops.	A.	R.	P.		A.	R.	P.
Turnips, Mangels,	3	0	0	Grain crops—Oats,	7	1	20
Potatoes,	2	0	0	Artificial grass,	2	2	13
Rape,	0	2	0	Permanent grass,	6	3	23
Total,	5	2	0				

518. This only accounts for 22A. 1R. 16P. In the return received from the Valuation Office, the area of the farm is given as 24A. 2R. 36P., the land being valued at £13, and the buildings at £3 10*s.* In Mr. Baldwin's last report the area of the farm is stated to be 26A. We are unable to explain the discrepancy.

519. The following table shows the disbursements, receipts, valuation, and profit for the years 1865, 1866, and 1867:— Profit and loss.

	1865.			1866.			1867.

520. The crops on the school farm, particularly the green crops, were very much better than those grown by the small farmers of the district, by whom the turnip is still not as much grown as it should be. Quality of crops.

521. The extent, however, of Clonkeen farm, as well as of some others of the same class, is, in our opinion, much too great for the purpose of agricultural instruction when, there is, as here, only one person to superintend the literary and the agricultural departments. A farm of 2 or 3 acres is ample for illustrating a sound system of rotation, while it is not large enough to create any reasonable danger of a teacher's time and attention being withdrawn by it from his literary duties. Farm too large for education.

Dromiskin National Agricultural School.

Dromiskin National Agricultural School.

522. *Description.*—This is an ordinary non-vested school, with separate school-rooms for boys and girls. It is situated about 1¼ mile from Castlebellingham, in the county of Louth. The school-rooms are 36 feet long, 15 feet broad, and 10 feet high. Both are provided with separate class-rooms, which, as well as the school-rooms, are boarded, and in excellent repair. The fittings, furniture, wall appointments, and school requisites were very good. Since 1st April, 1868, the boys' school had been in charge of a young man who had been a teacher two years, was untrained, and only a probationer, assisted by a lad of 15 years, who had been a monitor during 6 years, or since he was of the age of 9 years. The average number on the rolls for 1867 was 95·5, the average attendance 44·1; the number on rolls in the third class 19, and in the fourth class 11. There were present on the occasion of our inspection 44, all Roman Catholics. Of these, 8 were under 7 years of age, 23 between 7 and 9 years, and 13 between 10 and 12 years. Nearly one-third of those present were thus between 10 and 12 years of age; and 30, out of an average of 95·5 on the rolls, were in Third and Fourth Books. This is a satisfactory result, and, so far as it goes, shows that the late teacher had taught his school well. School under a probationer. Attendance of pupils.

523. The agricultural class—which consisted of 28 on the roll, who are all, with the exception of 2, in the third and fourth classes—received half an hour's instruction on each of the school days except Saturday. Agricultural class.

524. *The Farm,* which is close to the school-house, was added in 1850, and consists of 10A. 3R. 12P., statute measure, of good land. The farm was held by the late teacher and agriculturist, Mr. Patrick Quinn, from Lord Clermont, upon a tenancy-at-will, at the annual rent of £2 the Irish acre. The valuation of the land without the buildings is £17, which shows that the rent is moderate. The school-house was erected by the parish, the farm buildings and permanent improvements by Lord Clermont. In 1866 the books showed a profit of £49 1*s.* 10*d.*; the valuation at the end of the year was £102 10*s.* In 1867 the profit was £31 9*s.* 10*d.*, and the valuation £90 0*s.* 6*d.* The farm.

525. The farm was practically inoperative when we were there, the late teacher and agriculturist having resigned or been dismissed in consequence of some disagreement with the manager, had been served with notice to quit by Lord Clermont, who naturally wished the farm to remain connected with the school. Such a state of things is most likely to arise from the present ill-defined positions of the majority of agricultural teachers of schools not directly managed by the Commissioners of Education, as regards their interest in the school farms. The basis of all good farming is a just relationship between the landlord and tenant. When the State undertakes to set up a model for the practical Farm inoperative, late teacher being under notice to quit. Tenure of farms under

Board not properly attended to.

working of a farm it would be wise to afford a model for regulating the relationship of landlord and tenant, by insisting on specific written agreements between the contracting parties So far from this having been the case, it has too often followed the worst practice of the Irish land system—leaving everything to chance.

Farm always well spoken of: Lord Clermont's answer to queries:

526. In looking over the reports of the officers of the Board, we found this school and farm always well spoken of. In answer to our queries, the landlord, the Right Honorable Lord Clermont, says :—

"The farmers are more inclined to learn improved methods by the example of successful farming, than by oral instruction in agriculture."

"I believe the instruction given at the Drumiskin school and farm has been sound and practical."

"It was hard to answer the question, 'Whether the farmers have given their sons the benefits of the agricultural instruction, and profited themselves by the example given by the management of the school-farm,' with certainty. The farming in the district has certainly improved, but perhaps not more than in districts where there has not been any agricultural school."

"So far as I can form an opinion, the literary teaching of the school has been good, and has not been interfered with by the agricultural instruction, at least I do not know that it has been."

"In answer to the query, 'Whether it would be desirable to teach the elements of agriculture in all rural National schools, and to add, where practicable, a farm of a few acres to each,' Lord Clermont says :—'Certainly desirable, and if the teacher has a taste for practical farming (not otherwise) a small garden-farm would be desirable to show the results of the maxims taught. By a garden-farm, a plot of about one acre is meant; a quantity of ground not large enough to be properly called a farm, or likely to prove injurious to the general teaching by occupying too much of the master's time, and still more by engrossing his thoughts and interest.'"

opinion of Parish priest against agricultural School;

527. The manager of the school, the Rev. Thomas Callan, P.P., is of opinion that—

"The farmers in the neighbourhood of Dromiskin do not appreciate the value of agricultural teaching, and do not take advantage of it. The instruction given in the Dromiskin school is sound and practical. The farmers have not given their sons the benefits of the agricultural instruction; and they do not profit by the management of the school-farm. The farm is not now in connexion with the school. The literary teaching has been very much interfered with by having the farm attached to the school. He thinks it would be desirable to teach the elements of agriculture in all rural schools, but that 'a farm would be very injurious to the school.'"

formerly held a different opinion.

528. The following letter, which has been published in the Appendix to the Twenty-second Report of the Commissioners of National Education for the year 1855, shows that the Rev. Mr. Callan's views on the subject of agricultural schools, have recently undergone a considerable change :—

"SIR,—In reply to yours, enquiring about the working of the Dromiskin National Agricultural School, of which I am manager, I have much pleasure in stating that it continues to give entire satisfaction, not only to me, but also to even the most fastidious farmer in the surrounding district. The combination of the literary with the agricultural department contributes in a wonderful degree to fill the mind with accurate information, and prepares the hands, and improves the taste of the pupils for the skilful and profitable cultivation of the farms of which they may hereafter have the management. There are at present in the Albert Training Institution two young lads, who were educated in the Dromiskin Agricultural National School, who have displayed at every examination they underwent such accurate information, both on the theory and practice of agriculture, as to convince me, and everyone who witnessed their examination, of the utility and beneficial results of the combined system of literary and practical agricultural training. I feel confident that the Government, by continuing and encouraging such a system, would confer on the people of this country, and on the small farmers in particular a very great and lasting favour.

"Your obedient servant,

"Thomas Kirkpatrick, esq., M.D." "THOMAS CALLAN, P.P.

GLENGARRA NATIONAL AGRICULTURAL SCHOOL.

Glengarra National Agricultural school.

529. *Description.*—This is a vested National school, situated about 3 miles north of Lismore, in the county of Waterford. The school-house contains three boarded rooms, originally intended for a boys', a girls', and an infants' school. The boys' and girls' school-rooms are 36 feet long, 18 feet wide, and 12 feet high. The infants' school-room is smaller, and is now used as a refectory for boarders. There is not a separate class-room in either of the school departments. The buildings were in good repair; the fittings, furniture, wall appointments, and school requisites were good enough. The urinals, &c., are inconveniently situated, and were not clean. There is accommodation for thirty-one boarders; the dormitory and refectory were fair, but not tidily kept; and there was no lavatory. There is fair accommodation for the teacher, who is also the agriculturist. The teacher, who has held the office since 1843, was trained in 1844, and is classed in the second division of first class.

530. As we did not reach the school-house until just after the school had been dismissed, we had not an opportunity of ascertaining the character and extent of the knowledge acquired in the school. The following numbers will give an idea of the character of the attendance.

Attendance of pupils.

531. The total number on the roll was 70; the average attendance during the first quarter of 1868 was 39·2; second quarter, 37·7. There had been present on the day of our visit 31. The following table shows the classification of the boys on the roll, and the number of each class present on that day :—

		On Roll.	Present.
First Class,	First Division,	16	9
	Second „	12	5
Second, „		22	5
Third, „		11	6
Fourth, „		7	4
Fifth, „		2	2
		70	31

532. Thus, 28·5 per cent. of those on the roll were in the Third and higher books; and 38·7 of those present on the day of our visit. This very satisfactory result was not due to overgrown boys remaining in the school.

Agricultural class.

533. The agricultural class numbered 32 on the roll, and included all those in the Third and higher books, besides 12 from the more advanced boys of the second class. They were principally between the ages of 11 and 15, and the sons of farmers and farm labourers. There was also an industrial class of 6. Agricultural instruction was given in the school from 11 o'clock to 11.50, A.M., on every school day except Saturday. On the farm instruction is given from 2 o'clock to 3 o'clock, P.M, on five days, and for four hours on Saturday. The text-books used were the new class-book, Johnston's Catechism, &c. There was a sufficient supply of them given as free stock.

534. There was one free place for boarders filled up; and an application had been made for a paying place. The free boarder, who was the son of a farmer, was not very clever; but some pains had been evidently taken to instruct him in agriculture. He admitted that he did not continue his literary work with industry.

The farm;

535. *The Farm* was established in 1857, and consists, according to the teacher, of 20 statute acres, whereof 2R. are occupied by buildings and haggards, leaving 19A. 2R. available. According to Mr. Baldwin's report it contains 20A. 0R. 16P. But in the return received from the Valuation Office, the farm is stated to contain 22A. 3R. 15P. statute measurement. We are unable to explain these discrepancies. The land without the buildings was valued at £8 18*s.*, and the buildings at £2 12*s.*, exclusive of the school-house and residence, which are separated from the farm offices. The former with an acre of land are valued at £6, the farm buildings being estimated at £5 15*s.*, and the land at 5*s.* The land is hilly, slightly inclined to the south; the soil is a light, gravelly, peaty clay. The teacher, Mr. James K. Walsh, holds it as a tenancy at will from the Duke of Devonshire, at the annual rent of £11 15*s.*, which is at the rate of 10*s.* the acre on the area stated in the Valuation Office return. As that is the acreable rent which the teacher told us he paid, it would seem that the area stated in the Valuation Office return is probably correct. The taxes amount to £1 15*s.* 6*d.* An ordinary tenant would pay about £1 the Irish acre. A neighbouring farm of about the same quality is valued at 7*s.* 9*d.* the statute acre. The teacher thinks the rent of the school-farm somewhat higher than that of the farms about.

Farm buildings;

536. The farm buildings consist of an enclosed yard, with cow-house and the other usual offices. They were on the whole judicious, and suitable for tenant-farmers, but only in middling repair, and not kept tidy enough. The live stock consisted of 1 horse, 1 calf, 2 milch cows, 4 lambs, 5 ewes, 1 brood sow, 4 stores. The cattle and sheep were half mountainy. House-feeding was fully carried out in winter, and partially in summer.

Quality of land, and cultivation.

537. The land about is poor and cold, and the cultivation very indifferent. A five-course rotation is adopted on the school-farm, and is strictly adhered to. The cultivation is fairly carried out. The present quality of the land and the climate do not admit of growing stolen crops with advantage. Flax is not grown, nor is the soil yet suited for growing it with advantage.

Manures;

538. The collection and preservation of manure might be attended to somewhat better; there is, perhaps, not much real loss, but things might be made to look more tidy, with advantage to the farm as a model, and with profit also to the occupier. Seven cwts. of phospho-Peruvian guano had been used on the crops grown in 1868. The following table shows the disposition of the crops when we visited:—

Crops.

Green crops.	A.	R.	P.		A.	R.	P.
Turnips,	2	0	0	Grain crops—oats,			
Mangels,	0	2	0	Artificial grass, first year,	3	2	0
Potatoes,	1	0	0	,, ,, second year,	3	2	0
				Permanent grass,	1	2	0
Total,	3	2	0				

Profit and loss.

539. The following table shows the disbursements, receipts, valuation, and profit for the years 1865, 1866, and 1867:—

Rate of wages.

540. Labourers were paid by the day here 1*s.* 2*d.*, but could be had at 6*s.* a week if constantly employed. Since 1843, when the teacher came here first, wages, he says, have risen 50 per cent.

Larne Model Agricultural School and Farm.

Larne Model Agricultural School and Farm.

541. *Description.*—This school is vested in local trustees, and represents apparently the first idea the Commissioners of Education had of what a model school should be, when they estimated the cost of a model school-house at £500. The school-house is a plain building, with good-sized windows, and contains apparently two large airy rooms; the upper is used for the girls' school; the lower for the boys' school. It being vacation time, and the teacher being away, we were unable to examine the inside. There is a good large yard about the school-house which is well suited for a playground.

The school is reached from one side, at which is the principal entrance, through a piece of ornamental ground in good order, and which forms a kind of garden to two excellent houses for the female teachers, which were neatly and well kept. The school-house, on the other hand, did not look as if the trustees bestowed much attention upon it; without being exactly in bad repair, it looked neglected; the windows having a great number of broken panes of glass in them. The privies were in a shockingly filthy state, especially the boys'. The walls of *both* privies, *but especially the girls'*, were scribbled all over with filthy and indecent language. Nothing like it ever met our eyes before or since. What must be the morals of a school where even half a dozen "children" could be found capable of writing such things as we saw!

Privies filthy and walls covered with gross and immoral writing.

The farm.

542. The farm, upon which is the residence of the teacher of the boys' school, is situated a short distance above the school-house. It consists of 4A. 1R. Irish, or 7A. 1R. 15P. statute measure, held by a lease of 61 years from the 1st of November, 1840. The land then belonged to Edmund MacDonnell, esq., afterwards Earl of Antrim, but has since been purchased by Sir Edward Coey of Belfast. The farm offices and a nice cottage were built by the lessees, or school committee. The land is town-park, and is let at town-park rent, the annual rent being £21 18*s.* 6*d.* About Larne the rent of town-park is about £5 the Irish acre, so that the school pays about the usual acreable rent of the place.

School and farm, cradle of Agricultural Department.

543. This school farm was the cradle of the whole agricultural department of National education. It was the success of its management, and the great practical good it was supposed to have conferred on farmers that led to the establishment of other schools. Whatever it may have been once, it is no longer a model farm. The crops were dirty, the turnips poor, and the whole farm inefficiently managed.

Profits for four years.

544. Even so the farm, although paying a high agricultural rent, has always realized some profit. The following table shows the valuation at the commencement of each year, and the profit realized in 1864, 1865, 1866, and 1867:—

	Valuation.			Profit.		
	£	*s.*	*d.*	£	*s.*	*d.*
1864, . . .	79	4	1	5	5	0
1865, . . .	78	13	0	15	6	0
1866, . . .	77	8	8	8	10	4
1867, . . .	94	15	8	10	7	6½

Profit and loss account for 1867.

545. The following full balance sheet for 1867 will show how the farm was worked during that year, and the value of the stock at the commencement of the year that we visited the farm:—

Dr.	£	*s.*	*d.*	Contra—Cr.	£	*s.*	*d.*
To Amount of Valuation at the beginning of the year, .	94	15	8	By Amount received for grain, ...	48	9	1

„ Profit in the year, ...	10	7	6½				
	£174	0	3		£174	0	3

Live stock.

546. In 1864, the live stock included in the inventory consisted of three cows and four pigs; in 1865, of three cows, one calf, and six pigs; in 1866, of two cows, one heifer, one calf, and four pigs; and in 1867, of two cows, one heifer, and four pigs.

Agricultural class.

547. The teacher, Mr. William Hay, is we heard an excellent literary teacher. His merits are highly appreciated in Larne, where he is much engaged in private tuition after school-hours. He does not appear to have had any special education as an agriculturist, and obviously has not time to attend to farming. We had no means of learning how many were supposed to form the school agricultural class, or of testing their knowledge. Mr. Baldwin, in his report for 1867, gives the number on the roll as 78. There was also an industrial class of 5, the members of which worked two hours a day on the farm. None of the other boys ever came to look at the farm. The industrial class was simply a number of boys who were paid by the State for weeding the teacher's garden, and doing other farm work, but who, as far as we could learn, never received any special agricultural instruction from the teacher, whose time, we as have before stated, was otherwise occupied, certainly more profitably to himself, and perhaps also to the public.

548. As it may be useful to give the local opinion of an agricultural school which presents such a marked contrast between its present condition and its former reputed character, we subjoin the following summary of the answers which we received to our queries:—

Answers to queries from local clergymen and laymen.

The Rev. Ch. Ward, Rector of Kiliwaughter, and formerly manager of the Larne National School, thinks very few of the farmers in the neighbourhood of Larne appreciate the value of agricultural teaching, or are disposed to take advantage of it. *The Rev. Classon Porter, Minister of the Remonstrant Presbyterians, and present manager of the Model Agricultural School,* thinks they do, but not in the form of agricultural schools. *The Rev. Francis M'Kenna, Parish Priest of Larne,* thinks the farmers in the neighbourhood do not appreciate the agricultural teaching given in this school, and are not disposed to take advantage of it. *The Rev. John M'Murray, Presbyterian Minister,* says that, as far as his observation and knowledge of the farmers in the neighbourhood warrant him in forming a judgment, he is able to say that very generally they have adopted all modern improvements in agriculture, and are largely benefitting by them. *Malcolm M'Neill, esq., The Corran, near Larne,* believes they do, and that they would be disposed to take advantage of any system which they considered practical.

Rev. Mr. Ward believes the instruction given in the Larne Model School to be sound and practical. *Rev. Mr. Porter* believes it to be the best of its kind (evidently referring to the literary education only). *Rev. Mr. M'Murray* thinks it sound and practical. *Mr. M'Neill* thinks it is certainly theoretically sound, but doubts its being practical. The *Rev. Mr. M'Kenna* says that the Larne Model Agricultural School is practically a Protestant denominational one, in every respect, and consequently he does not know much about the instruction given in it.

Rev. Mr. Ward, in answer to the query whether the farmers have given their sons the benefit of the agricultural instruction of the Larne Model School and profited themselves by the example given by the

management of the school-farm, says no. *Rev. Classon Porter* says the numerous farmers who have sent their sons to the school have, of course, thereby given their sons the benefit of the agricultural instruction which is imparted in the school; but, he adds, "I cannot, in conscience, say that the farmers themselves have profited in the slightest degree by the example given in the management of the school farm, nor do I think that the idea has ever occurred to them of looking upon it as an example at all." *Mr. M'Neill* cannot say that they do either. The *Rev. Mr. M'Murray* says, "Several of the farmers have of late years, I understand, sent their sons to the Larne Agricultural Model School, and I think that this, and their observation and reading agricultural literature have combined to make them successful farmers." The *Rev. Mr. M'Kenna* says, "The farmers have not given, to any extent, to their sons the benefit of the agricultural instruction, nor have they, by any means, profited themselves by the example given by the school farm management." Answers to queries from local clergymen, &c.

In answer to our query whether the literary teaching of the school is considered to be successful, and has not been interfered with by being combined with agricultural instruction, the *Rev. Mr. Ward* says, "Very successful;" *Rev. Mr. M'Kenna* cannot answer for the reason already given. *Rev. Mr. Porter* says, "Since the appointment of the present teacher, who is 'first of first' in the classification of the National Board, the literary teaching of the school has been particularly good, and remarkably successful; nor has it been in the least interfered with by the agricultural instruction, because the manager and committee of the school have determined that such interference shall not, *under any circumstances*, be permitted." *The Rev. Mr. M'Murray* is of opinion that "The time occupied in giving instruction in agriculture has not," he believes, "interfered with the literary prosperity of the school, but rather aided in expanding the minds and improving the tastes of the pupils." *Mr. M'Neill* says, "I believe the literary teaching of the school to be *eminently* successful; and, I think such is the universal opinion in the neighbourhood. I have never heard it hinted that the agricultural instruction interfered in any, the remotest, degree with the literary."

In answer to our last query, whether it would be desirable to teach the elements of agriculture in all rural National schools, and to add, where practicable, a farm of a few acres to each, the *Rev. Mr. M'Kenna* says, "Yes, if the rules of the Board be faithfully carried out and competent teachers appointed." The *Rev. Mr. M'Murray* says, "I think that all farmers, in rural districts, would benefit by the establishment of agricultural National schools; and the proper management of a small farm, in connexion with the school would be of great value to the young." And, he adds, "Before answering the questions above, I have asked the opinion of a very intelligent practical farmer regarding the last question in particular; and he is decidedly of the opinion that I give in the answers. The rotation system has been partially the result of seeing the plan of the agricultural model school here." The *Rev. Mr. Ward* thinks, "It would be desirable to teach the elements of agriculture in rural schools; but the addition of a small farm would be of doubtful propriety. *Mr. M'Neill* says, "I think it would be very desirable to teach the elements of agriculture in all rural National schools; but (I state my opinion with all deference to that of persons who may think otherwise) I do not think it would be desirable to add model farms." The *Rev. Mr. Porter* says, "In my opinion the elements of agriculture, like the elements of any other department of knowledge, should be taught in all National schools; but, as to the connecting of farms with such schools, candour constrains me to say, that my experience of agricultural schools is not favourable to such connexion. No teacher can, I think, *properly* attend to a school and to a farm at the same time."

Lough Ashe Agricultural School and Farm.

Lough Ashe Agricultural School and Farm.

549. *Description.*—This was an ordinary non-vested National school, but the new school-house will be vested. It is situated about three miles south-west of the village of Donamanagh, in the county of Tyrone, and about ten miles from the city of Londonderry. The old school-house looked thoroughly worn out; the furniture and fittings, wall appointments, &c., like the school-house itself, have been long in use. A handsome new school-house was being erected at a cost of £274, two-thirds of which is to be contributed by the Commissioners of Education, and one-third by the proprietor and tenantry. The school-room is to be a boarded room 30 feet long, 15 feet wide, 12 feet high. The literary teacher resides in the house of the agriculturist, Mr. James Moore, on the farm along with the boarders. This house is old, and shows it. The dormitories of the boarders are not nearly so good as those in the National Board's model schools, but they are clean and airy. The bedsteads were all made at home, and of home-grown timber. The refectory and lavatory were fair, but not up to the level of modern requirements. There is a fair class-room for the use of the boarders, and a small room which serves as a laboratory, museum, &c. There was not much apparatus, but it appeared to be in regular use. Mr. Moore has formed a very useful collection of local rocks and minerals, and a well arranged, named collection of local grasses. Description.

550. The manager of the school is the proprietor of the land, John Pitt Kennedy, esq., who, however, resides in London; the correspondent is the Rev. Bernard M'Kenna, P.P., Donamanagh. The agriculturist, Mr. James Moore, was originally a scholar at Templemoyle agricultural school, and has held his present appointment since 1834. His son, James Moore, jun., who was educated here, acts as assistant agriculturist. The literary teacher, Mr. Patrick Fox, was also educated here, and then spent eighteen months at Glasnevin. Manager, &c. Character of school.

551. The school, while serving the functions of a primary school for the district, is much more of a special agricultural school than perhaps any other in the country; for while in nearly all of the other schools the boys attended chiefly for literary instruction, here agriculture might be said to be the primary object for which a considerable number came. The agricultural class consisted of day scholars and boarders; there were 11 of the former on the roll, who gave an average attendance of 6·8. There was accommodation for 15 boarders, and all the places were filled. It appears that there is rarely a vacancy, the places being filled as soon as vacated. These boarders come chiefly from a district within a radius of 20 miles, but some come also from a greater distance. All of those there at the period of our visit were the sons of farmers holding from 10 to 40 acres, with the exception of one whose father was a gentleman's steward or caretaker from the neighbourhood. Five of the boarders pay an annual stipend of £12; the parents of 10 pay £2 10*s.* in four quarterly payments of 12*s.* 6*d.*; Lady Bunbury, the sister of the proprietor, gives aid to 4 to the extent of £8 a year each; and since October, 1867, the National Board pay for 6 boarders at the rate of £10 a year each. Nine of the

assisted scholars were Roman Catholics, and 1 a Presbyterian; 4 of the paying scholars were Roman Catholics, and 1 a member of the Episcopal Church.

552. One hour each day is devoted to agricultural instruction in the school. The boarders study from 6 to 9 A.M.; work on the farm from 10 A.M. until 5 P.M., with the exception of one hour for dinner—that is 6 hours work; get half an hour's lecture on agriculture from 5½ to 6 P.M.; and study from 6 until 9 P.M. The agricultural instruction is given by Mr. Moore. The class books employed are Mr. Baldwin's new Agricultural Class Book, Stephens' Practical Agriculture, Hodges' Lessons on Chemistry, and Johnston's Agricultural Chemistry and Geology, of all of which there is a fair supply.

Boarding Department: examination of pupils.

553. As the boarding department of this school forms so important and successful an element of it, we confined our inspection of the educational work of the institution to the examination of the resident scholars. We examined the whole in reading, dictation, grammar, geography, and arithmetic, and found them very satisfactorily instructed in those subjects, quite up in fact to the level of boys of the same age in the best schools we have seen. Their proficiency in arithmetic especially was very satisfactory. Five were learning geometry and mensuration; 3 were very well prepared in two books of Euclid, and had a fair knowledge of mensuration especially in connexion with agricultural operations; 2 were beginners, and answered fairly in what they had learned.

554. Their knowledge of the theory of agriculture was very fair indeed. We were especially gratified with the manner in which the scientific principles upon which agriculture is based were taught to them. Mr. Moore appears to have given them just the amount of elementary knowledge in science which their training in other subjects had prepared them for, and they seemed quite familiar with the practice. We were glad to find that they had received regular instruction in the mode, and helped in the operation of keeping farm accounts, too much neglected elsewhere. There could be no doubt that in this school the teaching of agriculture and the practical working on the farm, so far from interfering with the literary instruction, has developed the intelligence of the boys, and enabled them to understand better what they had learned, instead of acquiring a mere knowledge of words. We also heard very good accounts of the fortunes of those who had left. Exclusive of those who had gone to Glasnevin for more enlarged instruction, about 80 (or 40 per cent. of the whole) had become farmers on their own account. Many had also become National school teachers, land stewards, and overseers.

The farm: history.

555. *The Farm.*—Lieutenant-Colonel John Pitt Kennedy, guardian of his nephew Mr. Pitt Kennedy, the present proprietor, wishing to improve the property of which he was trustee, and at the same time to benefit the few tenants upon the 1,160 statute acres of bleak uncultivated mountain land and bog forming the estate, established the present school in 1834, and appointed Mr. James Moore as schoolmaster and agricultural instructor, and to receive the rents. In 1837 a portion of the unreclaimed land was formed into a school farm, and provision was made for boarders. Year by year a portion of the waste was reclaimed, and additions were from time to time made to it of further portions. In 1850 the school farm consisted of 74A. 1R. 26P. statute, of which only 48 acres were under cultivation. It now consists of 90A. 2R. 26P. statute, of which 75A. 1R. 28P. are in cultivation, and 15A. 0R. 38P. are waste land or under roads.

Rent.

556. The present rent is 13*s.* 10*d.* the statute acre; the Poor Law valuation £47, which includes both land and buildings. In the return obtained from the Valuation Office 83A. 1R. 38P. (the amount held at the period of the valuation) the land is valued at £25, and the buildings, exclusive of the school-house, at £16, or together £41. The poor-rate is about 1*s.* in the pound, and the county cess about 1*s.* 6*d.* An ordinary tenant, allowing nothing for tenant-right, would pay an average of £1 5*s.* the Irish acre; the reclaimed land is worth about 3*s.* the acre more than the rent, or about 17*s.* The farm buildings cost about £600; the permanent improvements are estimated as far as can be ascertained to have cost £200, or together £800. If we estimate the original value of the land at 3*s.* the acre, the original value of the whole farm would have been £14, and the present value £64; the difference, £50, would represent the annual value of the improvements, at 6¼ per cent. on the capital sunk. Mr. Moore says that "The farm if let would return more than a fair interest for the money invested in improvements, but could not be expected to let at a rent that would return a fair interest for the capital invested in buildings and improvements." It is plain from the facts just stated that our opinion on this point is even more favourable than that of Mr. Moore. His view, however, may have been influenced by the fact that the capital expended was entirely the tenants', being, as he stated, "chiefly derived from the profits of the farm which were always reinvested;* and in this way the total improvements were effected, and farm buildings erected, the whole extending over a period of 26 years." If the landlord had expended the £800, he would clearly realize the profit of 6¼ per cent. upon his outlay; and so also would a tenant holding the land at an annual rent of 3*s.* representing the value of the unimproved land. As the accounts of this farm go back to 1850, and are well kept, the accounts as between capital and revenue, and as between teaching and agriculture being correct, and the charges and credits right, an analysis of them would afford about the best example of the cost and profits of reclaiming land, and give us the best data which could be anywhere found for determining the relative shares in the profits to which the owner and the occupier would in justice be respectively entitled.

Value of improvements; Farm instruction for determining the cost of reclaiming land.

Farm offices.

557. The farm offices comprise the usual out-offices. The byre was airy and roomy, plain and strongly, but, at the same time, inexpensively built. There was a good dairy, cheaply erected, and very commodious piggeries, and a good fowl house. They are quite adequate for the wants of the farm, are very judicious and, not being too expensive, are suitable for ordinary tenants. Some of them show, however, signs of age. The farm implements are good and sufficient for the wants of the farm, and are kept in good condition.

Cultivation: Rotation;

558. *Cultivation.*—Considering the elevation and quality of the land and the remoteness of the place, the agriculture of the district is very fair. The example set on the farm has been productive of much good, and is being largely followed. The school farm is cultivated according to a six-course

* He evidently meant that portion of the profits which would remain after he had maintained himself and his family, that is his savings.

rotation, which is very well adapted to the character of the soil, climate, and character of the district, and is strictly adhered to.

559. The cultivated land was cropped as follows :— crops in 1868.

Green Crops.	A.	R.	P.		A.	R.	P.
Potatoes,	7	1	26	Grain crops—Oats,	27	2	35
Turnips,	6	0	31	Artificial grass for soiling,	12	3	33
Cabbages,	1	0	0	Permanent grass,	20	0	23
Total,	14	2	17				

560. The cultivation was excellent ; the green crops were clean and luxuriant ; the headlands were all sown with late turnips or cabbages ; and no nurseries of weeds were allowed to accumulate about the fences. Farming very good ;

561. Stolen crops could not be expected to be successful in such a district ; vetches will not do at all at such a height as 600 feet and so far north. Mr. Moore does not now cultivate flax, as he has found that, on an average of years that crop is not as profitable as oats upon his farm. stolen crops, and flax.

562. There was not, of course, much manure at the season of our visit, but some heaps of compost were being carefully collected. A good deal of artificial manure is employed ; for instance, on the 14A. 2R. 17P. under green crops, guano to the value of £34 had been used. Manures.

563. *Live Stock.*—We found the following live stock on the farm :—3 horses, 2 mares ; 13 calves, 1 one year old heifer, 2 one year old bullocks, 14 dairy cows ; 3 ewes, 5 lambs ; 1 brood sow, 8 sucking pigs ; 40 hens, 20 ducks, 8 turkeys, 2 geese. The cattle were mixed Ayrshire and Durham. They were out at pasture during our visit, and looked well ; they are strictly house-fed in winter. In summer they are fed twice a day in-doors on soil, and are let out on pasture from 10 A.M. to 7 P.M. In winter the cows get the first feed at 7 A.M. ; it is composed of pulped turnips, oat-chaff, and meal seeds, prepared in the following manner :—The chaff, turnips, and seeds are placed in a large boiler in alternate layers, and boiling water sufficient to thoroughly saturate the mass is poured over them, and the whole is allowed to stand for 24 hours, when it has partially fermented and is ready for use.* A similar feed prepared in the same way is given at 7 o'clock, P.M., at 11 o'clock, A.M., and 3 o'clock, P.M. After each of the four feeds as much fresh oat straw or good hay is given as the cattle can consume. The milch cows and those near calving get, in addition, after the feed at 11 o'clock, A.M., about 1 lb. of Indian meal and 1 lb. of wheaten bran mixed with water, well boiled, and allowed to stand until sufficiently cold. Live stock ; feeding mixture.

564. This farm has always yielded a fair profit. The earliest balance sheet now preserved there, that of 1850, shows a profit of £45 ; the amount of land reclaimed and under cultivation being about forty-eight acres. The following table gives the profit from the farm as it is now for the years 1864, 1865, 1866, and 1867 :— Farm always profitable.

	£	s.	d.
1864,	131	6	6

565. We have been favoured with the following answers to our queries by the correspondent of the school and the landlord of the farm :— Answers to queries:

Rev. Bernard M'Kenna, P.P., Correspondent.—"The people of the neighbourhood have largely benefited by the example of the school farm, and though at first sceptical as to the success of an improved system of agriculture, now fully admit it and follow the example as far as their means will allow. Rev. B. M'Kenna, P.P

"The instruction is perfectly sound and practical.

"A great number of the farmers' sons have been educated in the school, and are now successful in many situations throughout the country.

"The literary instruction has not been retarded by being combined with the agricultural.

"I would have some hesitation in saying that it would be desirable to have a small farm attached to all rural schools, lest it should interfere with the teacher's duties in the elementary instruction of the children ; but model farms, in connexion with the more advanced literary schools in scattered districts, when wisely and properly conducted, will always be of great advantage to the localities in which they are situated ; but if not properly conducted, or in the hands of inexperienced or merely theoretical agriculturists, may do a great deal of harm."

J. Pitt Kennedy, esq., Memb. Inst. C.E., London.—"I have every reason to believe" that the farmers in the J. P. Kennedy, esq.

* When cold is substituted for boiling water fermentation does not set in so soon, and in this case the mess is allowed to stand for a longer time, varying according to the state of the weather, from thirty to forty hours.

neighbourhood appreciate the value of agricultural teaching, "and know that they often apply to the agriculturist (Mr. James Moore) for his advice."

The instruction given in the school and on the farm "is sound and undoubtedly practical, the farm being in an extensive and solely agricultural district the people see how it is cultivated and the result."

The farmers have given their sons the benefits of the agricultural instruction given at the school, and profited themselves by the example given by the management of the school farm, "and, consequently, their condition has greatly improved. I consider that the school, combined with proper management, has raised the Lough Ashe people from poverty to comparative independence."

"The literary teaching has been successful. We did feel the want of an assistant master, but since his appointment no difficulty has occurred that I am aware of." Literary and agricultural instruction "are combined, and, I think, ought to be."

566. In answer to our query whether it would be desirable to teach the elements of agriculture in all rural National schools, and to add where practicable a farm of a few acres to each, he says:—"Undoubtedly so. I think it difficult to over-estimate the value to any district that a well cultivated farm would be; but to be useful it should be done by the same practical means the small farmer possesses, combined with skill,—not by dint of money, as the poor farmer will tell you, it is done. I think Lough Ashe is a good example. We had not any money. I enclose a map showing what Lough Ashe was in 1830, and its state in 1863, from which you will be better able to judge of the value an agricultural school is to a poor district,—always provided the school is properly managed, and money not squandered."

567. Rev. G. J. Thomas, Rector of Donagheady, says:—"I am not able of my own knowledge to give an opinion as to the character of the education given at Lough Ashe, but I know that the school has turned out clever, well-informed lads and useful farmers, an opinion which is fully borne out by what my neighbours ascertained."

568. In answer to our question, whether it would be desirable to teach agriculture in all rural National schools, he says:—"I consider that to do so would be a great benefit, but that it would not be easy to find an individual who would combine in his own person the knowledge of agriculture and of letters, so as to be able to teach successfully in both branches of education."

Opinion of school and farm.

569. In conclusion, we believe this school-farm to be by far the most satisfactory we have met with. The theory of agricultural science is extremely well taught, without much use of hard names and odds and ends of chemistry, &c., so often mistaken for science, while the literary proficiency of the pupils is quite up to the standard of the best classes in model schools. The practice of agriculture is amply combined with the theory; the tillage is excellent; the crops good; the management economical; the accounts succinct, well kept, and seemingly accurate; and last, though not least, the profit is ample.

Rahan National Agricultural School and Farm.

Rahan National Agricultural School and Farm.

570. *Description.*—This school, which is under the management of the Rev. M. Colgan, P.P., Rahan, near Tullamore, in the King's County, is held in a vested school-house. The school-room is 36 feet long, 24 feet broad, and 16 feet 6 inches to eave-course, is boarded, and has no separate class-room. The fittings, furniture, wall appointments, requisites, &c., are good. The school-house is in very good repair on the whole, but rather untidy, and unfinished looking on the outside. The ventilation was very bad.

Attendance of pupils.

571. The average number on the rolls for 1867 was 83·6; the average attendance during the same period, 46·8; and the number present on the occasion of our inspection, 39, who were all Roman Catholics. The master, Mr. Richard Murphy, was classed first of 2nd class, and had not been trained. He had a house on the school-farm, at about quarter of a mile from the school-house; it was tidily kept, as were the back premises and farm offices. The school itself appeared to be well kept, though the attendance did not seem to have been very regular.

Agricultural class.

572. The agricultural class numbered 16 on the roll, all of whom are sons of farmers; on the occasion of our visit 5 were present. Agricultural instruction is given on each school day from 2 o'clock to 2·30 o'clock, P.M. The text book employed is chiefly the new Agricultural Class Book; the boys take home their copies of the book, and thus help to diffuse among their parents the information it contains. In consequence of an unforseen delay in our journey to the school we had no time to make a detailed examination of the agricultural class, and consequently cannot speak with authority as to its proficiency.

The farm: tenure, &c.

573. *The Farm,* which is situated about a quarter of a mile from the school-house, consists of 12A. 3R. 3P., statute measure, of a good loamy soil, and is held on a lease of 31 years from John O'Brien, esq., J.P., to the uncle of the teacher. The rent and taxes for the year 1867 amounted to £13 13*s.* 6*d.*, being about the amount an ordinary tenant would pay for it. The farm has been connected with the school since 1847. The present tenant's uncle appears to have paid the sum of £60 for the tenant-right of the farm to the landlord on getting the lease, which however contained protective clauses to the effect that if the lessee, Hugh M'Monagle (uncle of present teacher and his predecessor both as teacher and agriculturist) died during the term of the lease, or should be obliged to retire from the office of teacher of Rahan National school through ill health, incapacity, or any cause whatever, the lease should terminate, and in the case of death, his heirs or executors, or, in the case of leaving the school, the lessee himself should receive back the £60.*

Farm buildings.

574. The farm buildings consist of a cow-shed, stable, root house, barn, and piggeries, all on a good

* This was almost the only instance in which we found a detailed preliminary agreement as to teacher-tenants' compensation in case of removal. The fact that the teacher expressed himself as being perfectly satisfied with its terms, and contented with his position, would go far to prove the practicability of drawing up similar agreements elsewhere; as well as the desirability of the Board's insisting on such being entered into by both the parties to a tenure, as a necessary condition of placing a school on the agricultural list.

plan, very neat and tidy, and capable of affording accommodation for a farm of 30 or 40 Irish acres, or four to five times the size of the present farm. They have been inexpensively put up, taking into account the accommodation they afford; they must, however, have cost as much as at 5 per cent. would add, on so small a piece of land, 15*s.* per statute acre to what would be the natural value of the land in an unimproved state, and without any buildings on it. This would nearly double the present rent, and consequently the increased value of the farm could not possibly return in increased rent a fair proportion of the capital invested, which appears to have been supplied by the Commissioners of National Education. The farm buildings were in a very fair state of repair, if we except the want of paint on the woodwork of the dwelling-house. The farm implements were the usual ones of the district, were adequate for the wants of the farm, and were in reasonably good order.

575. *Live Stock.*—We found on the farm: 1, horse, 1 two-year old heifer, 1 milch cow, 2 lambs, 3 stores, and 40 hens and ducks. They were all the ordinary kinds of animals of the district, and were very fairly kept. Live stock.

576. *Cultivation.*—The agriculture of the district is mixed tillage and pasture. The farming is indifferent, except on one or two large farms near Tullamore, where we saw some large and good turnip fields. The rotation on the tillage part of the school farm is a four-course shift, which is strictly adhered to. The following table shows the disposition of the land as regards crops:— Cultivation: rotation; crops of 1868.

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	—	A.	R.	P.
Potatoes,	1	2	0	Oats,	2	1	2	Artificial grass to be followed by lea oats,	2	1	2
Mangels,	0	1	0	Barley, with grass seeds,	2	1	2	Permanent grass,	2	1	10
Turnips,	0	2	2								
Total,	2	1	2		4	2	4				

577. The land under buildings, garden, waste, &c., is 1A. 1R. 25P. The roots were very good, and the grass seeds were rather successful. No stolen crops were cultivated in 1868; cabbages are sometimes grown after potatoes. No flax had been sown for two years.

578. The manure pit is well placed, and in very good order. Two cwts. of Wonfor's special manure had been used on the turnips and mangels as an experiment. Manures.

579. The following table, containing the balance sheets for the three years preceding our visit, will help to complete our account of this farm:— Profit and loss.

580. The agriculturist states that the neighbours come to him for information, and take an interest in the farm. Having received no replies to the several queries we issued in the neighbourhood of this school, we are unable to compare his statement with those of less interested parties.

Sallybank National Agricultural School and Farm.

Sallybank National Agricultural School and Farm.

581. *Description.*—This is an ordinary vested National school, situated about four miles south of Broadford, in the county of Clare. The school-house was originally built in 1843, one-third of the expense (£33 13*s.* 8*d.*) being contributed by E. Bernard, esq., the late manager, and two-thirds (£74 3*s.* 4*d.*) by the Commissioners of National Education. Since the death of Mr. Bernard the District Inspector has acted as manager.

582. The school-house, which was in very good repair, contains one boarded room 34 feet long, 18 feet wide, and 10 feet high. The furniture and fittings were good, as were also the wall appointments and school requisites, for which the school was largely indebted to Mr. Vere Foster. The teaching staff consisted of Mr. Jeremiah Ryan, who acts as principal teacher and agriculturist, his wife, and two daughters. Mr. Ryan, who has been a National school teacher for 30 years, was trained in 1843, and is classed third division of first class. He has a comfortable house on the farm, which is close to the school, and which we found in good order; and fairly tidy. School-house.

583. The following table shows the character of the attendance of boys:— Attendance of pupils.

	Average. On Roll.	Attendance.
First quarter of 1868,	78·7	56·8
Second „	79·8	44·5
Third „	76·8	47·6

584. On the 7th October, 1868, the register contained the names of 74 boys, of whom 40 were

present. The following table shows their classification by lesson books, and the number of each class present on that day :—

		On Roll.	Present.
I.	First division, 13 / Second „ 10	23	11
II.	First „ 14 / Second „ 13	27	19
III.		15	5
IV.		9	5
	Total,	74	40

585. With the exception of 1 boy in the second division of class II., who was a member of the Episcopal Church, all the boys on the roll were Roman Catholics.

Agricultural class.

586. The agricultural class consisted of all those in the Third and Fourth lesson Books, numbering 24 on the roll, of whom 10 were present. Of those on the roll, 8 were between 9 and 12 years of age, 14 were between 12 and 16 years, and 2 above 16 years; 2 were sons of members of the Constabulary, 2 of the teacher, and the rest (20) of farmers. Agricultural instruction is given on each school day, except Saturday, from 2½ o'clock to 3 o'clock, P.M. The text books are the new class book, Johnston's Catechism, and Murphy's Expositor. Before the arrival of a supply of the new class book as a grant of free stock, all the members of the agricultural class had purchased copies of it for themselves. We examined 9 members of the agricultural class. Six did very well in dictation, the subject being a long sentence from the Agricultural Class Book; 4 boys of the fourth class did very well, indeed, in arithmetic (practice, interest, chain rule, &c.); and 4 of the third class did fairly in proportion. The answering of the whole class in the subject-matter of the agricultural class was very fair. They seemed to understand very well those parts which they were asked to read, or were examined in.

The farm.

587. *The Farm* consists of 15A. 2R. 25P. statute measure, of slaty clay land, held from year to year, by the teacher from the Rev. Mr. Baily of Ballingarry, in the county Limerick, at an annual rent of £10, or 12*s.* 9¼*d.* the acre. The valuation is £5 5*s.*, or 6*s.* 8½*d.* the acre; 2 neighbouring farms are valued respectively at 7*s.* 10*d.* and 5*s.* 3*d.* the acre. The land all about lets rather under £1 the Irish acre, so that taking custom as a criterion the teacher pays the full value. The increased value of this farm and the farm premises would be more likely to return in increased rent the interest of a fair proportion of the capital invested, than in the case of almost any farm we have seen. The accounts seem well kept, and are correct as between capital and revenue, but there has been no special expenditure by the tenant that should go to the capital account.

588. The farm wants draining very much; the tenant cannot afford to do it, and would not do it if he could without some tenure or security of repayment. He says he would willingly pay an increased rent, equal to 6 per cent. per annum on the outlay, provided it did not exceed £6 the acre, and that almost all his neighbours would likewise be willing to do so.

Farm offices.

589. The farm offices consist of a cow house, dairy, barn, piggery, tool house, potato house, root house, scullery, and shed. They were erected at a cost of £260 10*s.* conjointly by the Commissioners of National Education and the proprietor and late manager, and afford adequate accommodation. They were the best class of buildings as respects usefulness combined with economy, and as affording good models of small-farm steadings for tenants and landlords to follow that we have seen. They were built before the Board of Works had the management of such matters. They were economically maintained also—perhaps a little too much so.

Implements.

590. The implements were the ordinary ones of the district, and could not be recommended as *examples*. The common spades and shovels should not certainly be used on a model farm. We have already pointed out the good which the school farms might do in substituting proper hand implements for those generally in use. In the early days of the system the teachers were too much occupied in the analysis of soils and abstruse science to mind so commonplace matters as spades and shovels; but now that the schools are beginning to perform their functions successfully it is to be hoped that only the most improved hand implements will be in future used in any school farm in Ireland.

Live stock.

591. *Live Stock.*—The live stock on the farm consisted of 1 ass; 1 calf, 1 one year old heifer, 1 milch cow; 1 brood sow; 30 hens. The cow was of the ordinary breed of the locality. House feeding was strictly carried out in winter, and partially in summer.

Cultivation:

592. *Cultivation.*—The land of this district is very poor and wet, and badly tilled; almost all the farmers, however, grow some turnips and use artificial manures—the great want is efficient drainage. The school farm is cultivated on a six-course shift, with three years successive grass. A four-course rotation would undoubtedly be much better, but the agriculturist fears the expense of the requisite labour. If the farm were drained and the land well tilled the cost of the increased labour would be amply repaid to him. The following table shows the disposition of the several crops at the period of our visit :—

crops of 1868.

Green Crops.	A.	R.	P.	Grain Crops.	A.	R.	P.	Artificial Grass.	A.	R.	P.	Permanent Grass.	A.	R.	P.
Potatoes,	2	0	0	Oats,	2	2	26	1st,	1	1	13		6	1	2
Turnips,	1	1	13	Flax,	0	1	0	2nd and 3rd,	2	2	26				
Mangels,	0	1	0												
Cabbages and Parsnips,	0	1	0												
Total,	3	3	13		2	3	26		2	3	26		6	1	2

593. The land was well cultivated. The mangels and parsnips were good; the Swedes in both plots very fair. The potatoes were also a well-grown crop, but nearly two-fifths of them had become

diseased. The flax was a very good sample. The preceding year a rood had produced 6 stone, which was sold at 8*s.* 6*d.* the stone. The agriculturist thinks flax the most profitable crop, and not at all exhaustive. He steeps his flax unrippled, believing, as do the majority of flax-growers in Ulster, that it rets better, and gives a better fibre. We could never discover any sound reason for this belief. The clover laid down with the flax was very good, and the plot of rye-grass laid down with the previous flax crop was undoubtedly the best on the farm. A stolen crop of cabbages after early potatoes seemed to do well here. quality of crops.

594. In 1867 he used guano to the value of £7, and in 1868 to the value of £8. If this farm were worked on a four-course rotation, and the Belgian system of house-feeding strictly carried out with a sufficient number of cows, there would not be much necessity for stimulant hand-manures. Manures.

595. In the bad times there used to be an industrial class at this school. Now, however, the parents of the children will not let them work for the old wages; nor would they, the teacher thinks, for even a considerably increased remuneration. Another difficulty in the way of keeping up such a class is the extreme irregularity of attendance. There are no farms in the neighbourhood of less than 10 acres, and the tenants of such farms will not go out as constant labourers, although the latter now get nearly 9*s.* a week. These statements we give on the authority of the teacher alone. Industrial class.

596. The balance sheets for the years 1865, 1866, and 1867, which we give in the following table, will help to give an idea of the working of the farm, the floating capital employed, and the profits realized:— Profit and loss.

SCHOOL-GARDENS.

Glasnevin School-Garden.

Glasnevin school-garden:

597. We have already, in our brief account of the history of the origin and growth of the Agricultural Department of National Education, quoted the paragraph from the Fourth Report of the Commissioners, published in 1837, in which it was proposed to attach to each rural National school of a certain class a small piece of land to be cultivated as a garden-farm. Although a garden was established on the ground annexed to the house provided for the teachers in training in the village of Glasnevin, and instruction in kitchen, and to a small extent in flower gardening, was given there to the teachers, so as to prepare them afterwards for managing school gardens of their own, it was only in 1846 that the original idea was carried out by the building of a school-house on part of the ground in question. This school was established, as the Commissioners tell us in their Thirteenth Report (for 1846), "In order to furnish an example of the manner in which a school ought to be conducted in country districts, so as to combine literary and agricultural teaching." This Glasnevin school was in fact to be a model school of a certain type. history;

598. The school-house contains two spacious, well-lighted and airy rooms, communicating by a folding door, so as to allow of the rooms being thrown open for examinations or similar purposes. One of the rooms is for boys, and the other for girls and children of both sexes under seven years of age. There is a basement story which is partly and unnecessarily below the level of the road. One room of the basement is used as a class-room for both the girls and boys. The rest appears to have been intended as a residence for one of the teachers, and is, we believe, used by the female teacher. The school being the property and under the immediate management of the Commissioners, is, of course, well enough provided with furniture, fittings, books, and wall appointments. Some of the maps, however, were old, and one was torn off in part from its roller. The teacher of the boys' school is Mr. John Donaghy, formerly teacher of Larne school, at the period when that school attracted so much attention as a successful agricultural school. He then became superintendent of Glasnevin Model Farm, was afterwards for some years sub-inspector, and then one of the inspectors of agricultural schools. The following statistics will show the character of the present attendance:— description of school-house;

	Average on Roll. 1868.	Average on Roll. 1869.	Average Present. 1868.	Average Present. 1869.
1st Quarter,	46·2	41·5	28	28·6
2nd „	41·8	41·1	29	25·4
3rd „	40·9		25·6	
4th „	40·0		28·1	

attendance of boys;

number present when visited;

599. On the occasion of our inspection there were on the roll and present as follows:—

	On Roll.	Present.
1st Class,	8	2
2nd „	23	14
3rd „	9	7
4th „	4	2
Total,	44	25

school-fees, attendance decreasing;

600. The total fees of the school for the year 1868 amounted to £4 18*s.* 5*d.* Mr. Donaghy did not, however, expect to receive so much during the present year, because several of his best-paying pupils had left. The school had been formerly much better attended, but since the opening of a convent school, within about one hundred yards of this one, the attendance at both the girls' and boys' schools has gradually decreased. We were told that boys even above ten were received at the convent school. It appears from the school accounts that since January, 1866, about the time of the opening of the convent school, there have left this school and gone to other schools the following number of boys:—

number of boys who have gone to other schools;

To the Glasnevin Convent School,	48
„ Christian Brothers' and other Catholic schools,	9
To a Church Education school,	1
„ other National schools,	4
„ schools not known,	3
Total,	65

cause of decrease;

601. This desertion of the Glasnevin school cannot be ascribed to want of teaching power, for, in addition to Mr. Donaghy, there is an assistant teacher, who seemed an intelligent young man. It is evident that the parents of the children, the great majority of whom are Roman Catholics, prefer religious schools to even so favoured a school as this. The fact of Mr. Donaghy being a Protestant may, no doubt, have had some influence on the preference shown for the convent school; but that cannot be the only or even the chief reason, for a similar decrease has taken place in the girls' school, which is taught by an experienced classed Roman Catholic teacher.

agricultural class;

602. The agricultural school-class comprised all those in the third and fourth classes (there is not now a fifth class), numbering thirteen on roll, of whom nine were present. The industrial class consists of eight, of whom seven were present. The members of the industrial class, with the exception of one boy, who is only in the Second Book, are included in the thirteen just mentioned.

examination of class;

We examined those present in reading, dictation, writing, and arithmetic. The whole read intelligently, from the agricultural class-book, and in general could explain the meaning of the terms that occurred in the part of the book they read from. Four wrote a sentence from the same book without a fault in spelling or punctuation; two more wrote it without any fault in spelling, but did not punctuate or use the capital letters correctly; one made a single fault in spelling, and one did not take down the sentence correctly. The writing of all was good. They were all very backward in arithmetic; one failed in simple multiplication; three failed in an easy sum in division. Of five who tried an easy sum in division of money, one failed. None of them could do a very simple sum in proportion. They were all rather well acquainted with the Map of Ireland. For boys so backward as they seemed in ordinary school instruction, they had some useful general knowledge about crops, due no doubt to the allotment system, which we shall describe immediately. On the whole this school in its present condition is below an average National school, and certainly does not "furnish an example of the manner in which a school ought to be conducted in country districts, so as to combine literary and agricultural teaching."

description of school ground;

603. The whole of the ground upon which the training institution and National school are situated contains 3A. 1R. 31P. statute measure, of which about one statute acre is occupied by the school-house, school-premises, play-ground, and some ornamental grounds, leaving about 2A. 1R. 31P. for cultivation. This portion is divided into three parts:—1, the school-garden proper, close to the school; 2, a piece of ground laid out as a garden close to the training institution, in which rhubarb, seakale, &c., are grown; 3, the allotments. The plots one and two constitute the school-garden, and contain about one Irish acre (1A. 2R. 19P. statute) of land under crops. The allotment plot contains 1R. 26P. There is also a small piece of ground close to the latter, upon part of which have been erected piggeries; the remainder is used as a kind of nursery, and contains a few forcing frames.

"industrial classes" first established;

604. At first the whole of the available ground was cultivated as a garden-farm for the account of the Commissioners. With the view of encouraging the boys to acquire a practical knowledge of gardening, a limited number of the advanced boys were induced to work in the garden two hours each day, after the ordinary school business. Each scholar received 6*d.* a week for his labour. This was the first "industrial class." In 1849 the late Dr. Kirkpatrick recommended its extension to the other agricultural schools. The produce of the garden was valued to the Commissioners at the current market prices, for the use of the male and female training establishments. The boys of this industrial class attended daily at a course of lectures, given to the teachers in training, on the elementary principles of agriculture. In the Report for 1847 the Commissioners, however, say that "it will be a subject for future consideration whether this arrangement for the regulation of the labour of the garden might not be so altered as to place under each of the pupils a small allotment, which he shall be required to cultivate, being permitted to receive a portion of the profit derived from his industry." The system here suggested was put into practice on the 3rd of March, 1850, and has continued in operation since.

extended to other schools in 1849;

Commissioners suggest allotments to pupils,

the "allotment garden;"

605. The "allotment" garden is divided into two parts by a central walk. Each half is divided into three plots by narrow walks running off from the central walk. Two of these plots contain 12 perches, statute measure, two 11 perches, and two 10 perches, or in all 1R. 26P. Each plot is placed in charge of a boy—a member of the industrial class; he is charged rent at the rate of £5

the Irish acre, and is provided with the seeds, manures, &c., for which he is charged the cost. A regular debtor and creditor account is kept for each plot, and at the end of the year a balance is struck, and whatever remains after paying all expenses is paid over to the boy who has tilled it. Each tenant of a plot generally works three days in the week on his own plot, and three in the general school-garden, for which he is paid 1*d.* the hour, or 6*d.* the week. The following table contains the balance-sheets for these plots for the years 1867 and 1868 :— Profit and loss account.

Allotment.*	Area in Statute Perches.	Expenses.* 1867. £	s.	d.	Expenses.* 1868. £	s.	d.	Receipts. 1867. £	s.	d.	Receipts. 1868. £	s.	d.	Profit and Loss Account. 1867. £	s.	d.	Profit and Loss Account. 1868. £	s.	d.
1	12	1	19	1	0	19	8½	4	3	7½	3	10	11	2	4	6½	2	11	2½
2	11	1	13	1	0	18	9½	3	19	6	3	9	6	2	6	5	2	8	8½
3	11	1	7	3	1	0	0	3	17	9½	3	11	7½	2	10	6½	2	11	7½
4	12	2	3	11½	0	19	0	4	7	4½	3	7	1	2	3	5	2	8	1
5	10	1	15	5½	0	16	3	3	1	4	3	14	11	1	5	10	2	18	8
6	10	1	7	2½	0	14	7	2	14	10	3	7	11½	1	7	7½	2	13	4½
	66	10	6	0½	5	8	4	22	4	5½	21	2	0	11	18	5	15	13	8

606. The first year the system was put into operation, 1850–51, the profit realized and divided among the six boys was £12 6*s.* 1½*d.*; in 1852–3 it was £17 1*s.* 10½*d.*; in 1854, £12 8*s.* 5*d.* The chief plants cultivated are cabbages of different varieties, borecole, turnips, potatoes, parsnips, &c. The plots were in fair order when we saw them; but the walks, though in good order, were covered with what was considered to have been coal-ashes, but which was almost wholly coal. No worse example could have been given to young lads than to see such wanton waste of fuel. It too frequently happens that persons who are careful of their own property, and even of that of private persons, feel no scruple in wasting public property; but it appears to us that the fault is graver when public property is wasted just when a lesson of conscientiousness in the stewardship of others' property, and of economy, is expected to be given. Mr. Baldwin, it appears, had already complained of this waste, for which the Board of Works, we believe, is responsible. This waste shows the injudiciousness of making the Board of Works coal merchants among the many other functions thrust upon them. Profit made in former years. Coal spread upon walks, a bad example.

607. The school-garden is cultivated, under the direction of Mr. Donaghy, by men hired for the purpose, aided by the industrial class. The part close to the school is divided into plots, and a kind of rotation is followed out on each, by which shallow-rooted plants follow deep-rooted ones, and the converse. The common culinary vegetables are chiefly grown on this part; the seakale, rhubarb, and asparagus are chiefly grown in the lower plot of ground, which is less exposed. School-garden:

608. When the garden was originally laid out a number of standard fruit-trees were planted through it. In 1852, when all the land was placed under the teacher, the garden was remodeled, the old fruit-trees removed, and a lattice fence put round each plot, upon which espalier, apple, pear, plum, and cherry trees were attached. This is an excellent system, but as there is no fence to prevent the boys and girls from taking the fruit, not much profit is realized from it. fruit-trees, not protected;

609. The piece of ground used as a nursery looked very untidy. The frames were originally procured for the purpose of showing the cultivation of cucumbers, vegetable marrow, mushrooms, &c., but they do not seem to be much used now. nursery neglected.

610. The first teacher of this school, Mr. William Howe, proposed to the Commissioners in 1851 to build a piggery, in order that he might exemplify the use of the garden-waste for feeding pigs, and thus show how the profit of the school-garden might be largely increased. The piggery was erected in 1853, and in the first year after he realized £14 3*s.* by the feeding of six store pigs. This piggery is one of the most absurd and extravagant of any of the buildings erected in connexion with the whole department of agriculture. *The floor was originally boarded;* but Mr. Baldwin has had the boards removed when repairing it. To give to a teacher, or the son of a farm-labourer, such a building as a "model" for his imitation, is to mock him. Piggery.

611. Four sets of accounts are kept at the Glasnevin Industrial School—1, the cost of labour and other expenses connected with the plot of ornamental ground belonging to the training establishment; 2, the cost of labour, &c., for school building and grounds; 3, expenses and receipts of industrial school-garden; 4, expenses and receipts of each of the school allotments. The three first, which concern the public, are kept in the same book; they are generally well kept. We noticed a few mistakes, which, although not affecting the final balance-sheet, at least to any greater extent than a few pence, ought not to be in books which are, or at least ought to be, open to the inspection of all teachers in training. Thus, for example, a sum of 4*s.* is charged in its proper place in the cash account for 30th May, 1868, which is omitted from the labour account. We mention this example merely to show the character of the very few errors, and that they do not affect the trustworthiness of the accounts as a whole. Different accounts kept.

612. The cost of cleaning the school-rooms and school-premises, keeping the walks and flower-beds about the school-house in order, and sundry expenses connected with the administration of the place, *e.g.*, postage and cab-hire, and the labour expended on the ornamental grounds of the training department, cost, for each of the last three years, as follows :— Cost of ornamental ground, &c.

	School-house, Premises, and Grounds. £	s.	d.	Ornamental Grounds of Training Institution. £	s.	d.
1866	19	6	11½	9	19	0
1867	23	4	5	9	18	10
1868	26	7	5	12	13	3

* The tenant of each allotment is paid as a member of the industrial class while cultivating his own plot; the amount thus paid is not included in the expenses. The item of "labour" is not included, because the fruit which grows on each plot is put to the credit of the Commissioners, and is considered to be equivalent to the wages paid, which Mr. Donaghy estimates to be on an average about 8*s.* 8*d.*

None of the items composing these sums are in any way chargeable to the school-garden, and have been rightly charged to separate accounts.

Profit and loss on school-garden.

613. The following Table gives the balance sheet of the Industrial School-garden for each of the last three years :—

Dr.	1866. £ s. d.	1867. £ s. d.	1868. £ s. d.

£	76 3 7	72 13 7	82 17 3

Balance-sheet does not include valuation.

614. In these balance sheets no account is taken of any difference between the valuation of the stock, &c., at the beginning and end of each year. It does not appear, indeed, that a valuation is made. Except where permanent improvements have been made, such as the renewal of fruit trees or the laying down of beds of asparagus or rhubarb, the valuation can scarcely undergo any material change. Still it ought to be made, in order to show the pupils and the teachers in training the true nature of profit.

615. The profit might be somewhat increased if the fruit could be better protected.

Recommendation as to future development.

616. If the Central Training Institution be continued, and the house in Glasnevin retained in connexion with it, and that the system of school-gardens be extended, the Glasnevin school-farm should be made a model for showing how to work the school-gardens which may hereafter be annexed to rural National schools. The present garden is, however, only suited for the neighbourhood of a city or large town affording a steady market for vegetables. In most cases the school land should be cultivated as a combination of a farm and garden. It would be necessary, therefore, to have annexed to this school a second plot of ground of about the same extent as the school-garden, namely, about one Irish acre, or rather, as much land as could be made to feed one cow by improved husbandry, which could be cultivated as a school-farm and garden for rural districts. The present piggery could be made into a very good cow-house, and a new piggery, which would really serve as a model for similar buildings, erected. The general principles of horticulture or agriculture might be taught in such an "unit" garden or "unit" farm, according as circumstances required it to be worked as a garden or as a farm, as well as on a large farm. With the opportunity which the Glasnevin Agricultural Training Institution would offer to teachers of seeing those principles practically applied to farms of different sizes, the training of the rural school-teachers in agriculture and gardening would be very complete.

Other school-gardens.

617. Besides the Glasnevin school, there are only four other school-gardens in Ireland—one at Derrycughan, near Markethill, in the county of Armagh; one at Loughglyn, in the county of Roscommon; and two others, not far from the latter, in the adjoining county of Mayo, namely, at Ballaghaderreen and at Prison, near Balla. The three latter are on the estate of Viscount Dillon, and were established by Charles Strickland, Esq. The one at Loughglyn consists of only two roods of land, the object being to teach the cultivation of kitchen-gardening rather than agriculture. This school deserves notice, because the allotment system is worked in a different way from Glasnevin. At Loughglyn each boy in the industrial class has his allotment at home, which he works under the direction and inspection of the teacher—the school-garden serving as the model. These allotments date from 1847, but the school-garden was established in 1850.* The system, under the watchful care of Mr. and Mrs. Strickland, has had considerable success. We regret that we had not an opportunity of lately visiting this and the neighbouring school gardens, which owe their establishment to Mr. Strickland. As we were desirous of having the opinion of a gentleman who has had considerable experience of the combination of literary and agricultural teaching in National schools, we sent Mr. Strickland a copy of our queries, to some of which he has supplied us with the following answers :—

Lough Glyn school.

Peculiarity of allotment system there.

Mr. Charles Strickland on agricultural instruction.

He says the farmers in his neighbourhood appreciate the advantages of agricultural teaching, and are disposed to take advantage of that given in the Loughglyn school, which is sound and practical. He thinks the farmers have given their sons the benefit of the agricultural instruction of the school, and that "in many instances considerable improvement is carried out at home in the management of their small holdings."

"The literary teaching is successful, and it is not interfered with by the agricultural instruction."

"It would be most desirable and useful to have agriculture taught wherever practicable in National schools. I do not think it would be desirable to attach a small farm to the school, as it would take up too much of the time and attention of the teacher. Also, in many cases the teachers have not capital to carry out improved agriculture to any extent."

"I think the best mode would be to have a small piece of land—say about half an acre—attached to the school, and on it a regular system of cropping carried on, so as to give the pupils practical instruction of how they were to manage their crops and farms at home—in other words, a miniature model farm. Further instruction could be given to the pupils by the teacher visiting occasionally the lands tilled at home by the

* An interesting report was made to the Commissioners of Education in 1855 on the Loughglyn school, and on the annual exhibition of the produce of the garden allotments held in that year by Mr. Baldwin, the present Superintendent of the Agricultural Department, and was published in No. X. of a small journal then officially published, called the "Journal of the Albert National Agricultural Training Institution."

pupils, and giving them advice and instruction there on the spot, and so enlisting the parents or elder members of the families to co-operate with the pupils instructed at the school-farm."

Nothing done for the agricultural instruction of girls.

618. It seems singular that while so much has been done to teach improved husbandry to the boys that nothing should have been done for the girls—the future wives of those boys, and without whose sympathy and active co-operation no real change in the ideas or habits of the people can be effected. The extension of garden-farms appears to offer the means of giving some instruction in those parts of husbandry which are the special province of women—the cultivation of culinary vegetables, dairy management, and the rearing of pigs and fowl. If instruction of this kind is considered useful, and has been found beneficial in reformatories, we cannot see why its advantages should be confined to those who are criminal.*

FARMS NOT IN CONNEXION WITH THE BOARD OF NATIONAL EDUCATION.

Oldcastle Endowed School.

Oldcastle Endowed School.

History of its establishment.

619. *Description.*—This school and farm are situated quite close to the market town of Oldcastle, in the county of Meath. From a report published by the Trustees in 1865, we learn the following particulars of its origin and history:—The school has a considerable endowment, derived from the bequest of a Mr. Laurence Gilson—or, rather, Gilsinan—a native of the place, and a Roman Catholic, who had made a considerable fortune in England. By his will, dated 17th April, 1809, he left the sum of £25,400 in the Three Per Cent. Consols to endow the school at Oldcastle, naming the Protestant rector and the parish priest as trustees. The school was to be opened to children of all denominations, natives of the parish; and Protestants and Catholics were alike eligible to be masters and mistresses. The validity of the will was contested by the next of kin, but after some litigation, which extended over a considerable time, was confirmed by the English Court of Chancery. The Lord Chancellor of England appointed the late Anthony R. Blake, esq., afterwards one of the Commissioners of National Education, and some others, to prepare a scheme for carrying out the testator's intentions. The scheme prepared was acted upon. It proposed that three lay trustees should be added to the Trust—namely, the Chief Secretary of the Lord Lieutenant for the time being, the late J. W. Naper, esq., of Loughcrewe, a Protestant, and the proprietor of the town, and who had fulfilled a hope of the testator by granting a site for the school; and the late Gerald Dease, esq., of Turbotston, a Roman Catholic. It also proposed that £6,000 should be appropriated for the building of two schools, after the plan of some schools which had been a short time previously erected on the Borough-road in London. With the view of securing that the children attending the schools should receive religious instruction, it was proposed that the Protestant and Roman Catholic clergymen of the parish should be appointed chaplains to the schools at a salary of £25 a year each. It was also proposed that a sum of money, not exceeding £160 in any year, should be expended in clothing for the scholars, and that a premium of £5 should be paid for each of eight boys apprenticed in the town annually. The school was opened in 1827; the experience, however, of a few years showed that the money expended in charity offered the chief inducement to many parents to send their children to the school, and that the education given there was a secondary object. During the period of the potato famine the money then annually given away attracted a number of pauper lodgers to the town. In 1853 the lay trustees, Sir John Young being Chief Secretary, petitioned the Court of Chancery for a revision of the schemes for carrying out the trusts. With the sanction of the Board of Education, the trustees appointed Mr. J. W. Kavanagh, then Head Inspector of National Schools, to examine the Oldcastle schools, and report thereon. This report they submitted through their attorney to the consideration of Vice-Chancellor Kindersly, who ordered the present scheme to be drawn up.

Addition of a small farm;

620. The new scheme embraced agricultural education, and the consequent addition of a small farm. A plot of land immediately contiguous to the school buildings, containing about 19 statute acres, was obtained from Mr. Naper, and upon it were built a house for the accommodation of six boarders,—who may be considered the representatives in the new scheme of the apprentices in the old,—and farm-offices suitable for the size of the farm. With the view of ensuring that the business of the schools should be well attended to, and the farm carefully managed, the new scheme provided for a salary to be given to a professional Inspector and Examiner. The schools were reopened under the new scheme in January, 1858, and in July, 1859, the agriculturist was put in charge of the farm.

school buildings;

621. *School Buildings.*—The school-house contains two fine rooms, with class rooms attached—one for boys, and the other for girls; there is a third smaller room for infants. They are well lighted, fairly ventilated, and comfortable. The fittings and furniture were very good; there was an ample supply of school requisites and wall appointments. The mistress of the infants' school, the mistress of the girls' school, and the head master of the boys' school, reside in the part of the building appropriated for dwellings. Their apartments are comfortable, well furnished, and were in very good order. The out-offices are good, and at the time of our visit were in excellent repair, and very clean.

agricultural instruction;

622. *Literary and Agricultural Instruction.*—As two of our colleagues had examined these schools with a view of ascertaining the quality of the literary instruction acquired by the pupils, we did not think it necessary to make a special examination in the ordinary school business. The agricultural class consists of all the boys in the Fourth and Fifth books, and some of the more advanced boys in the Third Book. On the day of our visit 41 were present, of whom—

* We are glad to learn that, on the proposition of the Superintendent of the Agricultural Department, the Commissioners of Education propose to make an experiment in the instruction of girls in certain matters connected with agriculture and domestic economy.

agricultural class;

There were sons of farmers,		17	Total connected with agriculture, 24.

,, ,,	tradesmen,	7	
,, ,,	servants,	8	
,, ,,	schoolmasters,	2	
	Total,	41	

industrial class;

623. There were no boarders in the institution when we visited. Some of the boys belong to an industrial class; they work daily on the farm, under the direction of the agriculturist, and receive 1*d.* the hour.

character of instruction.

624. Agricultural instruction is given on four days of the week, from 3 P.M. to 3½ P.M., by the agriculturist, who also acts as second master of the school. The members of the class are taken over the farm occasionally. The text-book employed is the new Agricultural Class Book, of which there was a very good supply in the school, every boy in the class apparently having one. The answering in theoretical agriculture was very good. Most of the boys in the class showed that they had acquired a sound knowledge of the general principles of scientific agriculture. Instruction appears to be regularly given in the elements of physical science, as the boys knew a good deal, and that correctly, about the laws of heat, the constitution of the atmosphere, the structure of plants, &c., and we were not therefore surprised to find that the pupils of the school have been remarkably successful in the May Scientific Examinations of the Department of Science and Art. The answering in practical agriculture was also very satisfactory, and showed that a good deal of sound information could be imparted in a class in school. It would, however, be desirable that here, as indeed everywhere else, the field lectures should be more systematically given.

The farm, extent, &c.

625. *The Farm.*—The farm buildings consist of a good house for the agriculturist, and a well constructed, but inexpensive, tidy set of offices, with an enclosed yard. The land under cultivation, and for which rent is paid, contains nearly 18 statute acres, or a little more than 11 Irish acres. The soil is a calcareous loam; and the land lies flat. The rent paid is £32 2*s.*, or £1 15*s.* 8*d.* the statute acre. The rent is a fair one, and an ordinary tenant would pay the same amount for it.

rotation;

626. Two rotations are illustrated on the farm,—the ordinary four-course, and a modification of it, which is intended to show how the crops of a farm should be changed to suit local circumstances, or modifications of prices.

live stock;

627. The live stock consisted of 7 cows, 2 heifers, and a jennet; but since the date of our visit the number of cattle has been increased to 12, *or one cow to somewhat less than an Irish acre of land.* The great source of profit on this farm is the produce of the dairy; the cows are accordingly strictly house fed, and, with the exception of the corn and potatoes, everything else grown on the farm is consumed there, and turned into milk or dung.*

land under crops in 1868;

628. The following table shows the allocation of the land when we visited:—

		A.	R.	P.	A.	R.	P.
Grain crops.—Oats,					4	3	30
Green crops,	Turnips,	1	2	35			
	Mangels,	1	1	18			
	Cabbages,	0	0	32			
	Potatoes,	1	0	35	4	2	0
Grass,					8	2	0
	Total,				17	3	30

quality of crops;

629. The mangels and Swedes promised to be good crops; the rye grass was particularly good, and cannot fail to interest the farmers of the district. The whole farm looked tidy and well cultivated, as is shown by its balance sheets. The success of this farm, and the very satisfactory example which it affords of the advantage of house-feeding, and above all, of tillage over mere pastoral farming, induces us to give the balance-sheet for each of the years, from its establishment in 1859 to the time of our inspection. The following table contains the balance-sheets for 1859–60, 1860–1, 1861–2; the first includes from June, 1859, to October 31st, 1860; the others represent the years ending the 31st of October, 1861 and 1862, respectively:—

* See note on page 847, referring to a letter printed in the Appendix to this Report, in which the advantages of tillage *versus* grazing are discussed.

† The farm came into operation this year, the working capital having been expended in the purchase of cattle, implements, &c.; the items on the Dr. side include the whole of it.

630. In 1863 the period for taking the valuation was changed from the 31st October to the 31st March, on the ground that such valuation can be better made after the greater part of the crops have been disposed of. The end of March is, perhaps, the period at which a farmer has less of unsold produce on hand than at any other period of the year. The first column, on the Dr. and Cr. side, in the next table includes therefore 18 months from 31st October, 1862, to 31st of March, 1864. Profit and loss from 1862 to 1868.

631. The basis of all true balance-sheets—the inventory and valuation—seem to be specially attended to at Oldcastle. It is very easy, by an over-valuation, to cover for a certain time bad management, and consequently every precaution should be taken to insure an accurate inventory, and a moderate but true valuation. All the farm accounts are kept with great care, and in much detail, and it is very easy to check the annual valuation. The following summary of the inventory taken on the 31st March, 1868, will serve to show the amount of working capital engaged, and the amount employed under the several categories:— Valuation carefully made,

summary of that of 1868.

The Benedictine Farm at Leopardstown, near Dublin.

Benedictine Farm.

632. Leopardstown House and demesne, situated a few hundred yards from the Stillorgan station of the Dublin and Wicklow Railway, which is about 5¼ miles from the Dublin terminus, formerly belonged to Lord Castlecoote. Part of the land around the house was fenced off, and constituted the demesne properly so called. The remainder is the farm, which, except on the side of the demesne, is surrounded by a high wall and a belt of trees. From Lord Castlecoote it passed into the hands of Mr. Fenton Hort. About the year 1843, the Royal Agricultural Society of Ireland took some steps to found an agricultural college there. The fine set of farm offices offered the means of providing accommodation for a number of boarders. The project not having succeeded, the property was sold to Mr. A. J. Hawkins, who farmed it with considerable success for several years. The farm, consisting of 140 Irish, or 226 statute acres, and the head-rent of the house and demesne, were sold in the Landed Estates Court in February, 1867, for the sum of £17,000, to a community of English Benedictines, who purpose founding a monastery there. The new community consists as yet, however, of only one priest, the Rev. John Sullivan, who manages the farm, and a lay brother. History of farm;

633. This farm exhibits one of the most complete examples of high farming to be found in Ireland, as regards improved implements, deep tillage, heavy manuring, stolen crops, and highly-bred

stock. The rotation adopted is a five-course shift:—1, lea oats; 2, green crops, potatoes, mangels, and turnips, in about equal proportions of each—that is to say, from ten to fifteen acres of each; 3, wheat; 4, barley, with grass seeds; 5, grass. A great deal of manure is brought from Dublin and used on the green crops at the rate of from 35 to 40 tons per acre; the mangels get in addition 2 cwt. of guano, and the Swedes 1½ cwts. of guano, and 1¾ cwt. of superphosphate. The produce of potatoes is about ten tons; and as one of the earliest varieties is cultivated, a good price is realized. As sometimes as much as 25*s.* a ton can be obtained for Swedes and mangels in Dublin, a good deal of those crops are sold. The yield per acre is usually about 30 tons of mangels and 30 to 35 tons of Swedish turnips. The wheat crop of 1868 was very fine; 5 Irish acres of Lammas red produced 90 bushels per acre, the average yield being 16 barrels, or nearly 72 bushels, per Irish acre, or about 46 bushels per statute acre. An excellent brewer's barley is grown after the wheat. When grown after the manured crops the quality of the grain is inferior for brewing purposes, and owing to the too rapid growth of the straw, it readily lodges, and the yield of grain is also less.

Manures; quality of crops;

634. The seeds sown with the barley consist of a mixture of Italian rye-grass and red clover, in the proportion of 2 bushels of the former to 10 to 12 lb. of the latter. The first and second crops are both made into hay. Some of the hay is sold, and the growing crop is sometimes sold to hay-dealers at the rate of £10 to £12 an acre, for both crops. The black Tartarian oats grown on this lea-land produces about 14 barrels, or about 58 bushels per acre.

grass;

635. One of the great features of the farm is the cultivation of stolen crops grown after the lea oats. The land is ploughed immediately after the oat crop is cut and removed, and sown with—1, a mixture of dun oats and winter tares; 2, or rye; 3, or rape. The oat and tare crop and the rye are cut and used for feeding horses and cows in spring, being fit to cut towards the end of April or beginning of May, according as the season is favourable. The rape is sometimes cut for cattle, but generally it is eaten by sheep folded on the lands. In either case the ground is cleared of the whole of the stolen crops in time to prepare the lands for the green crops which follow in the rotation.

stolen crops;

636. Besides about 20 dairy cattle either pure short-horn or cross breeds, a large number of calves and yearling heifers are annually kept, as nearly all the calves of the cows are usually reared. At the time of our visit there were about 90 head of cattle of all kinds, including a fine pedigree short-horned bull, whose service is hired to neighbouring farmers, a good Kerry bull, and 2 young bulls. A flying flock of about 100 half-bred ewes is also kept. They are purchased about the time of the Ballinasloe fair in the autumn, and both ewes and lambs are sold fat as soon as ever they are fit for the market. The cows are almost entirely house-fed in winter; in spring and summer they are partly let on the permanent pasture and partly house-fed, with green forage and some cut straw and pulped roots, when the latter are available.

cattle; sheep;

637. At present about 9 working horses are kept, and a few are also bred. More horses were formerly kept, but the Rev. Mr. Sullivan purchased, in the autumn of 1868, a set of Fowler's double-engine steam tackle, which enables him to work the farm with so small a number of horses. For the present number there will be ample employment where so much carting has to be done.

horses:

638. Besides the fine set of offices already existing on the farm, the Rev. Mr. Sullivan has erected two very sensible buildings, separated from each other, with enclosed yards, one of which is used as a byre for cattle, and the other, when we were there, for the young horses; but it might be used, when required, as a byre. By this arrangement the danger of having all his cattle under one roof is avoided.

new cow-houses;

639. All the carts, machines, and implements are of a superior description, and fully represent the most advanced methods of cultivation. By means of the engines of the steam tackle all the work requiring power can be done more economically than with a fixed engine. Thus, Father Sullivan can take his thrashing-machine into his haggard and thrash out his corn without having to move it more than a few yards. As the Leopardstown farm could not alone support so expensive a machine as the steam tackle, which costs altogether about £1,500, Father Sullivan proposes to hire it out, and had already received applications for ploughing a considerable quantity of land.

Implements,—steam plough;

640. Since the farm came into the hands of the Benedictines a considerable amount of work has been done. For some years before the late proprietor sold the farm he had been unable to look after it, and it consequently got into a very foul state from couch grass and other weeds. The land is being gradually cleaned of weeds, which are being utilized by being interstratified with good rotten dung, so as to form a great heap of compost, several hundred yards in length, along one of the farm roads, and in a very convenient position to be applied to the land adjoining. Father Sullivan has also been removing the granite boulders with which all the land lying along the base and slopes of the Dublin mountains sometimes abound, and which frequently come close to the surface, and, consequently, prevent cultivation, especially by steam power. Already several hundred tons of them have been removed and used for building the new byres; and according as any of them are detected in the course of ploughing, they are marked, and afterwards removed.

improvements made;

641. The thorn fences have also been cut and trimmed, and all weeds removed from about the fences and headlands. In connexion with this part of the improvements at Leopardstown we may mention the attempt of Father Sullivan to utilize the ground occupied by the belt of timber surrounding the farm, which is about 17 acres. From this he has had all the briars, and, indeed, all kinds of plants, even grass, removed, the soil stirred up and sown with seeds of those varieties of grass which thrive under trees. He hopes to be able to use this space for grazing when the grass grows up.

grass seeds sown among trees;

642. Father Sullivan appears determined not to neglect any source of profit on this farm, and he is accordingly endeavouring to rear some of the improved breeds of poultry also, among which we may mention a splendid flock of Toulouse geese, about the best we have ever seen in this country.

poultry;

643. In case the Benedictines establish a school at Leopardstown, the farm would afford one of the most complete examples of high farming anywhere to be met with. It might also be utilized in connexion with a training school for Catholic teachers, in case denominational training schools be hereafter established, and that the one at Glasnevin should be found too remote or objected to on other grounds.

farm well adapted for a school.

RECAPITULATION. Recapitulation

644. It now remains for us to recapitulate the conclusions we have arrived at, and to recommend those changes which in our opinion would tend to improve the system of agricultural education in Ireland.

645. Believing that the class chiefly requiring instruction of this nature is that of the small farmers and labourers, we begin with those schools which, being intended for the instruction of their children, we conceive to be the most important and the most useful.

646. *Ordinary Agricultural Schools.*—We recommend— of recommendations.

1. That the elements of agriculture be taught in every rural State-aided school. Paragraph 56.
2. That where there is attached to such a school, or not more distant from it than a quarter of a mile, any land farmed by the teacher as a model farm, a portion of his payment shall be made to depend on the land being so tilled as to be a good example to the pupils.
3. That a further portion of the teacher's payment shall be made to depend on the results of his pupils' answering in theoretical and practical agriculture, or cottage gardening. Par. 57.
4. That small grants in aid of industrial classes shall continue to be given. Paragraph 604.
5. That school farms of more than two acres be discouraged. Paragraphs 521, 526.
6. That the cultivation of the ordinary garden vegetables should be insisted on, and that of the commoner kinds of fruits encouraged, in all school farms or gardens. Pars. 94, 605, 617.
7. That increased attention should be paid to instruction in the mode of keeping farm accounts. Paragraphs 40, 48.
8. That wherever a dairy cow is kept on a small model farm, the system of house-feeding should be more strictly carried out than has hitherto been the case. Paragraphs 46, 48, 627.
9. That to prevent needless complications, and to secure to teachers, in case of removal from their schools and school farms, just compensation for the loss of seed, labour, and ripening crops, as well as for any unexhausted improvements made by them during their period of occupation, the Board shall for the future decline to place any school on the agricultural list unless a satisfactory agreement shall have been signed by both the contracting parties on the teacher's entering the farm. Paragraphs 58, 525, 573.
10. That in so far as their rule would affect the cases of agricultural schools, the Board of Works should be requested to reconsider that by-law by which £100 is made the lowest limit of a loan for land improvement. Paragraph 62.

647. *First Class Agricultural Schools under Local Management.*—The majority of these schools, of which there are but seventeen, differ from the "ordinary" agricultural schools chiefly in the size of the farms attached, and in the fact that the salary as agricultural instructor allowed to the teacher by the Commissioners of National Education is in their case £10, while in that of the "ordinary" schools it is only half that amount. The case of Lough Ashe, however, of which a fuller account will be found in pages 911-914, differs from the rest of these schools in maintaining, and most successfully instructing, a large class of boarders. The excellence of this school has been acknowledged by the Commissioners of Education, who have made a special extra grant to the teacher, in recognition of his services in the cause of agricultural education. Ballinakill was also a very favourable specimen. Paragraphs 478–9, &c.

648. The remarks that we have made in respect to the "ordinary" agricultural schools apply in great measure to those of this class. As a rule, however, and although a few of these farms are amongst the most useful we met with, we are disposed to prefer the smaller farms, as being less likely to injure the efficiency of the school by attracting too much of the teacher's time and attention from the literary instruction of his pupils. In some of these, as in many of the "ordinary" schools, we found too little attention paid to giving practical lessons on the farm in illustration of the theories taught in the school-room.

649. *Agricultural Training Schools, Glasnevin.*—To promote a teacher's efficiency as an agricultural instructor it is desirable that he shall himself receive special instruction in the theory and practice of scientific agriculture. We recommend therefore— Glasnevin

Recommendations.

1. That the Albert Institution and Model Farm at Glasnevin be retained as a school of agriculture. Paragraph 71.
2. That all teachers who may for the future be trained under the immediate superintendence of the Commissioners of National Education shall, as now, receive agricultural instruction at Glasnevin.
3. That in the event of approved training schools for teachers being established in or near Dublin, under the management of other authorities than the Commissioners of National Education, the teachers being trained therein shall be allowed the same advantages as those being trained in Marlborough-street in respect to the agricultural instruction given at Glasnevin. Paragraph 125 (4).
4. That the admissions to the boarding class at the Albert Institute shall be by competitive examination, equal facilities being afforded to all candidates wherever educated or trained.
5. That steps be taken as far as possible to confine the competition to those who intend to devote their future to agricultural pursuits. Paragraph 127.
6. That due encouragement should be given to the class of paying boarders which has been lately established at Glasnevin, by means of which agricultural knowledge may be more widely spread, and the institution be rendered, to a greater extent than now, self-supporting. Paragraphs 75, 133–4–5.

650. Various suggestions on minor points of detail, which it is needless to repeat here, will be found in our special report on the Albert Institution, pages 853 to 867.

651. *Provincial and District Model Farms.*—The Board's provincial and district model farms have hitherto failed to confer on the State benefits at all commensurate with their cost.

652. The outlay on the various farm-steadings has, in almost every instance, been so excessive when Original cost.

compared with the area of the land attached, that, whether the farms are to be maintained or to be sold, it is hopeless to expect from them either a fair interest in the one case, or a return of the capital sunk in the other. Paragraphs 32, 34, 54.

Rents.

653. The rents for which the Commissioners of National Education have made themselves responsible for several of their farms, and to which they are in most cases bound by leases with many years to run, are, according to the Irish standard, very high, even if we value the land in its present improved condition. In the original and unimproved state of the land the rents, estimated by the same standard, must in some cases have been so excessive that it is difficult to conceive the Board's having made itself liable to them. Paragraph 37.

Financial improvement.

654. There is a marked improvement in the present financial condition of almost all the Board's farms as compared with that of a few years ago; and the systems both of farming and of theoretical instruction that are being now pursued are generally useful and practical. Paragraph 54.

Agricultural improvement.

655. So far as we have been able to judge by the reports received from their respective neighbourhoods, there must have been, within the few last years, as great an improvement in their agricultural as there certainly has been in their financial condition.

656. The circumstances under which the agricultural system of the National Board was first established must save it from so emphatic a condemnation at our hands as many persons have from time to time pronounced, and as some are still disposed to repeat. It must not be forgotten that many of the leading Irishmen of the day combined to urge on the Commissioners of National Education the *necessity* of incorporating agricultural with the literary instruction of the Irish people. Paragraphs 17 to 24. It is not our province in this place to express any opinion on the general system of literary, model, and training schools. But if that system had been accepted by the Irish public with more favour than it has been, we are free to confess that the proposed combination of agricultural with literary instruction, to be supplemented by the establishment of district farms in connexion with the larger model schools, was one that, if carried out with reasonable economy, would have strongly recommended itself to us. We cannot, however, refuse to accept the statements made by many influential witnesses who gave evidence before the Royal Commissioners, in conjunction with the report of our colleagues who have specially examined into the working of the model schools, as being conclusive evidence that the system is not one that has been, or will be, generally acceptable to the people of Ireland. It becomes necessary for us therefore, in making our recommendations in regard to the provincial or district model agricultural schools, to frame them so that they may be either applicable to the existing system—if Parliament should determine to continue it—or otherwise be fitted to meet the possible requirements of a system in which some of the duties and responsibilities now resting on the Commissioners of National Education would be allowed to devolve on local "Committees, voluntary societies, or religious bodies."

Alternative schemes.

657. There remains, of course, the alternative of abandoning altogether the provincial and district model farms, where the terms of the leases give the Commissioners the power of so doing; and though for ourselves we should regret its being deemed generally necessary to solve the difficulty thus, we are by no means sure that in several cases such a course may not be the wisest. This would eminently apply to the Ulster Model Farm near Belfast. Its position, and the nature of its soil, render it quite unsuitable for the purpose to which it has been applied. The yearly losses that have been incurred in working it amount to a very large sum, and its present condition leaves us no reasonable hope of increased usefulness. Paragraphs 37–9.

Ulster farm to be abandoned.

658. This farm should be abandoned by the Commissioners of Education. It might either be applied to the purposes of a reformatory—for which it would be in many ways well fitted—or the land should be sold for building.*

Peculiar cases.

659. In the cases of a few—for instance, Cork and Mungret—the engagements entered into by the National Board with local parties at the time the model farms were being established, and the employment of funds provided from local sources, either in the purchase of the land or in the erection of the farm-steadings, present difficulties to anyone who might be otherwise disposed to recommend the abandonment of those establishments.

660. In some cases—as at Templedouglas, Gormanstown, Dunlewey, Dunmanway, and Tervoe—where there are well attended rural National schools attached, the model farms might be carried on as now with advantage to the pupils, and, as we believe, at a very trifling cost to the State. The aggregate profits shown in the balance sheets for March 31, 1869, as having been made on the farms we have specified, would go very near to paying the salaries of the various agriculturists employed, and we have no doubt whatever that those profits could and would be largely increased under the present vigilant superintendence. See note, page 849.

661. As considerable advantages would accrue to the teachers of small agricultural schools, not alone from the profits of their farming and the payments for the results of their agricultural teaching, but also from the independence, comfort, and healthful recreation that the occupation of a small plot of land would furnish, it is clearly desirable that some special agricultural training should be provided for all teachers while in training. It would probably, therefore, be deemed of importance by those who, under a revised system, might undertake the superintendence of locally supported training schools, to make provision for the special instruction of all their teachers in agricultural matters.

662. In the event of such changes as those we have contemplated taking place in the condition of the existing model schools, the farms now connected with the training department of those institutions—as at Bailieboro', Ballymoney, or Kilkenny, might be let to the committees or other bodies undertaking to carry on such schools, and might be worked under the superintendence of the Agricultural Inspectors of the National Board. A favourable example of a model farm so managed is to be found at the Oldcastle Endowed Schools. Pars. 45, 619. By these means there might be secured to teachers

* We have learned since the above was written that a very advantageous offer has been lately made to the Commissioners by the Guardians of the Belfast Poor Law Union for the model farm and the buildings upon it. As will be seen by the Correspondence on the subject, given in the Appendix, this opportunity of repairing the mistake originally made in placing a model farm on so unfavourable a site has unfortunately been lost.

in training in any of the district schools advantages similar to those that would be conferred by the institution at Glasnevin, on the teachers being trained at Marlborough-street, or in any other approved training establishments for National school teachers in or near Dublin.

663. On the whole, however, we feel bound to confess that the practical usefulness of these establishments has not been such as to justify us in strongly insisting upon their retention as agricultural schools, if it were found that they could be economically adapted to purposes of greater public usefulness in any other form than their present one. It is possible that such an opportunity may present itself in connexion with the Reformatories Act or the Industrial Schools Act—a contingency to which we have already alluded when speaking of the Ulster model farm. Par. 219, &c.

664. If the idea of establishing an agricultural school in connection with the Benedictines' farm at Leopardstown were carried into effect, the advantages offered by that institution might be availed of, and would be found specially useful in providing for the wants of any Roman Catholic parents who might prefer to place their sons as boarders in an agricultural school under Catholic religious supervision. Paragraphs 632–4.

Rates of agricultural wages.

665. Our report has reached so much a greater length than we originally contemplated that very little space is left us for recording here our observations on the subjects collateral to the direct object of our inquiry, such as emigration and the rates of agricultural wages, to which we alluded in the opening of our report. In every district we visited we made inquiries from the agriculturist and from many others both as to the present rates of wages for skilled and unskilled agricultural labour, and as to the proportion they bore to those of twenty years ago. The replies we in many instances received, even from different persons in the same place, were so strangely at variance, that to any one having no previous knowledge of the facts in other parts of Ireland, or unacquainted with the universal difficulty of acquiring accurate statistical information, it would have seemed almost impossible to arrive at even an approximate conclusion. However, by sifting any unlikely-looking statement we generally were able either to make the varying stories tally, or to discover some sufficient cause for their seemingly strange variation. In Donegal, a sharp-looking young fellow engaged in harvest work assured us that he "*always* earned from 1*s.* 6*d.* to 3*s.* a day." "What!" we asked with surprise, "can you count on 13*s.* a week as a constant labourer." "Yes, *constant*," he replied, "I never got less." "How much a week do you earn in winter," we asked him, "to make up so high an annual average?" "Winter," he exclaimed, "sure I never work at all in winter; I wouldn't get a hand's turn to do in the dead time of year if I went out for three pence a day!" On further investigation this suspiciously flourishing, though perfectly *bona fide*, statement showed that for about twenty-two weeks in the year our informant could earn an average of twelve shillings a week, including the value of his "diet," while for the remaining thirty weeks he was literally almost idle. He was fain to admit that seven shillings a week with regular work would have been, both for him and his employers, an infinitely better bargain. In the county of Galway we asked a very intelligent mason, employed by the local officer of the Board of Works in repairing a vested school-house, what he considered to be the average rate of agricultural labourers' wages in that rural district. His answer, on the accuracy of which he very steadfastly insisted, was, "From two shillings to half-a-crown a day." Thinking this very doubtful, we asked the school teacher if it were true. "Oh, no," he replied, "you can get as many men as you want, wet and dry, for a shilling a day, and in winter for a good bit less." We then returned to the mason, and after some cross-examination he admitted that he had founded his opinion on the fact that "he often had himself to pay 2*s.* or even 2*s.* 6*d.* to a *handy man* to help him in jobs in the town of ————, where he lived." Both the schoolmaster and the mason, however, agreed in this—that twenty years ago the wages in that neighbourhood, with the qualifying phrase, "when work was to be had," was not more than an average of eight pence a day all the year round.* We found it similarly difficult in many other places to arrive at reliable data on which to found an opinion. Indeed, this is not to be wondered at, when we observe that in the very interesting returns on this subject, collected and published by Lord Dufferin in 1867, three of his informants, writing from the county of Cork, differ as much as sixty per cent. in their estimates of the wage-rate in that one county.†

666. After carefully comparing the various statements made to us in different parts of the country, we have arrived at very nearly the same conclusion that was reached by Lord Dufferin in his final statement on the subject—namely, that from seven shillings to seven shillings and sixpence a week may be accepted as the present average payment for unskilled agricultural labour in the rural districts of Ireland, and that the increase in average wages since 1850 has been from forty to fifty per cent.

Emigration.

667. The results of our general inquiries in regard to emigration were very much what our previous experience of these counties with which we were already familiarly acquainted, had led us to expect. The information we chiefly sought was as to the social status of the emigrants; their foreign destination, and the causes that were inducing them to leave Ireland. The vast majority, especially from the three southern provinces, seem to choose the United States and Canada, chiefly the former. From particular districts we found that a good many, generally of a rather better class, had gone to Buenos Ayres, and a few to Australia and New Zealand. The destination of those now emigrating seems in almost all cases to be decided by that chosen by previous emigrants from the same neighbourhood. In fact the passage money of the greater part of those now emigrating has been paid by their friends in America or elsewhere, and very many who are following the westward stream are going, not because they are particularly dissatisfied at home, but because as they express it, "they

* In a table prepared by the Commissioners of Poor Inquiry, in 1836, the rates of agricultural wages in various parts of Ireland, for 1835, are given in some detail. The average (ranging from 6*d.* in Connaught to 1*s.* in parts of Ulster) seems to have been under 8¾*d.* This rate would probably have slightly increased in 1850.

† "Irish Emigration and the Tenure of Land in Ireland." By the Right Hon. Lord Dufferin, K.P. Willis, Sothern, and Co., London.—P. 276, 7, 8. No. 3 states the wages in his district to be from 6*s.* to 9*s.*; No. 4 says from 7*s.* to 9*s.*; and No. 5, 6*s.*, with constant employment.

would lose their passage money" if they refused to go. Of most families of the labouring or small farmer class, there are now nearly as many members abroad as at home, so that the rupture of family ties is no longer felt as it was by the earlier emigrants. Moreover, so many now return each year to Ireland, not perhaps to remain permanently, but to spend a few months with the old people at home, or not unfrequently to recruit impaired health, that America seems as it were to have been brought nearer than it used to be.

668. As to the social status of those now emigrating, or who have emigrated within the last eight or ten years, we found that in almost all cases, they were the junior members of labourers' or small farmers' families. In the comparatively rare instances where the heads of families had gone, especially where they had been holders even of very small portions of land, we almost invariably found that before deciding to emigrate, they had become hopelessly in debt, either to the landlord, or the provision dealer, generally indeed to both. In but one instance could we find that a voluntary emigrant had been a solvent landholder.

669. This remark applies to the tenant-right districts of Ulster, as much as to other places in the south and west, and seems to be equally applicable to the cases of leaseholders and of yearly tenants.* Indeed the local statistics we collected on this subject might at first sight furnish matter of surprise to some interested in such questions, from the fact that in certain districts where leases happened to be more than usually common, we found little or no difference between the proportion of emigrants from the families of leaseholders and from those of yearly tenants. If, however, it be universally the case, as we almost invariably found it, that the present emigrants are either insolvent landholders, or the junior members of labourers' or of solvent small farmers' families, this would tend to explain what to the advocates of leases might at first sight seem unfavourable to their views. A leaseholder equally with a tenant at will, is liable to lose his land if he fail to pay his rent, while in the absence of permission to subdivide his holding, (a point in which both would most likely be similarly situated) there would be no better opening at home for the younger sons and the daughters of a small leaseholder, than for those of a yearly tenant.

Rarity of agricultural leases in Ireland

670. But whether or not a more widely extended security of tenure by grants of agricultural leases to a large number of the present yearly tenants of Ireland, would tend to check the progressing emigration, we have no doubt it would materially increase the usefulness of the agricultural education, that has at so much cost been provided by the State for the benefit of the farmers of Ireland.

671. The object of our being requested to report on the state of agricultural education was, that we might place before our colleagues as accurate an account as we could, of the good being done by the schools we visited. Where those schools had been successful, it was our duty to record their success. Where they had failed, or had been only partially successful, it was equally our duty to investigate, and report on the alleged causes of that failure. This we have tried to do fairly and impartially.

has been found to have an unfavourable effect on the spread of agricultural education.

We found what is called the land question cropping up in some shape or other at every turn in connexion with the object of our lengthened tour. At one time it was the teacher—at another the parents of the pupils—at another the managers or our local correspondents, who assured us of the obstacles thrown in the way of agricultural education and advancement by the present insecurity of the improving farmer. Some of the complaints made to us we thought reasonable, others not so. In the course of our report instances of both will be found, with the expression of our own opinions on each case, where we thought any expression of our opinion requisite. The position of the tenant at will was represented to us by the majority of those from whom we received information as being so evidently discouraging to the spread of agricultural education, that if through fear of trenching on political ground, or for any other reason we had avoided the subject, or, indeed, if we had failed to draw to it the special attention of the Commissioners, we should have been wilfully concealing from them a fact that had become strongly impressed on our own minds as being of grave importance to the interests of agricultural education. We trust, therefore, that our colleagues will not think we have exceeded the limits of the subject on which they requested us to report, in venturing so far as we have felt bound to do over the borders of that debateable ground now so fully occupied by those discussing the kindred subject of land tenure in Ireland.

We have the honour to be, my lords and gentlemen, your faithful servants,

(Signed), JAMES ARTHUR DEASE.
WILLIAM KIRBY SULLIVAN.

* The unfortunate rarity of agricultural leases in Ireland made it difficult for us to procure very many reliable returns sufficiently extensive to be of value in such an inquiry as we were engaged in. We subjoin the statistics of the two most fully detailed of the cases, on which we found the opinion above stated. The one was in Munster, the other in Leinster; in both, the period embraced in the returns was from January, 1859, to December, 1866. The first (the facts of which have been already published), is the case of an estate, on which, in 1859, there were 150 tenants, of whom about one-third held by lease. From 108 of these families there had been no emigration, and the whole of these were still on the estate in 1867. From the remaining 42 families (who were classified as being, 21 good tenants, 15 middling, and 6 bad), 72 individuals had emigrated, and of these 72, 58 were the sons or daughters, and 8 the nephews or nieces of tenants, the remaining 6 being the heads of families and their wives. Of the 42 families from which emigrants had gone, 15 were leaseholders and 27 were yearly tenants. One yearly tenant had been evicted for non-payment of rent, and had emigrated, and 3 (included in the 6 classed above as "bad rent payers") had gone away of their own accord, being hopelessly in debt. Of the total 150 tenants, 146 remained in possession in 1867.

In the second case there were in 1859, on an estate of about 900 acres, 29 families (numbering 133 individuals), of whom 16 held by lease (with nearly 20 years to run), and 13 held as yearly tenants. During the period named, 56 individuals emigrated from 20 families on this estate, while from the remaining 9 families none emigrated. Of these 56 emigrants, 34 were sons or daughters, 14 brothers, sisters, or nieces of tenants, and 8 were heads of families and their wives. Of the 29 families, 4 gave up their land, one (a leaseholder), on compulsion (being evicted for non-payment of rent), and 3 voluntarily. Of these 3, one (whose holding was only one acre in extent), was solvent. The passage money of himself and family had been paid by a brother in America. The other two sold their interest, being insolvent. Of the whole 56 emigrants, 29 were members of the families of leaseholders, and 27 of yearly tenants. Of the original 29 families, 25 remain, and 3 new comers have replaced 3 of the insolvent emigrants. There were still on the estate in 1867 28 families, numbering 129 individuals, so that the number of houses had only diminished by 1, and of inhabitants by 4, while two-fifths of the original population of 1859 had emigrated.

APPENDIX.

I.

List of Agricultural Schools in connexion with Board during Years 1868 and 1869.*

Since our Report was written, the Commissioners of National Education have appointed an additional Inspector of Agricultural Schools. The Schools marked with an asterisk are under Mr. Boyle, the new Inspector; those not so marked are under Mr. Brogan—the whole being under the superintendence of Mr. Baldwin. Where the name of the School is spelled differently in the Board's List, the Board's spelling is given in *italics*.

6	Roscommon,	4100	Loughglynn,	Loughglynn, Frenchpark,	0	2	27	21

The preceding List of Agricultural Schools, &c., with the exception of the spelling of some of the names, is a copy of a Document furnished to the Commission in May, 1870, by the National Board. This document was the printed "List of Agricultural Schools in connexion with the National Board on 1st January, 1870," with manuscript corrections, so as to include schools which were in connexion in 1868, 1869, although they had ceased to be so at the date of drawing up the printed List. Except in the case of the "First Class Agricultural Schools under the exclusive management of the Board," the Areas assigned in this Official List to the several Farms, &c., which were visited by us, do not always correspond with the information obtained by them in the course of their visits, and through other inquiries. This discrepancy has been already noted in some instances in the preceding Report. The Areas, &c., which are given in the following three Tables are those which have been ascertained through the special inquiries just referred to, and not those contained in the Board's List.

II.

Summary Tables showing the Condition of all the Agricultural Schools visited by the Royal Commissioners.

I. First Class Agricultural Schools managed by the Commissioners of National Education.

Number visited by Royal Commissioners—fourteen.

Schools.	Area.	Rent.	Griffith's Valuation.		Acreable Valuation of adjoining Farms, averaged from Returns received from Valuation Office.	Average floating Capital.	Years for which Profit or Loss is calculated.	Profit or Loss last three years.		Boarders.		Number of Day Boys getting Agricultural Instruction.		Observations.

The floating capital of these eight farms averages under £6 an acre.

III.

RETURN showing the Extent of GROUNDS, the TENURE, RENT, and COVENANTS of some Agricultural Farms, abstracted from the Original Deeds by John Behan, Esq., Barrister-at-Law.

School.	Quantity of Land.	Tenure.	Rent.	Covenants, &c.
ALBERT INSTITUTION, GLASNEVIN.	126A. 0R. 34P., statute measure, and 3R. 26P., statute measure.	For 999 years, .	£571 8*s.* 6*d.* yearly, .	All trees growing at the date of lease on the last mentioned lot, and all mines, minerals, coal quarries, and all royalties in the said lands, are reserved to the lessor, his heirs and assigns. Commissioners covenant to keep the said premises, and all buildings and improvements then or afterwards to be made on the said premises in good repair, and so yield up the same. Clause of surrender at the end of every five years, provided the Commissioners, their successors or asigns, shall first give six calendar months' previous notice in writing under the corporate seal of the said Commissioners, or their successors, or under the hands and seals of their assigns, and shall pay to the said lessor, &c., in addition to all rent due at the time of such surrender, the sum of £250, for the purpose of laying down in grass the said lands and premises; and it is further provided that, at the time of such surrender, the said premises, and all buildings and improvements thereon, shall be in good, perfect, and tenantable order, repair and condition.
Ditto, (*Clonturk*).	17A. 2P. statute measure.	Residue of 84 years, granted by the Corporation of Dublin to John Hudson, his executors, administrators, and assigns, from 21st June, 1819.	£300 purchase-money, and £59 1*s.* 3*d.* per annum, and annually on the feast of Christmas, paying one couple of fat capons or 5*s.* in lieu thereof, at the election of the Lord Mayor.	The lessee covenants to repair and keep in repair all buildings, &c., then or thereafter made on the said premises, and at the end or sooner determination of the term so to yield up the same; and that it shall be lawful for the masters of the city works for the time being, as also for the city surveyor and their assistants, to enter the said premises and examine the same, and to cause all defects to be amended at the expense of the tenant.
Ditto, . .	21A. 1R. 34P. Irish plantation measure.	31 years from 29th Sept., 1852.	£4 per acre per annum, and 1*s.* 6*d.* in the £ ministers' money, and repairs of Clonturk Church payable half-yearly, except the last half year, for which no rent whatsoever is to be demanded, the said Commissioners having before the execution of this lease, and according to invariable usage, paid into the hands of the Treasurer of the Borough Fund the sum of £92 5*s.* 8*d.* in advance of the last year of said term.	All timber and other trees, saplings and underwoods growing or to grow on said premises, with power of ingress to view, cut down, manage, and dispose of same; also all mines, minerals, and quarries then or afterwards to be found on said premises, with power of ingress to search for and work the same are reserved to the lessors (Lord Mayor, Aldermen, and Burgesses of Dublin); also reserving to the same Lord Mayor, &c., full power to lay out, make, or use any farm or occupation road through said premises for use of said premises, or of any other part of the lands or estates of the said Lord Mayor, &c., or to make drains through said premises for use of the same, or of any other part of the lands and estates of the said Lord Mayor, &c., making reasonable compensation for all waste done to said premises by the several acts aforesaid; also reserving all royalties, game, wild fowl, and fish, and privilege of sporting on said premises to said Lord Mayor, &c., and others authorized by them. Commissioners covenant that they will well and sufficiently repair and keep the said premises with the appurtenances in good and substantial repair, together with all buildings, windows, doors, and all other fixtures, and all gates, hedges, ditches, fences, drains, and things which shall at any time during the said term be erected or made, or shall be on the said premises, when, where, and as often as need shall be. Power is reserved to the lessors, their agents or officers, to enter the said premises to take a schedule of buildings made thereon, and to examine the condition of said premises, the Commissioners to make all repairs of which notice in writing shall be left at the premises of said Commissioners within three calendar months after such notice; also, that they shall manage the land in a husbandlike manner, and to insure the said premises and all buildings then or afterwards to be erected thereon in the sum of £5 per cent. on the gross value of such buildings; and in case any of the said buildings shall be damaged or destroyed by fire, all sums, or a competent part thereof, received by virtue of such insurance, shall be expended in rebuilding or repairing the same. Also, that the Commissioners shall not assign or underlet without consent of lessors, and shall not bequeath or devise said lands unto more than one person without the consent in writing of the said lessors. Provided that it shall be lawful for the said Commissioners, their successors or assigns, to bequeath the said premises to any one person charged with any sums of money for any other person, and thereupon it shall be lawful for the person to whom the said premises shall be so bequeathed, his executors or administrators (or his assignee, if any such there shall lawfully be), to sell or assign the said premises for the residue of the said term to any one person for or towards defraying the charges affecting the same. It is also agreed that the Commissioners, their successors and licensed assigns, shall not build any farmer's dwelling-house, labourers' houses, or other messuage whatever, except such as they shall from time to time be expressly authorized to build by the licence or consent of the said Lord Mayor, &c., and that the Commissioners will surrender said premises and all buildings, erections, and fixtures in good repair, in all respects reasonable wear and tear and damage by fire only excepted.
ATHY, . . .	44A. 1R. 28P., statute measure.	For 14 years from 5th March, 1855.	£78 yearly, payable every 25th March & 29th September.	All mines, minerals, quarries of stone, and all royalties are reserved to the lessor. Commissioners covenant to keep the said premises, and all buildings then or afterwards erected thereon, in good repair, and to yield up same in such good repair. Clause of surrender on giving six calendar months' previous notice, ending on any of the gale days.

RETURN showing the Extent of GROUNDS, the TENURE, RENT, and COVENANTS of some Agricultural Farms—*continued.*

School.	Quantity of Land.	Tenure.	Rent.	Covenants, &c.
BELFAST, . .	108A. 1R. 25P., statute measure.	For three lives renewable for ever.	£284 11*s.* 4*d.* per annum, and £1 upon the death of each of the lives mentioned, and rendering usual service at Courts Leet or Baron, when summoned thereto, and paying usual fees.	All timber, wood, and underwood growing on said premises at the date of said lease, or afterwards, and all minerals and quarries, save so much as may be used for building or improving on the premises, and all marl, fullers' earth, gipsum, getsum, flatsum, ligum, bog, turf, mosses, turbaries (except so much as is sufficient for consumption, and shall be used on the premises); also all mills, weirs, dams, waters, water-courses, fisheries, free-warrens, and free chase, with liberty for the Marquess of Donegal, his heirs and assigns, his and their servants, or any other person authorized by him or them in writing, to enter and hunt, hawk, fish and fowl; and all royalties and other privileges on said premises are reserved to the Marquess of Donegal, his heirs and assigns, or the person for the time being entitled to the fee. The said demise is also subject to the covenants and conditions in the original lease from the Marquess of Donegal. The Commissioners covenant to name new lives and to pay renewal fine. Clause of surrender on every 1st November, on giving twelve calendar months' previous notice in writing. The Commissioners also covenant to surrender, at the end or sooner determination of the demise, the said premises, and all improvements made or to be made thereon.
DERRYCASTLE, .	18A. 1R. 22P., statute measure.	For the lives of the Queen, Prince Consort, and Prince of Wales, or 31 years, whichever shall last the longer.	"Yielding therefor, during the said term, the rent of 15*s.* for each and every acre of said land, on every 25th day of March and 29th day of Sept. in each and every year."	This lease contains provisions for keeping the school open for literary and religious instruction; control over books, teachers, &c., as in leases of ordinary National schools.
DUNLEWY, . .	A lot of ground containing in front 59 feet, in rere 59 feet, and in depth 125 feet.	60 years from 29th September, 1845.	1*d.* per annum, .	
Same, . .	8A. 8P., . . .	60 years from 25th December, 1849.	10*s.* per acre, . .	This lease contains provisions for keeping the school open, for moral and literary and religious instruction, &c., as in the case of leases of ordinary National Schools.
DUNMANWAY, .	5A. . . .	For 999 years, .	£17 yearly, . .	Commissioners covenant to keep the said premises, and all buildings and improvements made or to be made thereon, in good repair, and at the end, or sooner determination of the term, to yield up the same in like good repair.
Ditto, . . .	11A. 2R. 10P., statute measure.	For 900 years, .	£29 8*s.* 2*d.* yearly, .	Commissioners covenant to support, maintain, repair, and keep the said premises, and all buildings and improvements made or to be made thereon, in good repair, and at the end or sooner determination of the demise, to leave the same in like good repair.
GORMANSTOWN, .	27A. 2R. 33P. statute measure.	For 31 years from 25th March, 1854.	£27 14*s.* 2*d.* yearly, .	Commissioners covenant to keep the said premises and all buildings and improvements to be erected and made thereon in good repair, and at the end or other sooner determination of the term to surrender the same in like good repair. Clause of surrender at the end of the first or any subsequent year on giving six calendar months' previous notice in writing or paying six months' rent in advance.
Ditto, . . (*Ardfinnan*).	20A. statute measure,	For 99 years from 1st Nov., 1849.	£21 10*s.* yearly, .	Commissioners covenant to keep the said premises, and all buildings and improvements to be erected and made thereon in good order and repair, and at the end of the term to surrender the same in like good repair.
KILKENNY, . .	79A. 34P. imperial statute measure.	For 999 years, .	£146 11*s.* yearly, .	The Commissioners covenant to keep the said premises and all improvements made or to be made thereon in good repair, "and on the determination of this demise, in case the same shall be determined as hereinafter mentioned, that they, the said Commissioners, their successors and assigns, shall and will so leave and yield up the same in like good tenantable order, repair, and condition." Clause of surrender at the end of every three years on giving six calendar months' previous notice in writing.
LIMERICK, . .	70A. 3R. 3P. statute measure.	61 years from 29th Sept., 1853.	£70 15*s.* 4*d.* . .	Commissioners covenant that they, their successors and assigns, shall, with all due diligence, expend upon the said premises such sums of money over and above the amount to be advanced by the Lords Commissioners of Her Majesty's Treasury for the purpose of establishing said model farm as may be necessary for the erection of offices, dormitories, and other buildings necessary and proper for said model farm, and shall keep said demised premises and all improvements made or to be made thereon in good repair, and at the end or sooner determination of this demise, to yield up the same in good repair; and further, that they will not at the expiration or other sooner determination of this demise, claim from the lessors, their heirs or successors, or any of them, any compensation or payment of any kind for any improvements made by them the said Commissioners upon the said lands during their occupation thereof, or made by any person or persons claiming under them any law, usage, or custom to the contrary, in anywise notwithstanding. Clause of surrender at the end of the first and any subsequent year of the term on giving six months' previous notice in writing.

RETURN showing the Extent of GROUNDS, the TENURE, RENT, and COVENANTS of some Agricultural Farms—*continued.*

School.	Quantity of Land.	Tenure.	Rent.	Covenants, &c.
MUNSTER, . .	126A. 3R. 17P., statute measure.	For 99 years, from 1st January, 1853.	£220 yearly, . . .	"Reserving unto the Duke of Devonshire, his heirs and assigns, all mines, minerals, quarries of stone, slate, marble, clay, gravel and sand, timber and other trees, bog, turf mould, turf bog, bog timber, and other royalties, and all fisheries, water and water-courses, ways and passages, now or hereafter to be upon the said premises, with liberty to the said Duke, his heirs and assigns, and all persons having a written authority from him or them, or his or their then chief agent in Ireland, his and their workmen and servants, with horses, carts and carriages, to enter the said premises, and lop and cut down, dig, search for, manufacture, and carry away the same by the most convenient ways, and to make, use, repair, cleanse, or alter any roads, passages, water-courses or drains, through or upon the premises, making reasonable compensation for immediate injury to the grass or crop then growing thereon." The exclusive right of sporting over said land is also reserved to the said Duke, his heirs and assigns, his and their servants, and all other persons having the aforesaid written authority. Commissioners covenant within two years from the date of the lease to expend not less than £2,000 in substantial buildings, fences, and improvements on the said farm, and to keep the demised premises, and all improvements, then or afterwards made, in good repair, and at the end or other sooner determination of the demise, to yield up the same in like good repair, and to permit the said Duke, his heirs and assigns, to enter and inspect the said premises during the continuance of this demise; also to manage said lands in a fair, proper, and husbandlike manner; also not to assign or underlet, without the consent, in writing, of the said Duke, his heirs and assigns; and further to insure all buildings standing from time to time on said premises, to the full value thereof, and to produce the receipt for the current year's premium; and when any building is destroyed or damaged by fire, to re-build same. Clause of surrender at the end of the first or any subsequent year, on giving six calendar months previous notice in writing, Provided that if the lease shall be determined by the said Commissioners, their successors or assigns, under the power hereby given to them for that purpose, the Commissioners, their successors or assigns, shall have no claim whatsoever against the said Duke, his heirs or assigns, in respect of any outlay upon buildings or improvements, or any other matter or thing whatsoever, notwithstanding any rule of law or equity, or the provisions of any Act of Parliament to the contrary. Provided also that if the rent shall happen to be unpaid for twenty-one days, or on breach or non-performance of any of the covenants contained in the lease, it shall be lawful for the said Duke, his heirs and assigns, and for the person or persons entitled to the said premises in reversion immediately expectant on this demise, to cause a notice in writing to be given to the Lords Commissioners of Her Majesty's Treasury, of the non-payment of such rent, or of the breach or non-performance of the Covenants, such notice to be left at the Treasury Chambers, Whitehall, and that from and after the expiration of one month from the service of such notice, in case the said rent shall not have been paid, or that satisfaction shall not have been made for the breach or non-performance of said Covenants, it shall be lawful for the said Duke, his heirs and assigns, to re-enter.

IV.

Questions put at the Examination of the Scholars of the Albert Agricultural Training Institution by the Royal Commissioners, 1868.

The examination of the scholars at the Albert Agricultural Training Institution occupied two days. On the first day they were orally examined in reading, grammar, dictation, geography, and arithmetic, for the purpose of ascertaining their general proficiency in those elementary subjects. On the second day the examination was partly written and partly oral. We did not keep any notes of the questions put on the first day, our object being merely to form a general opinion. All the questions given on the second day, both in the written and oral examinations, are here given, and also the tabulated results of the written examination. We could not tabulate the results of the oral examination in physical science, as the whole of the scholars were examined together. We may, however, state that every one of the questions put were answered by some one of the senior boys, the only ones who could be expected to have a fair knowledge of such subjects.

The senior class consisted of 40 boys, of whom 29 were present on the second day, 9 were reported as unwell, and 2 engaged on the farms in work which they could not leave. The junior class consisted of 29 boys, of whom 18 were present, 1 was reported sick, and 11 engaged at work which they could not leave. Many of those present at the first day's examination were engaged on the second day, while many of those engaged on the second day were examined on the first. In this way almost every student in the establishment came before us for examination.

Senior Class.

Written Examination.

Arithmetic.

1. 13 tons 4 cwts. 1 qr. 7 lbs. at £3 18*s.* 6*d.* per ton.
2. 15A. 2R. 32P. Irish at £1 2*s.* 6*d.* per statute acre.
3. 5 months 13 days at £3 7*s.* 6*d.* per month.
4. A farmer insures his house for £250, his furniture for £150, his farm offices for £450, what premium must he pay annually, supposing the rate of insurance to be 3*s.* per cent. ?
5. Calculate the commission on sales amounting to £1,357 12*s.* 4*d.* at $1\frac{3}{4}$ per cent.
6. A farmer lodges on deposit in a bank the sum of £243 16*s.* on the 25th September, the rate of interest being $2\frac{1}{2}$ per cent. ; on the 4th December the rate of interest falls to 2 per cent., at which it remains until the 2nd April, when he withdraws the principal ; what amount of interest does he receive ?

Algebra.

1. Find the product of $5ax$ by $3ay$.
2. Find the squre of $1+x+x^2+x^3+x^4$.
3. Find the value of $vn+1$ by $vn-1$.
4. Divide x^3+a^3 by x^2+a^2.
5. Find the square root of $4x^2+4ax+a^2$.
6. Find the product of the fractions $\frac{a^2}{b}$, $\frac{c^3}{d^2}$ and $\frac{e^4}{f^3}$
7. What value of x will satisfy the equation $3x-7=x+19$?
8. What value of x will satisfy the equation

$$\frac{x}{2}+\frac{x}{3}=1-\frac{x}{4}?$$

Geometry.

1. If perpendiculars be erected at the middle points of a triangle, prove that that point of intersection is equidistant from the angles.
2. If perpendiculars be let fall on the sides of an equilateral triangle, or of any regular polygon, from any point within it, prove that the sum of the perpendiculars is constant for all such points.
3. The rectangle under the sides of a triangle is equal to the rectangle under the perpendicular on the base and the diameter of the circumscribing circle.

Plane Trigonometry.

1. Write the equations which express the relations of the sides and angles of a right angled triangle.
2. Express $\frac{\text{Sin. A}}{1+\text{Cos. A}}$ by a single trigonometrical function.
3. Find the height of a tower from a base line of 140 feet, the angle of observation being 40° 20′.

Mensuration.

1. The base of a triangle is 35 perches, the perpendicular on the base is 11 perches, what is its area ?
2. How many acres in a triangular field whose sides are 10, 6 and 8 chains respectively ?
3. What would a stone wall, made according to the following specification, cost ?

Length, 70 perches, Irish,
Height, 8 feet,
Thickness, 18 inches,

resting on a foundation 18 inches deep, 2 feet 2 inches thick ; the trench to be dug 2 feet 8 inches wide. The contract price per cubic yard for digging and wheeling the clay to be 4*d.*, and that of the mason work 8*s.* per perch of 21 feet × 1 foot × 18 inches.

Mechanics.

1. If the force, acting horizontally, required to draw a load, be 400 lbs., how much would be required if it acted at an angle of 17° ?
2. A boulder which has to be removed from a field offers a resistance of 1,100 lbs., what power must be applied to a lever 4 feet long, and having the fulcrum 3 inches from the end, in order to dislodge it ?
3. If the force required to draw a loaded cart along a horizontal road be $\frac{1}{20}$ of the weight drawn, what force must be exerted to draw it up a hill having an inclination of 1 in 40 ?
4. The pitch of a screw is $\frac{1}{12}$ of an inch, the length of the winch 7 inches, the force applied 14 lbs., required the pressure exerted ?
5. What weight could be lifted by a Burton consisting of four moveable pulleys, each suspended by a single cord, if the power be 112 lbs. ?
6. Required the horse power of a steam engine having a cylinder of 10 inches in diameter, the length of the stroke being 2 feet, when it makes 40 strokes a minute, with a pressure of 20 lbs. on the inch ?

Book-keeping.

1. Mention the principal advantages which book-keeping by double-entry possesses over that by single entry.
2. Describe the day book and the ledger.
3. Under what circumstances will the total on the Dr. side of a cash book exceed that on the Cr. side ?
4. Mention the rules for making proper Drs. and Crs.
5. When you sell goods to a person on credit, or pay money to him, do you debit or credit him ?
6. If you sell goods to John Murphy on credit, what entry should he make, and what should you make ?
7. What do you understand by the terms bills payable and bills receivable ? How would you enter each class of bills ?
8. What does the Dr. side of balance show ?

Oral Examination.

Botany.

1. Describe briefly the nature of cellular, fibrous and vascular tissue; and state in what part of a plant each could be most readily found.
2. In what way does the cuticle of the leaves differ from the ordinary parenchyma of the leaves?
3. Describe the kinds of roots called simple, tapering, tuberose, fasciculated, nodulose, rhizome; and give examples.
4. Point out the distinction between a simple and a compound leaf.
5. Explain the terms reticulated and parallel venation. What kind of plants do we find each kind in?
6. What are bracts?
7. Describe the different parts of the stem of a tree?
8. Define briefly the meaning of the following terms applied to the inflorescence of plants: raceme, panicle, umbel, corymb, fascicle, cyme, spike, catkin, capitulum, glomerous, spadix, cone. Give an example of each.
9. Describe the several parts of a flower.
10. What do you understand by the terms perigynous, epigynous, and hypogenous?
11. When are the pistils said to be apocarpous, and when syncarpous?
12. What do you understand by the terms monopetalous and polypetalous as applied to the corolla?
13. When is the calyx said to be superior, and when inferior?
14. What term is used when the calyx and corolla are combined?
15. Explain the terms placentation axile, placentation marginal.
16. What is the ovule? When is it said to be orthotropal, when campylotropal, and when anatropal?
17. Explain the terms syncarpous, anthocarpous, and apocarpous?
18. Describe the germination of monocotyledonous and of dicotyledonous plants?
19. Describe generally the character of—(*a*) Thalamiflorae, (*b*) calcyflorae, (*c*) corolliflorae, (*d*) monochlamydeæ, (*e*) glumaceæ, and give examples of them from cultivated plants or well-known weeds?
20. Mention as many as you can recollect of the cultivated plants that belong to the following orders, and give a brief description of the characteristics of each order:—(*a*) Cruciferæ, or brassicaceæ; (*b*) linaceæ, (*c*) papilionaceæ, or leguminosæ; (*d*) Umbelliflorae, (*e*) chenopodiaceæ (*f*) graminaceæ.

Chemistry.

1. What is air composed of? In what proportion are the constituents mixed?
2. What is a barometer? Why does it rise and fall?
3. Besides oxygen and nitrogen, name other constituents of the atmosphere?
4. What is carbonic acid formed of? Mention some of the natural processes by which it is formed? What part does it play in vegetation?
5. What is the composition of water?
6. Explain the phenomenon of boiling?
7. What are the usual constituents of spring water?
8. How does the air dissolved in water differ from common air? What influence has the carbonic acid dissolved in water upon its solvent powers?
9. What compounds of interest to the agriculturist does nitrogen form with hydrogen, and with oxygen and hydrogen? What are the properties of ammonia? Under what circumstances is it naturally formed? Under what circumstances are nitrates naturally formed?
10. Explain the process of combustion in open grates, stoves, and boiler fire-places?
11. Explain the respiration of animals?
12. What is the cause of the formation of peat? In what does the matter of peat differ from the organic matter of a loam soil?
13. What are hydrates? What is the difference between basic and acid hydrates? What is meant by the terms monobasic, dibasic, and tribasic acids?
14. Apply the preceding account of acids to explain the action of sulphuric acid upon tricalcic phosphate or bones, and the composition of the "superphosphate" formed.
15. What do you understand by the terms: quantivalence, monivalent, divalent, &c.? Apply this theory to explain the difference between the green and red salts of iron, and the action of air upon subsoils.

Mineralogy.

1. What are the chief characteristics of the states of solid matter termed—crystalline, earthy, and colloid? What influence have these states upon the formation of minerals.
2. Name the carbonates which occur as rock masses?
3. Name the principal silicates that form rocks?
4. State generally the composition of the following minerals: talc, chlorite, hornblende, augite, orthoclase, albite, oligoclase, labradorite, quartz, potash mica.
5. What are zeolites? What are they generally composed of?
6. Mention the minerals that compose: granite, syenite, felstone, greenstone, basalt.
7. Describe generally the chemical composition of the soils derived from the following rocks: talc slate, mica slate, clay slate, granite, greenstone, basalt, limestone.
8. What is clay? Upon what does its plasticity depend? What action has burning upon it? Whence is it formed? What influence has the original rock upon the composition of ordinary impure clays? What is the difference between the soil and subsoil? Why is alluvial soil so much better than other soils?

Geology.

1. What is cleavage? What produced it? What kind of rocks are found cleaved?
2. What is meant by the dip of a rock? Of what practical use is it? Give an example.
3. Explain how different kinds of rock occur in a district of country.
4. What produced the present contour of the country?
5. What is a river basin?
6. Whence comes the water of rivers? What influence has the distribution of the rainfall upon the character of a river?
7. How would you know whether a bed of rock or clay was formed by a river, in a lake, in a shallow, or in a deep sea.
8. What do you understand by the age of a rock? Of what practical importance is it to be able to determine the age of a rock?
9. Of what practical use to a farmer is a knowledge of mineralogy and geology?

Junior Class.

Written Examination.

Arithmetic.

1. Find the greatest common measure of 207 and 245.
2. Find the least common multiple of 3, 12, 16, 20, 25, and 28.
3. Divide £720 12*s.* 6*d.* by 117.
4. Reduce the following fractions to their least common denominator: $\frac{3}{4}$, $\frac{2}{9}$, $\frac{7}{16}$, $\frac{9}{25}$, $\frac{5}{26}$.
5. Multiply $41\frac{3}{4}$ by $2\frac{5}{8}$.
6. Reduce 0·613 to a vulgar fraction.
7. Reduce $\frac{1}{512}$ to a decimal fraction.
8. Extract the square root of 16129.

GEOMETRY.

1. Prove that a parallelogram is double of a triangle upon the same base and between the same parallels.
2. Prove that the three angles of a triangle are together equal to two right angles.
3. Find a square equal to the sum of two or more given squares.

MENSURATION.

1. What is the area of a square whose diagonal is 9?
2. Find the area of a rhomboidal field 726 yards long and 465 yards in perpendicular breadth.
3. How many acres in a triangle the length of the sides of which are 90 chains, 50 chains, and 70 chains respectively?
4. The hypothenuse of a triangle is 65, the base 56. What is the perpendicular height?

[The senior and junior classes were examined together in dictation, grammar, botany, chemistry, geology, and mineralogy.]

V.

Copies of all Letters and Reports connected with the Belfast Board of Guardians as to whether the Commissioners of National Education had any intention of discontinuing the Ulster (Belfast) Model Farm.

I.—Letter from Board of Guardians of the Belfast Poor Law Union, inquiring if the Belfast Model Farm is about to be given up, &c.

II.—Report from Superintendent of Agricultural Department in reference to foregoing letter, and

III.—Letter from Board of National Education in reply to Guardians of Belfast Poor Law Union.

As called for by Royal Commissioners in letter dated 22nd September, 1869.

James Kelly,
Wm. H. Newell, } Secretaries.

Education Office, 23rd Sept. 1869.

Letter from Board of Guardians of Belfast Poor Law Union inquiring if the Belfast Model Farm is about to be given up, &c.

Belfast Union Workhouse,
18th June, 1869.

Gentlemen,—I have been directed to inquire if the Commissioners of Education in Ireland have any intention of discontinuing the Model Farm, situated in the Ballygammon townland of the Ballymurphy Electoral division of this Union.

Owing to the steady increase of pauperism here, consequent upon the unprecedented accession to the population of Belfast it would be most desirable, and will no doubt in a short time be necessary, that the Board of Guardians should provide a farm in the neighbourhood, on which to employ the surplus labour of the able-bodied male and female paupers.

A reply at early convenience will oblige, Gentlemen,

Your obedient servant,

(Signed) W. J. Boyce,
Clerk of the Union.

The Secretaries,
Education Office, Dublin.

Copy of Report from Superintendent of the Agricultural Department in reference to foregoing letter.

Ulster Agricultural School and Farm.

Glasnevin, 7th July, 1869.

Gentlemen,—In obedience to the verbal instructions received from you, I have to offer the following remarks on the letter addressed to you by the Belfast Poor Law Guardians in reference to the Ulster Agricultural School and Model Farm.

I understand that the Guardians are anxious to get possession of the establishment for the purpose of using it as an Agricultural Training school for juvenile male paupers. The farm is both well situated and well adapted for such a purpose. It is within three miles of the town of Belfast; the Ulster Railway bounds it on the east, and there is a Railway station close to the entrance. The farm contains 108a. 1r. 25p. of plastic clay, the greater part of which is cold and poor. The rent is £287 8s. 9d. per annum. The Commissioners have drained and otherwise improved the land at a considerable outlay.

In favourable seasons and with skilful management excellent crops of wheat and artificial grasses are raised on the farm. Mr. Smyth grew upwards of twenty tons of turnips per Irish acre; but the cost of producing them was very considerable owing to the difficulty of tilling the land.

During the past two years the farm has been worked at a heavy loss.

	£	s.	d.
In 1867–8, the loss by farming was, .	203	14	11
„ 1868–9, „ „ .	207	11	6
Total in two years, .	£411	6	5

While there was a loss on this farm in 1868–9, there was a large gain on the rest of the land worked by the Commissioners. Excluding Belfast the Model farms managed with public capital in 1868–9 contain 762a. 1r. 30p., and on them was a gain of £1,669 12s. 6d.

Notwithstanding the heavy loss incurred on the Belfast farm during the past two years, I have no hesitation in saying that a man of ability and skill could make it pay.

It was beginning to pay its way when Mr. Smyth was transferred from its management. But it is necessary to inform the Commissioners that the system by which it could be made to pay would be of an exceptional character, and unsuited to the circumstances of the farmers for whose instruction the Model farms were established.

This being the case, I venture to suggest to the Commissioners the propriety of entertaining a proposal from the Belfast Poor Law Guardians for the purchase of the Ulster Agricultural establishment, in which there is not, at present, a single agricultural boarder.

The Poor Law Guardians of Ireland could do much towards improving the efficiency of a large number of the future farm labourers of the country. This intelligence should be increased as much as possible. The first principles of agriculture should be taught in every Poor Law school as well as in every rural school in the land. The use of improved agricultural implements and machines has become a necessity. Farmers complain of the want of intelligence on the part of their labourers in the use of these machines, and if steps be not taken in time to cultivate the intelligence and skill of the labourers of the country, there is great danger that the area under tillage will be decreased, and the wealth of the country reduced very considerably.

I trust that the Commissioners will come to terms with the Belfast Guardians, and that a first-rate pauper training school will be established for Ulster on the present Model farm.

I remain, Gentlemen, &c., &c.

(Signed) Thomas Baldwin.

To the Secretaries.

Letter from Board of Education in reply to Guardians of Belfast Poor Law Union.

Ulster Model Farm.

Office of National Education,
14th July, 1869.

Sir,—Having laid before the Commissioners of National Education your letter of the 18th ultimo, stating that the Guardians of the Belfast Poor Law Union desire to know if the Commissioners of National Education have any intention of discontinuing the above Model Farm.

We are directed to state, for the information of the Guardians, that the Board of National Education has no such intention.

We are, Sir, your obedient servants,

(Signed) James Kelly,
W. H. Newell, } Secretaries.

The Clerk of the Poor Law Union, Belfast.

VI.

Oldcastle School Farm.

(Copied from the *Irish Farmers' Gazette* of July 7, 1866.)

Sir,—Cordially agreeing with your lately expressed opinion as to the advantages that would be gained by the publication of the results obtained in model farms throughout the country, I take the liberty of bringing under your notice the recently published Report of the Trustees of the Oldcastle Endowed Schools, a considerable portion of which is devoted to details connected with the small farm of eleven Irish acres, attached to that Institution. The following is an extract from that Report :—

"The balance sheet of the farm for the twelve months ended March 31, 1865, stands thus :

Dr.	£	s.	d.	Cr.	£	s.	d.
To valuation 31st March, 1864,	199	3	1	By grain sold,	20	12	0
,, Rent and taxes,	32	10	3	,, Potatoes, roots, &c., sold	13	15	6
,, Manure, seeds, &c.,	25	5	8	,, Cattle sold,	52	10	0
,, Cattle purchased,	57	17	6	,, Dairy produce sold,	111	10	10½
,, Implements purchased,	3	8	6	,, Valuation March 31, 1865,	195	13	7
,, Labour,	45	12	5½				
,, Cash profit,	30	4	6				
	£394	1	11½		£394	1	11½

"From this it will be seen that the chief source from which profit is sought and obtained in the Oldcastle School Farm is milk, and that the gross amount actually received for dairy produce in the year 1864 amounted to more than £9 5*s.* per acre. From the proximity of the school farm to the town of Oldcastle, it has been found to be equally profitable and less troublesome, as well as being a great convenience to the poorer class of the townspeople, to sell the milk than to manufacture it into butter. It would be incorrect, however, to suppose that the profits above stated are to be looked on as exceptional on this account; for the price at which the milk has been always sold is two pence per quart—a price that is well known by those who have tested the matter closely to be within a fraction of the actual value of new milk; when butter is selling for one shilling per pound—a fair yearly average price. There are, at the present time, in addition to four calves and a jennet, seven milch cows included in the stock of the farm, that being about the number of cows usually kept. With the exception of corn and potatoes, sold for £34 7*s.* 6*d.*, the entire produce of the farm was consumed on it (to be turned into cash through the dairy); thus producing a large quantity of manure of the best quality, the most certain guarantee a farmer can possess of having a good crop the succeeding year. One of the chief objects of including in the scheme of the Oldcastle schools the practical study of agriculture, and of working a small model farm in connexion with it, was to give to the small farmers of the district—whose number is far from inconsiderable—an opportunity of seeing the results of a system different from the one usually followed by that class in Ireland."

Since the above Report was written the year's accounts of the School Farm have been closed and balanced, and the result has been still more satisfactory than that shown in the balance sheet of 1864–5. The total profit will be seen to exceed that of the former year by £14 18*s.* 7*d.*, equal to £1 7*s.* an acre; while the amount spent in labour, manure, and seeds is higher than in 1864–5.

The balance sheet is given below :—

"Balance Sheet for year ending 31st March, 1866.

Expenditure.	£	s.	d.	Receipts.	£	s.	d.
To amount of valuation at 31st March, 1865,	195	13	7	By amount received for grain,	14	9	10½
,, Rent and taxes,	30	10	7½	,, Potatoes and roots,	12	15	8½
,, Seeds and manures,	27	11	5	,, Cattle sold,	83	12	6
,, Paid for cattle,	75	10	0	,, Dairy produce,	107	19	4½
,, Implements and repairs,	9	19	5	,, Valuation at April 2, 1866,	215	11	10
,, Labour,	48	1	2				
,, Profit for the year,	45	3	1				
	£434	9	3½		£434	9	3½

"The profit for the year will be here seen to have amounted to more than £4 an acre, after payment of rent (less £2) and all other expenses."

The facts stated in the above extracts are so very suggestive that I hope you will allow me, as one of the trustees responsible for their publication, to make in my individual capacity a few comments on them. The system pursued on most of such farms as that at Oldcastle is one of constant house feeding with little or no permanent grass—the system that, with certain modifications, has tended to make Belgium "the garden of Europe." This system is so diametrically opposed to that which has of late years found such favour with many theorists on Ireland's social condition, that it may not be out of place to say a few words in the way of instituting a comparison between the practical results of the two systems on the general social happiness and the material prosperity of the country. There seems to be no simpler mode of doing this than by estimating the fair average return to be expected for twelve months from, say, eleven Irish acres of medium land under permanent grass, worth an annual rent of £2 per acre, and then comparing that result with the actual returns obtained from Oldcastle School Farm of 11A. 0R. 13P., as shown in the balance sheet already quoted. The table given below shows the comparative effect of the grazing and the high tillage systems, not alone as to the total amounts of cash profits, but also in regard to the aggregate of national wealth (by the maintenance in comfort of a greater or a lesser number of tax-paying consumers, as well as by supporting a larger or smaller stock of cattle) respectively produced by each system. The comparison here drawn is between the tillage and the extreme grazing systems, viz.—where grass alone is looked to as cattle food, and where the only outlay in labour is that for haymaking and herding. The mode of carrying this out is here supposed to be by a combination of cattle and sheep feeding; meadowing one-third of the twelve acres each year, and consuming the hay during winter over the whole farm. This is probably as profitable a system in the long run as could be followed, where grass is the only cattle food used.

[Table.

Comparative Table.

	Grazing.		Tillage.	
Division of land,	Meadow (producing, say, 9 tons of hay),	A. R. P. 3 1 17	Oats,	A. R. P. 3 0 30

			Difference between valuations of 1864 and 1865 (loss on latter),	3 9 6
	Total outgoings (shown above),	£27 14 6	Total outgoings (shown above),	£115 13 10

The points where, in the above calculation, tillage seems, economically speaking, to be more advantageous than grazing, are—first, the net profit produced by the former exceeds the latter by £1 2*s.* 9*d.* an acre; second, the tillage will support in comfort nine times as many labourers as the grazing; third, the tillage maintains about 40 per cent. a greater value of stock than the grazing; fourth, the money circulated in the country, and the consequent benefit to trade by the purchase of manures and seeds, and the purchase and repairs of agricultural implements amounts to £28 7*s.* 5*d.* (or more than a whole year's rent), as against *zero* in the grazing account; and, finally, the rent produced by the land in grass is exceeded by that of the land in tillage by eighteen shillings an acre, if the interest (at the sinking fund rate of 6½ per cent.) on the cost of buildings be taken into account, as it has been in the above calculation. If, therefore, there be truth in the notorious aphorism that "Ireland was destined to be the fruitful mother of flocks and herds," or, in other words, that her soil and climate are better suited for the production of beef, mutton, pork, butter, and wool, than for the growth of corn, it would seem evident that her destiny can be more efficiently and happily fulfilled by the medium of tillage than by grazing alone.

Self-evident, however, as this may be, it is only right to consider also the difficulties that lie in the way of extending universally, or even very widely, amongst the small farmers of Ireland, the system we desire to see adopted, and of which we have endeavoured in Oldcastle to give them a limited example. The simplest way of pointing out these difficulties may be to note the essentials to success. These may be said to be sufficient farm offices, sufficient capital, sufficient skill, and sufficient industry. To take the last of these first, we believe that where all the other qualifications are found combined, industry will rarely be wanting; while, unfortunately, it is too often to be met with unaccompanied by any one of the other three. Doubtless, the habits of application, as well as the knowledge and intelligence acquired in well-conducted schools, will largely tend to cultivate this essential quality. The same may be said of the second *desideratum*—agricultural skill. Its local extension is the primary object of institutions like the agricultural department of Oldcastle school.

There may not be a general sufficiency of capital amongst the class of farmers at present holding ten or twelve Irish acres to enable them to change all at once from their present mode of working to an almost exclusively house-feeding system; for it will be seen that the floating capital even of our little school-farm, as shown in the valuation at the year's close, was nearly £200, or about £18 an acre. If to this be added as much capital in hand as would enable a small farmer to support himself and his family from the commencement of the farming year until profits began to be available, the total would reach a sum too rarely, it is to be feared, possessed by those actually occupying ten or twelve acre farms in Ireland. But it is not by any means necessary to despair on that account. This has been so well put by Mr. S. Gerrard, the author of the excellent prize essay on the "Mode of Managing Small Farms in Ireland," that I cannot do better than quote his words. "It may be alleged," he says, "that these farmers have not the capital to purchase the necessary stock in the first instance; the answer to this is given in the Introduction. Let the farmer adopt the system *as far as his means will allow, and strive to get up stock by degrees*, and so get into *the full system*, in the meantime keeping what he has in prime condition; and the same may be said of his farm buildings, &c.

Let him use what he has until he can get better. *Small farms, without stock well kept, cannot, in the existing state of matters, pay.*"

There now only remains for consideration the fourth, but not the least important of the small farmer's *desiderata*, viz., sufficient farm offices. It is obvious that the offices, and, indeed, the dwelling-houses, at present occupied by the class of whom we are now treating are too generally inadequate for the adoption of the house-feeding system, and unfavourable to the growth of those cleanly and careful habits that would be its certain accompaniment.

Where milk and butter are to be the chief money-makers, an airy and scrupulously-clean dairy is obviously indispensable. The indoor feeding system would require house accommodation for at least double, if not three times, the stock usually maintained on a twelve acre farm as at present managed. Where animals are almost constantly tied up, the sheds in which they are kept should, of course, be more lofty and spacious, and the drainage more perfect than where the cow is merely "shut in out of the cold" during the long nights of the winter half year. Where the great object is to produce the heaviest root and soiling crops, a strict economy of the manures, solid and liquid (the latter at present too generally wasted), is essential, and a change from the actual to the proposed system would necessitate a not inconsiderable outlay in that one direction. In a word, if the small farmers are to adopt generally the system so universally recommended by European writers on agriculture—a recommendation distinctly sanctioned by the Royal Agricultural Society of Ireland, in awarding its prize to Mr. Gerrard's very able essay—the first indispensable step is, that the farm offices and then the dwelling-houses of that class be improved. The question then naturally arises, who is to improve them? and the answer is as naturally confined to a choice between two. It must be done either by the landlord or the tenant. Now, on an estate of some thousands of acres where the area of the farms averages under fifteen Irish acres (a class of which there are still 307,000 in Ireland!) there is an obvious difficulty in the way of the landlord undertaking to erect the necessary buildings. The annual interest at 6½ per cent. on the outlay for needful farm offices is put in our calculation, given above, at eighteen shillings an acre, on an eleven-acre farm. Now, even if what is absolutely requisite could be done for half that estimate, it is clear that the great majority of landlords would hesitate before themselves undertaking to expend so very large a sum as, even at the reduced calculation, the erection of two or three hundred farm steadings would cost. Even in England, where the farms may already average two or three hundred acres in extent, the fact of the buildings and what (to borrow an engineering phrase) may be called the "plant" of a farm being supplied by the landlord is leading on many of the most modernized estates to a still further consolidation of the holdings. The reason of this is evident. The steading erected for the accommodation of a three hundred acre farm will, at a trifling additional cost, be made to suffice for the wants of an additional hundred acres. Thus, when an old range of farm offices is condemned as not being up to the advanced requirements of the times, and it is found that a new range would cost £800 or £1,000, the difficulty is not unfrequently solved by spending £80 or £90 on the farmstead of the two adjacent farms, and adding to each 150 acres of the neighbour with the tumble-down buildings. If this be the case on the larger scale here alluded to, how much less likely is it that the landlords of Ireland will generally undertake to erect even small steadings on farms, fifteen of which (making allowance for the difference between the English and the Irish acre) would represent the extent of one average-sized tillage farm in England.

If, then, the improved buildings be indispensable, and that the landlord cannot, in the majority of instances, be expected in prudence to undertake their erection, it remains that they must either be built by the tenant or be *left unbuilt*. Mr. Gerrard, in the sentence already quoted from his prize essay, says:—"Let the farmer adopt this system as far as his means will allow, and strive to get up stock by degrees, and so get gradually into the full system, and the *same may be said of his farm buildings.*" But if it be imprudent for the *owner* of the land to undertake the erection of the required buildings, which, at any rate, be they worth what they may, will always be his own or his successor's property, it would seem clearly imprudent for the *yearly occupier* to spend his labour and money in building them, however well able and anxious he might be to do so, without a proper security for his outlay. The point here arrived at is one beyond which the limits of a letter do not enable me to travel. The subject has, however, been so far narrowed that its main points seem to be included in the four following propositions:—1st. The adoption of the house-feeding system has been strongly urged on the small farmers by the Royal Agricultural Society of Ireland, which includes in its list of members almost every landlord of importance in the country. 2nd. It is admitted on authority that the present "plant" of the 307,000 farms under fifteen acres is insufficient for carrying out that system properly. 3rd. The erection of the buildings necessary for effectually following the advice given to the small farmers, and which must be undertaken either by the landlord or the tenant, cannot be generally undertaken by the former, from motives of economy. 4th. It cannot be undertaken by even the willing and solvent tenant-at-will, from motives of prudence.

While again stating that it is not my intention here to draw any practical deductions from the foregoing propositions, I may, at any rate, be allowed to express a conviction that whoever of those whose province it may be to do so succeeds in solving the difficult problem they present, will have conferred a lasting benefit on Ireland.

ONE OF THE TRUSTEES.

VII.

Provision made in other Countries for Agricultural Education.

One of the earliest steps taken by the Royal Commissioners was to request the Secretary of State for Foreign Affairs, to obtain copies of the official regulations under which assistance is afforded by the State, or by municipal or communal authorities to primary schools, &c., in the principal continental countries, and the United States of North America; and also, information as to whether any, and if any, and what provision was made to teach the elements of agriculture in primary schools, and to procure copies of any documents containing information regarding the general subject of agricultural education carried on with the assistance of the State in those countries. A similar application was made to the Secretary of State for the Colonies, requesting information of a like kind respecting Canada and the other Australian Colonies.
